No. 870, *New Series.*

THE EDITOR *cannot undertake to return, or to correspond with the writers of, rejected manuscript.*

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, *and not to the* EDITOR.

LITERATURE.

Letters of David Hume to William Strahan. Now first edited with Notes, Index, &c. By G. Birkbeck Hill. (Clarendon Press.)

DR. BIRKBECK HILL is certainly one of our most indefatigable literary men. It is only eighteen months since we reviewed in the ACADEMY his excellent edition of Boswell's Johnson, the result of nearly a lifetime's research. Since then he has brought out *The Wit and Wisdom of Samuel Johnson*, of which we have not met with a copy, but it is said to be a well-arranged compilation. His new work is a collection of letters from David Hume to William Strahan, carefully edited with very copious notes. The series is not quite complete, a small portion having been previously disposed of by a former owner. We have recently come across one of the missing letters, which is not, however, of any importance; and we fancy that the present collection contains all that was best worth publishing.

Dr. Birkbeck Hill is a born annotator; and most persons will think that, though some of these letters contain curious information, and afford us vivid glimpses of eighteenth-century life and manners, they are of less interest than the editor's scholarly notes. To give an instance how thoroughly the work is done, we may mention that one letter of scarcely three pages has eighteen small type pages of notes, and another letter of about the same length has fourteen pages of notes; and, though some of these notes are rather discursive, not one appears to be inserted for a mere display of knowledge. Many of them are naturally biographical and historical, referring to persons and events mentioned in the letters; others illustrate such subjects as the national debt, official franks, the British Museum, stage coaches, the post office, copyright, &c.; and to those who remember Dr. Hill's edition of Boswell, it is needless to state that no literary allusion in the text is left unexplained. From the note on copyright most readers will learn with surprise that, so late as 1774, owners of copyright were supposed to hold their property in perpetuity. Dr. Hill tells us that

"Wm. Johnston, a retired bookseller, in the evidence which he gave two or three weeks later [than February, 1774] before a committee of the House of Commons, said that he had held in whole or in part the copyright of Camden's *Britannia*, Dryden's Works, Locke's Works, and Steele's *Tatler*, and that, by the threat of filing a bill in Chancery, he had restrained a Coventry bookseller from publishing an edition of the *Pilgrim's Progress*" (p. 275).

In a note on Arlington Street, the editor quotes from a letter of Horace Walpole, who writes (December 1, 1769):

"From my earliest memory Arlington Street has been the ministerial street. The Duke of Grafton is actually coming into the house of Mr. Pelham, which my lord president is quitting, and which occupies too the ground on which my father lived; and Lord Weymouth has just taken the Duke of Dorset's" (p. 95).

The passage requires further annotation to show how well Arlington Street deserved the epithet "ministerial." The Duke of Grafton was at that time prime minister, and his secretary of state for the Northern Department was Lord Weymouth, whose maternal grandfather, Lord Granville, better known as Carteret, had also been a resident in the same street. Henry Pelham, chief of the Broad Bottom administration, had occupied a house erected on the site where Sir Robert Walpole had lived during his tenure of office, and Sir Robert's next door neighbour had been Pulteney. "My Lord President" was Earl Gower, who, when "Pelham fled to heaven," appears from the rate-books to have purchased the house from his widow, Lady Catherine. We may add that Lord Salisbury occupies the family residence in Arlington Street, which thus retains its ministerial prestige.

But we must leave these interesting notes, and turn our attention to the more immediate subject of the work before us. The editor has very properly prefixed to the letters Hume's well-known autobiography and a brief memoir of William Strahan.

During his life Hume held almost the first place among men of letters, and his reputation was greater abroad than in his own country. But his writings are now neglected, and their author is little remembered. His History is to a great extent superseded, and his philosophical opinions have been considerably developed by their modern exponents. Hume was born in 1711. His career was singularly happy and successful, though he was always a determined grumbler. Very early in life he resolved to devote himself to literary pursuits, which to the last were his ruling passion. Soon after his second published work he accompanied General Sinclair as secretary and aide-de-camp in a military expedition to France, and afterwards acted in a similar capacity to the same officer during his mission to the courts of Turin and Vienna. The final volume of Hume's History appeared in 1761, and two years later he was appointed acting secretary to Lord Hertford's embassy in Paris, where he remained three years, the most brilliant, if not the happiest, of his life. Nothing could exceed the warmth of his reception in the French capital. Grimm writes:

"M. Hume doit aimer la France; il y a reçu l'accueil le plus distingué et le plus flatteur. Paris et la cour se sont disputé l'honneur de se surpasser" (p. 51).

Hume himself writes on the same subject to Robertson:

"Do you ask me about my course of life? I can only say, that I eat nothing but ambrosia, drink nothing but nectar, breathe nothing but incense, and tread on nothing but flowers" (p. 52).

Walpole declared that Hume was the only thing in which the French implicitly believed. It is not easy to understand this extraordinary success, though it was doubtless in a great measure owing to Hume's reputation as an author and a freethinker; and the French, moreover, had always a rage for literary celebrities. Hume's personal appearance was not prepossessing. Lord Charlemont, who met him in Turin, wrote:

"His face was broad and fat, his mouth wide, and without any other expression than that of imbecility. His eyes vacant and spiritless, and the corpulence of his whole person was far better fitted to communicate the idea of a turtle-eating alderman than of a refined philosopher."

Hume's powers of conversation were as little calculated to win favour as his face and figure. In Mdme. d'Epinay's *Mémoires* a story (quoted by Dr. Hill Burton) is told of Hume acting in some charades where the dialogue was to be improvised. He was assigned the part of a Sultan endeavouring to overcome the resistance of two obdurate beauties.

"On le place," we read, "sur un sopha entre les deux plus jolies femmes de Paris, il les regarde attentivement, il se frappe le ventre et les genoux à plusieurs reprises, et ne trouve jamais autre chose à leur dire que: 'Eh bien! mes demoiselles. Eh bien! vous voilà donc . . . eh bien! vous voilà . . . vous voilà ici?'"

Another instance of Hume's want of fluency of speech is related by Rousseau. The incident happened soon after the commencement of their well-known quarrel; a temporary reconciliation had been patched up, and a meeting arranged between the two estranged friends. At first they were both rather embarrassed, and little conversation was exchanged.

"Bientôt," writes Rousseau, "un violent remords me gagne; je m'indigne de moi-même; enfin dans un transport que je me rappele encore avec délices, je m'élance à son cou, je le serre étroitement; suffoqué de sanglots, inondé de larmes, je m'écrie d'une voix entrecoupée: 'Non, non, David Hume n'est pas un traitre'; . . . David Hume me rend poliment mes embrassemens, et tout en me frappant de petits coups sur le dos, me répète plusieurs fois d'un ton tranquille: 'Quoi, mon cher Monsieur! Eh, mon cher Monsieur! Quoi donc, mon cher Monsieur!' Il ne me dit rien de plus" (p. 81).

But some of the friendships which Hume formed in Paris were enduring, and his correspondence with the charming Mdme. de Boufflers was continued as long as he lived.

Hume's political sagacity was not great, though he was one of those who foresaw that it was impossible to retain our American colonies. Through life a strong Tory, he dreaded any encroachments on the rights of the crown.

"Only consider," he writes in June 1771, "how many Powers of Government we lost in this short Reign. The right of displacing the Judges was given up; General Warrants are lost; the right of expulsion [from the House of Commons] the same; all the coercive Powers of the House of commons abandon'd; all Laws against Libel annihilated; . . . For God's sake, is there never to be a stop put to this inundation of the Rabble?" (p. 201).

Hume's character in private life was amiable, but we fear we must agree with Dr. Hill that his principles of honour were not high, though, perhaps, his practice was better; he certainly was much beloved by friends,

Digitized by Google

like Adam Smith and others, who knew him well. His antipathy towards England was very great. "Hume, in his abuse of the English," writes the editor, "as much surpassed Johnson in violence as he was inferior to him in wit" (p. 56).

Of Hume's opinions on religious subjects and ideas of a future state, we know nothing positive. Dr. Hill speaks of him as an Epicurean, and this is probably the best description that can be given. He certainly had no fear of death, and was singularly cool and collected in his last moments. A few days before he died, when his medical adviser told him that all would soon be over, he considered the prediction as good news; "for of late," he writes in his last letter to Strahan, "within these few weeks, my Infirmities have so multiplyed that Life has become rather a Burthen to me. Adieu, then, my good and old Friend." These lines, of which a facsimile is given in this volume, were written in a clear and legible hand on August 12, 1776. Hume died on August 25.

William Strahan was born at Edinburgh in 1715; and, "having served his apprenticeship in his native town," writes Dr. Hill, "he was enchanted, like so many of his countrymen, by 'the noblest prospect which a Scotchman ever sees,' and took 'the high road that leads to England.'" He set up as a printer in London, and was so successful that in 1770 he purchased "a share of the patent for king's printer." His business establishment was in New Street, Fetter Lane, where his descendants, Messrs. Spottiswoode, still carry on the works. In 1774 he was returned to parliament for Malmesbury as the colleague of Charles James Fox. Strahan was a friend of Johnson, and is frequently mentioned in Boswell's Life. His son, Dr. George Strahan, was appointed vicar of Islington in 1773, and it was to his house that "Johnson went sometimes for the benefit of good air." The old vicarage, we are informed by the present incumbent, was pulled down four years ago, and its site is now occupied by the premises of the Metropolitan Fire Brigade. William Strahan died in 1785.

We have left little space for extracts from the letters. The earlier portion of them is a good deal taken up with directions for the publication of his works, but occasionally we come across notices of important contemporary events. Soon after the accession of George III. Hume writes:

"Is this new Reign to be the Augustan Age? or have the Parsons got entire Possession of the young Prince? I hear that they brag much of their Acquisition; but he seems by his Speech to be a great Admirer of his Cousin of Prussia, who surely is no Favourer or Favourite of theirs" (p. 32).

A few months later he writes to introduce James Macpherson with a very warm letter of recommendation. Like many others, Hume was for some time convinced of the truth of Macpherson's pretensions. Gibbon not only believed that Ossian's poems were authentic, but, as late as 1776, quoted from them in the *Decline and Fall*. Horace Walpole, referring to the subject, wrote in 1761: "My doubts of the genuineness are all vanished." To the names of these believers may probably be added another still more illustrious—that of Edmund Burke. The editor supposes (and we entirely agree with him) that Burke was the writer of a review of Ossian's poems in the *Annual Register* for 1761. The following passage is certainly either by Burke or by a very clever imitator of his style:

"The editor has recovered from the obscurity of barbarism, the rust of fifteen hundred years, and *the last breath of a dying language*, these inestimable relics of the genuine spirit of poetry" (p. 37).

Sturdy old Johnson, as is well known, declared from the first that the poems were a forgery, and the correctness of his judgment was soon almost universally acknowledged.

In 1765 Hume wrote from Paris an account of a grand dinner at the English embassy in honour of George III.'s birthday, and requested that the event might be recorded in the *Chronicle*, of which Strahan was then printer. The request was duly complied with, in the impression of June 13, by a paragraph which differs only in slight details from the description in the newspapers of similar festivities in 1888, though probably few of Lord Lytton's guests on that occasion appeared in "new and rich cloaths." Wilkes, who was in exile at Paris, wrote on June 5 of the previous year: "Lord Hertford gave yesterday a grand dinner to all the English here except *one*" (p. 69).

From the year 1769 the letters become more interesting. It was in that year that Hume settled down in Edinburgh to pass the remainder of his life. At first he lived in comfortable rooms purchased by him some years before in "James's Court," in the same house, but not on the same story, where Boswell afterwards entertained Johnson during his visit to Edinburgh. On October 25 Hume writes to Strahan:

"I never enjoyed myself better, nor was in better spirits, than since I came down here. I live as I please, spend my time according to my fancy, keep a plentiful table for myself and my friends, amuse myself with reading and society, and find the generality of the people disposed to respect me more on account of my having been well received in greater and more renowned places" (p. 112).

Hume's position was certainly a pleasant one. His means were ample, his health was good, and he had every prospect of some years of enjoyable existence. He had many friends, whom he entertained with splendid hospitality, and was especially proud of his old mutton and his old claret. Though himself a temperate man, he was a member and regular attendant at the meetings of the Poker Club—a convivial body whose direct and specific object, according to Dr. Hill Burton, was the consumption of claret. His leisure was employed in corresponding with friends at a distance, and making corrections for new editions of his works. He often quoted a saying of Rousseau that one half of a man's life is too short to write a book, and the other half too short to correct it. To a great extent the prejudices raised by Hume's philosophical writings had died away, though to the last he was sometimes subjected to annoyance from over-zealous believers. A tradition exists in Edinburgh that on one occasion when he had slipped into the boggy ground at the foot of the castle rock, he was rescued by a woman, who, when, however, she discovered that he was "Hume the Deist," refused to help him till he had repeated the Lord's Prayer and the Creed. But this intolerance was rare, and Hume had little cause to regret his loss of office or the choice of Edinburgh as a residence.

London in the year 1769 was not a pleasant place to live in, especially for a Tory and a pessimist like Hume. In a letter already quoted from he writes: "As to my Notion of public Affairs, I think there are very dangerous Tempests brewing, and the Scene thickens every moment" Burke writes in the *Annual Register* that "the nation had been in a great ferment during the whole summer—the like had scarcely been ever remembered"; and again, in *Thoughts on the Present Discontents*: "Good men look upon this disordered scene with sorrow and indignation." The capital was a scene of daily riot. Bands of armed men wandered about committing every sort of outrage, and scarcely an attempt was made to repress them. The government had lost all power. The Duke of Grafton, a young man of dissolute life, was prime minister, but the king was supposed to be still under the influence of Lord Bute. In the House of Commons the ministry had lost the confidence of its supporters; and was assailed with insults and derision by its opponents, which it did not venture to resent. Lord Granby, the popular commander-in-chief, was notoriously unfavourable to the administration, and had already on one occasion voted with the opposition. In this year, too, commenced the letters of Junius, and were causing an extraordinary sensation (now rather difficult to understand); but the chief thorn in the side of the government was Wilkes, whose case had been mismanaged in every possible way. Dr. Hill writes in a note: "Had the pardon for which, in 1766, he [Wilkes] sued from the prime minister, the Duke of Grafton, been granted, he might have sunk altogether into oblivion" (p. 120). This is not quite accurate. The Duke of Grafton was not prime minister till the end of 1767; but there is little doubt that if Wilkes had been offered a place or a pension "he would have ceased to be a Wilkite many years before he did." There is a good deal of information about Wilkes in the editor's notes; but we wish he had added an interesting item of literary interest—that in the contest between Wilkes and Townsend for the mayoralty the latter was assisted by Oliver Goldsmith, who wrote paragraphs in the papers in support of his friend. Dr. Hill has, however, further on noted the curious fact that, in a letter written by Strahan to Hume, five days after Goldsmith's death, no allusion is made to the event (p. 285).

Early in 1770 the Duke of Grafton resigned; Lord North became prime minister; and the letters soon show that in home affairs, at least, his tact and common-sense had produced a marked change. In May Hume writes: "We are very happy that this Session is got over without any notable disaster" (p. 145); and some months later: "It is a pleasure, however, that the Wilkites and the Bill of Rights-men are fallen into total and deserved Contempt" (p. 161).

In June of this year (1770), Walpole was able to write to Mann:

"This is a slight summer letter, but you will

Digitized by Google

not be sorry it is so short, when the dearth of events is the cause. Last year I did not know but we might have a battle of Edgehill by this time. At present, my Lord Chatham could as soon raise money as raise the people; and Wilkes will not much longer have more power of doing either . . ." (p. 153).

The remaining part of the volume must be glanced at briefly. We have said nothing of Hume's literary judgments, and they will hardly commend themselves to the present generation. He preferred Home's "Douglas" to the plays of Shakspere; and with the light literature of his own time he appears to have been little acquainted. He writes in 1773:

"For as to any Englishman, that Nation is so sunk in Stupidity and Barbarism and Faction, that you may as well think of Lapland for an Author. The best Book that has been writ by any Englishman these thirty Years (for Dr. Franklyn is an American) is *Tristram Shandy*, bad as it is. A Remark which may astonish you; but which you will find true on Reflection" (p. 256).

The remark is certainly astonishing when we consider that "in these thirty years" (as Dr. Hill points out in a note) had been published *Clarissa* and *Sir Charles Grandison*, *Tom Jones* and *Amelia*, the Great Dictionary and *Rasselas*, Collins's Odes and all Gray's Poems; and (we should certainly add) Burke's political pamphlets. The editor suggests that Hume wished to pay a compliment to Franklin, who would probably see the letter.

We must pass over in silence the allusions to the dispute with Spain about the Falkland Islands, and to the revolt of our American colonies; but we cannot refrain from quoting one more extract, which contains a curious illustration of the manners of those days. When Hume, not long before his death, was travelling to Bath, he stopped for a short time at the inn at Speen Hill, and he writes on May 10, 1776:

"When we pass'd by Spine Hill, near Newbury, we found in the Inn Lord Denbigh, who was an Acquaintance of my Fellow Traveller [John Home]. His Lordship inform'd him that he, Lord Sandwich, Lord Mulgrave, Mr. Banks, and two or three Ladies of Pleasure, had pass'd five or six Days there, and intended to pass all this Week and the next in the same Place; that their chief object was to enjoy the trouting Season" (p. 324).

Lord Sandwich was the First Lord of the Admiralty, and Lord Mulgrave was one of the junior lords. We learn from a note by the editor that in November of the same year,

"soon after the opening of Parliament, Mr. Luttrell moved an Address to the King for the removal of Lord Sandwich from office. . . . Lord Mulgrave defended his chief. 'The British nation,' he said, 'had never known a First Commissioner of the Admiralty equal to the present in capacity and meritorious services'" (p. 328).

The motion was negatived without a division.

We cannot conclude better than by repeating our praise of this interesting volume. We have never seen a work better edited or better annotated, and there is an excellent index.

F. Grant.

Life of Lord Westbury. By Thomas Arthur Nash. In 2 vols. (Bentley.)

In spite of the essentially defective plan on which this book has been written, a very readable and interesting Life of Lord Westbury has been produced. It is, perhaps, in one view a merit that the effect is not at all what it was expected to be—for instead of the study of the cynical, sharp-tongued wit, whose motto might be *tot verba tot verbera*, we have a picture of the benevolent and industrious paterfamilias, devoted to his pigs and his poultry, forced by adverse fate into being the best advocate, one of the ablest politicians, and the most reforming of lawyers of his day.

It is well that the domestic and private side of Lord Westbury's character should have been revealed to a world that in the end used him more hardly and harshly than he was supposed to wish to use the world. But it cannot but be considered an essential defect in a biography that it throws into the shade and hardly displays at all the qualities of the man which made him famous, and for which, after all, the public demanded that his life should be written and for which it will be read, but read almost in vain. The catastrophe of his life, that which has made him stand out from all other chancellors of the last 200 years, is told with so much reticence as to be absolutely unintelligible. Mr. Nash has apparently adopted the wrong view of the sensation caused by the Life of Bishop Wilberforce; and, instead of taking with the necessary grain the outcry of critics against wounded feelings and injured susceptibilities, he has taken it with grand seriousness, not remembering the zest with which, while the critics struck, the public listened and read. The result will be that, while the Life of Bishop Wilberforce is passing through edition after edition, the life of Lord Westbury will, like virtuous coldness in general, be praised but left out in the cold. The absurdity of it, too, is that while the chief offence caused by the Wilberforce memoirs was caused by the revelation of private opinions and confidential utterances not before known, Lord Westbury's views of men and things were no secret, and his satire and sarcasm were almost public property. As for the story of his fall, the care taken in telling it to avoid wounding susceptibilities is simply misplaced, since anyone who likes can read the whole story in Hansard; and any harm that could be done to the persons concerned was done twenty-three years ago, and is past praying for. In the interest of his hero himself, Mr. Nash has been very ill-judged in this respect. Any impartial person who reads the whole story in Hansard can hardly avoid the conclusion that Lord Westbury was made the victim of party passion and personal malice, as was shown by the attempt made to implicate Mr. Gladstone, then Chancellor of the Exchequer, and Lord Palmerston during the debate on the vote of censure forced on at the fag end of a session, when a dissolution had already been announced. But Lord Westbury had offended two powerful interests—the High Churchmen and the high and dry lawyers—and has aroused personal animosities; and they found their revenge for a few biting phrases in the wreck of the career of the greatest chancellor of the century.

With his vivid wit, his reforming and constructive energy, and his constant reference to principles instead of rules and routine, Westbury stands out among the mere used-up lawyers or precise formalists who have usually adorned the woolsack before and after him, very much as Carlyle among historians or Latimer among preachers. Among chancellors, he was of the school of the Broughams and Thurlows rather than of the Eldons or the Hatherleys. He was supposed to be cynical and ill-natured by many who had suffered under his wit; but, in fact, he was only cynical as to views in which he did not believe and as to people whom he did not trust, and his ill-nature was no more than the surface irritability of a superior but impatient mind. It seems to have been purely intellectual, and his most ill-natured sayings were merely the flashes of an uncontrollable wit. Mr. Nash's pages amply demonstrate that Lord Westbury was never cynical in things which he thought important, such, for instance, as law reform, nor ill-natured to those who "knew him at home." He had a hard struggle in early life; and, unfortunately, the very qualities which gave him his paramount position in his profession—his power of sarcasm, his want of respect of persons, that is, his carelessness of what other people thought of themselves, and its correlative, carelessness of what other people thought of him—provoked and gave the opportunity to those who eventually hustled him off the woolsack. It was hard, too, on one who had throughout life depended on himself that in the crisis of his career he was attacked under circumstances in which he had to depend on others. Had he been in the House of Commons, if he had not obviated defeat, he would at least have left on record a speech as brilliant as that in which he annihilated Bishop Wilberforce in the House of Lords on the condemnation of *Essays and Reviews*, or the speeches in which he met Mr. Gladstone's onslaughts on the Divorce Bill.

As it was, though cut short prematurely in his career, he had done as much, as Sir Richard Bethell and Lord Westbury, for law reform of all kinds as half-a-dozen of his predecessors or successors. And he has left behind a fountain of wit, from which it is to be hoped some more copious draughts will be given to the world. Meanwhile, we may be thankful to Mr. Nash for having done for Bethell's private character very much what Sir George Trevelyan did for Macaulay's, in showing that he had a heart as well as a head; and for the story of his university and early bar career, which may afford pabulum to Mr. Smiles to show that in the learned profession as well as in the manufacture of shoddy there is no disadvantage in beginning life with half-a-crown if there be a whole head and a sound body.

Arthur F. Leach.

Visitations of the Diocese of Norwich, A.D. 1492-1532. Edited by the Rev. A. Jessopp. (Printed for the Camden Society.)

In saying that the text of the above volume is one of the most valuable contributions to English history every issued by the Camden Society I commit myself to a very strong statement, but those who have read it will

Digitized by Google

agree with me that it is a true one. Dr. Jessopp is to be congratulated on having unearthed the MS., and has done good service to the literary world by procuring it to be printed.

But there praise must end; for his introduction is not worthy of him, and he has not used the material ready to his hand out of which he could have made a literary success in his own style. No one was better qualified than he to touch with a light hand the most interesting facts disclosed by the book, and sketch in vivid colours the inner life of the monasteries just before their suppression, had he taken Carlyle's *Past and Present* for his model. But, as it is, the preface is obviously hastily written, and is inaccurate in fact and loose in argument. Over production for popular periodicals has left Dr. Jessopp no time to make careful research or to check statements jotted down hurriedly, and the editing is not up to the usual standard of the Camden Society.

It would be unkind to track minutely all the slips of the author's flying men, but "trepidis" (xxi.), which is fancifully explained, is clearly his transcriber's error for "crepidis," the similarity between *c* and *t* of this date being fatal. Nor should a local antiquary of repute translate *corrody* "annuity," *communaius* "chief accountant," or *pincuna* "provision-contractor." A contractor surely implies one who gets profit from what he supplies, but that any officer of a monastic community was allowed to get anything out of his fellows is a startling assertion. There are many minor slips and misprints. It is almost incredible how anyone who knows Norwich so well could pass "Lollardes, Pittes." Again, at p. viii., there is the extraordinary statement that Rushworth College, founded in 1342, was the earliest college in the diocese of Norwich. Even admitting that Bury St. Edmunds, which is said to have become a perfect college in 925, and Glemsford, "founded *tempore* Edward the Confessor," were not colleges in the sense Dr. Jessopp apparently means, it seems hard to understand how he passed over the well-known colleges of Gressenhall (founded in the reign of Henry III.), Thetford, Thompson, and Caister (in the reign of Edward I.), and the still better known college of the Chapel in the Field at Norwich before 1331.

As to why the *Visitations* include certain monasteries and omit others, Dr. Jessopp offers no suggestion beyond pointing out that certain houses (the number of which he inaccurately gives as seven—there were really more) were specially exempt from the bishop's jurisdiction. But, unless we suppose *all* five visitations are imperfect, this does not account for the omission of very many other well-known monasteries; and the real solution, of course, is that they were cells to other monasteries which were themselves exempt.

The line that Dr. Jessopp takes as to certain nameless accusations is absolutely incomprehensible. He unhesitatingly puts them down as false; and of a note in which I controverted his views elsewhere he says (xii. n.) that it will be taken for what it is worth, though he does not reply to it. After editing a volume which not only teems with accusations and reports on minor immoralities but actually (pp. 204, 250) proves that two accusations were made of a major sin, and which hints at it on pp. 200, 266, and 269, he actually reiterates his opinion. It is idle to get hysterical over hateful things, and to say that they did not exist because they were hateful—to talk of "hideous comperta," and so on, and to urge that the scandals which justified the dissolution were the "horrible inventions" of "miserable men," "hired detectives of the very vilest stamp come to levy blackmail," and so on. The evidence now printed is not that of any one of this class. It is a record never meant to be read by a layman, and it bears ample proof that everything possible was hushed up; but it proves up to the hilt that in over thirty instances monks accused monks of immorality and vice. Is it probable that *all* these accusations were untrue—that a monk would venture to accuse his superior before the official who, if he disbelieved his story, had practically the power of life and death over him? And, in any case, if all the accusations were false and the accused all innocent, how very vile and very base must have been the thirty accusers, and how unlike the blameless and bland devotees pictured in Dr. Jessopp's fancy sketch! How he can reconcile his statement on p. xii., that "no such charges or anything like them are to be looked for in the following pages," with the text and specially with his own words on p. xxxiii., that "there had been a hideous and revolting scandal among the brethren," it is, indeed, hard to say. A valuable excerpt from a visitation of St. Mary of Thame in 1526, recently printed by Mr. G. C. Perry in the October number of the *Historical Review* (p. 704), still further proves that similar charges were made and investigated by the ecclesiastical authorities, who had the best reason for denying their existence.

But enough has been said to show that the writer is not at his best when dealing with dry facts or when arguing on them. As one of the most delightful essayists of the day—one might almost say the master of antiquarian romance—he is unrivalled, and he has probably done more than anyone living to popularise antiquarian study; but his Pegasus goes very reluctantly in the shafts of hard work, and was obviously kicking over the traces in the concluding paragraphs of the introduction, which betray undisguised joy at coming to an end of his task.

Walter Rye.

Pen and Ink: Papers on Subjects of more or less Importance. By Brander Matthews. (Longmans).

There is a happy blending of wisdom and gaiety in these essays of Mr. Brander Matthews. While never profound, they are seldom frivolous. Of sound common-sense there is plenty, and philosophy and moral instruction are not wanting. But when these occur they are sure to be whimsically stated, or to be standing shoulder to shoulder with some application or comment more or less fantastic. Whatever of the useful is offered is well wrapped up in the entertaining—like a pill in a plenitude of jam—after this fashion:

"Poker is a true touchstone of character. In great trials a man generally tries to act as he ought, while in little affairs he shows himself as he really is. I know a gentleman who says he will allow no man to marry his daughter until he has tested his temper and gained an insight into his character by playing poker with him" (p. 205).

Several of the papers have been gathered from magazines, where, in some instances, they attracted considerable attention.

The papers on literary topics contain some sound criticism. Certain modern English novels might well have been in Mr. Matthews's mind when he wrote, "A brutal misuse of the supernatural is perhaps the very lowest degradation of the art of fiction." Here is a well-drawn comparison between Poe and Hawthorne:

"There is a propriety in Hawthorne's fantasy to which Poe could not attain. Hawthorne's effects are moral where Poe's are merely physical. The situation and its logical development and the effects to be got out of it are all Poe thinks of. In Hawthorne the situation, however strange and weird, is only the outward and visible sign of an inward and spiritual struggle. Ethical consequences are always worrying Hawthorne's soul; but Poe did not know that there were any ethics" (p. 79).

A little farther on, he adds:

"In Poe's hands the story of 'The Ambitious Guest' might have thrilled us with a more powerful horror; but it would have lacked the ethical beauty which Hawthorne gave it, and which makes it significant beyond a mere feat of verbal legerdemain. And the subtle simplicity of the 'Great Stone Face' is as far from Poe as the pathetic irony of 'The Ambitious Guest.' In all his most daring fantasies Hawthorne is natural; and, though he may project his vision far beyond the boundaries of fact, nowhere does he violate the laws of nature" (pp. 80, 81).

This level of criticism is not maintained in the essays on "Two Latter-day Lyrists," where Mr. Frederick Locker and Mr. Austin Dobson are discussed. These two papers are not without their good points, but they are sadly marred by superlatives. Superlatives, like seasoning, should be used with caution, a fact which, in this instance, Mr. Matthews has quite ignored. "The perfection of daintiness and delicacy"; "as purely a lyric as the song of the thrush itself"; "a marvel of refinement and restraint"; "the spirit of all Mr. Dobson's work is beautiful"; "there is unfailing elevation"; "a happy mingling of a broad and genial humanity with an extraordinarily fine artistic instinct"—gushing phrases such as these are to be expected where some eager but injudicious log-roller strives to impose an aspiring nobody upon a guileless public; or where the aspiring nobody, for purposes of his own, seeks to flatter an author of renown. But that a humourist of Mr. Matthews's calibre, who is also something of a critic, could write them, is wonderful. Nor does it seem complimentary or altogether just to Mr. Locker and Mr. Dobson to make them the subjects of such extravagant eulogy.

The paper, "On the French spoken by those who do not speak French," is a protest, much needed, against a prevalent literary vice. Mr. Brander Matthews is sorry Thackeray did not write one of his "Roundabout Papers" on the subject, for

"it is a subject which seems most suitable for the author of the *Book of Snobs*; for, above all things, is there snobbishness in the affecta-

Digitized by Google

tion of being on speaking terms with the French language, when, in very truth, it barely returns your bow" (p. 168).

For a stern moralist on this matter, Mr. Brander Matthews is himself too prone to drop into French; but his own deficiencies in this particular do not detract from the justice, though they may diminish the force, of his precepts. In his case, as in that of some other preachers, "Do as I say and don't do as I do," is a good motto. But for his own sake Mr. Matthews should not neglect the admirable warning given by no less an authority than himself, that the habit of dropping into French "is as enfeebling as the habit of punning." In this particular the writer of an English book for English readers ought to be a total abstainer.

"A national hymn," says Mr. Matthews in the paper on "The Songs of the Civil War," "is one of the things which cannot be made to order. No man has ever sat him down and taken up his pen and said 'I will write a national hymn,' and composed either words or music which a nation was willing to take for its own."

The statement is true generally, but "never" is a strong word. Am I mistaken in thinking that the battle-song of English Jingoism, "Rule Britannia," which almost rivals our so-called national hymn, breaks Mr. Brander Matthews's rule?

The essay on "The True Theory of the Preface" was a good deal discussed when it appeared in *Longman's Magazine* not many months ago. It is an ingenious piece of work. According to Mr. Matthews "a book with a good preface is half-way on the high-road to success." A good preface is "appetizing, alluring, enticing." It is a mistake to suppose that nobody reads a preface:

"Perhaps that impalpable entity the general reader may skip it not infrequently; but that tangible terror, the critic, never fails to read the preface, even when he reads no farther. . . . The critic is a very different sort of person from the general reader, and it is meat and drink to him to read a preface."

Therefore the author should write his preface for the critic, to guide him as to the character of the book and as to the things he should say about it. The use of the term "critic" in this connexion is, of course, too general to be entirely accurate; but there are plenty of tasters for newspapers, who, assuredly, are only too glad to compile their notices from prefaces. It is not necessary to follow Mr. Matthews's argument; but a piece of advice like the following is worth quoting and has applications wider than the question immediately in hand: "Hold the head up; look the world in the eye; and he is a churlish critic who does not at least treat you with respect." It is a pity Mr. Matthews has not given us in the present volume a specimen of the ideal preface he recommends. It would have been a task worthy of his skill.

On the whole, readers have good reason for gratitude to Mr. Matthews, who has given them a book which is, what a certain popular magazine professes to be, interesting from end to end.

WALTER LEWIN.

TWO BOOKS ON PERSIA.

A Personal Narrative of the Euphrates Expedition. By William Francis Ainsworth, Surgeon and Geologist to the Expedition. In 2 vols. (Kegan Paul, Trench & Co.)

"The Story of the Nations."—*Persia.* By S. G. W. Benjamin, lately United States Minister to Persia. (Fisher Unwin.)

MR. AINSWORTH'S narrative begins "towards the end of the year 1834," and the half century and more which has elapsed since his notes were recorded has produced a stream of works relating to every part of the countries which he traversed. We are constrained to say there is nothing of novelty, or of careful scientific research, in these volumes such as to make them worthy and welcome. Mr. Ainsworth has imposed upon us the task of reading his eight hundred pages; and we regret, for his sake and for our own, that he did not publish his narrative before her Majesty began her reign. In the Preface, Mr. Ainsworth states "that no fully detailed account" of the "Euphrates Expedition has been given"; and we thought that possibly, after fifty years, there might be some matter of permanent value to be made public. But these volumes are for the most part made up with worthless commonplace.

"The Colonel having dismounted to get a good shot, his steed bolted." "Colonel Chesney and I had ridden on to secure quarters." "There was the same cloudless sky, starry with constellations by which Abraham steered his course from his fatherland,"

are not details for which we have time and patience after the lapse of half a century.

Mr. Ainsworth was geologist to the expedition; and there is room even now for a scientific description of the most interesting and ancient monuments of Asia. After pages full of scraps of history which have no more connexion with the expedition than with Whitechapel, Mr. Ainsworth says: "The most remarkable monument still existing at Tarsus is known as the Dunuk Tash—a vast, solid parallelogram of masonry." Longing for scientific, especially geological, description, upon which the rust of fifty years would be imperceptible, this is what we obtain:

"This monument has attracted the attention of all travellers, and M. Gilet made endeavours, not without some success, to penetrate into the interior; and M. Langlois has placed on record a minute detail of its structure and dimensions."

If Mr. Ainsworth had shown these "details" to any judicious friend, he would have said: "Throw away at once and for ever all your ill-sorted pickings from ancient history, all your ill-digested Strabo and Pliny, all about Xerxes, and the rest. Keep only that which may by any decent pretext be included under the promise of your preface as details of the expedition." The result would certainly have been slender, and might be read in a comparatively short time, but Mr. Ainsworth would have been less open to reproach. As to Persepolis, Mr. Ainsworth gives us an original speculation: "Is it possible that the unicorn represents an animal that has become extinct within historical times?" But his description of the ruins is inferior to a dozen contributed by more recent visitors.

Now that the Shah has just opened the Karūn to free navigation, we turned with hope to what "the geologists to the exhibition" might say upon the rocks at Ahwas which bar the ascent against any vessel of useful size. And here then is some matter of real interest. From Mohammerah "so facile was the navigation that we effected a distance of sixty-eight miles in ten-and-a-half hours." At Ahwas, less than half the distance for which the Karūn is navigable to Shuster,

"a ridge of tertiary or supra-cretaceous sandstones cross the gentle, almost imperceptible slope towards the Kurdish mountains, some hundreds of miles away. Ledges of rock impede the navigation of the river; and a few hundred yards below the town a regular reef, called the Bund, stretches from bank to bank, giving rise to rapids which are sometimes dangerous to native boats."

This difficulty may be overcome by the construction of a canal by which vessels could pass round the rapids and into the stream, which nine miles above Ahwas is 150 yards broad. At Shuster goods may be landed 244 miles nearer to Ispahan than at Bushire, the usual port of entry.

Mr. Benjamin's conclusion that Russia "undoubtedly intends, sooner or later, to extend her sway over Persia," is not very unlike that of Mr. Ainsworth, who thinks "one of the next phases" will be Russia and England fighting for supremacy at the mouth of the Euphrates, "which Russia will probably reach by the uplands of Persia." Neither view is quite consistent with British naval supremacy in the Persian Gulf, and neither writer assumes that supremacy to have been lost. But this is almost the only remark upon contemporary affairs in Mr. Benjamin's book, which, except in its final pages, is made up of much of all the questionable information that is obtainable concerning the Persian kings from Feridoon and Shah Djemsheed down to Nazr'ed'deen Shah, Kajar, who has just now completed forty years of reign over Persia. The story of the great Rustem, and how he slew in single combat his son Sohrab, ignorant of their relation until the moment of the young hero's death, is, perhaps, the most attractive portion of the work. No attempt is made to write up to the interesting illustrations, which are taken from the works of Malcolm and Justi, and are sown with a rough broadcast upon Mr. Benjamin's pages. We do not know by what class of readers information such as this, relating to the Mohammedan conquest of Persia, is valued: "Firoozan was killed, and it is said that 100,000 of the routed army fell in the disorderly flight"; or this, with regard to Nadir's invasion of India: "It is said 100,000 people were massacred in one day in the streets of Delhi." Mr. Benjamin has, however, written a second work on Persia, and carries into his retirement a larger knowledge of that empire than is possessed by any other citizen of the United States.

ARTHUR ARNOLD.

NEW NOVELS.

Concerning Oliver Knox. By G. Colmore. (Fisher Unwin.)

The Old Adam; a Tale of an Army Crammer. By Hugh Coleman Davidson. In 3 vols. (Sampson Low.)

The Road from Ruin. By C. L. Pirkis. In 2 vols. (Spencer Blackett.)

That Unfortunate Marriage. By Frances Eleanor Trollope. In 3 vols. (Bentley.)

Annie Kilburn By William D. Howells. (Edinburgh: David Douglas.)

Claire. By the Author of "Vida." (Glasgow: Maclehose.)

Our Boy. By Jessie M. Barker. (Roper & Drowley.)

It is a real pleasure, after reading what is presumably a first attempt in fiction, to feel honestly justified in congratulating the author, and urging him to persevere in the path he has chosen. In *Concerning Oliver Knox* Mr. G. Colmore has, without doubt, written a very remarkable story, and shown dramatic powers of an uncommon order. The book is distinguished both by simplicity of material and by an intense depth of colouring. Only three characters are brought prominently into view—Oliver Knox, his wife Lavinia, and his mistress, Hester Blake, with whom, after his marriage, he carries on, *more Gallico*, an almost undisguised intrigue. Only three passions may be said to have been employed by the author for the purpose of developing his drama—love, hatred, and pitiless revenge. They are the all-absorbing motives throughout; no other considerations seem to have any place—no thought of heaven, no dread of future retribution, no regard for the opinions of mankind. The actors in the tale live a life of their own, unknown of neighbours, uncaring for religion, cut off alike from humanity and God. All this, while it forbids us to look for any sort of ulterior meaning or moral purpose in the book, undoubtedly imparts to it a weird fascination, which is, perhaps, the only effect the author intended to create. There are imperfections, no doubt, in the tale. Its incidents are intrinsically improbable, if not impossible. And there is an accumulation of ghastly horrors at the close (where the only character permitted to survive is a mouthing and moaning maniac), which suggests an almost childlike appetite for destruction on the part of the writer. Mr. Colmore may possess a healthy contempt for that modern phase of sentimentalism which would fain have Romeo and Juliet finally set up, married and happy, in a suburban villa; but he might, without risking any imputation of artistic anti-climax, have assigned some less deplorable fate than a pauper's death in a London garret to the miserable woman whose heart has been broken and temper soured, and whose twenty-two years of married life have been blasted by the merciless brutalities of the fiend she called husband. But, for all that, the book is a strong one—the strongest, perhaps, that has appeared this season—and cannot fail to make its mark. Mr. Colmore must, however, give us a longer story next time.

The author of *The Old Adam* is more to be congratulated on the treatment of his subject than on the subject itself. There is always rather an element of incongruity about the love-making of youths, who, though released from school, are still *in statu pupillari*. However, if this small difficulty can be got over, there is plenty else in the book to amuse and entertain. The easy life and rollicking pranks of a fashionable crammer's establishment furnish plenty of matter for humourous description; and the central figure, Dr. Copingstone, is really an excellent portrait of a man whose warm-hearted nature is so entirely hidden under a crust of pompous formality that he deceives even his own children. Of these, Arnold, the son, actually leaves his father's home to seek his own fortune; the daughter, Nellie, is afraid in time of trouble to confide in him. And these circumstances, together with an unfortunate element of cunning and suspicion in the doctor's own nature, are the chief causes of the complication which forms the plot of the novel. Mr. Davidson has a good deal of descriptive power, and can successfully elaborate a mystery and keep it running through three volumes without tiring the reader. As a rule, his allusions to matters of every-day fact are correct enough; but (vol. ii., p. 147), to a man standing on the sea-wall at Hastings, Beachy Head could scarcely be said to "frown out of the haze in the far *east*."

The Road from Ruin is remarkable chiefly for a hero, Gerald Chertseye by name, of provokingly weak character, who, beyond being lavishly and foolishly generous, has little claim upon our sympathy. At the opening of the story, Gerald's father, Lord Chertseye, has been dead a year, while Gerald himself, who five years previously had quarrelled with him and left England in a fit of temper, has completely disappeared. Pending news of him, his cousin, Horace Chertseye, the next heir, is presiding over Chertseye Manor by order of the Court of Chancery. Horace is a keen man of business, and fitted to make a much better manager of the estate than Gerald; but he is cold-blooded, selfish, a scoundrel, &c., &c., and the requirements of the story compel us to regard him with horror. At length Gerald, somewhere in the Australian bush, receives the news of his father's death, and immediately returns to England, almost heart-broken at the thought that his conduct may have hurried the old man into his grave. In the bitterness of his remorse, he even determines that he is no fit person to be master of Chertseye Manor, and is with difficulty saved by his friends from transferring the estate to his cousin. Though this pitch of absurdity is prevented, he persists in evading his responsibilities as a peer and a landlord; and, being supposed to have perished in a fire that has broken out in a lunatic asylum, where he had been appropriately confined, he sails again from England, leaving Horace to the enjoyment of the title and property. Worse still, he calmly resigns Violet Constable—who has loved him from a child, and for whom he himself entertains a passion—to Horace, who is also her lover, comforting himself with the reflection that she will perhaps be happier with his cousin. Meekness and resignation are estimable virtues in their place, but they are contemptible in a lover, and sure to be condemned by all novel readers.

To the jaded novel-reviewer it is a relief to come across an author whose name alone guarantees the excellence of the literary fare provided. *That Unfortunate Marriage*, by Frances Eleanor Trollope, yields to none of this lady's previous works in point of faithful and observant portraiture, with all the quiet humour which accompanies thoroughly natural description of life and manners. What more, then, is there to be said? It would be invidious to select instances of character-drawing where all, from peer to peasant, are excellent of their kind; and as for the story, that is a minor affair. One rises from the book with the feeling that one hardly remembers or cares what it has been about, in the delight of having formed a new and interesting circle of acquaintances, whose counterparts we know to exist in the world around us, and whose thoughts and ways have become so familiar that we could tell to a nicety what any one of them would say or do under any given circumstances.

As readers of Mr. Howells would be prepared to expect, *Annie Kilburn* is rather a a psychological study than a novel, having no plot whatever, and no particular ending to speak of. The heroine, or, more properly speaking, the principal subject of analysis and delineation in the book, is an unmarried woman of thirty, who desires to do some real good work with her money and her time. After a few muddles and blunders, she is just upon the point of landing herself in a situation resembling that of Alan Dunlop, so familiar to readers of Mr. Walter Besant's *Monks of Thelema*, when she is saved from committing an actual absurdity by the death of the Rev. Julius W. Peck, a devout apostle of Christian Socialism, whose example and theories have made a powerful impression upon her. No short outline could convey any idea of the quaint humour, sparkling dialogue, and subtly analytical description with which the work abounds. From this brief notice it will be gathered that *Annie Kilburn* is in a general way typical of the author's method, and exhibits no particular departure from the lines upon which Mr. Howells has earned his reputation as a writer of fiction.

Dialect is a medium which requires to be rather judiciously handled by a novelist; and to anyone intending to intersperse a work freely with it we would fain whisper, "commendat rarior usus." The Scotch of Burns, for example, has undoubted charms, which, however, are apt to produce satiety when presented in too great abundance. It is more than probable that many a reader south of the Tweed who comes across *Claire*, and glances at the opening chapter, beginning with, "Eh, Allan, lad, is that you? Dinna sit doon," &c., will close the book without going further. It is only fair to say that the base Southron who does so will miss a very pretty story. Without being exactly original, the characters are drawn with fidelity. There is also a good deal of real pathos, and here and there some touches of national humour.

A pleasant flavour of tea leaves, cathedral-town gossip, and mild flirtation pervades the

Digitized by Google

pages of *Our Boy*, and the book will no doubt be attractive enough to the class of readers who delight in these quiet scenes of every-day life. Duke Darmyn runs away, when a boy, from his drunken father, and after a while is adopted into the family of a clergyman named Meadows. He has a talent for music, and is ultimately appointed assistant organist in a neighbouring cathedral town. In the early part of his career he becomes engaged to a shallow-minded girl named Rosalie Stroud, who throws him over on account of his father, who has become a drunken tramp. This father continues to be a bar to Duke's prospects until carried off by death, after which Duke marries Kitty Meadows, the companion of his childhood. Miss Barker might with advantage study a little more variety in her plots. Readers of *Mary Elwood*, her previous work, will notice that its conditions and those of the present tale are almost precisely similar. In both stories the hero and heroine are playmates in childhood, and, after being separated by circumstances or misunderstandings, meet again and marry at the end. The fact that Mary Elwood marries a missionary, and Kitty Meadows an organist, does not do much towards diversifying the general agreement in the plan of the two books.

JOHN BARROW ALLEN.

CURRENT LITERATURE.

Life Aboard a British Privateer in the Reign of Queen Anne. Being the Journal of Captain Woodes Rogers, Master Mariner. With Notes and Illustrations by Robert C. Leslie. (Chapman & Hall.) Mr. Leslie is to be congratulated no less upon his choice of a subject than upon the manner in which he has treated it. What boy's ears will not tingle at learning that he can here read the story of a voyage round the world of two Bristol "frigots" in 1708-1711, who had the renowned Dampier for their pilot, and who rescued Alexander Selkirk from the island of Juan Fernandez? Even the romantic exploits of Sir Amyas Leigh pale before this simple narrative of hardships and dangers encountered with a temper worthy of the companions of Ulysses. From it we discover whence Defoe acquired that artless realism which is as conspicuous in *Captain Singleton* as it is in *Robinson Crusoe*. Would that our modern caterers for the appetites of boys would follow so classical an example! Mr. Leslie has unearthed his treasure from a forgotten book, of which he has unpardonably omitted to give us the full title. Wherever he transcribes from his original he uses marks of quotation; and his own comments are so apposite and illustrative that we can well believe he has left no sound ears for another to glean. To add to the charm of his volume for grown-up readers, he has had it printed at the Chiswick Press, on hand-made paper, with ample margins, and has not been sparing of italic type; while he has illustrated it with plates from his own drawings and a few woodcuts, which alike recall the old seafaring life. We know no book of this winter season which would form a more interesting and instructive present.

English Wayfaring Life in the Middle Ages. By J. J. Jusserand. Translated from the French by Lucy Toulmin Smith. Illustrated. (Fisher Unwin.) As we reviewed this book at some length (ACADEMY, October 18, 1884) at the time of its first appearance under the title of *La Vie Nomade et les Routes d'Angleterre*, we must be excused now for doing no more than giving it a hearty welcome in its new dress. The French original was published by Hachette, in their "Bibliothèque variée, format en-16," at 3f. 50c. The English translation has been augmented by about one-fourth of new matter, and has been illustrated with some sixty cuts, mostly from old MSS., but also including several modern photographs of architectural subjects. The author, whose studies we may presume to have lain chiefly in literature, was well advised in accepting the collaboration of Miss Toulmin Smith, than whom there are few more trustworthy guides among the records and MSS. of the British Museum. It is from these sources that most of the illustrations have been taken—notably from the Louterell Psalter and the Ellesmere MS. of the "Canterbury Tales." The result is a handsome volume, which may be warmly recommended to all who wish to obtain a picture of one aspect of English life in the fourteenth century. For such a pleasant introduction to the history of our own country we have to thank a French scholar, who has also made a special study of the early English drama and the early English novel. Where are we to look for the Englishman who can write—we do not say school books—but serious essays of a similar character on French history or French literature?

The Gold of Fairnilee. By Andrew Lang. Frontispiece by T. Scott. Drawings by E. A. Lemann. (Bristol: Arrowsmith.) If Mr. Lang condescends to tell a fairy tale of the Scotch border to his niece "far away on the other side of the world"—where bunyips usurp the place of fairies—and to print it for the general good, it is not for critics to examine too curiously into its substance. Even the most austere will feel that the author took pleasure in calling back to mind the simple excitements of his boyish days and the legends of his own home—the country of Scott, and Leyden, and Hogg. We cannot pretend to think that an additional charm is given by the coloured illustrations, though some are better than others; and the heavily glazed paper quickly works ruination to the binding.

Giannetta: a Girl's Story of Herself. By Rosa Mulholland. (Blackie.) As a rule, autobiographies are to be avoided; but there are exceptions, and this tasteful volume is among the exceptions. Giannetta's story is perhaps improbable, and most certainly could never have been told by an Italian peasant's child; but it is nevertheless extremely well told and full of interest. But we can imagine that its readers in the schoolroom will not be all of one mind as to the "Irish business" which occupies no small portion of the tale. The Home Rule question will give rise to lively discussions, with a decided tendency to take the side of the people against the oppressing landlords. It is almost a matter of course that the representative of the latter class should be a baronet, for authors seem to have made up their minds that the "red hand of Ulster" is to be regarded as the badge of moral depravity. Giannetta is a true heroine—a warm-hearted, self-sacrificing, and, as all good women now-a-days are, largely touched with the enthusiasm of humanity. Irish evictions call forth a display of her characteristics; and we should certainly rejoice with her if they were at an end, and that cottage industries pursued by a contented and thrifty race should make Glenmalorne an example which all the rest of Ireland would be eager to follow. The mystery of Giannetta's birth is not the only one in the story; but we must not divulge the author's secrets, which are well preserved by herself. The illustrations by Lockhart Bogle are unusually good, and combine with the binding and printing to make this one of the most attractive gift-books of the season.

Miss Hope's Niece: a Story for Girls. By C. Selby Lowndes. (Seeley.) A thoroughly healthy tone pervades this pleasantly-written tale, and enables us to recommend it without reservation. The style is natural and the incidents are of the same character, being just what might happen at any time in any English country neighbourhood. The reader is not wearied by sermons in ill disguise, but is allowed to draw for herself the moral (for there is a moral) which the story is designed to teach. Mrs. Selby Lowndes reached last year a high level with the story we then noticed—*Both Sides of the River*. She has retained it this year.

The Captain General. By W. J. Gordon. (Frederick Warne.) Really Mr. Gordon quite takes our breath away by his preface. He was born too late or too early. Could anything be less in accordance with the spirit of the age than to write a story of piracy with the deliberate intention of not dwelling on the details of crime more than was necessary? And what is more strange he has carried out his intention; and, though there is plenty of downright wickedness and fighting, and any amount of material for one of the most sensational stories of the day, there is not an attempt "to pile up the agony" anywhere throughout the book. Even in the matter of bad language he has not made anything like the best of a more than usually splendid opportunity. Mr. Gordon, indeed, seems to have set himself the task of trying to realise for us, in the spirit rather of a historian than a novelist, what a voyage such as that of the *Batavia* was like in the third decade of the seventeenth century. It was a voyage in a Dutch East Indiaman, with mutineers on board—a voyage of which many authentic records have been left, and one of no little historical interest; for the *Batavia* was the flag-ship of a fleet of eleven which, freighted with emigrants, set forth on an attempt to colonise New Holland. The fleet met with a fearful storm, in which all the ships except the *Batavia* foundered, and she only escaped the winds and waves to fall a prey to the shoals of Houtman's Abrolhos. There, on the miserable coral islands, in the absence of the brave Koopman Pelsart, who had set off in search of assistance, a terrible tyranny was established by one Jerome Cornelis, the Captain General, as his dupes and accomplices agreed to call him. What revolts and murders, treacheries and slaughters, stained his short dominion, and what happened when Pelsart returned in the "Saardam," we will not say; but we can recommend all who love true tales of adventure, told in terse and nervous English, to read the book and discover for themselves. They will find the meat quite strong enough without the seasoning of superfluous expletives or extravagances of imagination. In the simple force with which the whole narrative is brought before them, they will be reminded of Defoe; and if they be politicians, they will find much wholesome food for reflection in the career of the Captain General, and those who were foolish enough to trust in him.

Dulcie and Tottie. By Evelyn Everett-Green. (Nelson.) This is an interesting and thoroughly wholesome story, in which all the characters are well-drawn, and all the incidents well-chosen and arranged; and, though we are not quite satisfied that Gilbert should take Norman's birthright, it is rather because the former was such a contemptible character than because we wish Norman to become a very wealthy banker. Dulcie and Tottie are two delightful children, and Aunt Mostyn and Aunt Susan the dearest of old maids. The contrast between the new and the "old-fashioned" systems of education is well, and not too strongly, drawn, and the religious spirit which underlies the

Digitized by Google

whole story is wholly free from sectarianism and cant.

The Battlefield Treasure. By F. Bayford Harrison. (Blackie.) There is a good deal of antiquarian knowledge about Shropshire in this little book, and rather a thin story running through it. But the moral is excellent.

Arm-chair Essays (Ward & Downey) is, like its predecessor by the same author, *Three-Cornered Essays*, a collection of desultory papers on a great variety of subjects, mostly, however, of a familiar and homely kind. They deal with such topics as "The Ethics of Dining," "Two Peeps into Spain," "The Inner life of a London Hospital," "Some Experiences of Weddings," &c. The are very agreeably written, and are likely to subserve the armchair delectation contemplated by the author. As indicated by the title, they make no pretence at grappling with serious subjects, though they contain ample indications that the author is a thoughtful as well as a well-read man. His talent for accurate observation of the humorous aspects of human life, and for a corresponding description of them, makes his book very pleasant reading.

RECENT THEOLOGY.

The Comprehensive Teachers' Bible. Containing the Old and New Testament according to the Authorised Version, together with new and revised Helps to Bible Study, a New Concordance, and an Indexed Bible Atlas. (Bagster.) This "Teachers'" Bible has some excellent features, though we do not think that on the whole it compares favourably with the similar work issued by Messrs. Eyre & Spottiswoode in 1880. It has nothing corresponding to the notes containing various readings and renderings by Profs. Cheyne, Driver, and Sanday, which formed the most valuable part of the earlier book; and the anonymous articles on the natural history and ethnology of the Bible, and similar subjects, though good, are not equal to those contributed by eminent specialists to Messrs. Eyre & Spottiswoode's volume. The list of personal names, with their interpretations, is quite out of date, the results of Assyriological discovery, in particular, being almost wholly ignored. On the other hand, the account of the several books of the Bible is well-written and scholarly. The author's usual point of view is, indeed, that of rigorous "orthodoxy" with regard to critical questions; but he neither ignores the existence of views opposed to his own, nor vituperates those who advocate them. The unity of the Book of Isaiah is treated as an open question, and the late date of Ecclesiastes is admitted without hesitation (though in the "Chronological Arrangement" the book is ascribed to Solomon). In the remarks on the "Song of Songs" the writer shows no sympathy with the whimsical delusion which has converted a pretty pastoral comedy into a solemn allegory. The Concordance we cannot pretend to have examined in detail, but we note that the passages referred to seem to be judiciously selected for their intrinsic interest or their familiarity as quotations. A feature that deserves approving mention is the index of passages of the Old Testament referred to in the New Testament. The handy size of the volume is a not unimportant point in its favour. Its most serious defect as a "Teachers' Bible"—the absence of the Apocrypha—is shared, so far as we know, by all other works of similar character.

The Gospel of St. John: an Exposition, Exegetical and Homiletical, for the Use of Clergymen, Students, and Teachers. By Rev. Thomas Whitelaw. (Glasgow: Maclehose.) It would not, perhaps, be easy to say anything very new or original on the *quaestio vexata* of the authorship of the Fourth Gospel, and Dr. Whitelaw probably makes no pretension of the kind. But the subject, of course, falls to be discussed, and in his introduction he gives a very good summary of the leading evidence for the Johannine authorship. The main objections to the authenticity are very fairly stated, and the stereotyped answers supplied. It may, however, be pointed out that one important branch of the discussion is entirely omitted, viz., the relation of the Johannine Gospel to the Apocalypse. The exegetical commentary, while remarkably full, is at the same time a marvel of compression, and brings together in an admirable way all the best opinions upon every point of importance. Evidently, it has been a work of great labour and patience. The homiletical sections will, doubtless, prove suggestive to the preacher; and altogether the work seems to be admirably adapted to its purpose.

The Epistle to the Galatians. By the Rev. Prof. G. G. Findlay, Headingley College, Leeds. (Hodder & Stoughton.) This is a recent addition to "The Expositor's Bible," edited by the Rev. W. Robertson Nicoll; and, to those who are acquainted with the previous volumes, it can only be necessary to say that it well maintains the character of the series as a commentary on the Bible at once popular and evangelical, and of high literary excellence. Prof. Findlay divides the epistle into five sections of varying length, according to the subjects treated of, viz., The Prologue (chap. i. 1-10), The Personal History (chap. i. 11—ii. 21), The Doctrinal Polemic (chap. iii. 1—v. 12), The Ethical Application (chap. v. 13—vi. 10), and The Epilogue (chap. vi. 11-18), and devotes to each as many chapters as are required for its adequate treatment. His exposition of the apostle's doctrine is clear and able, though, of course, the propositions that "righteousness of character springs out of righteousness of standing," and that "God makes a man righteous by counting him so," will not be universally accepted as correctly summing up Paul's doctrine of justification. Still, it will be generally felt that the writer's point of view is very much that of the apostle himself. Prof. Findlay shows a generous breadth of mind in his graceful acknowledgment of the labours of Dr. Pfleiderer, "whose delicate and sympathetic interpretation of Paul's teaching (in the Hibbert Lectures) has made all students of the apostle his debtors, however much they may quarrel with his historical criticism"; and, in dealing with the practical part of the epistle, he writes with fervour and eloquence.

A Commentary on the Revised Version of the New Testament. By the late W. G. Humphry. New Edition, Revised. (S.P.C.K.) A new edition of this scholarly work will be welcome to all students of the New Testament. It is, in fact, a commentary on all the more important English translations, compiled with care and accuracy, and referring when necessary to the original Greek, but not so constantly or elaborately as to deprive the work of interest for those who are not Greek scholars. The author was himself a member of the company of revisers of the New Testament, and is therefore fully aware of the exact significance of all the changes made in their version. It is scarcely possible to estimate the labour bestowed on that version till we have used such a commentary as Mr. Humphry's.

NOTES AND NEWS.

Mr. Alfred Austin has in hand a new volume which, under the title *Love's Widowhood, and other Poems*, will shortly be published by Messrs. Macmillan & Co.

Messrs. Longmans have in preparation an uniform popular edition of Macaulay's Works, together with his Life and Letters by Sir George Trevelyan. The whole will make five volumes, at half a crown each. The first volume, containing one half of the History, will be published on January 15.

Messrs. Trübner & Co. announce a new series to be issued under the title of the "Lotos Series." The volumes will be printed on a specially made paper, and will be issued in a neat and artistic binding; the type will be large and legible, and the paper of excellent quality. It is intended to include only works of approved excellence; and they will either contain copyright matter—*i.e.*, matter which is to be found in no other edition, or they will be reprints of such works of standard worth as are not generally accessible in a handy form. The volumes will be issued at a uniform price of 3s. 6d., while one hundred special large paper copies, on Dutch hand-made paper and numbered, will be printed for sale, at an advanced price, to book-lovers. One of the early volumes will be a revised and enlarged edition of *The Breitmann Ballads*, by Mr. Charles G. Leland, with a new preface and additional poems.

Dr. Robert Brown has undertaken to edit for the Hakluyt Society the travels of Al Hassan ibn Mohammed Abwazzan Al Fasi, the Moorish geographer, better known as Leo Africanus, Leo Johannes, or Leo Eliberitanus. He was a Granadian of rank, who, after visiting many parts of Morocco and Eastern Barbary, still only vaguely known, was captured by Venetian corsairs when returning from Egypt, and presented as a slave to Leo X., who converted him to Christianity. It was during his residence in Italy that he wrote his famous work, though it would appear that he afterwards returned to Morocco, abjured Christianity, and died at Tetuan in the third decade of the sixteenth century. The new edition will contain a comprehensive introduction on the subject of the author and his travels. The notes, which will comprise the result of the editor's many visits to the Barbary States, and of an exhaustive study of the literature relating to them, are intended to elucidate the old traveller's narrative, and to describe the changes which have taken place since he witnessed the opulence of Al Islam in Northern Africa.

Dr. W. Robertson Smith has had printed in elegant form a memorial of the dinner in the hall of Christ's College, Cambridge, which he gave on December 11, to celebrate the completion of the ninth edition of the *Encyclopaedia Britannica*. It was a notable gathering, to commemorate an event no less notable; and the guests will be glad to preserve this interesting souvenir.

Under the title *Faithful and Unfaithful*, Messrs. Macmillan & Co. will publish an American novel on the subject of divorce, by Miss Margaret Lee. It is understood that the book has attracted the attention of Mr. Gladstone.

Mr. Reginald L. Poole, one of the most energetic of the editors of the Wycliffe Society, has written a little volume on *Wycliffe and Early Movements of Reform* for the series entitled "Epochs of Church History."

Messrs. Macmillan announce a book on *The Swiss Confederation*, by Sir Francis Ottewell Adams, lately minister at Bern, and Mr. C. D. Cunningham.

The next volume in the "Statesmen" series will be *Walpole*, by Mr. John Morley.

Messrs. Blackwood have in the press *Body and Soul*: a Romance in Transcendental Theology, by Mr. Frederick Noel Paton, the

Digitized by Google

editor of a recent volume of selections from Chaucer in the "Canterbury Poets."

Cogitations and Conclusions: a Commonplace Book of Passing Thoughts, by O. F. Routh, is the title of a volume announced for immediate publication by Mr. Elliot Stock.

CASSELL'S *Encyclopaedic Dictionary*, which has just been completed, will now be re-issued in monthly volumes, the first of which will appear on January 24.

THE Aristotelian Society will hold its first meeting for the new year on January 14, when Mr. M. H. Dziewicki will read a paper on "The Scholastic Philosophy," which will set forth the standpoint of Neo-Scholasticism. Dr. A. Bain is to read a paper on January 28 on "The Empiricist Position." Two symposia are announced—one on the subject "What takes place in Voluntary Action?" and one on "The Nature of Force," to which Dr. Bain, Prof. Dunstan, and Dr. Johnstone Stoney will contribute.

MR. JOSEPH JACOBS has been elected a corresponding member of the Royal Academy of History, at Madrid.

LORD COLERIDGE, as chairman of the Marlowe Committee, has issued the following appeal: "* * * * a subscription has been set on foot by a committee of gentlemen to erect some memorial at Canterbury in honour of Christopher Marlowe. The town council of that city are very desirous that the memorial should be placed there, and have expressed their desire formally through the town clerk. The master of the grammar school at Canterbury very cordially supports the object; and I am informed, though I cannot speak on this matter with the same certainty, that the dean and chapter are favourable to it. Cambridge, the university to which Marlowe belonged; Deptford, the place where he was killed; and Westminster Abbey, which contains the monuments of so many of his great contemporaries and successors, have, for various reasons, been deemed places less suitable than Canterbury for the site of the proposed memorial. Into the much vexed questions as to Marlowe's position among great poets, as to his disbelief in Christianity or even in a God, as to his character and death, I do not presume to enter. Three hundred years have passed away since, in 1588, "Tamburlaine the Great" was first produced upon the stage; and no one who has ever read "Faustus" or "Edward II." can doubt that Marlowe was a great poet, endowed with marvellous dramatic instincts and power of dramatic delineation. There may be, perhaps, reasons for not commemorating him in a building dedicated to the worship of Our Lord; there can be none, as I think, against endeavouring to preserve the memory of so great a genius in the city where he was born, and where he received the larger part of his education.

"Mr. F. Rogers, of Toynbee-hall, will receive any subscriptions which may be contributed to this object."

MESSRS. TILLOTSON & SON, of Bolton—well known for their enterprise in the publication of novels in serial form through newspapers—have opened an office at New York, with Mr. Phil. Robinson as manager. At Berlin, they are represented by Herr Paul Jüngling.

WE have received from the office of the *Publishers' Circular* (Sampson Low) the usual analytic table of books published in England during 1888. With somewhat mixed feelings we record that the output of the year shows a very large increase, the total number of new books and new editions amounting to 6591, as compared with 5686 in the twelvemonths previous. Indeed, we believe this total to be a "record," for, on looking back through the last half-dozen years, we find that the highest figure hitherto reached was 6373 in 1884, after which date there was a heavy fall, the number in 1886 being only 5210. Considering the difficulties of classification, it is hardly worth while to examine the several divisions; but it is probably not altogether accidental that the total for fiction has risen from 432 in 1882 to 1,314 in 1888, or more than threefold in six years. It is interesting to learn that about 40 per cent. of all publications appear in the last quarter of the year, while January and February are far the least prolific months.

TRANSLATION.

"HARK, THE HERALD ANGELS SING!"

AUDI angelos cantantes,
Voce clara nuntiantes:
"Regi novo gloria!
Pax in terris: jam peccata
Solvit hominum ingrata
Deus pro clementia!"

Gentes, surgite beatae;
Celebretis nunc elatae
Laudes cum caelestibus:
"Natus est in Bethlehemo
Christus noster": ita nemo
Non proclamet vocibus.

Christus caelis adoratus
Dominusque consecratus
In aeterna secula;
Satus Virgine apparet,
Quando tempora declaret
Certa aetas longula.

Ave Deum, quem velatum
Corpore et procreatum
Debili aspicimus!
Te, Immanuel dignantem,
Jesu, et associantem
Cum terrenis colimus.

Ave principem divinum
Pacis! ave genuinum
Sanctitatis Filium!
Cui surgenti pennae vita
Atque luce tam petita
Sanant mentes omnium.

Gloriam deponit volens,
Homines perire noleus
Qui errabant devii;
Natus altis ut tollantur
Caelis atque renascantur
Ipsi terrae filii.

Cairo: Christmas, 1888. A. H. S.

MAGAZINES AND REVIEWS.

THE *Antiquary* begins the new year well. Mr. Talfourd Ely's paper on "Recent Archaeological Discoveries" is very useful, as it gives in a small compass an account of much that has been done in unearthing the treasures of dead civilisations. This is only a first part. We shall look anxiously for what is to follow. No cultured Englishman can read it without a certain sense of shame and sorrow. There was a time when England took the first place in archaeological discovery. What is she doing now? Mr. Theodore Bent's article on "The Sun Myths of Modern Hellas" shows a competent knowledge of a difficult subject. Modern Greek folklore has not been neglected, but we cannot say that all has been done in the way of collection and elucidation that is needed. Wave after wave of barbarian invaders have swept over the land. Christianity has replaced heathenism, and the Moslem for many years had his hand on the throat of the Frank. The Latin and the Greek churches have made Greece their battle-ground; and, notwithstanding all that has gone by, the old fireside stories are with us still. The sun is an object of reverence (shall we say adoration?) just as he was untold centuries ago. Thomas Doggett, the actor, is the subject of an admirable paper by Mr. C. A. Ward. Doggett was a man of many activities. If he was not brilliantly successful in anything, we do not know that on that account he is less worthy of sympathetic study. Such men as he tell far more on their age than the men of one or two ideas, unless the latter are furnished with transcendent genius. Could Doggett have chosen for what he would be remembered, we do not doubt he would have said his stern, uncompromising Whiggery. "The House of Hanover and the Protestant succession" had no more devoted adherent. Such a blind goddess is fate, however, that we do not doubt that nine out of every ten who know his name have heard of it in connexion with the prize he gave for a rowing match by Thames watermen. The prize is yet given, but the contest now attracts little notice. The customs of the manor of Yeatminster are printed without note or introduction of any kind from Watkins's *On Copyholds*. We are glad to meet with them here, as they contain one or two curious things. The timber growing on the copyhold lands was the lord's, not the tenant's; but if the lord would not permit the tenant to get needful timber out of the woods, he might fell timber on his own land for his own use..

CORRESPONDENCE.

DR. JOHNSON'S LETTERS.

3, The Crescent, Oxford: Jan. 1, 1889.

I have entered into an engagement with the Delegates of the Clarendon Press to collect and edit Dr. Johnson's Letters. A very large number of them are in print, but scattered through many volumes; many others still remain in manuscript. Since I published my edition of Boswell's *Life of Johnson* I have, through the kindness of correspondents, received copies of not a few which I had never before seen. Many, I have reason to know, still remain hidden away in the desks of collectors of autographs.

May I through the ACADEMY appeal to the owners of such letters to furnish me with copies? If they would trust me with the originals they

Digitized by Google

would greatly add to the favour. The registered letter-post is a very secure mode of transmission. Whatever I receive shall be returned without delay. If only a copy is sent I venture to ask that the spelling and punctuation of the original be exactly followed. In the case of those letters which have been published, I would suggest that they should be collated by their owners, and that I should be informed of any inaccuracy. Johnson's handwriting is not always clear, and not a few errors have been committed by the copyists.

As I hope to supplement this work by a similar edition of the letters of Boswell, I venture to make the same requests in his case also.

G. Birkbeck Hill.

Milton and Cædmon.

Oxford: Dec. 31, 1888.

The question raised by Prof. A S. Cook in the Academy of December 29, 1888 (p. 420) as to the supposed effect made upon the mind of Milton, in the production of "Paradise Lost," by the publication, by Fr. Junius, of the paraphrastic poem of the so-called Pseudo-Cædmon, is one which has not attracted so much attention as so curious an enquiry demanded. It may be true that Milton wrote in his commonplace book "De poeta Anglo subito divinitus facto mira et perplacida historiola narratur apud Bedam"; but neither Prof. Cook nor Sir Henry Ellis, in the introduction to his collection of plates copied from the Bodleian MS. (*Arch.* vol. 24), nor Mr. Thorpe, in his observations on the history of Cædmon (*Arch., ibid.*, p. 341), connect the "Paradise Lost" with the elaborate details given in the Bodleian MS. volume. Having had occasion some years ago to investigate this matter in my *Palaeographia*, I was convinced that the whole of the early portion of Milton's grand poem owed its origin entirely to the publication by Junius —for the following reasons.

The plot of the early portion of the Pseudo-Cædmonic paraphrastic history so much resembles that of "Paradise Lost" as to have obtained for this Cædmon the name of the Saxon Milton (Wright, *Biogr. Brit. Liter.*, p. 198). On the other hand, it appears to me that Milton borrowed his plot from the Anglo-Saxon poem, and should rather be called the English Cædmon.

The MS. of Junius was published in 1655. About this period Milton was engaged upon his History of England previous to the Norman Conquest, and it cannot be doubted that such a publication would find its way to him. "Paradise Lost" was published in 1667, but its composition occupied a number of years (see *Life of Milton*, by his nephew, Edward Philips, Pickering's edition of Milton's Poetic Works, 1826, vol. i., p. lxii.); and we further learn from Philips that it was at first intended for a tragedy:

"And in the fourth Book of the Poem there are six verses which, several years before the poem was begun, were shewn to me and some others as designed for the very beginning of the said tragedy."

These verses commence with what stands as the thirty-second line of the fourth book. Now, it will be at once remembered that the first three books of the poem are occupied with the history of the expulsion of the devil and his angels from heaven, their discussions, &c.; and it is precisely this portion of the Anglo-Saxon paraphrase which is so strikingly similar to "Paradise Lost." We cannot, therefore, suppose that Milton was ignorant of the publication of Junius, nor can we do otherwise than conclude that the first three books of "Paradise Lost" were an after-thought, entirely induced by the plot of the paraphrase and its publication.

J. O. Westwood.

Chaucer's "Eclympasteyre."

London: Dec. 27, 1888.

In Chaucer's "Book of the Duchesse," l. 167, there is mention of "Morpheus and *Eclympasteyre*, That was the god of slepes heyre." Prof. Skeat, in his excellent edition of Chaucer's Minor Poems, suggests that Eclympasteyre is a name evolved by Chaucer himself out of Ovid's *Icelon* (accusative) with the addition of *plastera* (πλαστῆρα). He supposes that Chaucer may have seen a MS. of Ovid in which *plastera* was given as a gloss upon *Icelon*. Prof. Skeat refers to other explanations proposed by Ten Brink and Mr. Fleay (who agree with him in regarding the first part of the name as a corruption of *Icelon*), and adds that "Other suggestions have been made, but are not worth recording." If none of these are better than that of Sandras (*engle imposteur ! !*), this sentence is certainly just. Perhaps the conjecture which I am about to offer may deserve no better fate. It is certainly somewhat adventurous; but I think it is at least not more so than Prof. Skeat's own.

It seems to me conceivable that some very late mythologist may have invented the word Ἐκλιμπαστήρ (as if from a verb, *ἐκλιμπάζω, suggested by ἐκλιμπάνω), intending it to mean "the god who causes ἔκλειψις, or swoon." On this supposition Chaucer's form is perfectly correct, though the question whence he obtained the name remains still unsolved. It is difficult to imagine that a name so plausibly Greek-sounding can have been the result of so violent a distortion as that assumed by Prof. Skeat.

Henry Bradley.

The Word "Bore," a Tiresome Talker.

8 St. George's Square, N.W.: Dec. 28, 1888.

The earliest instance of this got by the readers for our Philological Society's New English Dictionary, ed. Murray and Bradley, was 1812. But in looking through *The St. James's Chronicle* for 1769 I find an account of the word (in the above sense) in the number of Tuesday, August 29, to Thursday, August 31, p. 4, col. 2, by its real or apparent inventor. He says that the word has been banded about by some correspondents, who

"seem as little able to speak to the Purpose, and to its Signification, as if it was a Chinese Word. To end, therefore, all Controversy, Enquiry, and future Scribbling about this very emphatical Word, I shall at once open the Understanding of your Readers, and introduce to them a Word, a Monosyllable, that speaks and means more than Pages of other Words. I had the Honour to invent the word *Bore*, which has been received, adopted, and continually made a Flower of Speech, by those who, having more Fashion about them, and superior Ideas, should govern the Language, as well as the Country.

"In short, a *Bore*, properly speaking, is a Man that will find Tongue, if you will find Ear; but as Patience, Dullness, and many other Virtues, we have not, must constitute a proper Object for *boring*, we always steal off, and leave the Auger to bore into those Sculls, who [*sic*], having a proper Thickness and a peculiar Kind of Wood about it [*sic*], will bear the operation without murmuring.

"My Father's Word for this intolerable Animal was a *Proser*, which has some Meaning; but surely, Mr. Baldwin, there is as much Difference between *Bore* and *Proser*, as there is between the Genius of our Fathers, and the Refinement of their Sons.

"Your's, Mr. Printer,

"A Maccaroni."

We sadly want the old newspapers read and compared with our Dictionary, which is but an excellent foundation for the complete building. There are very few words and meanings for which earlier instances cannot be found.

F. J. Furnivall.

On Translating Heine.

London: Dec. 31, 1888.

While gratified by your reviewer's very kind notice of my monograph on Heine, I should like to explain that the few translations to which he alludes as unsatisfactory are in no instance my own, save the lion-fountain song in "Almansor." I despaired—as who would not?—of giving an adequate metrical translation of this exquisite fragment, and concluded that a rendering in rhythmic prose would be as much more acceptable to the reader as it would be more truly interpretative.

I cannot agree with your reviewer in his assertion as to the desirability of absolute exactitude. It seems to me that a *literal* prose rendering of an imaginative lyric is an impermissible infliction upon the reader, and an outrage to the original. I never imagined that even a reader ignorant of German would infer the literalness of my version, which is so obviously a tentative effort at the accomplishment in prose of what is practically impossible in verse. To give expression to merely a personal opinion, I would add that I think rhythmic prose is, in nine instances out of ten, superior to verse as a medium of translation. The French have long recognised this. For example, they certainly know Heine much more truly through Gérard de Nerval's and other prose renderings than do those of our countrymen who are ignorant of German through the innumerable metrical versions which have been published by English and American writers in recent years.

William Sharp.

"Mind and Matter."

Ipswich: Dec. 31, 1888.

I can give Dr. Furnivall an earlier reference for the lines—

"What is mind? No matter.
What is matter? Never mind."

than the sixties.

In that amusing but ephemeral publication called *The Month*, which was brought out by Albert Smith and John Leech during the Exhibition of 1851, there will be found on page 147 the above words without any comment or reference to author.

W. E. Layton.

Sare: Dec. 31, 1888.

Surely the germ, at least, of this dates much farther back:

"When Bishop Berkeley said 'there was no matter,'
And proved it—'twas no matter what he said."
(*Don Juan*, canto xi. 1.)

But I believe it to be earlier even than Byron's day. I am out of the way of books of reference, but is there not a French epigram on the subject, and an English imitation of it by the wits of Berkeley's own time, or soon after? At least, such is my impression. Prof. Key may have improved the form, but the idea is sufficiently obvious to have occurred more than once.

Wentworth Webster.

APPOINTMENTS FOR NEXT WEEK.

Monday, Jan. 7, 5 p.m. London Institution: "Art and Artist-," with Illustrations, by Mr. H. Furniss.

8 p.m. Victoria Institute: "Colours in Nature," by the Rev. Dr. F. A. Walker.

8.30 p.m. Geographical: "Journey over the Central Plateau of Africa, from Natal to Benguella, and past the Sources of the Zambesi to the Sources of the Congo," by Mr. F. S. Arnott.

Tuesday, Jan. 8, 3 p.m. Royal Institution: "Clouds and Cloudland," adapted to a Juvenile Auditory, V., by Prof. Dewar.

7 p.m. Metropolitan Scientific Association: "Gasteropods," by Mr. S. Pace.

8 p.m. Biblical Archaeology: Anniversary Meeting.

8 p.m. Civil Engineers: "The Compound Principle applied to Locomotives," by Mr. E. Worthington.

Digitized by Google

8.30 p.m. Anthropological: "The Distribution and Density of the Old British Population of Hampshire," by Mr. T. W. Shore; "The Monument known as 'King Orry's Grave,' compared with Tumuli in Gloucestershire," by Miss A. W. Buckland.

WEDNESDAY, Jan. 9, 7 p.m. Society of Arts: Juvenile Lecture, "How Chemists work—an Example to Boys and Girls," II., by Dr. H. E. Armstrong.

8 p.m. Geological: "The Growth of Crystals in Igneous Rocks after their Consolidation," and "The Tertiary Volcanoes of the Western Isles of Scotland," by Prof. J. W. Judd.

8 p.m. Microscopical: "The Special Internal Anatomy of *Uropoda Kraneri*, by Mr. A. D. Michael; "Reproduction and Multiplication of Diatoms," by the Abbé Count F. Castracane.

8 p.m. Elizabethan: "The Educational Value of Art," by Mrs. S. A. Barnett.

THURSDAY, Jan. 10, 6 p.m. London Institution: "Pygmies," by Prof. Flower.

8 p.m. Electrical Engineers: Inaugural Address, by the President, Sir William Thomson.

8 p.m. Mathematical: "Results of substituting Differential Symbols in the General Quadric Ternary Form, and Operating on the Product of Two or more Forms of any Order in Terms of Second Differential Coefficients only," by the President; "A Theorem in Combinations," by Mr. R. W. Christie.

8.30 p.m. Antiquaries.

FRIDAY, Jan. 11, 7.30 p.m. Civil Engineers: Students' Meeting. "Refrigeration and the Artificial Production of Cold," by Mr. G. A. Becks.

8 p.m. New Shakspere: "The Distinction between Classical and Shaksperian Plot, illustrated by the Recasting of 'Macbeth' in Classical Form," by Mr. R. G. Moulton.

SATURDAY, Jan. 12, 3.45 p.m. Botanic: General Meeting.

SCIENCE.

SOME GEOLOGICAL BOOKS.

Geological History of Lake Lahontan. By Israel Cook Russell. (Washington: Government Printing Office.) In that region of the Far West which lies between the Rocky Mountains on the east and the Sierra Nevada on the west is a vast stretch of country, for the most part arid and desolate, known to the geographers of the United States as "The Great Basin." Cut off from connexion with the ocean, the surface drainage of the country collects in lakes, which are commonly saline and alkaline, while their shores form desert-like tracts, relieved only by a few salt-loving plants. Some of the shallow sheets of water are known as "playa lakes," since they evaporate to dryness in the summer and their beds become reduced to smooth mud plains, or playas. Geological exploration in Nevada has shown that at a comparatively recent period there must have existed in this area two vast sheets of water, which have been termed Lake Lahontan and Lake Bonneville. Mr. Russell, working on the geological survey of the Great Basin under Mr. Gilbert, has for some years past made a special study of the former of these lakes; and the results of his labours are presented in the work before us, which forms the eleventh volume of the fine series of Survey Monographs. The ancient lake described in this monograph takes its name from Baron La Hontan, an early French explorer of the head-waters of the Mississippi. Occupying a depression along the western border of the Great Basin, at the base of the Sierra Nevada, it must have covered a surface of more than 8000 square miles. A careful study of this fossil lake has led to the conclusion that it did not overflow; and consequently it must have retained all the mineral matter which was brought in by tributary streams, and was eventually deposited either as lacustrine sediments, or as tufaceous precipitates and other desiccation-products. Among these deposits is the curious crystalline tufa known as "thinolite," which has been elaborately examined by Prof. E. S. Dana. It may be remarked incidentally that the volume contains much good chemical work, relating especially to the composition of lake-waters and lacustrine deposits. To a geologist one of the most interesting inquiries is that relating to the age of Lake Lahontan. It undoubtedly existed during the Quaternary period, and probably did not finally dry up until comparatively recent times. Indeed, the discovery of a chipped implement of obsidian in one of the upper lacustrine deposits leads to the conclusion that the final rise of the lake must have been witnessed by man. Never before has the history of a vanished lake been so thoroughly worked out in all its aspects—geological, chemical, physical, and biological. Mr. Russell is to be congratulated on the publication of his monograph—a volume presenting that thoroughness of execution which of late years has characterised all the work of the geological survey of the United States.

Bömmelön og Karmöen med omgivelser, geologisk beskrevne. Af Dr. Hans Reusch. (Kristiania: P. F. Steensballe.) Bömmelö and Karmö are two large islands near the mouth of the Hardanger Fjord, on the coast of Norway. Their geological structure has been carefully studied by Dr. Reusch, of the geological survey of Norway, whose results are now given to the world in the form of a quarto volume of nearly 400 pages. The islands and the neighbouring mainland consist of archaean, primordial, and silurian rocks, offering in many places a fine field for observation and speculation on metamorphic phenomena. Evidence of the operation of mechanical forces in modifying the structure of the rocks is abundant and striking. Not only have the hard pebbles of certain conglomerates been so squeezed as to be pressed flat, and stretched out in definite directions; but basic eruptive rocks have become foliated, while granites have, in many cases, acquired a gneissoid structure. Dr. Reusch holds the opinion that sedimentary rocks may become altered by regional metamorphism to such an extent as to be finally protruded as veritable eruptive masses, and thus he seeks to explain the origin of certain granites in the area under examination. English geologists, whether they accept his views or not, will be grateful to the author for his concession to their linguistic weakness by having appended to his work a copious "summary" in English. They may not, perhaps, care to follow him into the details of his work; but they will assuredly be glad to learn the conclusions of so experienced an observer, especially as these conclusions may be helpful in attacking the perplexing problems suggested by the Scottish Highlands. In fact the Highlands of Scotland and the peninsula of Scandinavia form but a single orographical system, cut in twain it is true by the depression of the North Sea, yet essentially one in structure and origin. At the present time, when the subject of Highland architecture is provoking so much discussion in geological circles, Dr. Reusch's work is peculiarly welcome; for if it does not disclose any very novel views, it is at least a substantial contribution to the subject of dynamic metamorphism.

The Minerals of New South Wales, &c. By A. Liversidge. (Trübner.) Fourteen years have passed since Prof. Liversidge first published a general description of such of the minerals of New South Wales as had then come to his knowledge—a work which at once stamped him as a high authority on the mineralogy of the colony. The handsome volume now in our hands is an expansion of the original compilation, strengthened and improved, however, in a variety of ways and accompanied by the reprint of several papers on rocks and meteorites. The remarkable collection exhibited by the author in the Colonial Exhibition at South Kensington will be fresh in the recollection of English mineralogists, and may be referred to in illustration of his zeal in collecting local minerals. Most of the descriptions in the present volume are from the author's personal observation of specimens, while many of the analyses are from his own laboratory in Sydney. As coal is the most important mineral product of New South Wales, his full account of the coals of the colony and their mode of occurrence is peculiarly welcome, though fastidious mineralogists might object to the introduction of such details in a work on pure mineralogy. The subject of gold is also treated with much fulness. A striking feature in the volume is an excellent map of the colony, showing, by means of colours, the geographical distribution of those mineral substances which are of economic value. It would be well if each of the Australian colonies possessed a record of its mineral resources as complete as that which Prof. Liversidge has presented to the oldest and richest of the group.

Geology for All. By J. Logan Lobley. (Roper & Drowley.) Much of Mr. Lobley's life has been devoted to the interests of geology, and he has frequently had occasion to expound his favourite science on the platform. A course of lectures, delivered some time ago at the City of London College, forms the substance of this little volume. It is with much justice that Mr. Lobley, in his introductory chapter, laments the lack of interest shown by many intelligent people in the teachings of geology. Taking six representative counties in England, he shows that out of a population of 5,874,174 there are only 157 fellows of the Geological Society or members of the Geologists' Association. The aim of the present work is to awaken some interest in geological studies, and especially to arouse schoolmasters to the necessity of introducing the elements of the science to their classes, so that intelligent lads may not leave school without some knowledge of the structure of the land they live in. Mr. Lobley's *Geology for All*, though not free from faults, ought to assist in this laudable work. It presents in simple, clear, and readable form an introduction to the general principles of geology, and a broad sketch of the history of the stratified rocks.

Science and Geology in Relation to the Universal Deluge. By W. B. Galloway. (Sampson Low.) Dissatisfied with the glacial theory of modern geologists, the Rev. W. B. Galloway here seeks to displace it by reviving the old diluvial hypothesis, as held by Buckland and other geological thinkers of a former age. The author endeavours to explain the phenomena of the drift as the effects of a universal deluge, due to a sudden change in the position of the earth's axis of rotation. He assumes that a vast land area which formerly occupied the position of the Pacific Ocean was submerged, and thus shifted the earth's balance. From some of the phenomena of terrestrial magnetism it has been supposed that the earth has a nucleus which revolves differently from the main mass of the earth; and to satisfy the conditions of this dual rotation Mr. Galloway interposes between the nucleus and the rest of the globe a layer of quicksilver, so that when the equilibrium of the earth was disturbed and the main body had altered the position of its axis, this free nucleus retained its original rotation in a mercurial bath. But perhaps the oddest notion in the book is that which is advanced to explain, in whole or in part, the submergence of the ancient land of the Pacific. The author believes that chalk and flint are of meteoric origin, and that this accession of new material caused a flow of water to the opposite side of the earth. It certainly requires some ingenuity to connect the flood with the origin of chalk and flints; but it is a pity that the ingenuity appears to be so misdirected. No amount of keen reasoning can lead to sound conclusions if the premises are utterly false; and we fear that most geologists will regard

Digitized by Google

Mr. Galloway's premises—at any rate so far as the nature of chalk and flint is concerned—as pure figments of the fancy.

SCIENCE NOTES.

Dr. Croll, has just completed a volume on *Stellar Evolution and its Relation to Geological Time*. It will be published immediately.

The Institution of Electrical Engineers—formerly known as the Society of Telegraph Engineers and Electricians—will hold their first meeting for the year on Thursday next, January 10, at 25 Great George-street, Westminster, when the new president, Sir William Thomson, will deliver his inaugural address.

PHILOLOGY NOTES.

Messrs. Trübner & Co. will publish immediately, as a new volume in their "Oriental Series," *The Life of Hiuen-Tsiang*, by the Shamans Hwui Li and Yen-tsung, with a Preface containing an Account of the Works of I-Tsing, by Prof. Samuel Beal. The present volume is intended to supplement the *History of the Travels of Hiuen-Tsiang* (Si-yu-ki), already published in two volumes, and entitled "Buddhist Records of the Western World." The original, from which the translation is made, is styled "History of the Master of the Law of the three Pitakas of the 'Great Loving-Kindness' Temple." It was written, probably in five chapters, in the first instance by Hwui-li, one of Hiuen-Tsiang's disciples, and afterwards enlarged and completed in ten chapters, by Yen-Thsong, another of his followers. Yen-Thsong was selected by the disciples of Hwui-li to re-arrange and correct the leaves which their master had written and hidden in a cave. He added an introduction and five supplementary chapters. The five chapters added by Yen-Thsong are probably those which follow the account of Hiuen-Tsiang's return from India, and relate to his work of translation in China. Prof. Beal has not thought it necessary to reproduce this part of the original; his object has been simply to complete the "Records" already published relating to India.

MEETINGS OF SOCIETIES.

Clifton Shakspere Society.—(*Saturday. Dec. 22.*) W. C. H. Cross, Esq., president in the chair.—Mr. Albert R. Frey, of New York, recently elected a corresponding member, sent some "Random Notes on Twelfth Night," dealing with a few of the obscure expressions.—A paper on "Twelfth Night," by Mr. Leo. H. Grindon, was read, in which he said that "As You like it," and "Twelfth Night," Shakspere's two most joyous plays, were evidently given to the world, not so much as products of long-continued thought and industry, as outcomes of pure hilarity of heart, when leisure gave opportunity for playfulness, and when the grave and solemn in his mighty nature was laid aside awhile for the sake of smiles and sprightliness. Of the two, "Twelfth Night" is the more mirthful, the wealthier in fun and frolic; but it is one of the most trying of all plays for performers, even of long practice, and no play shows more conspicuously how false and deleterious is the idea that amateur acting is easily managed. Acting, worthy of the appellation, is not possible without special and original aptitude followed by long and careful training. It is one of the finest of the fine arts, and is in no connexion more conclusively proved to be so than when we have Shakspere's women before us. So again with the difficult part of Malvolio. Few actors can at once maintain the dignity of the part (remembering that Malvolio is no "low steward of comedy"), and keep the character in the tragi-comic atmosphere (almost more tragic than comic) to which it properly belongs. A scene which might very nearly be considered the test of an actor's abilities is that one, in particular, with Olivia, so liable to exaggeration and demanding such thorough self-possession and self-command. In "Twelfth Night" may be seen how, without the slightest tinge of pedantry, Shakspere sets forth his knowledge of ancient fable. How aptly, for instance, come in the names of Diana and Penthesilea. His knowledge of classical authors is no more than would be expected in an age of scholarship. But, while never advertising his acquirements, he employs his knowledge with a chastity of judgment such as wins and delights without exciting the slightest idea of burnish or deliberate ornament. The like may be noticed in the manner in which he deals with his imagery drawn from objective nature. A singularly fine illustration of the great poet's way of teaching is supplied in that beautiful and fascinating passage where Viola asks Sebastian if he is "a spirit." Shakspere clearly understood St. Paul, which is more than many professional theologians have done. The true and great poet is not only a musical singer and a painter of beautiful pictures but an expositor of Divine realities. Wherefore he should always be approached with reverence and an earnest desire that we may be quickened into sympathy with him. For without sympathy there can never be any real insight. Approaching Shakspere with such desire, we soon discover that his utterances in reference to the wise and true come as an apocalypse. When people say they do not care for Shakspere, it is a confession that they are not advanced enough to comprehend him. We none of us praise him. We simply rejoice in him and are thankful. To praise him is only to be impertinent.—Mr. John Taylor read a paper entitled "Shakspere's Religion," saying that, as "Twelfth Night" raised the question of Shakspere's relation to the Puritans, it becomes an interesting study to try to discover from the plays what were his own religious views. Dr. Karl Elze in his recent work cites only passages to show that the great dramatist was an utter disbeliever in Divine Revelation and in the doctrine of a future life. But numerous quotations can be given in which the immortality of the soul is taken for granted. That there was a sentimental leaning in Shakspere towards the unreformed faith may be fairly admitted, but there are insuperable difficulties in allowing that he was an adherent of its doctrines and forms. But though in external accord, so to speak, with mediaeval ecclesiasticism, Shakspere was not a Roman Catholic, and the mere fact of his mildness towards Romanism may evince that he was not a Puritan. Though we vainly seek for passages reflecting upon or sneering at the customs and doctrines of the Church of Rome, Shakspere treats of these points only in such way as any liberal-minded member of the Church of England would at the present day speak of them without necessarily accepting them at heart. We find in Shakspere constant use of Scripture phraseology, while the doctrines of Christianity, as embodied in the services of the Church of England, are repeatedly adduced with implied acceptation.—A paper by Mrs. C. I. Spencer, on "Malvolio as the Alleged Type of the Puritan," was read, dealing with Hunter's views on the subject, as propounded in his *New Illustrations*, and showing that his whole reasoning is of the style of the inverted pyramid order of architecture. In it he has done great injustice both to Shakspere and to Malvolio. If Shakspere had intended to satirise the Puritans, he would have done it better. Malvolio is an admirably-drawn character, but he is not the Puritan as such a masterhand would have delineated him. Probably Shakspere would not have done the Puritan full justice, for his wit and humour, his theatrical associations and interests, and his rollicking life would not have disposed him to sympathise with the gravity and other-worldliness of the Puritan. Yet he would surely have given us a character of more depth than this. Poor Malvolio seems fated to be a victim. Mr. Hunter, to lend support to his argument, gives a totally erroneous view of the character, which is just one of that valuable and yet sometimes trying person—a devoted family servant of the old school, whose self-esteem does not alienate our sympathy. Olivia's kind judgment of him and the Duke's gracious command respecting him find truer echo in our hearts than Mr. Hunter's misrepresentations.—The President read an anonymous paper on "Wolves in Sheep's Clothing," taking Viola as one of that brilliant group of Shakspere's female characters who, for a time, put on man's dress under the stress of circumstances. By changing his heroines into boys, Shakspere brought them more within the power of his actors, and, in so doing, has placed them beyond the scope of our actresses. When we look at these characters as a body, we find that they comprise the most charming of Shakspere's heroines, and the way in which they preserve their higher womanly characteristics is very marked. They are all ladies from beginning to end. But this extreme femininity militates sadly against their success in the rougher part of their new life. Viola, for instance, is perfection until it comes to fighting, and then the contrast between herself and Sebastian becomes very apparent. All these ladies marry men very inferior to themselves. It would be interesting to know where Shakspere met with this type of heroine, marvellously endowed as to the affections and the understanding. It is one of the many questions which make our ignorance of his life so deplorable.

FINE ART.

THE NATURE OF THE EGYPTIAN "KA."

Since I had the pleasure—now more than ten years ago—of first introducing the *Ka* to readers of the Academy, that shadowy and fantastic personage has enjoyed a career of unexampled brilliancy. It has been his good fortune to possess a singular fascination for students of the religion and philosophy of Egypt. His nature and functions, his worship, his needs, and the extraordinary superstitions of which he became the nucleus, have been made the subject of as much patient research as if he were an undeciphered script, or an obscure natural phenomenon. The meaning of the word *Ka*, it may be remembered, was long misunderstood. Brugsch, in his Hieroglyphic Dictionary, explains it as "la personne, l'individu, l'être"; and so recently as 1877, the late Dr. Birch continued to translate *Ka* by "person"—as, for instance, in his volume of *Egyptian Texts for the Use of Students*, where "*en Ka en*" ("to the *Ka* of") is rendered as "to the person of." One year later, however, Prof. Maspero and Mr. Le Page Renouf, working at the same class of inscriptions, came independently and simultaneously to the conclusion that the *Ka* was a purely impersonal conception, answering, according to Prof. Maspero's view, to the Doppelganger of German legend, and resembling, according to Mr. Le Page Renouf, the εἴδωλον of the Greeks, the "genius" of the Romans. These new readings, supported by the evidence of a large number of texts, were so conclusive as to be at once accepted by the whole body of Egyptologists; since when the *Ka* has been understood as a sentient, bodiless, "counterfeit presentiment" of the man, inseparable from him during life, surviving him after death, and destined to be reunited with him in the world to come. That reunion, however, depended on the fulfilment of many conditions, such as the safe passage of the soul through the perils of Hades, the preservation of the body, and the continuance of food-offerings to the *Ka*. For this strange εἴδωλον needed nourishment, and was liable to perish from starvation. Hence the large amount of real property vested at all periods in the hands of the priesthood for the foundation of oblations in perpetuity. Hence, also, those stores of miniature loaves, ducks, gazelle-haunches, &c., in glazed ware, which the less wealthy were wont to bury with their dead. Want of space forbids me to enter more at length into the history of the *Ka*, about whom I have already written so frequently in these columns. It is, moreover, a subject which Prof. Maspero has made completely his own, and which is best studied in his works.

Digitized by Google

Among the latest contributions to what may be called the literature of the *Ka* are Mr. Petrie's chapter on the so-called "Banner-name," which I especially noted when reviewing *A Season in Egypt* (The ACADEMY, May 5, 1888), and Dr. A. Wiedemann's recent article on *The Immortality of the Soul according to Ancient Egyptian Doctrine* ("Die Unsterblichkeit der Seele nach altägyptischer Lehre"), in which the *Ka* of necessity plays an important part. Dr. Wiedemann's definition of the *Ka* differs somewhat from that of Prof. Maspero, who calls it "the double," and from that of Mr. Le Page Renouf, who calls it "the genius." The *Ka*, according to Dr. Wiedemann, is "the personality," or "individuality"; that is to say, "the image which a man's name recalls to the mind's eye of those who have known him."

"Similar thoughts," he says, "have led other nations to lofty conceptions, and have moved them, as in the case of Plato, to explain personality as the antithesis of person on philosophical grounds; but the Egyptian, being incapable of abstract ideas, gave to this personality a purely material form, which exactly corresponded to the man, and was his second self, his Doppelgänger. In countless representations subsequent to 1800 B.C., we see the king in the presence of the gods, while behind him stands his *Ka*, shown as a little man with the ruler's own features. . . . Here the personality appears as companion to the person, doing what he does, and following him, as a man is followed by his shadow. So early, however, as the time of Amenophis III., about 1500 B.C., the Egyptians had gone farther than this, and had completely separated the personality from the person. Thus the king frequently appears before his own personality, which grasps the symbols of divinity, the ruler's staff and the emblem of life. Before it stands the king with various offerings, imploring heavenly gifts for himself; whereunto the personality makes answer: 'I give unto thee all life, all duration, all power, all health, all joy. For thee I conquer the people of Nubia, that thou mayst decapitate them.' . . . The separation between personality and person is not, however, thoroughly and systematically carried out. They are undoubtedly two separate beings, but they are so far one that they can only exist through and with each other. Only so long as the *Ka* is with him does the man live, and only at the moment of death does the *Ka* leave him. But herein we perceive a difference in their mutual relationship. The *Ka* can exist without the body, but not so the body without the *Ka*. Yet the *Ka* is not therefore a loftier and more spiritual being. It is to the full as material as the body itself, needing the sustenance of food and drink, and suffering from hunger and thirst when deprived thereof."

If I had not already arrived at certain other conclusions in reference to the true nature of the *Ka*, I think that the foregoing passages in Dr. Weidemann's interesting article would surely have suggested them to me. I placed those conclusions before the readers of the ACADEMY in the review of Mr. Petrie's book* already referred to, expressing at the same time the hope that I might return to the subject later on. If I now do so at an earlier date than I at first proposed, I must plead Dr. Weidemann's article as my apology.

I ventured, as it may be remembered, to suggest that the *Ka* stood for the life—in a word, for the "vital principle"; and in support of this view, I pointed out the close and significant connexion which is invariably seen to subsist between the *Ka* and the "Ankh," or emblem of life. To the illustrations which I then adduced from various monuments, it would be easy to add many more. The royal *Ka*, as Dr. Weidemann remarks, is represented in the bas-reliefs sometimes in attendance, as it were, behind the king, sometimes face to face with his royal prototype; but always, to the best of my remembrance, with the "Ankh" in one or both hands. In Plate 151 of Rossellini's *Monumenti Storici*, Amenhotep III. is depicted in the act of advancing towards Khem with a libation-vase in each hand, followed by his *Ka*; the *Ka* with the so-called "banner-name" (*i.e.*, Ka-name) on his head, surmounted by the pschent-crowned hawk, emblem of Horus. The *Ka*-figure carries a long staff terminating in a bust of the king, above which is inscribed "Suten Ka Ankh Neb Ta" (query, *Tawi*?) *i.e.*, "Royal *Ka*, Life [of the] Lord of the Land." Again, "life" as the translation of *Ka* makes sense of a passage in the *Book of the Dead* (chap. xxx.), the obscurity of which was long ago pointed out by Mr. Le Page Renouf.* The deceased, addressing the heart-scarab, says: "entuk Ka em Khat-a," which is currently understood as "Thou art [a] *Ka* in my body"—a phrase devoid of meaning if we translate *Ka* by "double," εἴδωλον, or "genius," but which is perfectly intelligible† if read as "Thou art life in my body." The same reading holds good, as it seems to me, of other texts quoted in this connexion by Mr. Renouf; and I cannot help thinking that the customary form of oath, "by the *Ka*" of the king, is interpreted with more probability by "life" than by either "double," εἴδωλον or "genius." So again, if we turn to the inscription graven on the throne of the statue of King Ra-ian (or Khian), recently discovered at Bubastis. Here, under each royal cartouche, we find the words *Ka-f Meri*, signifying "loving his *Ka*," of which M. Naville remarked in his report (ACADEMY, April 14, 1888) "that he should be the worshipper of his *Ka* (*i.e.* of himself) is a very curious circumstance." Read, however, as "loving his life," the motto is seen to be natural enough. If, in short, it be accepted as standing for the "vital principle," much that is obscure and contradictory in texts relating to the *Ka*, much that is fantastic in his cult, becomes susceptible of rational explanation.

If, however, my proposed definition throws a clearer light upon some of the phrases quoted by Mr. Le Page Renouf, I readily admit that others require to be translated as he translates them, namely, by εἴδωλον or "image." But in these and other similar instances, the word *Ka*, as it seems to me, stands for *Ka*-statue (*i.e.* the funerary statue of the deceased), in which sense the true meaning of *Ka* remains unaltered. For the *Ka*-statue, as Prof. Maspero has shown, was not a mere portrait-statue executed in memory of the dead; it was an artificial body made expressly for the benefit of the *Ka*.

"Comme sur la terre, l'homme avait besoin d'un corps pour subsister; mais le cadavre défiguré par l'embaumement ne rappelait plus que de loin la forme du vivant (*L'Archéologie Egyptienne*, chap. iii., p. 121)."

Translate *Ka* by "life," and the *Ka*-statue also becomes more intelligible than before. The "life" needed a body in which to abide, just as it needed bread, meat, fruits, wine and milk for its sustenance. Accepting *Ka* in the sense of "life," one is, however, compelled to reject the theory which interpreted the funerary statue as a material "support" for the immaterial double. The true *Ka* would inform the statue, dwell within it, feel through it, as the "life" informs, inhabits, and feels through the living body; and this I believe to have been the sense in which it was understood by the Egyptians.

The Egyptians, who defined man as consisting of a Body, a Soul, an Intelligence or Spirit, a Shadow, a Name, and a *Ka*, can scarcely be supposed to have omitted the "life" from so careful a category. Yet, if the *Ka* is not the life, that all-essential principle is unrepresented in their human microcosm. As Dr. Wiedemann justly observes, the ancient Egyptian was incapable of abstract ideas; hence it follows that vitality was necessarily conceived of by him as a separate entity. We ourselves speak figuratively of the life as "going out of the body" at the moment of death; but the Egyptians believed not only that it went out, but that it thenceforth led an independent existence. They saw that while the man lived, he nourished his life (*i.e.*, his *Ka*) with the foods and drinks which he consumed; and they naturally concluded, from their concrete point of view, that the *Ka*, on deserting the body, needed a continuance of the same support. Finding it impossible to reconcile the material needs of the *Ka* with the immaterial theory of the "double," M. Pierret, in a footnote to chap. cv. of his translation of the *Livre des Morts*, says: "Je crois que le *Ka* exprime la substance corporelle, la personne matérielle, l'individualité de la chair." The corporeal substance is, however, fully accounted for already by the body, the *Khat*, of the Egyptian microcosm; whereas, by accepting the *Ka* as the personification of the "life," we not only steer clear of contradictions on the one hand and of gross materialism on the other, but we at once understand how it was that the disembodied *Ka* became dependent upon the periodical renewal of food-offerings, and why, failing such, he perished. When he perished, the "life" of the deceased became extinct, and extinction was the greatest of calamities. It annihilated the dead man's prospects of ultimate re-union with his *Ka*, his "life," and it deprived him of immortality.

It may be that even during life, the *Ka* in some sense led a twofold, if not a distinct, existence. Those scenes referred to by Dr. Wiedemann, in which the king is represented as propitiating his own *Ka* with prayers and offerings, can scarcely be otherwise accounted for. They imply at all events a recognition of the life as something apart from the mortal man. From the words put into the mouth of the *Ka*, we gather the tenour of the king's supplications: "I give unto thee all Life, all duration, all power, all health, all joy," these being precisely such boons as the personified vital principle might be supposed to grant.

Of the vital principle *per se* something remains to be said. When I wrote upon this subject in the ACADEMY eight months ago, it would seem that I failed to express myself as clearly as I could have wished. Prof. Maspero apprehended my meaning, and does me the honour to accept my definition of the nature of the *Ka*; but I find that by some readers I was understood to mean the "breath," by others, the circulation of the blood, and so forth. But the action of the lungs and the heart are secondary causes. What I desire to

* No. 835. May 5, 1888.

* Mr. Le Page Renouf offers an ingenious explanation, founded on an apparently parallel passage in a Magical Papyrus at Leyden, where there occurs a formula for the protection of a person from the effects of *smu em Khat-f*. Here the word *smu*, signifying "image," is quoted as indicating the same meaning for *Ka*. "In both passages, the reference is to some sacred figure traced by nature or by art, or perhaps accidentally placed upon the body of a person, and acting as a talisman either for good or for ill." See Le Page Renouf "On the True Sense of an Important Egyptian Word" (*Transactions* of the Society of Bib. Arch., vol. vi., p. 498. 1878).

† The heart-scarab was a large scarabæus of hard stone, the under side engraved with chap. xxx. of *The Book of the Dead*, beginning "Oh, my Heart, which came to me from my mother! My Heart, which was mine upon earth," &c. Placed inside the chest of the mummy, this scarabæus, in virtue of its magical properties, served as a substitute for the actual heart, which had been removed by the embalmers. Seeing that the heart is the most essentially vital of organs, I venture to think that the above reading—"Thou art life in my body"—is hereby strongly confirmed.

Digitized by Google

express by "the vital principle" is that transmitted energy which must undoubtedly have descended from the primal source of life to all who live, or have lived, upon earth. That physical first cause is a problem which the ancient Egyptians can scarcely be supposed to have considered very curiously. Yet the kings traced their descent from the sun-god; and the *Ka*-name, from its first appearance in the inscriptions of Seneferu (IIIrd Dynasty), is invariably surmounted by the emblem of Horus. It would be strange enough if modern science were some day to confirm the genealogy of the Pharaohs.

AMELIA B. EDWARDS.

CORRESPONDENCE.

"NOTES OF THE PRINCIPAL PICTURES IN THE ROYAL GALLERY AT VENICE."

National Gallery: Dec. 31, 1888.

As your notice of my handbook to the Royal Gallery at Venice, which appeared in the ACADEMY of December 22, is prefaced by a remark likely to create misconception on a matter relating to my official duties, I shall feel obliged by your allowing me to correct it.

It happens that these little handbooks of mine are the result of notes made in Continental galleries during such leisure as my brief annual holiday affords. But, quite irrespective of this fact, I beg to add that I am in no way responsible for the delay which has occurred in issuing the new edition of the larger "Foreign Schools" catalogue of pictures in the National Gallery, for the simple reason that the revision of that work has not been committed to my care. CHARLES L. EASTLAKE.

It was not my intention to imply that Mr. Eastlake was in any way responsible for the delay in issuing a new edition of the larger catalogue of the National Gallery (Foreign Schools), and I regret that my words were open to such an interpretation.

THE WRITER OF THE NOTICE.

NOTES ON ART AND ARCHAEOLOGY.

BESIDES the Royal Academy, there will be opened next week two exhibitions at the Fine Art Society's in New Bond Street—a collection of fifty drawings of "The Queen's Navy," by Mr. W. L. Wyllie; and what is described as a "champion" photographic exhibition. The Camera Club will also open on Monday the second of their "one-man" photographic exhibitions, consisting of large direct pictures in platinum, by Mr. Harry Tolley, of Nottingham. The usual winter exhibition at the Grosvenor will not, we understand, be ready till a fortnight later.

The Society of Lady Artists will hold its annual exhibition of paintings, etchings, and sculpture in the Drawing-room Gallery, Egyptian Hall, Piccadilly, in the spring. The days for sending in paintings are March 4 and 5; for sculpture, March 11.

The January number of the *Century Guild Hobby Horse* is interesting from the literary, and very attractive from the artistic, point of view. The magazine is now issued directly from the Chiswick Press, so that it is under the most direct control of its editors. The principal illustration this time is a good photogravure from the Queen's Tintoret at Hampton Court—"The Nine Muses." The head and tail-pieces are, as usual, exquisite, and essentially decorative. We welcome Mr. Horne's brief and sympathetic account of James Gibbs, the architect to whom London owes the Great St. Martin's-in-the-Fields, and the delightful little church of St. Mary-le-Strand. But the principal literary contribution is a most excellent chapter by Mr. Kegan Paul on "English Prose Style." This was first given as a lecture at Bedford College. We hope the ladies—by whom, as a rule, the very existence of the art of style is unsuspected—marked, learnt, and inwardly digested what Mr. Kegan Paul told them. And if they did not, here is again their chance—the chance of the great public too!

Though we do not greatly care for Mr. L. Muller's etching from "School Belles," a picture by Mr. Fred Morgan, the *Art Journal* begins its new year in a promising manner with an excellent study by Mr. Claude Phillips on the French painter of romantic history, M. J. P. Laurens. Mrs. Sitwell's paper, on "Types of Beauty in Renaissance and Modern Art," is interesting; and Mr. Richard Davey's, on portraits of Mary Stuart, very opportune. The new feature of the magazine is an illustrated supplement, entitled Art and Industries. This may be made a very interesting and useful addition, if it is kept clear from all suspicion of trade advertisement.

THE January number of the *Scottish Art Review*—which is now published in London by Mr. Elliot Stock—contains two plates: (1) an etching by Mr. William Hole after James Maris, which will be familiar to those who are fortunate enough to possess the catalogue of the Edinburgh Exhibition of 1886; and (2) a reproduction of a drawing of a head by George Clausen. Among the literary contents we may notice some stanzas by Mr. Gosse, entitled "Old Morality"; the first of a series of practical papers on "Etching and Etchings," by Mr. Frank Short; and an illustrated article on "Roman Models."

THE STAGE.

"MACBETH" AT THE LYCEUM.

A PERFORMANCE of "Macbeth" by actors of intelligence, the rolling forth of the great words of Shakspere, the presentation of the scenes with which his mind was inspired in the most august of its periods, could, of course, never fail to be interesting; but no performance of "Macbeth" that has been given in our time has been attended with such promise of legitimate excitement as that to which we were invited last Saturday. The policy, now seemingly established in permanence at the Lyceum—whether for good or ill—of paying the utmost attention to scenic effect, would, it was felt, at all events result in the accumulation of external adornment, of all manner of pomp and circumstance, in the representation of the play. The most engaging as well as the most original of contemporary English composers had promised music which was to supersede Lock's—which has held the stage during two hundred years. The sympathetic actress whom not to admire is, whether in England or America, to be that which Lady Teazle, with the wisdom of her sex, entirely declined to be—"out of the fashion"—was to act for the first time a part which, unlike her more familiar part of Juliet, makes from end to end upon its exponent the claim of tragedy. And how was that claim to be responded to? Lastly, the actor whose place for the last twelve years has been the leading one upon the stage was to repeat, with probably some modifications or some emphasis, and with in any case the weight of an added experience, a performance whose merits had been strongly contested, though a performance which was very far from being the failure that certain rough and irresponsible criticism had elected to declare it.

As there can be no manner of need for the discussion in the ACADEMY of all the details of a production discussed already with great elaboration elsewhere, and as I have little disposition to write the thousand-and-first paper on "Macbeth," and to narrate with cheerful air of novelty the adventures of its *dramatis personae*—as if the world were now hearing of them for quite the first time—let it be said at once, and briefly, that the promise of interest was entirely fulfilled. "Macbeth," as it is now given, will be a brilliant and a justified success; and, if one were inclined to differ far more than, with a merely superficial knowledge, one would venture to differ from the interpretation which some leading exponents therein essay to set forth, one would yet forgive much for the satisfaction of knowing that the leading actor of the time is now occupied nightly in a task quite worthy of his position and his strength. The "Faust" of Goethe is one thing. The "Faust" of Mr. Wills is another. Some debt we owe to Mr. Irving for his missionary service to the German poet—he set people reading Goethe who had listened to the verse of Mr. Wills. But now the real thing—the substance, and not the name of it—is at the theatre. No after-course is required, either as penance or as pleasure. The poet who furnishes the title furnishes, too, the matter of the evening's occupation.

On the question of scenic effect, I have to avow myself a little heretical and rebellious, and to repeat an opinion that a too great reality in the accessory and ornament does tend to divert attention from the business of the play. But, though there are plays—Sheridan's "Rivals," as it was done at the Haymarket, is one of them, and I am not sure but that "Romeo and Juliet," as it was done at the Lyceum, is not another—of which the action is somewhat effaced and its effect interfered with by a too opulent exhibition of the decorator's craft, there are others in which everything that may be done, if it be done well, is an aid to the imagination, rather than a weight about its feet. "Macbeth" is one of these. What adornment can be given to it must be given chiefly by the provision of background—background varied and significant, the true art of the scene-painter, which, unlike the parade of foreground properties, enters into no competition with the realities of the figure, but is pure art and pure accompaniment, even more when it is at its best than when it is less perfect. The scenery with which Mr. Hawes Craven and his fellows have endowed the present revival of "Macbeth," with its studied illumination, its weird obscurity, its flushed sunsets—a very "portent," like Mr. Albert Goodwin's—is conceived and executed in the spirit of the play; and one could no more find fault with it than one could find fault with the selected words in which Mr. Browning, as in "Ivan Ivanovitch" or in "The Flight of the Duchess," sets about his figures the landscape that is proper to them, or by which Mr. Thomas Hardy stretches the horizon of the heath behind the stately lines of his Ethelberta or his Bathsheba, and folds the darkness of the country night round his Eustacia Vye.

Digitized by Google

So much then for the scenery. It is extraordinarily helpful and poetic, and those who pass before it are grouped with singular skill. Of the technical qualities of Sir Arthur Sullivan's music there can no doubt be little question; but what is yet more evident—what an outsider in these matters may quite safely pronounce upon—is its dramatic significance, its poetic suggestiveness. Whether in march-movement, in passages weird and ominous, or in a strain that is serene and radiant—like the exquisite chorus that surprises the playgoer at the end of the cauldron scene—it is alike a contribution of high value to one's entrance into the spirit of the play. And having said this, the way is cleared for some expression of opinion on the acting. Those actors who are engaged in secondary parts may possibly have perceived a measure of truth in Samuel Johnson's remark that the play "has no nice discriminations of character." They, at least, will hardly dispute the accuracy of the criticism that "the events are too great to admit the influence of particular dispositions," and that "the course of the action necessarily determines the conduct of the agents." For that is, after all, only another way of saying that, for stage purposes, the secondary characters in "Macbeth" cannot be made extraordinarily effective. Mr. Webster's agreeable personality does, indeed, suffer him to be pleasant as Malcolm. Of course, there is no reason why Mr. Haviland should not be gracious as the King. Mr. Wenman, as Banquo, is moderately forcible. Mr. Alexander is a goodly Macduff; and in the little part of Siward we get at all events all that we have a right to expect when we can hear the ripe rich utterance of Mr. Howe. As the Porter—a character most reasonably restored, it seems—Mr. Johnson has a brief but excellent chance for the quaintest of low comedy. Miss Coleridge appears most suitably as the young gentlewoman in waiting, who has heard "what she should not"; and by allotting to three ladies the parts of the witches, generally played by the most grotesque and ungainly of men, Mr. Irving has, as far as that matter goes, done a service. But Dr. Johnson is so far right that if the secondary parts were played quite perfectly, "Macbeth" would not gain very visibly in effectiveness, while, if they were played quite poorly, the piece might remain impressive. It is the function, practically, of Macbeth and of Lady Macbeth alone, to excite now our horror and now our sympathy; and—with whatever qualifications we may choose to make—the function is fulfilled largely when those parts are in the hands of Mr. Irving and Miss Ellen Terry.

Miss Terry's being the new assumption, her's it was that excited the greatest curiosity. Persons whose conception of Lady Macbeth is sharply defined, and somewhat inflexible, and is based more or less on the stage traditions which the country actress has inherited from Mrs. Siddons—the tradition of a demon somehow not completely unsexed—cannot accept Miss Terry as satisfactory, and nobody is invited to accept her as entirely ideal. The very view she takes of the part is, at least unconsciously, one must venture to say, affected by her own personality. But how is this admission in itself to be construed into blame, when we remember that after all the personality of the player is the whole of his material? It is the instrument to which the dramatist's music has of necessity to be adapted. Miss Terry's uses of that instrument are, in certain passages of her Lady Macbeth, quite other than any she has hitherto employed. Her Lady Macbeth, instead of emphasising her limitations, reveals some hitherto unsuspected resource. Obviously, for pure terror, for a ghostly and gruesome impressiveness, she cannot do with the sleep-walking scene what, to speak of our own generation only, has been done with it by Ristori. But she fills it, for almost the first time, with infinite pathos; and if one of the functions of tragedy is "to purify by terror," the other is "to purify by pity." Effective in the murder scene, Miss Terry is almost commanding in the banquet. Gracious and earnest and serious, to Macbeth she can be exquisitely tender. The line—

"You lack the season of all natures—sleep"—

was never said to Macbeth before with so much of explanation in the tone, or with so much of comforting quietude. One criticism—in the nature of a suggestion rather—I should like to make beyond saying broadly that the performance wants without doubt some further indication of evil. In our realistic day—when the human "document" is studied by the creative artist so closely in every phase of its disease and its sanity—is there no method of implying, and no reasonableness in implying, Lady Macbeth's nervous instability at some earlier stage than that of the sleep-walking scene? From a single visit perhaps one judges wrongly and roughly; but if my memory is to be trusted, or if my observation was properly alert, the new Lady Macbeth made, with nothing less than the usual suddenness of her forerunners, the transition from vigour to collapse. I can conceive that even the line that I have quoted might be taught to bear the message and convey the hint of Lady Macbeth's own condition. Had she herself, with such a Past behind her and such a Future almost within sight—had she herself "the season of all natures"?

Macbeth—dominated by the supernatural, but of desperate courage in the presence of all possible combinations of men—who, whatever may have been "long the subject of conjugal debate" (to quote from Mr. Comyns Carr's extremely able pamphlet), was certainly a thousand times more averse to encountering the moment of the murder than to encountering any array of armed men in battle—Macbeth is presented by Mr. Irving, in the main, with extraordinary force, feeling, and subtlety. Whatever may be the theory of the actor as to the facility with which the suggestion of foul play was embraced, and whatever may be his skill—to my mind it is extreme skill—in suggesting the first fears or the last recklessness, it is certain that Mr. Irving misses no jot of opportunity in delivering with fire or pathos all that is grand in the language or touching in the thought of the character. And if, after the murder scene, nothing is fully its equal in effectiveness, until there comes the crowded hour in which Macbeth is told of his wife's death, and the moment when it is revealed to him that "juggling fiends" can

"keep the word of promise to our ear,
And break it to our hope"—

that is, at least, partly because there is in the play itself a certain pause in the splendour of its action. The pause is at all events not long or not final; and now, as thirteen years ago, the play's end, as Mr. Irving interprets it, is of superb effectiveness, to summon our admiration for the courage, almost our pity for the fate, of its main character. This Lyceum revival—whether by its general spirit or by the combined breadth and sensibility of those impersonations on which attention is most concentrated—must be recognised as a boon to the public. Having regard to the immensity of the effort, the "shortcomings," are comparatively few, and no labour accomplished with such thoroughness can ever have been undertaken without delight.

Frederick Wedmore.

STAGE NOTES.

Place aux enfants! Drury Lane Pantomime was not made for them. Nothing of the kind! Adelphi melodrama was not made for them. Nothing of the kind! Then let these wait till next week. But there are three entertainments suited for children in London; and we will say what they are. One of them is Mr. Savile Clarke's version of "Alice in Wonderland." It is played daily at the Globe Theatre, by a cast not by any means incompetent to deal with it. Another is Miss Rosina Filippi's children's pantomime—"Goody Two-shoes," done every afternoon at the Court. This is arranged skilfully, and even sympathetically. Both for the book of the words and for its interpretation something is to be said. But the really beautiful thing to see—and it is happily humorous too—is of course the Opéra Comique performance of the "Real Little Lord Fauntleroy," in which the three chief parts are played by Mr. Somerset, Miss Mary Rorke, and the admirable child-actress Vera Beringer. The play itself is so genuinely charming that people might be impressed favourably with any decent interpretation of it. Yet it is not until Vera Beringer has been seen as the Little Lord that the best judges can express themselves as perfectly satisfied. For her performance is just as full of good breeding as it is full of cleverness, and, the part being what it is, therein lies half of the performance's merit. Mr. Somerset's more than elderly nobleman is a distinguished and engaging wreck. Miss Mary Rorke's unvarying stage tact, her womanliness, the exceptional quality of her voice—together with her knowledge how to use it—cannot but ensure for the representation of the character of the young widow something more than justice—charm.

MUSIC.

MUSICAL PUBLICATIONS.

From Messrs. Augener & Co. we have received: *Beethoven's Nine Symphonies* arranged for the pianoforte by Mr. E. Pauer. It is only the few who can read and enjoy a full score. Most people require to hear the music played. A pianoforte is always to hand—not so an orchestra. Beethoven's master works demand constant study, so that pianoforte transcriptions of them are necessities. Musicians who first become acquainted with the Symphonies by the aid of a colourless key-board will find the music of absorbing interest, and later on the life and colour supplied by the orchestra will enhance their pleasure. And those who play them over after having heard them performed—if only they have a retentive

Digitized by Google

memory and a little imagination—will hear mentally, not the sounds of the pianoforte, but those of the orchestra. Mr. E. Pauer has accomplished his task most successfully. Of course the transcriptions—especially of the later Symphonies—cannot possibly be easy playing, but everything has been done to reproduce fairly the composer's thoughts, and to avoid difficulty for difficulty's sake. In the second part of the ninth Symphony, the German text is given with the music.

Thalberg's *Nel silenzio fra l'orror*, Nicodé's *Elfin Dance*, Scharwenka's *Staccato Study*, Nicode's *Staccato Study*, are all useful practice and effective "Etudes de Concert." They are fingered and revised by Mr. E. Pauer.

Laubach's *Six Etudes* are thoroughly good. Various technical difficulties are neatly and pleasantly introduced.

Prelude and Fugue. By A. Napoleon. This piece may be recommended as an excellent study. The Prelude is simple and effective. The Fugue, with a good theme, begins well; but the writing soon becomes quite modern, and Rhapsody would be a better title for the piece.

Fleurs et Chansons, two Books, *Albumblätter*, *Idylles*, *Miniatures*, *Canzonette*, *Serenatelle*, by Del Valle de Paz. All these different collections of pieces are short, pleasing, and of moderate difficulty. Besides, they are well-written, and combine instruction with amusement. They are really studies in piece form, and are "morceaux de salon" in the best sense of the term. Teachers will find them extremely useful.

Danses hongroises, *Valses Styriennes*, *Danses Bohèmes Galop*, by F. Kirchner. The composer's name is well-known, and anything from his pen is sure to be good. All these pianoforte duets are attractive, and will please young players who cannot yet attempt Schubert's and Schumann's more difficult four-hand compositions.

Die Weihe der Töne. An excellent duet, arrangement for pianoforte, of Spohr's admired Symphony, by Mr. Max Pauer, a clever pianist and sound musician.

Handel's 7th *Organ Concerto*. This fine work has been edited by Mr. W. T. Best, who played it at the Handel Festival last summer. The cadenza then introduced by him in the first movement is here fully written out.

Cecilia, edited by Mr. W. T. Best. Books 35, 37, 38 and 39 of this valuable collection of organ pieces in diverse styles include compositions by Bach, Hesse, Fumagalli, Schneider, Wesley, &c.; and the editor has contributed a graceful Christmas Pastorale.

Bach's *Organ Works*, edited by Mr. W. T. Best. Part iii. includes five of the master's immortal Preludes and Fugues.

Pezzi Originale per Organo, by F. Capocci. Useful pieces for organists. The music is in many ways clever. A solid Fugue shows that the composer has studied counterpoint. The numbers which best please us are the Entrata, the Larghetto, and the Minuetto.

Theme, with Variations, for Organ. By T. T. Noble. The theme is graceful, and the variations are solid and effective.

Hermann's *Etudes Spéciales pour Violon*, parts i. ii. and iii., and Courvoisier's *Méthode de Violon*, parts i. and ii. Some of the best studies, and one of the best methods for the king of instruments.

The Flood. By Gurlitt. This is an interesting work. The words have been selected from the Bible by Mr. J. P. Metcalfe, who, in a short preface, assigns to his "Reading in Church, Recitation, and Chorus" a place somewhere between the Hymnal and the great Oratorio. It is an experiment likely, we should think, to meet with success. The choruses are of moderate length, and of moderate difficulty; while the music is fresh and tuneful, and the part-writing generally shows a skilful and practised hand. Some of the numbers are marked to be sung as choruses or solos. If the latter method—which would give greater variety—should be adopted, the work would be in fact a small oratorio.

Sacred Songs. By Molique. For one voice (Op. 48), for two voices (Op. 49), and for three voices (Op. 51). There are six in each set, and they are all melodious and charming. It must have cost the composer no small pains to keep his song so simple, his rhythm so uncomplicated, and his forms so modest.

We may further mention *Popular Pieces*, by Corelli, transcribed for the Pianoforte from the Sonatas and Concertos for strings, revised by Mr. E. Pauer. "Canzonette toscane," by Della Morea, pleasing and characteristic; "Six Songs," by F. H. Crossley, graceful and musicianlike; "Ten Songs for Children," by Reinecke, with English words—charming little numbers, with dainty accompanyments; "Scottish Songs," arranged by Laubach for viola and piano, and cello and piano, and set in quite simple fashion; and "Standard English Songs," arranged by Gurlitt, as short and easy pianoforte duets.

All these publications, by Messrs. Augener, are remarkably clear in print, and cheap in price.

From Messrs. Metzler & Co.:

Metzler's Red Album, Nos. 1-4. No. 1 contains nine songs by popular composers—Sullivan, Goring, Thomas, Berthold Tours, and others; No. 2 is a similar collection; No. 3 contains modern compositions of a light kind for the pianoforte; and No. 4 six pieces for violin and piano. Of these last we may mention Mr. Higgs's *Canzonetta* and Mr. Tours's *Swing Song* as graceful and pleasing. Each of the four numbers costs only one shilling.

Ten Songs. By Lawrence Kellie. The opening number is quiet and orderly; No. 3 ("Far Away") shows great taste and feeling, and some of the others are gracefully written; but Nos. 2, 4, 5 and 9 are rambling and scrambling.

Please sing Me a Song. By R. B. Addison. This is an album of songs for the young, with very pretty words by Mary Chater and Ellis Walton. The music is extremely well written, and shows a good deal of fancy. Children will enjoy the songs.

The Lifted Veil. By J. Barnby. A quiet, simple song for mezzo-soprano; grateful to the singer.

Midsummer Night. By Percy Reeve. A light, flowing song, with a graceful accompaniment, and an obbligato violin part.

You ask Me why I Love. By L. Kellie. A fidgetty and commonplace song.

The Vanguard March. For Pianoforte. By H. M. Higgs. An easy and well-written piece.

Christmas Album of Dance Music. This will be acceptable during the present festive season.

W. Williams's "White Mousie" quadrille, Crowe's "Rose Queen" waltz, E. Dumaine's "Pocket" polka, and Mrs. Maddison's "Diana" waltz, with an elegant lithograph on title-page, like the above album, will be found useful.

Original Compositions. For Violin and Piano. By H. M. Higgs. This collection may be recommended to young players who wish for something not too difficult and not dry. They are capital little drawing-room pieces.

From Messrs. Hutchins & Co.:

Old Time and the Maiden. By R. Harvey. A rather effective song in Old English style.

When the Soft Spring Winds are blowing. By H. Hill. A smooth, flowing song for soprano and tenor.

Not at Home. By Annie E. Armstrong. A light and not very original song. The composer has written better things than this.

Wedding March, for Organ. By W. J. Westbrook. This is an effective transcription of Sir Julius Benedict's well-known March.

Rêve d'Innocence. By H. Croft. A short and elegant "morceau de salon" for pianoforte.

The Little Drummer. By R. W. Oberhoffer. An easy pianoforte piece; a trifle monotonous, but good practice for young players.

La Cloche d'Argent. By C. de Thiere. A very simple gavotte for pianoforte. The composer ought to know that a gavotte should begin on the third beat of the bar.

De Montfort's Daughter: Cantata for Female Voices. By Julian Edwards. The music consists of solos, a duet, and choruses; and all the numbers are graceful and suitably written for the voices. There is a good deal of taste displayed in the pianoforte accompaniment. Well sung, the little work would prove effective.

From Edwin Ashdown:

A Heaven on Earth: Song. By Carl Willoughby. A quiet unpretentious composition.

Stars of the Summer Night: Song. By E. D. Palmer. An ordinary setting of Longfellow's familiar words. There is a violin accompaniment *ad lib.*

Waiting for Thee! Arabian Serenade! Little Lady Bountiful. By Michael Watson. These three songs are not of a very high order. But tastes differ, and they may please some who like light simple strains. The Serenade is the best of the three.

Un Aveu. Mélodie pour Piano. Par T. Mattei. Sentimental, yet well written, and, in its way, pleasing.

From Messrs. Beal & Co.:

In After Years. By M. Watson. An ordinary kind of ballad.

From Dark to Dawn. By O. Barri. A tuneful song which sets one thinking of certain popular composers.

Spanish Dance. By G. P. Moore. A light and agreeable little piece for pianoforte.

On the Moonlight Deep, and *Ring o' Bells.* By M. Watson. Two short easy pieces for pianoforte; well-written for the instrument.

MUSIC NOTES.

Mr. Edward Dannreuther is writing a *History of Musical Graces and Ornaments*, with copious illustrations and examples. The work will consist of two parts, the first from Diruta (1593) to Seb. Bach (1685-1750); the second from Emanuel Bach (1714-88) to the present day. It will be issued in the course of this year as one of Novello, Ewer & Co.'s Primers, edited by Sir J. Stainer.

LITERATURE.

The Recluse. By William Wordsworth. (Macmillan.)

The Complete Poetical Works of William Wordsworth. With an Introduction by John Morley. (Macmillan.)

THE first book of the first part of "The Recluse"—some seven hundred lines—now printed for the first time, may be said to be a continuation of Wordsworth's poetical autobiography as given in "The Prelude." It tells of his arrival in Grasmere, and presents an imaginative study of the local features and spirit of the vale, a study of the character of its inhabitants, and a noble vindication of Wordsworth's devotion to the high calling of his life. Its appearance is a very important event for all who love the poetry of Wordsworth. I do not know that there are seven hundred consecutive lines to be found anywhere in his writings of greater interest than these.

With this word I dismiss the fragment of "The Recluse," for I must speak somewhat fully of the edition of the "Complete Poetical Works" now put forth, with no editor's name, but seemingly with the authority of Wordsworth's representatives. I must try to speak plainly and strongly, though I hope without heat or temper. A serious wrong has been done to Wordsworth; a serious wrong has been done to Wordsworth's readers. What strikes one in the volume from first to last is the disrespect shown throughout to Wordsworth's judgment, the entire disregard shown to Wordsworth's wishes. And as a consequence the reader of Wordsworth suffers grievous loss. I propose briefly to make good these assertions.

Wordsworth did not leave his poems at haphazard or in disarray. He arranged them in an order of his own, presenting them as he wished them to reach his readers, in certain groups and in a definite sequence within each group. He may not have been always happy in his arrangement, but it was carefully considered and had his deliberate approval. It is in part connected with his critical theories, and in part it is independent of them. He classed some of his poems, for example, under the heading of "The Fancy," and others under that of "The Imagination." That arrangement is connected with a critical theory. Whether the groups be well or ill-named, within each group the poems are placed in such an order that they often reflect interesting lights each upon the other. There is, again, a series of "Miscellaneous Sonnets" in three parts; and here no critical theory is involved. The first part begins with a sonnet on "The Sonnet," following a dedication in verse; it closes with the memorial sonnet to Raisley Calvert. The second part begins in like manner with a sonnet on "The Sonnet," and closes with a poem entitled "Conclusion to ——." Again, there is the noble series of "Poems dedicated to National Independence and Liberty," in two parts, each most judiciously arranged. In the present volume Wordsworth's design, in its larger lines and in its minor details, is swept away; and, as I shall presently show, some of the poems in consequence lose a special significance, and some become unintelligible.

The arrangement attempted throughout is chronological; but there are errors in the chronology. Now it is most interesting to read Wordsworth's poems in the order in which they were written. I may quote my own words from a review of Prof. Knight's edition of Wordsworth, which appeared in the ACADEMY six years ago. I considered Prof. Knight's edition to be what I called the Student's Wordsworth, with a purpose of its own, but not as one designed to replace the authorised edition, superintended by Wordsworth himself, and I wrote as follows:

"Prof. Knight proposes to print the poems in chronological order, and for such an edition as the present [*i.e.* as Prof. Knight's] this is, undoubtedly, the right plan. It has been generally felt that, with Wordsworth, the chronological study is of peculiar importance; that his poems fall naturally into groups, characteristic of his periods of visionary youth, grave-thoughted manhood, and tranquil decline. But we have felt this in a general way, and did not trace out details. Now we shall be able to follow the history of his intellect and his imagination from year to year, sometimes even from day to day."

But, then, Prof. Knight's edition was not intended, as I take it, to displace the authorised text. It was designed rather to be one of our aids to study. It was copiously annotated, so that any wrong done to the reader could be at once repaired by information conveyed in a note. It is not so in the present edition. The reader is nowhere informed that this poem or that has been wrenched from its true position. And all this has been done in violation of Wordsworth's well-known desire. In Wordsworth's *Prose Works*, vol. iii., p. 474, we find the record of a conversation given by the Rev. R. P. Graves as follows:

"I expressed to Wordsworth a wish that his poems were printed in the order of their composition, assigning as reasons for the wish the great interest which would attach to observing the progressive development of the poet's thought, and the interpretative value of the light mutually reflected by poems of the same period. I remember being surprised by the feeling akin to indignation which he manifested at the suggestion. He said that such proceeding would indicate on the part of the poet an amount of egotism, placing interest in himself above interest in the subjects treated by him, which could not belong to a true poet caring for the elements of poetry in their right proportion, and designing to bring to bear upon the minds of his readers the best influences at his command in the way best calculated to make them effectual."

Part of the force of the reason assigned by Wordsworth has passed away; that which he would not do himself may be done for him. It is well that by a knowledge of the chronology of his works we should be able to trace the development of his mind; but it is an injury to a dead poet that in the edition which seems to bear his authority he should be forbidden the right to present his poems as he decided on mature deliberation that they ought to be presented. There is a loss here of what is needed even by the historical student of Wordsworth's mind; an interesting part of the document is obliterated. And for the reader who cares for the poems simply as poems a still more serious loss is caused by the injudicious application of the chronological principle.

Let me prove my point by two or three examples. The injury to Wordsworth's poetry begins on the first page. In the later editions sanctioned by the poet himself he placed some well-known and beautiful lines in the forefront as a proem or motto for the whole—those beginning:

"If thou indeed derive thy light from Heaven,
Then, to the measure of that heaven-born light,
Shine, Poet! in thy place, and be content."

The full significance of the poem, as elevated by its author into a prologue, depends on its position. It is like the inscription over the doorway of a great cathedral. In this edition the inscription is taken down; and, after searching, we find it stowed away in the back premises, on p. 705, between a Sonnet to Haydon on seeing his picture of Napoleon Buonaparte and the lines on "A Wren's Nest." Unluckily, the new position assigned to the poem has not even the merit of being chronologically correct. It is here said to have been written in 1832, and it is printed as belonging to that year. But it may be found among "Poems of Sentiment and Reflection," in the edition of 1827, and words spoken by the author to Miss Fenwick make it probable that the date of composition is much earlier.

I took this example first because it came first. But one or two others will better serve to show the deep injury that has been done to Wordsworth and to his readers. Among the "Miscellaneous Sonnets," are two connected sonnets, numbered by Wordsworth as the first and second of a pair. The first of these is that exquisite sonnet in which, by a beautiful surprise, the terror of death is transformed into a vision of loveliness. Instead of the grisly king, the poet beholds

"the face of one
Sleeping alone within a mossy cave,
With her face up to heaven."

We find this sonnet on p. 356 of the present edition, where it is numbered I., and the note dictated to Miss Fenwick is prefixed:

"The latter part of this sonnet was a great favourite with my sister, S. H. When I saw her lying in death, I could not resist the impulse to compose the sonnet that follows it."

But No. I. is not followed here by No. II. The second sonnet disappears; nor is the smallest hint vouchsafed to explain the enigma to the perplexed reader. Four hundred pages away I discover the companion sonnet, with no indication that it does not stand alone—a sonnet beginning with words which refer to the vision of Death—

"Even so for me a vision sanctified
The sway of Death"—

words absolutely without meaning for the reader who knows Wordsworth only in the present unhappy edition.

Digitized by Google

"Come, lame me with reasons!" exclaims Celia to Rosalind; and if the nameless editor of the present edition made a like request, it were easy to gratify him. But it is no pleasure to me to fling stones. I desire only to protest seriously against what is a grave crime committed against an eminent benefactor of all English lovers of literature. Let one other example therefore suffice. We all remember the fine sonnet composed on the evening of Wordsworth's wedding-day, in which he describes a vision of great glories in the western sky—citadel, temple, and tower substantially expressed in the sunset clouds. We remember how the sonnet closes, with a sigh that, though all these cloudland wonders seemed so steadfast, all must fade, and that even the memory of them must perish:

"They are of the sky
And from our earthly memory fade away."

These words become the starting-point of the companion sonnet, written four years afterwards, in which the poet claims for the good realities of our human life a higher place in our affections than that granted to any unsubstantial dream of beauty.

"Nor will I praise a cloud, however bright,
Disparaging Man's gifts, and proper food."

In the present edition the whole of "The Prelude" and many another poem lie between the two companion sonnets, nor does any note direct the reader from the first sonnet to the second, which had been by its side from 1807 until to-day. This, indeed, is editorial work of waste and ruin.

Moreover the editor's chronology is at times erroneous. How often it is so I am unable to say. I am no specialist in the minuter facts of the chronology—facts which, though minute, make all the difference between right and wrong in an edition based on the chronological principle. I have shown how the poem "If Thou indeed derive thy light from Heaven" is misplaced by at least five years. A glance enables me to point out that "The Cuckoo-Clock," "Love lies bleeding," its "companion" poem, and the sonnet "Though the bold wings of Poesy," &c., here printed as belonging to the year 1845, are incorrectly placed. They were published in Wordsworth's "Poems chiefly of Early and Late Years," 1842. What has been gained by removing them from the position assigned to them by their author and fixing them in a wrong chronological order? The sonnet "To B. R. Haydon on seeing his Picture of Napoleon Buonaparte," here printed as of the year 1832, was in fact written on June 11, 1831 (see Graves's *Life of Sir W. R. Hamilton*, vol. i., p. 429). That beginning "Men of the Western World," here dated 1842, was written in 1839 (see letter to Prof. Reed). That beginning "People! your chains are severing link by link," here dated 1835, was written in 1831 (see note in "Yarrow Revisited," p. 264). The second of the three connected poems on Burns, here luckily left among the "Memorials of a Tour in Scotland, 1803," was not composed until many years after. In the "List of Wordsworth's Poems arranged in Chronological Order," which serves as a table of contents, and which seems to be identical with Prof. Knight's revised list as printed in the *Transactions* of the Wordsworth Society, I notice several errors as to the dates of first publication. But the list shows so much valuable research and contains so much useful information that it becomes us rather to be grateful than censorious. And in every considerable piece of work a margin of error must be allowed.

Among these errors of date is one which names the year 1842 as that in which "The Birth of Love," translated from some French stanzas described here as by Francis Wrangham, was first published. The translation of a French poem signed "Anon," and not, as far as I can ascertain, by Wrangham, appeared in the year 1795 in Wrangham's volume of "Poems." I notice the error here because the insertion of this translation without note or comment in the authorised text of the "Poetical Works" is an instance of disregard of Wordsworth's wishes against which I must record a protest. In such an edition as that of Prof. Knight, designed to be part of the critical apparatus of a student, it is right that every poem ever printed by Wordsworth should be reproduced. The editor's notes will inform the reader that certain poems were not intended by Wordsworth to form part of his authorised text, or were rejected by him as unworthy. They are nevertheless of interest to the student, and perhaps of some importance in tracing the development of his mind and art. I should have liked to see in Prof. Knight's edition Wordsworth's first sonnet—that written "On seeing Miss Helen Maria Williams weep at a Tale of Distress," and the rejected poem "The Convict." But in such an edition as the present it is a wrong to Wordsworth to reprint, as if they appeared with his sanction, such lines as those included in Wrangham's volume, or the rejected stanzas "Among all lovely things my Love has been," or the rejected "Andrew Jones." They appear as part of an authorised collection, and yet they were deliberately refused admission to his Complete Poetical Works by the author. Wordsworth's judgment is slighted and his wishes are set at nought.

Nor can I suppose that it would have pleased Wordsworth to see his poems introduced by the notes on their origin and occasions which he dictated to Miss Fenwick. These notes are of the greatest interest and importance. But the place which they occupy in this and some other posthumous editions would never, I believe, have been approved by Wordsworth. Two columns of closely printed prose are prefixed to the little poem, "We are Seven." Most valuable matter is contained in these columns; but I believe that surviving friends of Wordsworth would bear me out when I say that in many instances it was his wish to present his poems simply as they are, with a certain ideal remoteness from what is local and occasional, while he was not unwilling, as the Fenwick notes prove, that his readers should have it in their power, as a matter of historical or biographical interest, to trace the poems to their place and time and occasion.

Mr. John Morley has introduced Wordsworth to the readers of this volume in an excellent essay. If any Wordsworthian should say to me that the choice of Mr. John Morley as Wordsworth's presenter is somewhat curious, I should give a silent assent. If he should go on to assert that Wordsworth would look upon the choice of such a presenter with fervid indignation, I could not say "No"; only I would remind my interlocutor that literature is a noble eirenicon, and that in those worlds where Protesilaus and his poet dwell there is

"An ampler ether, a diviner air,"

than in our troubled planet. Mr. Morley writes as one who partakes in a large measure of Wordsworth's spirit, though, perhaps, he does not feel its finer ecstasy—

"the bloom
And all the mighty ravishment of spring."

Devout Wordsworthians may acknowledge him as a sincere worshipper in the court of the Gentiles. Yet I confess that I should like better to read what Mr. Morley has written if it were anywhere else—if it were offered, for instance, as a pious discourse to literary Radicals in the *Westminster Review*. Wordsworth can very well stand alone. He needs no presenter now; and an introductory essay to his "Complete Poetical Works," even if the writer were Mr. Frederic Myers or Mr. Hutton, would be something like an impertinence.

Let me say at the close how, in my opinion, the edition of Wordsworth, which we all desire, ought to be planned.

(i.) Wordsworth's latest text to be given. Wordsworth's arrangement of the poems to be followed.

(ii.) A chronological table, strictly tested, to be given, so that the reader should have it in his power to ascertain the date of any poem, or, if he should please, to read the complete poetical works in the chronological order.

(iii.) An appendix of "Poems by Wordsworth not intended by him to appear in the authorised text."

(iv.) Appendix of notes dictated to Miss Isabella Fenwick.

(v.) Appendix of select various readings, presenting the earlier text in the case of poems seriously injured by Wordsworth's rehandlings. Good judgment would here be needed, but in a few pages a valuable result could certainly be attained.

(vi.) Bibliography of Wordsworth's writings, not extending beyond the year of his death.

(vii.) No introductory essay, and no author's name but that of Wordsworth on the title-page.

EDWARD DOWDEN.

The Life of Sidney, Earl of Godolphin, K.G. By the Hon. Hugh Elliot. (Longmans.)

AN ever-increasing band of tourists speeds each year through the Land's End district, but not one in a hundred of them turns aside from the beaten track to view the birthplace of Sidney Godolphin. It lies about eight miles from Penzance, under the shadow of Godolphin Hill, which three centuries ago was pierced through and through by the tin mines worked under the direction of his ancestor, the most distinguished mineralogist of his day. The old banqueting hall in which the great lord treasurer used to receive on his visits to the country the squires of the neighbourhood, and to impart to them the news which Dyer's news-letter had not yet furnished, stands uninjured. The gardens, seven

Digitized by Google

acres in all, still remain, and in them may be seen some box-trees, twenty feet high. The fish-ponds are left, but the fish which used to swarm therein were destroyed by arsenic some thirty years since. The estate has from time immemorial been held under the manor of Lambourne by a vexatious tenure, the reeve loudly knocking on Candlemas Day at the outer door, boldly entering the hall, jumping upon the table, and thrice repeating his demand, accompanied by the striking of his stick on the table, that he came to receive the ancient quit-rents. Mr. Elliot states that the custom is discontinued; but in this he errs, for it was observed so recently as Candlemas Day in 1884.

To the progenitors of Sidney Godolphin, a set of men distinguished in many varying ways, Mr. Elliot has paid due attention, and devoted many pages of his book. Two of them were conspicuous at the siege of Boulogne, and both were wounded. One of these men was the leading mine-adventurer of his time; but he was a soldier also, and to him was entrusted by Queen Elizabeth the guardianship of the isles of Scilly. To another of his ancestors Hobbes dedicated as "to my most honour'd friend" his celebrated treatise of the *Leviathan*. Sidney Godolphin, the poet, lives in the prose of Clarendon and in the poetic epitaph which Hobbes wrote to his memory. His own poems, which were famous in their age, have persistently been assigned to his nephew, the lord treasurer; but we are inclined to agree with the opinion of Mr. Elliot that the statesman, if he ever wrote any poetry at all, never soared above a set of complimentary verses. Sidney Godolphin was killed in a skirmish in the civil war in the stone porch of the inn at Chagford; but all the members of the family did not act with the king. John Godolphin was judge of the admiralty court during the Protectorate; and the head of the house, though he sympathised with the royal cause, prudently came to terms with the parliament in 1646.

In such a home as this, and with the lives of such ancestors to inspire his youthful imagination, Sidney Godolphin was born in the summer of 1645. He was not sent to the university. His education—and he was a good classical scholar—was no doubt imbibed in the grammar school of Helston, over which several well-known clergymen, such as Derwent Coleridge and Augustus Jessopp, have presided within recent years. When a youth he became a page at the court of Charles II., and it must have been within the precincts of Whitehall that he first made the acquaintance of the still younger John Churchill. The Godolphins possessed much borough influence in the West. They had some power in both Penryn and St. Ives; but the borough of Helston was then, and until the Reform Bill of 1832, almost completely under their control. Sidney was very anxious that one of the seats for the family boroughs should be occupied by himself; and Mr. Elliot has printed several letters from the Additional MSS. at the British Museum, in which he presses his wishes upon his brother. Another, and even more emphatic communication, expressing his "infinite concern" for the seat, and urging his brother to "think a little seriously" on the subject, is among the collection of Mr. Alfred Morrison. His wishes were gratified; and from October, 1668, until his elevation to the peerage, he sat, with but a brief interval, for the constituency of Helston. While on this topic, we would suggest that the names of Evitley and Grisley, printed on pages 52 and 54, should have been read as Erisey, the patronymic of a prominent squire in the Lizard district of Cornwall. A few years later (1675) Godolphin married Margaret Blague, one of the ladies about the court, whose "saintly life," as delineated by John Evelyn, has become, after it had slumbered in manuscript for more than a century and a half, one of the popular books of this generation. In three years she was dead, and her body was carried to Godolphin, in Cornwall, and buried in the north transept of the parish church, her name being erroneously entered in the parish register as "*Catherine* Godolphin."

Godolphin's active career in politics began at this date. Ten years had passed away since his election to parliament, and they had been spent in acquiring the reputation which Charles II., with his characteristic accuracy of expression, summed up in the phrase that "Godolphin was never in the way and never out of it." Then, as ever, he was reticent in speech and retiring in manners. His political conduct during the reign of Charles did him little credit. While he professed friendship for James II., then Duke of York, he was active in endeavouring to secure his exclusion from the throne. The reason for this conduct does not lie on the surface. Mr. Elliot attributes it to Godolphin's love of moderation and to his dread of James's fanaticism; and this suggestion, though somewhat fanciful, is as good as any that can be put forward. From 1679 to 1684 Godolphin was a lord of the treasury, but for a few months in the latter year he held the seals of secretary of state. He was then recalled to the treasury, and it was in that office that the greater part of his political life was spent and his reputation was earned. Godolphin had arranged a truce with James II. long before his accession to the throne, and after that event was ranked among his principal advisers. Like his colleagues in statecraft, he was distracted between acquiescence in the royal views of the divine right of kings and doubts how far the nation at large would concur in the promotion of papal designs. The priests believed that Godolphin was always on the point of adopting the Roman Catholic creed, but somehow or other he always drew back at the last moment. Neither in the last days of Charles nor during the reign of his successor had the minister's career been marked by dignity or candour; but he was one of the last to desert the fading cause of James, and he is said, poor man as he was, to have supplied the flying king with a hundred guineas to carry him to France. In the convention parliament of William he sided with those who were indisposed to create a new monarchy, and Charles Godolphin, his brother, provoked the fiercest opposition of the Whigs in the debates on the succession to James; but the new monarch was not so firmly seated on the throne that he could openly gratify his likes or dislikes to their fullest extent. These faults were overlooked, and Sidney again found a place in the treasury. Here his services were above all value. William wanted money for his wars, and no one could raise it on such easy terms as Godolphin. In the estimation of the city Godolphin always stood out above his fellows; and his promptness in raising the ways and means led his master to overlook, for many years, his hesitating support of the new dynasty.

Godolphin's supremacy in politics dates from the accession of Queen Anne. He, like Marlborough, was descended from a knightly family in the West country. They had both commenced life as pages at the royal court, and they had both selected their wives from those in corresponding positions as maids of honour. Their friendship had been drawn closer still by the marriage in 1698 of Godolphin's only son to his friend's eldest daughter. It became a matter of necessity that Marlborough should assume the position at the head of the English forces which the Dutch William had held during his reign; and it was equally imperative that Godolphin should take upon himself the control of the national finances. They became the chief members of a mixed administration of Whigs and Tories, for it was their desire to bring together into one ministry a band of officials, differing in their political views, but supported alike by the favour of their sovereign. Needless to say that the course of events proved adverse to the success of such a system. The ministry was from the first of divided counsels, and gradually passed from a confused body of discordant opinions into a united band of Whigs. In foreign affairs the two chiefs were not always of the same opinion. Mr. Elliot brings out with great force the differences between the views of Godolphin and Marlborough over the campaign against the forces of the Grand Monarque. The one was for attacking the French king through military operations in Spain, and for aiding with British troops and British money the rebellious subjects in the Cevennes whom religious persecution had driven into open revolt. The other, not unnaturally, was for forcing his way into France through the Low Countries or through the provinces of Germany, in which he had achieved so many famous victories. When the back-stairs intrigues of Harley and his still more dangerous ally, and the ill-fated prosecution of Sacheverell—a senseless proceeding which inevitably foreshadowed the downfall of the existing cabinet—had undermined the Whig party, neither of its prominent members acted with vigour or dignity. To which of them should be assigned the larger share of blame will probably always remain in doubt. History has perhaps placed on Godolphin's shoulders the greater burden of disapproval. His biographer, as might be expected, holds a brief for the minister at home, and transfers the odium to Marlborough.

Mr. Elliot claims, and is justified in his assertion, to have exhausted all the sources of information respecting Godolphin with which he was acquainted. The proofs of his industry are perceptible in every chapter. Still the statesman does not stand before us, as he lived and acted, with the vividness which might be desired. The pages are sometimes wanting in animation, and the biographer is hampered by the mass of materials at his disposal. There are several pleasant digressions in the narrative. Let

the description of Godolphin's country residence of Cranbourne Lodge, the details of his assistance in the conversion of Greenwich Palace into a hospital for decrepit seamen, and the narrative of the changes which were effected in St. James's Park after he had constructed his house in the precincts of the adjoining palace, bear witness to the lighter hours of the chronicler's toil.

W. P. Courtney.

The End of the Middle Ages. By Mary F. Robinson (Mdme. James Darmesteter). (Fisher Unwin.)

This volume of studies falls into two divisions. The first part consists of three essays on Mediaeval Mysticism—two examples and an analysis. The second part gives us six essays whose connecting link is the relations of France to Italy, and especially the French claims to Milan and to Naples. There is a tenth essay on the Malatestas of Rimini, really a study of the life and character of Sigismondo Malatesta, which stands by itself. The author, in her dedicatory epistle, tells us that these studies are the prolusions to two larger histories—the history of the Hohenstaufen and the history of the French in Italy.

In the first essay, the story of Beguinism and of the Weaving Brothers is most interestingly told. We learn how the begging confraternity came into existence, the joint product of the physical ill-being brought upon Europe by years of Crusading, and of the spiritual outgoing towards the unknown which marked the first dawn of enlightenment. We see the development of Beguin teaching, leading them nearer and nearer to heresy and to a collision with the church. We are told how the church secured all of Beguinism that she desired, by the establishment of the tertiary orders of St. Dominic and St. Francis; how Mechtild of Magdeburg maintained for a while the prestige of Beguinism by the active benefits of her life; how, after her death, heresy spread through the order; how the order was finally suppressed, the orthodox Beguines joining the Dominicans, but carrying with them a leaven of their heresy which shows itself in the writings of Eckhart and of Tauler. In this essay the personal interest centres round the figure of Mechtild. In her mediaeval mysticism attained its finest growth, because its tenets, too apt to teach absolute inactivity, were tempered, in Mechtild, by an irrepressible natural impulse towards action. "Such a nature," says Mdme. Darmesteter, "is not by instinct a mystical nature." There is something strong and vigorous and human in her caste of mind which marks her as a creature very different from the swooning ecstatics about her. What a whole and wholesome conviction there is in her dream-born phrase "Lieb' meine, betrübe dich nicht zu sehr, die Wahrheit mag niemand verbrennen"! Mechtild is the Novalis of mediaeval mysticism, just as the dominant character in the next essay, Gertrude, is its Schleiermacher.

The essay on the Convent of Helfta is occupied with the story of the sisters Gertrude and Mechtild von Hackeborn. And here again, as in the case of the first essay, Mdme. Darmesteter handles the subject which interests her most deeply—a spiritual struggle. Mechtild, of Magdeburg, the brilliant, vigorous woman of the world, is gradually forced, under stress of spiritual storm, to adopt the semi-monastic life of Beguinism—a rule which still left sufficient scope for her instinct towards action. Gertrude, of Hackeborn, the recluse, the student, is gradually forced, under a similar stress, to renounce her beloved study of letters, her intellectual pride and superiority, and to abandon herself to the quietistic side of mysticism and to ecstatic communings with the unseen. Mdme. Darmesteter is full of regrets for the upshot of this struggle, and full of pity for the girl Gertrude, in whom the battle raged so fiercely. She thinks that Gertrude would have been happier, would even have been more useful, had she carried her learning into the life of the outer world. But in natures so complex as that of the saint a struggle was inevitable; one part of the complex whole had to triumph, and the battle preceding the victory could not help being painful. We have no right to suppose that Gertrude would have been happier had her strong love of learning gained the day. We have no warrant for asserting that she did violence to her destiny or failed to follow her major impulse in dedicating herself to the visionary life.

The third of Mdme. Darmesteter's essays is, as we said, an analysis of the roots of mysticism—of the position assumed by those who "love to lose themselves in a mystery, to pursue their reason to an *O altitudo*!" It is called "The Attraction of the Abyss." There seems to us to be some confusion and indistinctness in our author's treatment of this difficult subject. On p. 77, for example, the simile which is used to express the relation of the body to the soul is not quite clear, unless we read *body* for *spirit*, in l. 12; and, in any case, the simile does not appear to hold good according to the strictest doctrine of mysticism, if, as we understand, the argument runs thus: God is all, the soul is God, therefore the soul is all, therefore the body is nothing. We do not see how the pure colourless liquid of the soul is to be poured into nothing. Indeed, mystics appear to us never to have carried their doctrines far enough. The mystic "must see neither difference nor distinction" (p. 83), so runs one of the dogmas. This would lead to the impossibility of predication, and, therefore, of course, to the impossibility of formulating any doctrine of mysticism. True predication is impossible for us, and even if it were possible, it is useless. All predication of a subject that is true is already contained in the subject. The most man can do is to be tautological; his only safe assertion—what is, is. By predicating at all man is in imminent peril of lying; and the only time predication has any new meaning is when it is lying predication. Only lies are new; the truth is always old. When Erigena says "God is non-being"; when Eckhart asserts that "Godhead is a simple stillness—an eternal silence"—they are only showing what poor mystics they are. It is of the very essence of mysticism that it shall not offer any explanation conformable to our understanding, on pain of ceasing to be mysticism. It must, therefore live in the region of dumb negation, and be finally reduced to the true import of its name, and hold its tongue.

These considerations only apply, of course, to the intellectual aspect of mysticism. There is the other and far more important aspect of the emotional region. For knowledge, being impossible as well as useless for man, he is compelled to fall back upon feeling, the only existent which no one has ever ventured to call into dispute. The mediaeval mystics, as well as their modern German brethren, make religion consist in feeling. But the ways in which this emotion operates and manifests itself are various. We have the feeling issuing in action in Mechtild of Magdeburg as in Novalis; or we find it passing through quietism into hysteria in Mechtild of Hackeborn; or formulated into a doctrine of non-resistance to evil in Tolstoï, whose mediaeval counterpart is Ochsenstein's dictum that not even the desire of the kingdom of heaven should tempt a good man towards activity. It is natural that so elastic a foundation as feeling should produce great varieties of heights and depths in the religion based upon it.

We have left ourselves no space to talk of the two excellent historical essays on Valentine Visconti and the claim of the House of Orleans to Milan. They are written in a firm and vigorous style, except in the passages where the author is striving for effect in the accumulation of adjectives and the use of the present tense. Of their scholarship and grasp of subject it would be difficult to speak too highly. We recommend them to all who desire information on one of the principal historical causes of ruin and misery to Italy.

Horatio F. Brown.

Daylight Land. By W. H. H. Murray. (Chatto & Windus.)

The first feature which strikes us in this Christmas volume is the beauty of the tinted illustrations; and secondly, the utter inappropriateness of the text which they are supposed to elucidate. The latter, indeed, has little to do with the ostensible subject of the book, which is to describe a journey across the American continent by way of the Canadian Pacific Railroad. In reality, all the purpose the trip serves is to supply various pegs on which to hang wordy disquisitions on all manner of subjects. There are philosophical commonplaces, bombastic speeches, and a host of stories, none first-rate, and several extremely old, though they are supposed to be part and parcel of the "experiences, incidents, and adventures, humorous and otherwise, which befel Judge John Doe, tourist, of San Francisco; Mr. Cephas Pepperell, capitalist, of Boston; Colonel Goffe, the man from New Hampshire, and divers others, in their Parlor-car Excursion over Prairie and Mountain." Yet, for all the reader learns about Manitoba, the North-west and British Columbia, the journey might as lief been made through Kentucky, New England, or Switzerland. Certainly, of the 336 pages, not twenty touch directly or indirectly on the country traversed, and then almost apologetically, as if the author felt that something was due to the title of his book. What makes it worse, the little he says is not

Digitized by Google

always accurate or of any value. For instance, from the way Mr. Murray speaks of "Siwash Indians" (p. 329) it is evident that he imagines "Siwash" to be the name of a tribe. It is the Chinook jargon word for an Indian generally, being a corruption of the French voyageur's "sauvage." Again, it might be interesting to learn what American sept uses "the Indian armour deftly quilted" (p. 332), or from what part of British Columbia came "bows and arrows from polished bone tipped with deadliest poisons" (p. 333) which the fortunate tourists saw in the Victoria "pawnshops." As a specimen of how myths grow, Mr. Murray devotes eight pages to an inflated secondhand account of what he describes as a Fourth of July incident in 1868, when, according to him, American Bar on the Fraser was tenanted by a wild pack of Californian gold-digging desperadoes, with whom the revolver was the sole legal code. In 1868 American Bar was quite deserted except by a few Chinese; and long before that date Mr. Justice Begbie had struck awe into the law-breaker. The incidents related happened not at American Bar (which was in its glory in 1858), but at Lillooett, in 1863, while the hero of the story was, so far from being a "big, offensive, red-raced London cockney," a "lofty-acting, boastful, swaggering braggart," a hard-working Fraser River boatman. He was not, perhaps, endowed with the most refined manners (which were at a discount in those days), and was certainly notable for his habitual use of the offensive adjective from which he derived his familiar designation; but he was the son of an English admiral, and quite incapable of any such verbal atrocity as "Urrah for the flag of Hold Hingland."

However, the book does not profess to be a serious contribution to North-western geography, social history, or ethnology. Our main objection to it is that after glancing at the pictorial embellishments which strew almost every page, the incautious reader might imagine it to be a grave book of travels instead of an imitation of that half-novel, half-tourist talk which Mr. Dudley Warner has brought into literary fashion; only, Mr. Murray does not write quite so well as that adroit penman. In a fine specimen of the puff direct which is appended to his volume, we are told that he is an American clergyman, "a pulpit orator without a peer," and a public reader famous for the "purity of his language, almost wholly Saxon in quiet intensity and grace of style," &c. It may be admitted that, putting aside the windy pages about nothing, the book has passages which indicate that, if Mr. Murray could now and then touch mother earth, he is capable of better things than the poor "hifalautin" of which pp. 17-24 are not the worst specimens. But when old-fashioned folks come upon such phrases as "has Phoebus loaned you his car" (p. 18), "getting a check cashed" (p. 76), "I never saw a madder man or a worse muss" (p. 78), "he dove through the door of the tent" (p. 129), and so forth, they may question whether the author's trumpeter has not been blowing too loudly.

It is not pleasant to write disparagingly of a volume the mechanical execution of which is so creditable to the Riverside Press of Cambridge, Massachusetts; for though published in London it is produced in America. Nothing in the shape of clear type, and thick, glossy paper, is lacking to set off the beautiful illustrations produced "under the supervision of J. B. Millet," though most of them seem photographs printed in tints by a peculiar process, of which we have seen too little in this country. There is not one of the 140 in the book which is not a gem; and the reader who may be disappointed with the few grains of wheat, which he will find it scarcely worth his pains to search for among such a superabundance of chaff, may be consoled by the assurance that in no other work are there views of scenery, Indians, and game animals, which afford so vivid a picture of the North West. It is a pity that they are wedded to such vapid verbiage; yet, from a mere commercial point of view, they are worth the price of the volume twice over.

ROBERT BROWN.

NEW NOVELS.

The Legacy of Cain. In 3 vols. By Wilkie Collins. (Chatto & Windus.)

Colonel Quaritch, V.C. In 3 vols. By H. Rider Haggard. (Longmans.)

Mary Myles. In 2 vols. By Mrs. Edmonds. (Remington.)

A Russian Proprietor.

The Cossacks.

The Death of Ivan Ilyitch. By Count Tolstoi. (Walter Scott.)

Amos Kilbright. By Frank Stockton. (Fisher Unwin.)

Greystone Grange. (Bumpus.)

Uncle Piper of Piper's Hill. By Tasma. (Trübner.)

The Crime of the Golden Gully. By Gilbert Rock. (Spencer Blackett.)

IT would be impossible for Mr. Wilkie Collins to write a dull story; and though his favourite method has no longer its freshness of interest or its potency to charm, it still, no doubt, proves attractive to many readers. The author of *Armadale*, *The Woman in White*, &c., should be able to rely on a higher inventive faculty than that indicated by the adoption of such clumsy aids to plot-evolution as the diaries of the leading characters and the collateral narratives of those incidentally introduced. There is but indifferent skill required for the marshalling of incident and episode through the mazes of a complicated plot, when the author adopts the *rôle* of an indefatigable interviewer, and, note-book in hand, jots down just what he finds needful from the fictitious individuals who await his convenience. The method has its merits, of course, just as the barrister's method has *its* merits—in the courts of justice. But then the novelist is not a barrister, and the court in which he pleads is of a very different constitution from that presided over by legal judges. Unbroken sequence of narrative is one of the greatest charms of a work of fiction; and to this end the obtrusion of the diary-record method is apt to be fatal. *The Legacy of Cain* is an exciting story, and by many will be found as enthralling as it is meant to be. It is not, however, one of the author's most noteworthy books. The invention occasionally flags, the literary subterfuges are now and again too apparent, and even the style shows a falling-off from the old crispness and vigour. Such, at any rate, is the impression made upon the present writer, who would in this instance be very glad to find that he constituted the minority of one; for he, as surely all, must ever be grateful to the kindly and delightful story-teller whose best novels are still read with avidity or remembered with pleasure. The allusion in the title is to the evil inheritance bequeathed to her child by a murderess. The story is the old tale of virtue *versus* wickedness—Eunice is charming Miss Virtue, Helena is evil Miss Wickedness. In the conclusion, as every reader of Mr. Wilkie Collins's books will anticipate, Miss Virtue triumphs and Miss Wickedness comes to a bad end. To be more exact, Helena suffers punishment and degradation, but ultimately re-appears in America as the Reverend Miss Gracedieu, of the Temple of the Worship of Pure Reason. Helena deserved to be hanged, but she hardly merited such a doom—for a young woman of her tastes—as the intellectual curacy of a few Massachusetts atheists. The weak point in the novel is the much too elaborate supernatural vision and voice which cause Eunice so much distress ere at last she gains happiness as the wife of Philip Dunboyne. The most effective of the secondary personages is the eccentric *masseuse*, Mrs. Tenbruggen, who, when not engaged in some intrigue against other people's welfare or in being interviewed by Mr. Wilkie Collins, is employed in "rubbing, tickling, squeezing, tapping, kneading, rolling, striking" unfortunate patients, and in studying their joints-anatomy, their "flexion, extension, abduction, adduction, rotation, circumduction, pronation, supination, and the lateral movements." Mrs. Tenbruggen is amusing company for a while, but the *masseur* (or *masseuse*), the hypnotist, and the esoteric Buddhist are now almost as tiresomely commonplace in fiction as the spiritualist, or even as the "patriot" of Hibernian romancists.

In his earlier books, *Dawn* and *The Witch's Head*, Mr. Rider Haggard showed capacities which justified critics in foretelling that he might one day write a memorable novel. His happy genius made him stray into the realm of adventurous romance. His best achievement, *King Solomon's Mines*, is worth a score of *Dawns* and *Colonel Quaritches*; for it is exceptional—it is practically unique—and the latter are but good examples of third-rate fiction. *She*, also, is a fine book of its kind, notwithstanding all the absurd cant of literary superior persons, who could not write an engrossing tale of adventure if their soul's salvation depended thereupon. Yet it is inferior to its predecessor just in so far as it is more pretentious, and as the reader is led to expect keener intellectual stimulus. But in the ordinary novel Mr. Haggard is too heavily handicapped. He has the imagination which can create or vivify thrilling incidents; but he has not—or at any rate has not yet displayed—the imagination which naturally occupies itself with the subtler complexities of human nature. *Colonel Quaritch, V.C*, is a capital book of its kind.

Digitized by Google

The interest is continuous, the padding only occasionally obtrusive; and, though the style is but indifferent at best, it is freer from banalities and deadly commonplace than are most of its three-volume kindred. As he had set himself the task of writing an ordinary story of English life, Mr. Haggard would have been wiser to have left the treasure-business alone. It has not at all the effect intended, and the present writer is certain that he does not speak for himself only when he asserts that it is distinctly disenchanting. A good treasure-story is always, and probably will ever be, enjoyable; but the finding of fifty thousand pounds odd just in time to prevent foreclosure and other evil machinations on the part of the villain merely bores the discriminating reader. Much the best thing in *Colonel Quaritch, V.C.*, is the dramatic ending of the solicitor Quest and the horrible woman who is his real wife. The story is not altogether a pleasant one. Mr. De la Molle is a selfish old man—for all his eminently English manly qualities, as set forth by the author—and his daughter Ida, the heroine, is not so much a woman as the "leading female personage" of a novel; Quest is a refined scoundrel, and Edward Cossey an unadulterated blackguard; Edith Quest, *alias* the Tiger, is in her own way a much fouler individual than the objectionable old Gagool in *King Solomon's Mines*; and the other Mrs. Quest, after a very ordinary and vulgar intrigue with Cossey, becomes the saintly Sister Agnes. Colonel Quaritch himself is a fine fellow, and one is glad to have made his acquaintance. The countryman George is also a worthy individual, though he sometimes does the funny part too obviously. To say that the novel is poor would be unjust, to say that it is indifferent would be misleading; so the reviewer may fall back upon the safe assertion that it is better than *Dawn*, and from every point of view inferior to those later works wherewith the author's name is most closely identified.

Mrs. Edmonds is known to many readers by her charming *Greek Lays* and *Hesperas*; but, so far as I am aware, *Mary Myles* is her first essay in fiction. It is the story of the experiences of a beautiful and true-hearted girl, whose only drawback is that she causes too many people to fall in love with her. The reader is similarly seduced from the moment when, in company with Herbert Langridge, he sees her as a modern hamadryad, asleep below the chestnut trees, her long hair flowing about her, and her bare feet gleaming in the sunlight. I thought I could never have read another governess-story with pleasure, nor was I able to repress a wearied sigh when I discovered that Mary Myles occupied the useful, but uninteresting, position of instructress; but ere long it became possible to be interested even in the minor details of her life. The love of Dr. Grantham for his Nausicaa, as he called the beautiful girl against whom he had been prejudiced on account of her being "a sweet girl-graduate" from Girton, is sympathetically told, and its pathos is all the more touching from the author's just reserve. Any interested reader would have resented a tragic close to Mary's life, so fortunately all turns out well in due time, and the story of a good woman and her love comes to a pleasant close.

The three volumes of fiction by Count Tolstoi, which come next on my list, are a credit to everyone concerned—except, in some respects, to the translator. That the translated writings of one whom I venture to call the greatest of living novelists can be so handsomely printed and bound at so small a cost per volume is quite as wonderful as anything else in these days when esparto grass is a drug in the market. The translator, Mr. Nathan Haskell Dole, is evidently an American. His dislike to the close companionship of two *l*'s and to the *u* in such words as "honour" and "colour," his occasional strange idioms, and such vulgarities as "he sort of snored," mark him out as a translator more commendable for zeal than for literary style. Nevertheless, much of his work is excellent, and, so far as one can judge who cannot read the originals, as literal as is practicable. The more Tolstoi is read the more he will be admired. Like his native steppes, his genius is vast in its apparent monotony; but there is no real monotony therein. His, moreover, is that true realism which is the very breath of life. He shirks nothing that is necessary to artistic effect; but he would as soon think of the fatuous and nauseous realism of certain of his contemporaries as he would of adopting the method and subject-matter of Paul de Kock. For the issue of this series of the great Russian novelist's romances Mr. Walter Scott deserves the thanks of all who are interested in high literature; and the influence of such widespread perusal as must follow cannot but be to the welfare both of English fiction and of the readers thereof. *A Russian Proprietor* has the additional interest that the greater part of it is indirectly autobiographical; and the autobiography of such a man as Lyof Tolstoi cannot but be fascinating. *The Cossacks* is in some respects his most vivid piece of narrative, although it has not the psychical interest or significance of *Anna Karénina*. It has already been reviewed in the Academy in another translation, as has been that sombre study of physical and moral disease, "The Death of Ivan Ilyitch." In the volume that contains the latter there are several eminently characteristic, and one or two very fine, short tales and allegories. There is something of the desert, something of the sea, in Tolstoi's genius. He is so great that to small minds he seems dwarfed; but he is in reality of a wider embrace than Balzac himself, and perhaps than any other imaginative writer since Shakspere.

Mr. Frank Stockton is the quaintest of living humourists, but in his latest volume he hardly does himself justice. *Rudder Grange*, *Mrs. Lecks and Mrs. Aleshine*, and other charming tales have somewhat spoilt the exigent reader. "Amos Kilbright" is the first of four compositions in this little volume, and is distinctly the best. It deals with the strange experiences of a materialised spirit of the eighteenth century who successfully escapes dematerialisation and settles down happily among his posterity of to-day; and it is narrated with considerable vigour and verisimilitude. "The Reversible Landscape" is only moderately amusing, while the other pieces come perilously near the verge of dullness.

Greystone Grange is, for some mysterious reason, sub-titled "Da Due Signore," for the Italian portion of the story is of little extent or importance. The narrative is unequal, but in the main it is brightly written and is of sufficient interest to repay perusal. The closing chapters, however, are the least satisfactory.

The Crime of the Golden Gully and *Uncle Piper of Piper's Hill* are both Australian tales; but, while the former is sensational and smacks of the soil, the latter is sedately ordered and deals at some length with life on board an emigrant ship. The two books, however, should not be bracketed together; for *The Crime* is worthless as a literary production and not very enthralling as a tale, while *Uncle Piper* is a work of considerable promise and shows signs of power in the portrayal of human character which deserve hearty recognition. It is too long, and it is dull in parts; but the author has no need to shelter himself—or herself—under a pseudonym; for, if I am not mistaken, "Tasma" will yet accomplish something to redeem Australia from the reproach of literary unproductiveness, which has not been mitigated by many volumes of the *Mystery of a Hansom Cab* and *Crime of the Golden Gully* kind. The creator of the child Louey may rest assured that, as they say in the North, he—or she—has "a call" for the writing of fiction.

William Sharp.

FOUR RECENT BIOGRAPHIES.

Frederick III., Crown Prince and Emperor. With an introduction by the Empress Frederick. By Rennell Rodd. (David Stott.) The genesis of Mr. Rodd's memoir of the Emperor Frederick sufficiently explains its scope and its limitations. When the Crown Prince was attracting the admiration of the English public by his heroic bearing at the Queen's Jubilee, an instinctive sympathy led him to visit the London Throat Hospital. It afterwards became the object of his consort to contribute in some way—by the work of her own hands, if possible—to the support of this institution. Other cares supervened; but in pursuance of her intention the Empress asked Mr. Rodd, a recent member of the Berlin Embassy, to write a popular life of her husband, the proceeds of the sale being devoted to the Throat Hospital. This biography, in the Empress's own words in the introduction, has for its object "to make the Emperor's name better known to the English public, and give him a place in their affections beside that of my father." Mr. Rodd has executed the task laid upon him with credit. His memoir is simple and well-written; and, though a note of generous admiration runs through it, the volume is free from extravagant eulogy. But he has naturally enough avoided all disputatious matter or partisan pleading. There is nothing to help towards an appreciation of the great problem which has divided Germans, and will continue to divide them, with reference to the late Emperor. Put briefly, that question is—with many Germans who have no concern with the bitterness of political cliques, and render just tribute to the noble and chivalrous character of Frederick III.—whether his liberalism was compatible with the present development of Germany, whether he had sufficient hardness of character for directing the empire whose very existence for some time yet depends upon considerations of mere force? But Mr. Rodd, drawing from the sources of intimate knowledge at his disposal, has been able to throw

Digitized by Google

light upon many traits in the character of one who admittedly

"was as full of kindness as of valour,
Princely in both."

He gives several anecdotes which show the humanity and solicitude displayed by the Crown Prince during the Franco-German war, sentiments which the quick instincts of the French people soon recognised. Like many other brave soldiers and successful commanders, the Crown Prince held war in thorough detestation; and there is only one curious expression in his letters which points to his having momentarily felt the exultation of battle, the χάρμη μάχης. His success as a commander in the war was, however, as much political as military—in attaching to himself the South-Germans, who had entered on the struggle with some hesitation, and with the memories of 1866 still rankling. A story in proof of this, which we have not seen in print elsewhere, was a favourite with the Crown Prince. Upon the morning after Wörth he came upon a Bavarian trooper enjoying a quiet breakfast in the garden of a farmhouse. The enthusiasm of the trooper carried him away. "Ah!" he exclaimed; "if only we had had your Royal Highness to lead us in 1866, you would have seen how we would have thrashed those cursed Prussians." But Mr. Rodd gives us glimpses into the Emperor's home life, as well as into his conduct on the field, all of which deepen our admiration of his simplicity, consideration for others, and zeal for culture in its largest aspects. Few men have been such heroes even to their valets, and have inspired such affection. We may conclude this notice with the words of an Englishman—Sir Beauchamp Walker—who had unusual opportunities of studying his character in the most trying times:

"He was not only the most lovable, but the noblest man with whom I have ever associated—noble in his acts, noble in his speech, noble in his judgment of others. I never knew him say an unkind thing of anyone, man or woman, living or dead—not that his judgment of others was always favourable, but it was never expressed in other than the most kindly terms."

George Maxwell Gordon; the Pilgrim Missionary of the Punjab. By the Rev. Arthur Lewis. (Seeley.) We have it on high authority that the most successful missionaries in India are the Brahmans. The number of people who every year become Brahmanists exceeds the total number of annual converts to all other religions. Considering the large sums of money subscribed in England for the propagation of the Gospel in various parts of our Indian empire, the result is anything but satisfactory; and it might be as well to inquire sometimes whether missionary efforts have been turned hitherto in a right direction. The life of George Maxwell Gordon affords no little help towards removing any doubt on this point. He saw clearly that the commonest type of Anglo-Indian missionary is a mistake. What is chiefly wanted are Christian *fakirs*, who can dispense with those luxuries of existence which to most Englishmen in India seem absolutely requisite to health and well-being. The missionary must be a hermit. He must be able to live in a native hut and on native food; and he must defy the rigours of a climate usually fatal to Europeans unless they are protected by every attainable comfort. It is a hard and desperate struggle; but Gordon, a man with means of his own, and with highly cultured instincts, gave up all for what he conceived to be a duty. There have been self-devoted missionaries in India of the same stamp ever since the days of Henry Martyn; but not many have combined Gordon's zeal and determination, with, it should be noted, those intellectual attainments and powers of physical endurance without which the missionary in India must needs be a failure. Gordon was killed in a gallant endeavour to convey help to the wounded in a sortie during the siege of Kandahar, leaving behind him a record such as none who have borne his name would be ashamed of.

The Life of William Denny. By Alexander Balmain Bruce. (Hodder & Stoughton.) The portrait of William Denny, engraved by M. Jacquet, which forms the frontispiece of this volume, gives a complete index to the character of the man. The face is one of singular beauty, both moral and intellectual; but in the eyes there is a look of utter want of repose. William Denny was a partner in the well-known firm of shipbuilders of Dumbarton. Had he limited his energies to his business he would have been living at this hour, honoured and loved by all who had the good fortune to know him; but, alas! his was

"A fiery soul, which, working out its way,
Fretted the pigmy body to decay,
And o'er informed the tenement of clay."

William Denny died by his own hand at the age of forty. This tragic event is related with commendable reticence by Mr. Bruce. We have no wish to raise the veil, but would only say that Dryden's lines seem to offer the best key to the mystery. Whatever may have led to the final catastrophe, there can be but one opinion as to William Denny's life. It was uniformly pure, truthful, and unselfish. It is impossible within our limits to do justice to his professional achievements; for these we must refer the reader to chapters vi. to x. We would rather dwell on the man as thinker than on the shipbuilder, and we specially recommend the perusal of chapter xii. to those who are interested in mental problems. We find here one who was at once intensely practical and fervently speculative—in fact, a Scotchman of the highest type. The letter to Mr. Dawes recommending Hinton's *Law Breaker* is brief and characteristic. The following extract from a letter to a lady perhaps gives the truest reflection of Denny's view of our Lord's ethical teaching:

"An eternal sleep seems vastly preferable to the hideous future of preferential happiness for a select few, and endless misery for the many. . . . What a horrible set the select few will be, if they ever enjoy one hour's happiness in their new existence, knowing the awful and utterly hopeless misery coexistent with them. They would be un-Christlike with a vengeance, and our Master reigning over such a select few is quite inconceivable. . . . The one consolation for us is that simultaneously among the best minds and spirits such hideous ideas are dying; and among the rank and file devotion to the good of others, and efforts for them, are preponderating over the theological conceptions. The spiritual world moves, and towards the truth—that truth which will set it and all of us free. The day will come when a man will think it as strange to wish himself one of a select few in heaven, as one of a select few here. When caste dies here it will die there, for life is of a piece, in spite of all our self-deception" (p. 273).

It is not to be wondered that a man whose Christianity was so little mechanical should have excited awe as well as love in those who knew him. Mr. Denny always regretted that one of the last acts of Christ—the washing of His disciples' feet—had not been commemorated as a sacrament by any of the churches: that sacrament—the sacrament of service to humanity—hallowed William Denny's daily life. The two chapters on his politics are extremely instructive. He supported Mr. Gladstone's Home Rule proposals because they contained (in his opinion) the only scheme before the country capable of being adapted to the federal requirements of the whole empire. We have said enough to show that Mr. Bruce is fortunate in his subject. It is but bare justice to state that he has written a most interesting biography.

The Life of William Morley Punshon, LL.D. F. W. Macdonald. (Hodder & Stoughton.) We find this biography somewhat melancholy reading. The hero was, perhaps, the greatest orator of his generation outside politics. He had natural gifts which are rarely given to Englishmen.

"The difficulties involved in the preparation and delivery of sermons, which are in themselves a discipline for most young preachers, hardly existed for him. He sermonised with ease; divisions, paragraphs, sentences took shape as fast as his flying pen could fix them. There was no laborious committing to memory—that was accomplished in the act of composing. What he wrote he could recall, page after page, with perfect accuracy and freedom; while his delivery, rapid, rushing, yet subtly modulated, charmed the ear, and strangely touched the emotions."

But knowledge and scholarship do not come by nature. They must be acquired, and time must be given for the process. Unhappily, Dr. Punshon's career as a student was cut short after four months at the Theological Institution at Richmond; and he was sent at the age of twenty-one to Marden in Kent, where a secession from the parish church in consequence of "Puseyite" practices gave an opening for the founding of a Methodist congregation. "There are no Methodists in the place, and I shall have to try, under God, to *make* some." This sentence epitomises Dr. Punshon's life. Without leisure for study or thought he was kept perpetually at work, and died at the age of fifty-six of "making Methodists." We have no wish to deny or to depreciate the importance of this work; but, nevertheless, Prof. Macdonald's biography leaves us with the conviction that Dr. Punshon gave up to sect what was meant for mankind, and that the sect, as well as mankind, is a loser. We cannot feel that Dr. Punshon has left anything behind him which fairly represents his great powers and immense labours; and the reason is that the immediate work of filling Methodist churches in England and Canada occupied every corner of his whole life, and left him little time to possess his own soul, and still less to adequately express it. Sacrifices are made constantly in all the sects of victims who have the fatal gift of oratorical ability, but such victims as Dr. Punshon are rare. Prof. Macdonald is an experienced biographer, and has done his work well. He is assisted by Prof. Reynar, of Ontario, who is responsible for chapters xi. to xv., which describe Dr. Punshon's work in Canada.

SOME BOOKS ON OUR TABLE.

THE authorities of the South Kensington Museum have published (H.M. Stationery Office) a Catalogue of the printed books bequeathed to them by John Forster in 1876. The name of the compiler is not given; but it seems to have been made in a scholarly manner, together with an elaborate index. Prefixed is a brief life of Forster, by the Rev. W. Elwin, whom we take to be identical with the editor of Pope; and for frontispiece there is a fine portrait, engraved on steel by Jeans. We could have desired also a memorandum of the conditions under which this library is available to readers, and some indication of the character of its contents. Apart from the show cases, it is very rich in first editions of English literature of the two last centuries, and also in historical pamphlets. As might be expected, the most attractive headings are Dickens, Goldsmith, Landor, Lytton, and Swift. The early Tennysons, Brownings, and Carlyles

Digitized by Google

are also interesting. The first edition of *Paracelsus* (1835) is thus inscribed: "My book to my best friend, R.B."; and the library edition of Carlyle's Collected Works (1869-71):

"To John Forster, Esq^re (Palace-Gate House), my ever-helpful friend,—without *whom* this *Edit^n.*, and much else, had never been: gratefully, T. Carlyle. Chelsea, 20 Jan^y., 1869."

The total number of volumes exceeds 18,000, which are catalogued under 9729 entries. A second part of the catalogue is to follow, containing the remainder of the bequest—MSS. and autograph letters, paintings and other works of art, and modern pamphlets.

Messrs. Longmans have published this week a "popular edition" of all Macaulay's Works, including the *Life and Letters*, by Sir G. O. Trevelyan, in five volumes. Competition, due to the expiry of copyright, had previously brought down the price of the *Essays*; but the *History*, we believe, has hitherto cost 12s., and the *Life* 6s. The former can now be obtained in two volumes, of nearly 800 pages each, for 5s.; the *Life*, in a single volume of 700 pages in larger print, at 2s. 6d. The type generally might be clearer, though it is not from battered plates, such as we have seen lately in other cheap reprints. The binding is stout enough, but the edges are considerably shaved. It would, perhaps, be hypercritical to complain that the cloth covers simulate half-calf. Altogether, whether we consider the quality and quantity of the matter, or the substantial manner in which it is got up, we know not where such literature is to be obtained at such a price.

Messrs. W. H. Allen are issuing a "cabinet edition" of the *History of the Indian Mutiny*, in six volumes. The two first volumes consist of the two first volumes written by Sir John Kaye; these are to be followed by Col. Malleson's first, superseding Kaye's third; then will come two more of Malleson's, and finally, Mr. Pincott's index, forming a volume by itself. Col. Malleson, as general editor, has wisely decided to leave his predecessor's contribution untouched, except in so far as it was necessary to harmonise the spelling of native words with that now officially adopted; but he promises that his own work shall be rigorously revised. The only thing that we miss is a map, which the publishers to the India Office ought to have no difficulty in supplying.

Messrs. W. H. Allen are also issuing—in larger type and on better paper than the preceding—Sir John Kaye's *Lives of Indian Officers*, perhaps the most popular, and by no means the least valuable, of his works.

Messrs. Macmillan have now added *Alton Locke* to their cheap re-issue of Kingsley's works. Unfortunately, the usual bibliographical statement is not prefixed; but we can well believe that *Alton Locke* was the most successful of all its author's novels (not excepting *Westward Ho!*) on its first appearance, and that it will be read scarcely less eagerly at the present time, when the subject of "sweating" has again come under attention.

NOTES AND NEWS.

Mr. P. G. Hamerton—than whom no one has a more competent knowledge of the subject from both its sides—has collected his papers on "French and English," which appeared last year in an American magazine; and they will be published shortly in a volume by Messrs. Macmillan. They deal with such subjects as education, patriotism, politics, religion, virtues, customs, and society.

Mr. Cosmo Monkhouse has undertaken to write a Life of Charles Kingsley for the "Great Writers" series.

Max O'Rell's new book, *Jonathan et son Continent, ou la Société Américaine*, will appear in Paris and New York on January 23. It will also be signed by an American *collaborateur*. The English translation is by Mdme. Paul Blouët.

The forthcoming number of the *Universal Review* will contain a story, by André Theuriet, entitled "Le Trésor du Lac," illustrated by W. R. Bunny, and Guy de Maupassant's latest novelette, "Un Soir"; both of these will be in French. There will also be an article on "Hunting in the Midlands," by Mrs. Kennard, illustrated by Percy Geatherd; "The Feast of Saturn," by A. W. Verrall; "Orators in the House," by H. W. Lucy; "Beauty and Evolution," by Prof. Mivart; and "The Future of Canada," by Prof. Shaler, of Harvard.

Students of commercial geography will learn with satisfaction that an English translation of Prof. Zehden's *Handels-Geographie* is on the point of being published by Messrs. Blackie & Son. The translator is Mr. Findlay Muirhead, who has written some of the principal geographical articles in the *Encyclopaedia Britannica*. The translation has been made from the fifth German edition, specially revised by the author for the purpose; and some alterations have been made, with the author's approval, to adapt the work for English students. Dr. Zehden's book has been adopted as a schoolbook in numerous European countries, either in the original or in translations; and latterly the original text has found its way into the German schools in the United States.

Prof. A. W. Ward, of Owens College, Manchester, has written a volume on *The Counter-Reformation*, for the series of "Epochs of Church History," edited by Prof. Mandel Creighton.

Messrs. Blackwood annonnce a modern romance, by the author of "Thoth," entitled *A Dreamer of Dreams*.

John Strange Winter's new work, *Harvest*, will be shortly produced by the Hansom Cab Publishing Company.

Messrs. Hutchinson & Co. announce for early publication a volume of stories of Australian, New Zealand and Canadian life. The editor is Mr. Philip Mensull, the London representative of the Melbourne *Age*; and among the contributors are Mr. B. L. Farjeon, Mr. C. Haddon Chambers, and Mr. Edward Jenkins.

Messrs. Longmans have in the press an investigation, by Mr. Arthur Crump, into the causes of the great fall in prices which took place coincidently with the demonetisation of silver by Germany.

Messrs. F. V. White & Co. will publish immediately *Purple and Fine Linen*, a novel in three volumes, by Mrs. Alexander Fraser.

The next number of Mr. Eyles's *Popular Poets of the Period* (Griffith, Farran, & Co.) will contain a critical and biographical note, by Dr. A. H. Japp, on Mr. H. T. Mackenzie Bell. Sketches of the career, and selections from the poems, of Clement Scott, Katharine Tynan, James Ashcroft Noble, and Frederick E. Weatherly, are also to apoear.

In future, *North Country Poets*, edited by Mr. William Andrews, will not appear in monthly parts, but will be issued at once in book form. The second volume will be ready in May, and the third in December, of the present year.

A recent catalogue published by Mr. Quaritch has attracted some attention as an effort to illustrate the history of bookbinding. This art is one which, in its artistic and decorative phases, is now being much spoken of; and a number of books, giving facsimiles, have made their appearance in France, England, and Germany. Mr. Quaritch is now about to issue the catalogue in question, in its completed form on large paper, with a preface containing a sketch of the whole subject, and indexes of the books, the owners, and the binders. A companion work, also published by the same Piccadilly house, is a set of facsimiles of artistic bindings of the sixteenth and seventeenth centuries done in colours. It will be completed in ten parts with about ten plates each, of which the first part has already appeared.

Dr. Mary Noyes Colvin, who is editing Caxton's *Godfrey of Bologne* for the Early English Text Society, has (with Prof. Paul Meyer's help) found the Latin original of the French version which Caxton englished. This is the first ten books or so of Guillaume de Tyr's *History of the Siege and Conquest of Jerusalem*. In the introduction to her edition, Dr. Mary Colvin will give an account of Guillaume de Tyr, his life, literary merits, and death; of Godfrey of Boulogne and the fictions attached to his name contrasted with historic facts, of his crusade, and of the government of Jerusalem by the French. The editor is much struck with Caxton's frequent blunders in englishing his French, his bold transfer of French words and constructions into his text, and his ingenuity in making readable English of his almost word-for-word translation.

Mr. Edmund Gosse will lecture at the London Institution on Thursday next, January 17, upon "The English Novel in the Seventeenth Century."

At a meeting recently held at the Deanery, Lincoln, presided over by the Dean, and attended by Sir Charles Anderson, the Mayor of Lincoln, Precentor Venables, &c., it was resolved to establish a Record Society for the county of Lincoln, the annual subscription to which should be half-a-guinea. The Rev. J. C. Hudson, Thornton Vicarage, Horncastle, and Mr. A. Gibbons, 4, Minster Yard, Lincoln, will be glad to receive communications of support.

The papers to be read before the Hull Literary Club during the second half of the winter session include the following: "The Characters of 'Lear,'" by Mr. H. S. Skipton; "Weber and his Operatic Works," by Herr Müller; "East Riding Folk-Speech," by Mr. John Nicholson; "In the Shakspere Country," by Mr. S. W. Clarke; "Philosophy, its Nature and Function," by Mr. A. Jordan; "The One Blot in Shakspere," by Mr. W. G. Walter; "The Lost Towns of the Humber," by the Rev. J. R. Boyle; "The Poetry of A. H. Clough," by Mr. D. C. Manwell; and "Emerson: his Descent and Training," by the Rev. J. Bell.

The Rev. Wentworth Webster has published in pamphlet form (Bayonne: Lamaignère), what was evidently read as a paper before some learned society in South-western France. Its title is "Le Mot *République* dans les Pyrénées Occidentales"; and its object is to show that not only the word, but also a very large measure of local autonomy, existed down to the end of the last century in the valleys on the French side of the mountains. Many have heard of the still surviving Republic of Andorra, and of the struggles of the Spanish Basques for their *fueros*; but it is surprising to learn that the word "republic" and its associations were so long preserved on French soil. As Mr. Webster points out, the closest analogy is to be found in the petty states (πόλεις) of ancient Greece. In an appendix Mr. Webster prints an interesting document, containing the *faceries*—or treaty

Digitized by Google

concerning local rights—made in the year 1800, between the representatives of fourteen villages in the valley of Baztan and the town of Sare.

ORIGINAL VERSE.

NEW YEAR JOY.

THE lake is motionless, the mountains hoar,
From Glaramara to grey Wythop woods,
Lean listening through the silence to the floods
That plunge towards the Derwent's sunless shore;
The sheep are hushed, but tho' on yonder moor
The cloudy rack impenetrable broods,
A sense of cheer, a hint of happier moods,
Fills the long vale and smiles from every door.

For once again the church, in hollies drest,
Has echoed back the songs of Bethlehem;
Once more the music of our Christmas bells
Has fallen far off with blessing on the fells;
The baby year has made God's babe its guest
And lo! with joy the people follow them.

H. D. RAWNSLEY.

OBITUARY.

J. O. HALLIWELL-PHILLIPPS, F.R.S.

IT is with much regret that we have to record the somewhat sudden death of Mr. Halliwell-Phillipps, perhaps the most enthusiastic antiquary who has ever associated his own name with that of Shakspere—or Shakespeare, as he himself always persisted in spelling it. He had not been in his usual health, we believe, during the past summer; but he was not taken seriously ill until Christmas Eve, and he died on Thursday of last week, January 3, at his residence, Hallingbury Copse, near Brighton—which, by his unrivalled collections, he had made a place of pilgrimage second only to Stratford-on-Avon in the eyes of all lovers of our national poet.

James Orchard Halliwell was born in 1820, in Sloane Street, Chelsea, being the son of Thomas Halliwell. In 1872, he assumed the additional surname of Phillipps, under a direction in the will of Thomas Phillipps, the grandfather of his first wife. It would be impossible to enumerate here all his published works, which extend over a period of more than forty years. Some of them appeared in the *Transactions* of the Old Shakespeare and other learned societies; many were printed only in limited issues for private circulation. His magnificent edition of the Works of Shakspere, in sixteen volumes folio, illustrated (1853-1865) was published at an almost prohibitive price, and very rarely comes into the market. On the other hand, his most important work, *Outlines of the Life of Shakespeare*, may be said to have been given away. The seventh, and last, edition of it (Longmans, 1887) consists of two handsome volumes, super-royal octavo, crowded with woodcuts and facsimiles, for which he asked the public to pay no more than half a guinea.

At first, Mr. Halliwell's antiquarian interests ranged over the whole field of early English popular literature—plays, ballads, chapbooks, &c. But he was gradually compelled to concentrate himself upon Shakspere alone, more particularly upon Shakspere's life, and more particularly again upon Shakspere's life in Stratford and its neighbourhood. Upon this last subject he both collected and printed much, and has probably left next to nothing for after-comers to glean in either respect. The *Outlines*, already alluded to, will always preserve its value as a monument of patient research, even though critics may differ from not a few of its conclusions.

But what Mr. Halliwell-Phillipps would doubtless himself wish to be best remembered by is the collection of Shaksperian rarities which he had formed during the past sixteen years at

"that quaint wigwam on the Sussex Downs which has the honour of sheltering more record and artistic evidences connected with the personal history of the Great Dramatist than are to be found in any other of the World's libraries."

Of this collection he printed a *Calendar* in the summer of 1887, "for special circulation and for presents only," which all who received will treasure as the most fit memorial of the man. The lots there described number 804, thus classified: (1) early engraved portraits, (2) authentic personal relics, (3) documentary evidences regarding Shakspere's estates and individuals associated with his biography, (4) artistic illustrations connected with his personal history, (5) printed Shakspereana. Perhaps an example of each of these divisions may not be considered irrelevant to this notice. Of the first, it is inevitable to choose the Droeshout portrait in its original proof state, before it was altered by an inferior hand; and of the second, six title-deeds of Shakspere's property that must have passed through his hands. The third includes numerous documents relating to the Hathaway family and the Clopton estate; the fourth, the original drawings of Stratford made by the master of the grammar school in the middle of the eighteenth century. Among printed Shakspereana, we can only mention the unique 1568 impression of Lily's *Shorte Introduction to Grammar*, being the edition probably used at the Stratford School in the poet's time; the all but unique surreptitious edition of *Pierce Penilesse* (1592), which contains the earliest allusion that has yet been discovered to any of the works of Shakspere; and the unique portion of the first edition of the *First Part of Henry the Fourth* (1598). Nor had Mr. Halliwell-Phillipps ceased to collect. Only a few weeks ago the *Nation* printed a letter from him to an American friend:

"Among my recent acquisitions are a copy of the printed original music to 'Farewell, Dear Heart, since I must needs be gone,' quoted in *Twelfth Night* (II. 3), only one other copy being known; and a MS. book of travels of the last century, containing the earliest account of the interior of Shakspere's birth-room that has yet been discovered."

Let us hope that he was a true prophet when he wrote in the preface to his *Calendar*: "Nor is there a probability that the collection described in the following pages will ever be dispersed." In his will he has given the first offer of it, at the price of £7000, to the Birmingham corporation.

MAGAZINES AND REVIEWS.

THE *Expositor* for January has several surprises for its readers. We can listen to Archdeacon Farrar discoursing genially and with knowledge of one of the most difficult portions of the Old Testament (Ezek. xl.-xlviii.). Surely no one can doubt that the imagination plays a great part in Ezekiel's descriptions, and yet recent critics may be right in regarding these chapters as containing a programme for the study of the returned exiles. We can drink in from Dr. Driver's full stream of knowledge in his "notes" on the influence of Jewish Midrash and Targum on St. Paul, can admire Epaphroditus with Prof. Beet, and rejoice at the improvement in English New Testament exegesis with Dr. Marcus Dods. But when Mr. Rendall, as good a Greek Testament scholar as can be found, asks us to accept a "scriptural" idea of priesthood which ignores Biblical criticism, we ask ourselves if recent talk about free and fair inquiry has been mere sport; and when the venerable Prof. Delitzsch, who needs so much forbearance himself, fulminates against "modern theology," positive as well as negative, and not merely professes his own contentment with old Lutheran definitions, but makes the worst he can of the rising school of "Ritschlianer," which offers a refuge to so many earnestly Christian minds in German universities, we dolorously shake our heads, and ask if evangelical theology said its last word when Delitzsch was young. The protest for essential evangelical theology might have been made so effective. One who has been so candid, at such great cost to himself, in matters of Old Testament criticism, might have said such a reconciling word in the field of theology; and the word in season has not been spoken. Still, biographically, this new "confession" (for Delitzsch's works are all full of "confessions") is of the greatest interest; and students who can make due allowance for faults which are but noble qualities carried to an extreme will be interested and, in one way or another, stimulated by this, as we hope, not farewell utterance. And, after all, how few can help being inconsistent in some points in such times as these? Lastly, the old friends of the ACADEMY cannot help rubbing their eyes when they find its own theological department, in those early days when its founder and first editor, the late Dr. C. E. Appleton, was still carrying all obstacles before him by a not unshared enthusiasm, reckoned by Mr. Nicoll as one of the factors in the new critical theological movement in the Church of England, co-ordinately with *Essays and Reviews* and Bishop Colenso's large work on the Pentateuch. It is difficult for us either to accept or to reject the praise. The theological section of the old ACADEMY was a kind of Ezekiel's "programme," if Archdeacon Farrar will permit the phrase. Has theology even yet returned from exile? Mr. Nicoll's contribution to the history of Biblical criticism in England is at any rate most welcome. He criticises Dean Burgon's account of the early works of H. J. Rose and Pusey, recognises the depressing circumstances under which the immediate subject of his article (Dr. Cheyne) began in 1868 to publish the firstfruits of study, and takes a friendly view of the results of his labours to abate the prejudice against Biblical criticism. Mr. Nicoll excuses the subject of his sketch for the "audacity" of his early theological articles, and thinks that, if other workers have stepped forward since, this does not interfere with the credit or discredit due to Dr. Cheyne for that independent international theology which through him became one feature of the old ACADEMY.

THE *Theologisch Tijdschrift* for January has a varied choice of articles. Rauwenhoff, the accomplished Leyden church-historian, gives the first part of a "study" on the task of philosophy, suggested by Windelband's *Präludien*; Bolland seeks to show the onesidedness of the standpoint of the science of nature; Dr. Meyboom's indispensable summary of facts and theories relative to Marcion and the Marcionites is reviewed by Dr. J. A. Bruins; works on comparative mythology, including that large work by O. Gruppe, of which Prof. Max Müller speaks so amusingly in his recent Glasgow lecture, are noticed by C. P. Tiele; and works on Old Testament criticism are described and briefly characterised by the great master of the subject, A. Kuenen. Among these, French and English books are not neglected. Driver's *Isaiah* is welcomed as an encouraging "sign of the times," and Cheyne's *Book of Psalms* as not less useful than his *Prophecies of Isaiah*. In the former work, the last chapter on the linguistic phenomena of Isa. xl.-lxvi. as compared with those of Isaiah is specially recommended. The book as a whole, indeed, is said to be not merely excellent for the ordinary reader. Nor is Dr. Cheyne's reticence

Digitized by Google

on questions of date and authorship a stumbling-block to this reviewer. Questions are raised and sometimes virtually answered, though the full treatment of them is reserved.

The *Theologische Literaturzeitung* (edited by Harnack and Schürer) for December 29 contains a valuable review of Driver's *Isaiah* by K. Budde, one of those theologians who unite fearless treatment of critical questions to a warm interest in the church. Fairly and wisely the reviewer abstains from detailed criticism. He thinks that Dr. Driver has hit the right mean between popular vagueness and academic overlading. One point in the work, *pour acquit de conscience*, Budde does criticise—the too tender treatment, as he thinks it, of the conservative view of Isa. xxiv.-xxvii. Some will think that this is just one of the points which are most valuable, as proving to the conservative majority the author's willingness to meet tradition so far as he honestly can.

CORRESPONDENCE.

SPICILEGIUM VATICANUM.

Rome: December 20, 1888.

My objects in visiting the Vatican library were two: first, to look for unpublished Celtic glosses—Irish, Welsh, Cornish, or Breton; and, secondly, to collate with the originals the texts relating to Celtic matters which have been published from Vatican MSS. by Pertz, Dziobek, Zimmer, and Greith.

I. GLOSSES.

The seeker for Celtic glosses naturally examines, in the first place, the Latin vellums written by Irish scribes. Of such MSS. I have found in the Vatican library only four, viz.:

Vatican 5755, ff. 2, 3. Fragments of a treatise *de computo*, in an Irish hand of (I think) the ninth century, inserted in a volume containing an eleventh-century copy of S. Augustine *De Trinitate*, which formerly belonged to the monastery of Bobbio. The Augustine is in a Lombardic hand.

Regina 1209. Alcuin, *De Dialectica* (Migne, Patr. Cursus, t. 101, col. 951); and a tract, entitled *Dialogus rei horicae artis*, also, apparently, by Alcuin—both in an Irish hand of the ninth or tenth century.

Palatine 65. A quarto, 200 folios. This contains, first, a psalterium glossatum in a beautiful Irish hand of the eleventh century; secondly, in the same hand, a copy of the Canticum Moysi (fo. 194); and, thirdly, in a different, but still Irish, hand, the first three leaves of a copy of Boetius *De Divisione* (fo. 198). In fo. 133 r., I found the following rhyming formula, which, though written in a continental hand, seems to be of Irish origin, for it occurs also, as Mr. Warren informs me, in Vitellius F. xi. (a tenth-century Irish psalter in the British Museum), fo. 35 v., and in the Southampton Psalter (MS. C. 9, St. John's College, Cambridge), fo. 69 v.:

> "Deus quem exercitus canit celorum
> quemque ecclesia laudat sanctorum
> quem spiritus ministrat uniuersorum
> miserere obsecro omnium nostrorum
> qui regnas in secula seculorum . amen."

There are also, in fo. 197 v., an ascription of praise, beginning thus: "Te Dominum de celis laudamus tibi ut canticum nouum cantare mereamur"; and a collect, beginning thus: "Deus qui exeunti ex egipto populo tuo maria diuisisti."

Palatine 830. A quarto, 170 folios. This is the autograph copy of the Chronicle of Mael Brigte, commonly called Marianus Scotus, who died at Mainz in the year 1082.

In none of these MSS. did I find any unpublished Irish glosses, though I discovered on the margins of Palatine 830, ff. 38 r., 40 r., 47 v., 48 r., three Irish poems, which seem to have hitherto escaped notice, and which begin, respectively, thus:

Fo. 38 r., Cenn ard Adaim, etrocht rád.
Fo. 40 r., Cethror coic[fh]ichit iarfír.
Ff. 47 v.-48 r., Ben romarbsat fir Galad.

The first declares the origins of Adam's head, breast, belly, feet, blood, and soul. The second (mere mnemonic verses) gives the numbers of his sons, daughters, &c. The third is a complete copy of the poem on the war between the tribe of Benjamin and the other children of Israel (Judges, c. xx.), of which only the second and third quatrains are preserved in a MS. in the British Museum (Harl. 1802, fo. 11 v.). These three poems will be published, with translations, in the *Revue Celtique*.

So far as regards glosses, I was not much more fortunate with the twenty-eight MSS. brought to the Vatican from the monastery founded by S. Columbanus at Bobbio. Of these MSS. (now marked Vatican 5748-5776), some are interesting palimpsests, blackened though they be by Cardinal Mai's chemicals; but they contain only one non-Latin gloss, which may perhaps be Irish. It occurs on the margin of a copy of S. Augustine's *Confessio* (Vatican 5756, fo. 7 r.): "quia ludebam pila (.i. *balla*) puer." But it is written in a Lombardic, not an Irish, hand; and it may, of course, be the O.H.G. *balla, palla*, whence the Italian *palla*, French *balle*, &c.

I was luckier with the MS. marked Regina 215. This codex contains (in ff. 88 r.-106 r.) a collection of glosses, entitled *Incipiunt glosae ueteris ac noui testamenti*, which agrees to some extent with the glossary in Codex Bernensis, 258, ff. 18, 19,* and which, though written in a continental hand of the ninth century, is certainly of Irish origin. It contains thirty-three Old-Irish glosses,† of which the following are specimens (all will appear with a commentary in the *Revue Celtique*):

89 r. Scinifes [σκνῖφες] .i. *brecnatin*.
89 v. Craticula .i. *indsin* in medio altaris [cf. *ain-ches* gl. fiscina, *ain-cis* gl. sportam].
90 v. Uallículas i. *fanlige*. Pituíta i. *calsch* ["gallorum"]. Impetiginem . genus scabiei i. *bolach* . Cratera . situla i. *cilorn*.
91 v. Stipula . stuppa i. *scart*.
95 r. Liciatorium . *claideb garmne* ["a weaver's beam"]. Formellas ["cheeses"] .i. *tangea* [acc. pl. of *tanach*].
96 r. Trahas i. *daintech* ["a harrow," instrumentum *dentatum*].
97 v. Lanugo i. *canach*. Muscipula i. *cuitech*.
99 v. Gurgustium . brancas .i. *oilech* piscium. Pera . *tiag loin*.
101 v. Pilosi demonum genera i. *geltig*. Lamia monstrumm feminae figura i. *morigain*.
106 r. Perpendiculum *mathe* cum plumbo ad maceriam dirigendam.

Of these glosses the most interesting is *morigain*, "lamia," which is = the *Mórrígain* of the Táin Bó Cúalnge, and other Irish sagas, the scribe here "singling" the double consonant, as he does also in *barchrumbac* (gl. uerticale) 89 v., for *barr-chrumb-bacc*, and *foilen* (gl. fulica) 90 r, for *foilenn* = the French *goëland*, from Bret. *gwelan*.

I found no Welsh, save a list of British towns in the copy of the Historia Britonum attributed to the anchorite Marcus (Regina, 1964); *Mauun* (*ibid.*, f. 57 v.), the British form of *Magonius*, the name given to S. Patrick when in Gaul; one or two proper names in the Life of S. Samson hereinafter mentioned; and a few words in the marginal gloss on the fourteenth-century copy of the *Prophetia Merlini*, by Johannes Cornubiensis, a hexametrical Latin poem preserved in Ottob. 1474, ff. 1-4, and purporting to be a literal translation from "nostrum britannicum" (*i.e.*, Welsh or Cornish). For this and other reasons it will be published with its prologue and glosses in the *Revue Celtique*.

Some Cornish words and phrases, such as "villam quae dicitur *Treruf*" (fo. 2 r.), "*Goen Bren*, in lingua Saxonum *Fawi mor*" (fo. 3 v.), and *pe[m]p bliden warnugens ha hanter*, "twenty-five years and a half" (fo. 2 r.), occur in the same marginal gloss.

Some Breton names of persons and places occur in two tenth-century copies of the Life of S. Samson (Regina 465, ff. 63-74, Regina 479, ff. 9-24), thus—*Riadam, Penetale, Dol*. The name *Frotgerius* (borrowed from *Hrotger*, Förstemann, *Altdeutsches Namenbuch*, i. 727), which occurs in this Life, is interesting as showing how the Bretons treated the Teutonic sound *hr*. Compare the Irish reflex of *hl* by *bl* in *Blothair* (Saltair na Rann 2371) = *Hlothari* (Förstemann, 693).

So much for the Celtic λείψανα, which I have found in the course of nearly three weeks' work in the Vatican library. It is probable that there are many more in the 17,144 Latin MSS. which that library is said to contain. But the imperfection of the lists—always excepting Mr. Henry Stevenson Junior's catalogue of the first 921 numbers of the Palatine collection*—renders the search for glosses a matter requiring far more time than I have at my disposal.

II. COLLATIONS.

I have collated three texts: first, the fragment published by Prof. Zimmer in his *Glossae Hibernicae* (Berlin, 1881, pp. 259-261), from Dziobek's transcript of Vatican 5755, printed in Bezzenberger's *Beitraege*, v. 63-67; secondly, the extracts from Palatine 830, published by Pertz (*Monumenta Historica Germaniae*, vii., pp. 495-562), and by Zimmer (*Glossae Hibernicae*, pp. 274-282); and, thirdly, the hexametrical poem,

* See Hagen's *Germanistische Studien*, ii. 297; Zimmer's *Gloss. Hib. Supplementum*, p. 2; and the Academy, No. 752, p. 228, col. 3.

† Of these three (in fo. 105 r.) were discovered by G. Löwe, and published by Zimmer in his *Gloss. Hib. Supplementum*, p. 5. They are: Trulla . id est *liag iern bis os denam macre* (an iron spoon used in building a wall). Fasciculum . id est *ere l. grimne*. Naulum . *foerais* . id est merces.

* *Bibliotheca Apostolica Vaticana. Codices Palatini Latini*, tom. i., Romae, 1886. The second volume is, I believe, in the press.

Digitized by Google

entitled *Prophetia Merlini*, with its prologue and gloss, published by Greith in his *Spicilegium Vaticanum* (Frauenfeld, 1838, pp. 98-106). A complete list of the errors which I have detected in these publications would fill a page of the ACADEMY. Here shall be mentioned only some of the more important:

1. *Vatican*, 5755.

Zimmer, *Glossae Hibernicae.*	*Manuscript.*
P. 259, l. 5, profuerit	Fo. 2 r. *superfuerit*
7, etc.	esse
260, l. 2, prima	una
7, simul	sume
10, semper	semper adde
14, invenis	iauenies
20, quia	qui
21, adsumas	2 v. ad suas
29, 30, nec alius dies ovenientium argumentum datus (!)	regularem secundum *conuenientiam* argumenti dicit
31, 32, per aferia (!!)	*secunda* feria
33, nec generaliter	nunc generalitas
261, l. 4, septeni	septem.

So much for the Latin text and Latin glosses of this amazing edition. Prof. Zimmer's edition of the thirty-one Irish glosses in Vatican 5755 omits one, and makes in the others twenty-six mistakes, of which the following are two: *insæscni* and *decad luandasinsir*. For the former the MS. has *ais œscai* ("moon's age"); for the latter, *dec ó lúan dús in fír*. The other errors have been corrected by Dr. Güterbock, in Bezzenberger's *Beitraege*, vii. 343, and need not, therefore, be specified here.

2. *Palatine*, 830.

Zimmer, *Glossae Hibernicae.*	*Manuscript.*
P. 274, l. 11, *isimblia(din)*	F. 33a. isinbliad*ain*
12, *isinside*	isi side
14, quod	q*uia*
18, *coitcenn*	coittcenn
276, ll. 1, 2, *im cech* *	incech
20, sorores	sorores ei*us*
277, l. 6, sanctum Patricium	*sanctus* patricius
10, per	pro
278, l. 9, ubi	141b. ubi *per annos sexaginta*
24, Ebergus	162a. Ebergerus
35, filius suis (!)	163a. filius suus
279, l. 20, missalem	163b. missalem librum
31, vere	u*ero*
37 insola	insola keltr*a* †
280, l. 3 Kelta	
12, debere	deberi
19, *Donchad*	Donnchad
36, Wirziburc	uuirziburc consecratus
281, l. 9, *ifel tigernaeg cluana* ejus (!) occisus	ifel tigernaeg cluana euis occissus ("slain on the feast of [St.] Tigernach of Cluain Euis") ‡
29, *Fiache Multach letan*	15b. Fiache mull-let[h]an. §
282, ll. 4, 17, 30, *Donnall*	Domnall
7, *Donnaell*	Domnæll
14, *Donnaill*	Domnaill
27, *Irigalaig*	Irgalaig
28, *Flaithbertach*	Flaithbertach
32, *Donnael*	Domnael

* To this Prof. Zimmer appends the note: "*in Zeuss*, perperam." Perperam!

† *I.e.*, Inis Cealtra, in Lough Derg.

‡ Now Clones in Fermanagh.

§ "Broad-crown." Here *mull* is = the Anglo-Saxon *molda* or *molde*, "the crown of the head," cognate with Sanskrit *mûrdhan* "head." From this *mull* the common word *mullach* is derived.

3. *Ottob.*, 1474.

Greith, *Spicilegium Vaticanum.*	*Manuscript.*
P. 98, l. 22, R(oberte) Oxoniensis	*Roberte* praesul Oxoniensis
99, l. 6, opus clam	opuscolsm
8, cum	praesertim cum
27, Auro	Euro
32, anglis	Angligenis
100, l. 13, lambit	radit
101, l. 12, affatur	effatur
25, pedes etenim Canuti[!] truncati sunt	pedes etenim canum truncati sunt
103, l. 12, Ares	Ales
104, l. 6, Quae nostra	Quaenam
24, munisma	nummisma
105, l. 19, Kavaladro	Kadvaladro
25, Saprinum	Sabrinum

It will be seen that, as Latinists and palaeographers, there is a strong resemblance between Prof. Zimmer and Herr Greith. They are alike, also, in their dealings with non-Latin languages. Thus, as the former prints gibberish for Old-Irish, the latter gives the following as Old-English (*Spicilegium Vaticanum*, p. 45):

"This man seal thid gedrif thritan on vreom leac bladan, his naman thaer mid Eugenius . Stephanus . Portarius . Dionysius . Sambucius . Cecilius et Cyriacus."

This receipt may be found in Regina 338, fo. 88 r. It is perfectly legible, and runs thus:

"þis man sceal wiþ þ. gedrif writan on þreom leac-bladan 7 his naman þærmid Eugenius . Stephanus . Portarius . Dyonisius . Sambucius . Cecilius et Cyriacus.

that is to say:

"This shall one write against the fever, on three leek-leaves, and his name therewith: Eugenius," etc.

Compare for the names Eugenius, &c., the charm contra frigora in Cockayne's *Leechdoms*, &c., iii. 294, ll. 13-21, a reference to which book I owe to Prof. Napier.

In conclusion, I wish to warn future students in Rome against the inaccuracy of many of the references to Roman MSS. in Hardy's *Descriptive Catalogue of Materials relating to the History of Great Britain and Ireland*. These errors have caused much waste of time and trouble, not only to me, but (what is more important) to the officers of the Vatican, Vittorio Emmanuele, and Vallicellan libraries, whose courtesy, patience, and helpfulness I desire to acknowledge with gratitude.

WHITLEY STOKES.

COINCIDENCES IN BUDDHIST LITERATURE AND THE GOSPELS.

London: Jan. 5, 1889.

In the introduction to "Birth-Story" 190 (Jātaka, ii. 111) we read of a pious disciple, firm in the faith, who, on his way to the Master, having to cross the river Aciravatī, and not seeing any boats,

"took a joyful confidence in the Buddha and crossed the river. His feet did not sink in the waters. As he went even as on dry land he beheld, coming to the middle [of the river], waves. Then his joyful confidence in the Buddha became slack, his feet began to sink. Again he strengthened his joyful confidence in the Buddha, and going [on] on the surface ['back'] of the water he reached Jetavana," &c.

I think everyone will notice the resemblance of this narrative to that of Matthew xiv. 29 (not found in the other Gospels), of Peter walking on the water. We have here the same three stages: first, Peter walking on the water in the faith of Jesus (v. 29); then, seeing the wind boisterous, he becomes afraid (his faith slackens), and begins to sink; finally (his faith reviving somewhat) he cries out "Lord, save me!" and Jesus stretches out his hand, &c. (vv. 30, 31). Only the Buddhist receives no outward help, he knows he is left to himself alone.

In the commentary on v. 79 of the Dhammapada, the story of King (in a later life, thera) Mahākappina is related, who every day sends out his four ministers on his four horses—

"Go, roam about two or three *yojanas*, and should you learn the appearance of a buddha, a law, or a community [the three *ratana*], bring me the *happy news*."

The word in the text is *sukha-sāsana*, which would be a good translation for εὐαγγέλιον ("frohe Botschaft"). When the king at last receives the longed-for *sāsana* from some wanderer, he gives him three times a hundred-thousand (viz., *kahāpana*), for each *ratana* one, by letter to the queen, while he himself, with his numerous retinue, continues his way to the Buddha, in the course of which he passes three rivers, each deeper and broader than the last, with horses and chariots, as if on stone. "Only the ends [rims] of the hoofs got wet." This he achieved by his pious remembrance of the three *ratana*. When the queen receives the king's message, she, in her turn, asks for this good news, and, in her joy, gives three times as much as the king. Hearing further that the king, with his numerous retinue, has gone to forsake the world before the Buddha, she says to her companions,

"Since the king has left his worldly estate like a lump of phlegm (*khela-pinda*) . . . who would, standing on his knees, take with his mouth this lump of phlegm, spewed out by the king."

This must remind us of "the dog who returns to his vomit" (Proverbs, xxvi. 11; 2 Peter, ii. 22). The queen then follows the king, crossing the three rivers in the same manner; and both, in due course, hear the law with the best result.

All of these resemblances can, I think, be explained in a natural (psychological) way, though at first view they might seem somewhat strange, and raise a suspicion of historical contact. And may we not take this longing after a new doctrine as a true historical trait in the above story—a longing that probably prevailed in a large part of India about the time of Buddha's appearance, analogous to the feeling of the heathen world shortly before Christ's time? Compare what Sir Alfred Lyall says in his *Asiatic Studies* (p. 300) on the "malaise religieux" to be observed in India at the present day.

H. WENZEL.

THE EGYPTIAN "KA" AND SCHOPENHAUER'S "WILL."

Selling, Faversham: Jan. 5, 1889.

Doubtless some of the numerous few who take an interest in the current speculations as to the evolution and precise nature of the Egyptian belief in—to use an easy phrase—individual-duality, as exhibited in the records of the *Ka*, will have bethought them of the Will, as expounded in Schopenhauer's philosophy.

Miss A. B. Edwards, in this day's ACADEMY, says

"the vital principle [the *Ka*] is that transmitted energy which must undoubtedly have descended from the primal source of life to all who live, or have lived upon earth."

Schopenhauer maintained that

"the Will, or thing-in-itself of all phenomena, is in nowise affected or attainted by birth or death (*Die Welt*, &c., bk. iv., § 54).

And, again:

"If the individual consciousness disappears at death, the Will, which alone fears death, survives it" (book iv., supp. xli.).

Digitized by Google

"The conclusion is almost inevitable that the force which formerly animated the Life now actually extinct is the same which animates the Life now existing" (*ibid*).

This last passage seems to be very close to Miss Edwards's definition.

Again, Schopenhauer wrote—I carefully condense several passages: My philosophy teaches that the whole body and its activity are but the exterior phenomena, outward intuitive manifestation, or visible objectification of the Will; that is to say, they are the embodied Will; nay, more, they are the Will itself, which is equally present in every part of the body; and upon the Will depends the *vita propria* of each such part. The Will thus becomes its own representation (or idea), and is that unity which we express by Ego (bk. ii., supp. xx).

Another curiously close parallel could be drawn. Dr. Wiedemann, as cited by Miss Edwards, says that before his *Ka* the king frequently stands, in the monuments, "with various offerings, imploring heavenly gifts for himself." Whereunto the *Ka* makes answer:

"I give unto thee all life, all duration, all power, all health, all joy. For thee I conquer the people of Nubia, that thou mayst decapitate them."

In book iv., § 60, Schopenhauer remarks that

"the Will often becomes exalted to such a pitch as to overpass considerably the affirmation of the body. This condition then becomes signalised by violent emotions, by energetic passions, under the domination of which the individual is not contented with merely affirming its own existence, but denies the existence of others, and endeavours to suppress that existence wherever it proves itself an obstacle."

The theory of the *Ka* may admit of further illustration from the Zoroastrian *fravashi*; the Hindu and Scandinavian "Thumbling"—which last corresponds somewhat to the diminishing of the *Ka*; and the animal soul of archaic Chinese belief. A comparative study in these and other directions might tend to elucidation, but it would entail a communication too lengthy for your columns.

JOHN O'NEILL.

THE WORD "BORE," A TIRESOME TALKER.

London: Jan. 8, 1889.

Mrs. Cowley's lively farce, "Who's the Dupe?" written in 1777, contains a good definition of the word *bore*:

"*Charlotte.* Knowledge, as you manage it, is a downright *bore*.

"*Gradus.* Boar! Why what relation, Madam, can there be between knowledge and a hog?

"*Char.* How ridiculous! You have spent your life in learning the dead languages, until you are ignorant of the living. Why, Sir, such words as *bore* are all the *ton*.

"*Grad. Ton! Tin!* What may that be? It cannot be orthology! I don't recollect its root in the parent languages.

"*Char.* Ha! ha! ha! Better and better! Why, Sir, *ton* means——. *Ton* is——. Pho! What signifies where the root is? Such words are the shorthand of conversation, and convey whole sentences at once. All that delights the town is *ton*, and all that disgusts is *bore*."

EMMA PHIPSON.

Budleigh Salterton, South Devon: Jan. 7, 1889.

Immediately before reading Dr. Furnivall's letter in the ACADEMY of January 5, I chanced to find a reference to the word *bore* in the *Gentleman's Magazine* for August, 1780. It occurs in a review of Malone's "Supplement to the Edition of Shakespeare's Plays published in 1778, by Samuel Johnson and George Steevens, &c." After the quotation from "Henry VIII.," Act i., Scene 1,

"He *bores* me with some trick,"

follows the remark:

"As old things often become new, it might have been added that this is now again a cant-word among the great vulgar."

The use of the word in the passage quoted from Shakspere has, however, no connexion with its "cant" signification, as the context will show.

At the risk of earning for myself a place among the "intolerable animals" whom A. Maccaroni and his father distinguished by those valuable additions to language, "Proser" and "Bore," I have ventured to send you this chance gleaning.

FRANCES ELEANOR TROLLOPE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 14, 4 p.m. Royal Academy: Demonstration, "The Lower Limb," I., by Prof. J. Marshall.
5 p.m. London Institution: "Recent Babylonian Explorations," by Mr. W. St. Chad Boscawen.
8 p.m. Aristotelian: "The Starting-point and First Conclusions of Scholastic Philosophy," by Mr. M. H. Dziewicki.

TUESDAY, Jan. 15, 7.45 p.m. Statistical: "The Amount and Incidence of Imperial Taxation in Different Countries," by Mr. J. S. Jeans.
8 p.m. Colonial Institute: "British West Africa and the Trade of the Interior," by Mr. H. H. Johnston.
8 p.m. Civil Engineers: Discussion—"The Compound Principle as applied to Locomotives," by Mr. Edgar Worthington.
8.30 p.m. Zoological: "Some New Species and a New Genus of Araneidea," by the Rev. O. P. Cambridge; "Additions to the Echinoderm Fauna of the Bay of Bengal," by Prof. F. Jeffrey Bell; "The Anatomy of *Rhinoceros lasiotis*," by Messrs. F. E. Beddard and Frederick Treves.

WEDNESDAY, Jan. 16, 4 p.m. Royal Academy: Demonstration, "The Lower Limb," II., by Prof. J. Marshall.
8 p.m. Society of Arts: "The Channel Tunnel," by Col. Hozier.

THURSDAY, Jan. 17, 6 p.m. London Institution: "The English Novel in the Seventeenth Century," by Mr. E. Gosse.
8 p.m. Linnean.
8 p.m. Chemical: Contribution from the Laboratory of Gonville and Caius College, Cambridge; "A Cubical Form of Bismuthous Oxide," by Messrs. M. P. Muir and Arthur Hutchinson; "The Oxides of Copper," by Mr. Douglas Carnegie; "The Periodates," II., by Mr. C. W. Kimmins; "Compounds of Arsenious Oxide and Antimonious Oxide with Sulphuric Anhydride," by Mr. R. H. Adie; "A Compound of Boron Oxide with Sulphuric Anhydride," by Mr. R. F. D'Arcy.
8.30 p.m. Antiquaries.
8.30 p.m. Historical: "History and Assassination," by Mr. Herbert Haines.

FRIDAY, Jan. 18, 2.30 p.m. British Museum: "The Hittites and their Inscriptions," I., by Mr. T. Tyler.
4 p.m. Royal Academy: Demonstration, "The Lower Limb," III., by Prof. J. Marshall.
8 p.m. Philological: A Dictionary Evening, by Mr. H. Bradley; with a Report from Oxford.

SCIENCE.

A Handbook to the Land-Charters, and other Saxonic Documents. By John Earle (Oxford: Clarendon Press.)

THIS volume consists of 450 pages of Anglo-Saxon charters, an introduction of 110 pages, and notes and indices. To students who have not access to Mr. Birch's unfinished *Cartularium*, or to the earlier collections of Kemble and Thorpe, this handy selection will be highly acceptable; and beginners in the study of Old English charters will find it an advantage to have the documents classified approximately in the order of the relative strength of the evidence for their genuineness. About 250 pages of the book are occupied by "Genuine Records Dated": *i.e.* the dated documents down to the eleventh century, which are preserved in original or nearly contemporary MSS., with, however, the addition of a few that are taken from cartularies which there are reasons for believing to be especially trustworthy. These are followed by "Genuine Records Undated"; and the remainder of the text consists of what Prof. Earle calls "Secondary Documents," which are divided into fifteen "groups," beginning with the records extant in non-contemporary MSS. not later than the eleventh century, and ending with the jingling rhymes of the fifteenth century, professing to record grants made by Anglo-Saxon kings. Apart from inconsistencies of detail, to some of which Prof. Earle himself calls attention in his preface, this arrangement appears convenient and useful. The inclusion of specimens of the spurious documents, and of those which are probably genuine documents modernised, is quite justifiable; but some of the space occupied by these might better have been devoted to an exhaustive index of words and matters, which would have more than doubled the value of the book. One of the advantages of a small selection of this kind is that it admits of being thoroughly indexed, which is not possible in the case of a complete collection. It would be quite worth while to issue a supplementary volume, devoted entirely to indices and minute annotations on the text.

The introduction, in addition to remarks on the characteristics of form and language common to old English charters, and the criteria by which genuine documents may be distinguished, contains some interesting discussion of questions relating to the early forms of land tenure in England. Prof. Earle is unquestionably right in his rejection of Kemble's theory of "the Mark and Gá," for which the authority of that great scholar, and the ability of of his exposition, for a long time procured almost universal acceptance. There can be little doubt that he is also right in maintaining that the origin of the English manorial system, in its principal features, is to be sought in the conditions of the Teutonic conquest of England, although some elements of the system may have been derived from other sources. Prof. Earle's view that the *gesiθ* was, so to speak, the ancestor of the manorial lord, is, so far as I am aware, novel. Into this question, and into the other questions of similar nature treated of in the introduction, my studies have not qualified me to enter; and I can only express the hope that what is original in Prof. Earle's speculations will be discussed by those who have the requisite knowledge of the subject.

The lexicographical material contained in the charters has hitherto been strangely neglected by the compilers of Anglo-Saxon dictionaries; and Prof. Earle's glossary, though far from complete, raises many interesting philological questions. One of these, relating to the word *rod* (properly *hrod*), the equivalent of the Icelandic *roð*, "a clearing," has already given rise to some discussion in the ACADEMY. I must confess that the evidence for the existence of this word in Old English does not appear to me convincing. The South Yorkshire *royd* may very well be of Scandinavian origin. In the instances cited by Prof. Earle from the charters, it seems to me that the word is more probably *ród*, represented by the modern *rood*. As the noun, so far as we know, is always feminine, it cannot be the exact equivalent of the neuter

Digitized by Google

ród; and the hypothesis of a feminine *hrodu from the same root finds no support from Teutonic analogy. The passages in question state that certain boundaries on the outside of woods ran *andlang þære róde* which Prof. Earle would translate "along the clearing or road." Before accepting this explanation, it is necessary to enquire whether any admissible sense can be extracted from the rendering "along the rood." On this point I will venture to offer a suggestion, which is confessedly hazardous, but which may, perhaps, give rise to some useful discussion.

The obvious reason why the fourth part of an acre is called a "rood" is that it is a quantity of land of the length of a furlong (furrow-long), and of the breadth of a *rod* (*i.e.*, of the "*rod*, pole or perch" of ordinary long measure). The *rood*, then, as a measure, properly denotes the length of 5½ yards, which was, at the same time a convenient length for a measuring pole of timber and a convenient aliquot part of the length and the breadth of an acre.* My suggestion is that the "rood" of the charters was a headland of a pole's breadth left unploughed on the edge of a wood, so that the phase quoted may be compared with the *andlang þæra andhéafda* (along the headlands) of other charters. The compound *ródstybbe* certainly lends some plausibility to the notion that the first element means "clearing"; but until there is further evidence of the existence of the word *ród* I prefer to interpret it as "rood-stubbing" The verb *rédan*, to which reference has been made in the discussion between Prof. Earle and Mr. Mayhew, cannot, I think, be connected phonologically either with the hypothetical noun *hrod*, or with the verb from which that is derived. The assumed sense, also, is hardly suitable to the context. It would scarcely be a natural way of indicating a locality to speak of it as "the place were Bishop Aelfric commanded a clearing to be made." I should rather suppose the meaning to be that the bishop had appointed the spot for some religious ceremony, or for reading or preaching (compare the local name "Gospel Oak"). The verb *rédan* might be miswritten for *rǽdan*, to read; it might be the equivalent of the Gothic *rǒdjan*, and the Icelandic *rœða*, to speak; or, again, it might be derived from *ród* in the sense of "cross." But so long as the word is known only from a single passage it is useless to try to settle its precise meaning.

The word *fyrhþ*, as a topographical term, occurs several times in the charters, but its meaning is obscure. Prof. Earle, following Kemble, regards it as denoting a wood of some kind. If this be correct, the word is identical with the Middle-English *firth* or *frith*, which must, therefore, be disconnected from *frith*, a game preserve. The derivation, on this view, appears to be from *furh*, a fir-tree, with the addition of a suffix functionally equivalent to that of the Latin *salictum*. It is remarkable that in one passage the word is apparently feminine, though elsewhere it is masculine or neuter. Leo explains it as a derivative and synonym of *furh*, furrow; the other dictionaries do not notice it. Several other topographical words in Prof. Earle's glossary call for notice on the ground of their having been omitted by lexicographers. *Ánstig*, meaning, like *ánpæð*, a path only broad enough for one person, is interesting because it survives in the name of the "Ainsty of York," which must, like most of the English hundreds and wapentakes, have received its appellation from some place within its borders at which public assemblies were held. The word *healh* is here erroneously explained as "hall"; it is really "haugh," though as an ending in place-names it commonly assumes the form of *-hall*. Probably the word may be identical with *heal*, a corner; a connexion with the Latin *calx*, heel, is not impossible on the ground of sense, as the word *hó*, a heel, is also used as a topographical designation. The frequent, but still unexplained, word *crundel* is discussed by Prof. Earle in a long note. The evidence seems to show that it meant some kind of hollow or depression in the ground, not, as has been supposed, a tumulus or a cromlech; but no light has been thrown on its etymology. The phrases *stán crundel*, *ceale crundel*, suggest that it was sometimes a quarry. *Rinda crundel* cannot mean "bullock's crundel," as Prof. Earle suggests; perhaps *rinda* is the name of a stream. The word *hán*, the Old English form of *hone*, which is ignored by all the lexicographers except Leo, occurs frequently in the charters, not, however, in the sense of "whetstone," but as a topographical term. "The red hone," "the gray hone," seem to be rocks so called from their shape or material.

One or two questions relating to local etymology may be worth brief notice. Prof. Earle says that he cannot explain the *n* in *Léofsnhǽma* "people of Lewisham" (gen. pl.); it appears to point to derivation from the personal name Léofsunu. In the time of James I. (as appears from an anecdote told by Bacon) Lewisham was colloquially pronounced *Lusen*; as *-en* is not in this district a usual corruption of *-ham*, perhaps this pronunciation may be due to the *n* of the first element. A charter professedly of 889 mentions an "antiquum petrosum aedificium" in London called *Hwætmundes stán*, *i.e.*, "Hwætmund's stone." The normal modern form, if the name had survived, would be "Whatmanstone"; it would be interesting to know whether the name is found in any later document relating to London. Prof. Earle quotes (strange to say, with apparent approval) Mr. Kerslake's extraordinary notion that the name means "wheat-maund stone," and that it has something to do with a sculptured stone (dated 1638) found in Panyer Alley, representing a man sitting on a basket! Of course Hwætmund is simply a man's name, like Hwætred and Eadmund. The *Wón-stocce* of the charters is not, as supposed by Kemble, connected with Wóden; *wón* being the dative of the adjective *wóh* "crooked." Prof. Earle thinks the name *Byrnan scylf* probably has a mythological reference, as "a *shelf* belongs to a divinity." But *shelf*, as an ending in local names, is so common that there can be no reason to doubt that it simply denotes the topographical character of the place to which it belongs. Tanshelf (in O.E. *Taddenes-scylf*, probably for *Tatwinesscylf*), Waldershelf (from the personal name Waldhere), Tibshelf, Ulleskelf (from the Scandinavian personal name Ulle) are among the examples. In the introduction Prof. Earle refers to my observation that the occurrence of the name *Hód-s ác*, "Hood's Oak," in two different counties before the twelfth century affords evidence that "Hood" was familiar as the name of a wood-spirit long before it came to be used as a nickname for the chief of a band of forest outlaws I take the opportunity of saying that I still believe this conclusion to be justified, though I no longer maintain the correctness of all the arguments with which, five years ago, I endeavoured to support it.

Although this volume does not actually contain any texts hitherto unprinted, it includes several that have not previously appeared in any general collection of charters. Among these are the very interesting documents from the Leofric Missal, an important manifesto of Cnut, and Henry II.'s charter to Archbishop Theobald. In many cases the charters are printed from fresh collations of the MSS., or from the British Museum facsimiles. In any future editions it would be well, if it be necessary to copy any of the charters from Kemble or Thorpe, to omit the accents. The accentuation of the MSS., though often inconsistent and incorrect, is instructive, and ought to be preserved wherever it is known; but the normalised accentuation of earlier editions has no documentary value, and is very far from being scientifically accurate. The accents in the glossarial index need careful revision.

HENRY BRADLEY.

* In Old-English, so far as I know, *ród*, when used without reference to land, always means "pole" or "cross." It seems worth while to suggest that the modern sense of *rod*, a stick, a bundle of twigs for chastisement, may have been imported from Low German.

CORRESPONDENCE.

A NEW INDIAN INSCRIPTION.

Yuzufzai: Dec. 15, 1888.

It may interest some of the readers of the ACADEMY to learn that Mr. M. F. O'Dwyer, C.S., Officiating Deputy Commissioner of Shahpur, has recently discovered an inscription at the village of Kura, in the Salt Range, where there are some large unexplored ancient mines. A considerable part of the inscription is in very fair preservation; but the ends of the first two or three lines are much obliterated, and from the lower part of the slab four or five lines appear to have been erased. The characters are what are usually called Gupta, of about A.D. 500. It is dated in the reign of "Mahârâja Toramâna Shah," whose name occurs in the first line and in the third from the bottom; and the record is of certain donations to a Buddhist monastery. The slab was sent by Mr. O'Dwyer to the Lahore Museum, where I have examined it in company with Dr. Aurel Stein, of the Oriental College. It will be published in the *Epigraphia Indica*.

The coins of Toramâna are known, but the only epigraphic record of his reign hitherto found is the inscription on the boar at Eran, in the Central Provinces. This, found in the middle of the Panjâb, would indicate that his rule extended far to the north-west of Mâlwâ, and may possibly identify him with the Toramâna of Kasmîr, whom Gen. Sir A. Cunningham considers quite a separate prince.

SCIENCE NOTES.

MR. HENRY F. BLANDFORD, formerly meteorological reporter to the Government of India, has written a Practical Guide to the weather and climates of India, Burma, and Ceylon, and the storms of the Indian Seas. It will be published by Messrs. Macmillan.

AT the annual meeting of the Académie des Sciences, the prix Janssen for astronomy was awarded to Dr. William Huggins.

Nature for last week adds a twenty-fifth representative to its series of "Scientific Worthies," by a portrait of Prof. Sylvester, engraved on steel by Mr. Stodart after a photograph, together with a memoir by Prof. Cayley.

THE Royal Academy of Sciences of Turin give notice that the seventh Bressa prize will be given to the scientific author or inventor, whatever be his nationality, who, during the years 1887-90, "shall have made the most important and useful discovery, or published the most valuable work on physical and experimental science, natural history, mathematics, chemistry, physiology and pathology, as well as geology, history, geography, and statistics." The value of the prize amounts to 12,000 lire (£480).

A CONTRIBUTION of exceptional importance to students of volcanic geology has been recently published by the Royal Society of Edinburgh, in the shape of an elaborate memoir by Prof. A. Geikie, entitled *The History of Volcanic Action during the Tertiary Period in the British Isles*. It appears that after a very long period of quiescence, symptoms of renewed activity were manifested in Eocene times, when by internal tension the earth's crust gave way at various points and a great system of fissures was established, striking generally towards the north-west; and these, becoming filled with lava, form the basic dykes which traverse so large a part of Scotland and the north of England. Where the fissures reached the surface, lava flowed forth in great sheets, forming the plateaux of basalt in Antrim and the Western Isles. At a later date basic rocks of coarsely crystalline structure broke through these plateaux and appear as great eruptive bosses of gabbro and similar rocks. After a long period of repose, volcanic activity was renewed, and acid rocks were developed as felsites, porphyries, and granites. In many respects the views of Prof. Geikie run counter to those of Prof. Judd, and a controversy of much interest to geologists is being carried on between these authorities.

SOME interesting information respecting the jade of Burma is contained in an Indian Blue Book, lately received from Rangoon. The jade mining-district is a large tract of country, chiefly on the west side of the Uyu river. The Kachins, though acknowledging Burmese authority, regard themselves as owners of the mines. The jade is sold chiefly to the Chinese, the headquarters of the trade being at Mogaung. The best quarries in recent years have been those of Hsimu, Masa, Mopang, and Tamukan. It appears that Burma is the only source whence the Chinese draw their supply of this highly-prized mineral. The Chinese Lun Pein, to whom the British Government had farmed the jade-tax, was assassinated a few months ago in consequence of his unpopularity. Geologists will be curious to know more about the conditions under which the jade occurs.

PHILOLOGY NOTES.

THE Clarendon Press will publish immediately a volume of *Essays in Biblical Greek*, by Dr. Edwin Hatch, Reader in Ecclesiastical History in the University of Oxford. The work consists of the substance of the lectures delivered by the writer during his terms of office as Grinfield Lecturer on the LXX., and contains the seven following essays: "The Value and Use of the LXX.," "Short Studies of the Meanings of Words in Biblical Greek," "Psychological Terms in Biblical Greek," "Early Quotations from the LXX.," "Composite Quotations from the LXX.," "Origen's Revision of the LXX. Text of Job," and "The Text of Ecclesiasticus."

WITH the last number, the *Babylonian and Oriental Record* enters upon its third year; and we must take the opportunity to congratulate the proprietors and the director upon the continued activity of their undertaking. It requires no small expenditure both of time and money to conduct so highly specialised a magazine, in the face of scanty encouragement. The circumstances of its origin are described in an introductory note, which also contains an appeal for more subscribers. Prof. Terrien de Lacouperie is not only the editor-in-chief, he is also the principal contributor and the soul of the enterprise. It is here that he has published most of his remarkable series of arguments for the derivation of early Chinese civilisation from Babylonia, and it is by his influence that so many foreign supporters have been enlisted. We may add that the annual subscription is 12s. 6d., and that the publisher is Mr. David Nutt.

FINE ART.

THE WINTER EXHIBITION AT THE ROYAL ACADEMY.

I.

THE twentieth exhibition at Burlington House of works by the Old Masters yields in interest and variety to few, if any, of its predecessors; and yet for the first time not a single picture of Italian or Spanish origin appears in the collection. We think that the Academy, if, as is probable, they were unable to obtain for exhibition works of the first rank belonging to this class, were well advised in excluding from their walls schools already so supremely well represented on former occasions. The examples of the Dutch, Flemish, and French schools—to say nothing of the English collections—are of such splendour that nothing but absolutely first-rate southern work could maintain its supremacy in juxtaposition with them. Never before has such a magnificent show of Rembrandts been seen on the walls of the Academy. It is doubtful, indeed, whether in quality it can be matched even by the famous collections of St. Petersburg, Cassel, the Louvre, and Dresden; though the two first-mentioned galleries possess far more numerous series of the master's works. No such exemplification of the finer and more delicate phase of French eighteenth-century art has been afforded in England as is now given by the exhibition, on the same walls, of the famous Watteaus and Lancrets which are among the treasures of Sir Richard Wallace and Mr. Alfred de Rothschild respectively. We are not aware that any such collection of similar works has yet been brought together—save, it may be, when, at the Loan Exhibition held in 1883 at Berlin, the treasures of the royal palaces of that city, and especially of Potsdam, were for the first time united. All the Watteaus, Lancrets, and Paters acquired by Frederick the Great then saw the light; including the finished and altered version of the famous "Enlèvement de Cythère," which is one of the chief glories of the Louvre. Many of these charming works had, however, suffered irreparably from exposure and rough usage.

In addition to the special attractions of the present show, and to a third and singularly fine instalment of Turner drawings, Burlington House contains the well-known Horrocks Miller collection of English pictures, chiefly of this century, together with choice examples of Cotes, Gainsborough, Romney, Crome, Constable, and other English masters of the same period. The works of the late Frank Holl, R.A., wisely shown separately in two galleries, constitute a distinct section of the exhibition, to which we hope to return later on.

It is the breadth and the subdued splendour of Rembrandt's art, his mastery and unerring intuition in portraiture, his power in the suggestion, not only of physical life and individuality, but of that vivifying force which is the inner life and thought, that are here demonstrated to the full, rather than the yet rarer and nobler aspect of his genius which shines forth in those great scenes of sacred history and legend, which, by the simplicity and penetrating pathos of his conception, were, it may be said, re-created and endowed with a new life. Almost all the styles of the great master, except the very earliest, are here adequately represented. First, in order of date, comes the so-called "Rembrandt's Mother," painted in 1632—that is to say, in the year of the famous "Lesson in Anatomy" at the Hague. The coldness of the shadows, the peculiar quality of the black robe and slate-toned background, and the calculated vigour of the superb modelling, render this canvas somewhat of an exception even among the works of that time. It is the sympathetic truth of the conception, the strange reflective power of the glance, which are, above all, characteristic of the painter. It is difficult to imagine anything finer than the firm and noble modelling of the brow, or the consummate drawing of the eyes and eye-brows. About the year 1633 were executed the two famous portraits of Jan Pellicorn and Susanna his wife (Sir R. Wallace), which here, as at Manchester House, appear as pendants. They are surprising specimens of the unaffected truth, industry, and skill of the master at that time; but they have, on the other hand, less individuality and less felicity of intellectual characterisation than are usual with the painter at his best. The same year is also illustrated by the Queen's famous "Shipbuilder and his Wife," which has already on a former occasion appeared at the Academy. The execution is here already bolder and at the same time more refined, the head of the old woman handing a letter being especially a masterpiece of unaffected truth in expression, as of subtlety in handling. Yet another work of the same year is the small "Good Samaritan" (Sir R. Wallace), executed with an almost miniature-like finish, which yet includes real breadth of brushing. It is infinitely less touching than the later and much larger representation of the same subject—treated in altogether different fashion—which is in the Louvre collection. The version now shown is identical with the well-known etching, which bears the date 1633. To the year 1634 belongs one of the most consummate exercises in rich subdued colour-harmony ever produced by the painter. This, the so-called "Black Archer," shows a young negro richly and fantastically dressed. We know not whether to admire most the delicate firmness of the handling or the exquisite arrangement which groups together kindred hues of sombre richness. The over-cleaned and highly varnished "Portrait of a Young Man" (Sir R. Wallace) belongs to 1634 or 1635, and is, in reality, one of the many portraits of the painter by himself; to the same period may be allotted that "Portrait of the Painter" (159), which so closely resembles one in the Long Gallery of the Louvre. The Queen's so-called "Burgomaster Pancras and his Wife" is, as has been pointed out by Dr. Bode—relying on certain resem-

Digitized by Google

blances in the famous Dresden portraits, and above all on the fantastic personal adornments of the sitters, which are such as Rembrandt only ventured upon when either himself or immediate members of his family were in question—in reality a portrait of the master with his wife, Saskia, painted, not in 1645, but about 1636, in the heyday of his triumphant success. It is one of the most splendid, as it is one of the most extensive, *portraits d'apparat* of the master, expressing just the marital pride, the material pomp, and the physical enjoyment of life, which have been especially aimed at. Perhaps the climax of Rembrandt's technique, in the second stage of his practice, is exhibited in the Queen's magnificent "Portrait of a Lady," bearing the date 1641. The very richly, yet unostentatiously, attired sitter displays an unusual measure of grace and distinction, expressed, however, without any loss of that intensity of "speculation" and vitality which mark the painter's finest work. To about this time belongs the strange composite landscape (159), coming also from Manchester House, and closely paralleled by similar pictures at Cassel and Brunswick. Notwithstanding the potent magic of the chiaroscuro, something unreal and too palpably manufactured about this work detracts from its unity and prevents it from deeply impressing the beholder as do the artist's truer transcripts of nature. Some few of Rembrandt's creations of this peculiar class are open, in this respect, to the same reproach which may be levelled against Turner's most ambitious, but by no means most noble, productions. Far truer and more distinctive of the true Rembrandt is Lord Northbrook's little landscape (118) showing a flat country, with the buildings of a town in the distance. A very important, if not altogether sympathetic, delineation of the painter by himself is the large portrait, dated 1658, (sent by the Earl of Ilchester), in which he appears in heavy and fantastic trappings of Jewish fashion, such as he wore far less frequently in his later, than in his earlier, time. The ashen flesh-tones are, in their present state, not quite in keeping with the rich hues of the broadly-painted costume. It is extremely difficult to place Sir R. Wallace's vast canvas, representing the parable of the "Unmerciful Servant"—whether between 1645 and 1650, as given by Vosmaer, or about 1660, as stated, not without doubt, by Dr. Bode. The jewel-like broken reds of some draperies, the somewhat hasty, if broad, execution would be evidence in favour of the latter date; while the grays in the half-tones of the flesh are such as are not generally found in works of so late a time. To about 1660 belongs the small "Portrait of a Young Man" (116) painted on copper. One of the surprises of the exhibition is Mrs. Owen Roe's large "Portrait of a Man" (166), which is, if we mistake not, practically unknown to recent biographers of Rembrandt. It is a superb study in a colour-harmony, of which reddish-brown and darkly-gleaming red are prominent ingredients. From the ruddy, half-tones of the flesh, the grays are altogether absent; and the whole scheme of colour and style of execution are akin to those of the great "Family Piece" of Brunswick, which belongs to the year 1668. Mr. T. Humphry Ward's "Study of an Old Man" (117) is a broadly and solidly-painted sketch in darkly-luminous golden tones, such as, so far as colour is concerned, Rembrandt need not to have been ashamed to own; but it is difficult to accept as the master's own the neither very individual nor very living head of the model. This is of a type that a late follower of the master, such as Aart de Gelder, might have produced.

Four important specimens of the art of Rubens assert themselves, even by the side of this unequalled series of Rembrandts, with which, indeed, they are in the most striking contrast. The superb "Earl of Arundel," lent by the Duke of Norfolk, is one of the great Fleming's most imposing portraits. Without entirely subduing that intensely subjective artistic temperment which impelled him to infuse into the individuality of his sitters so large an admixture of himself, he has happily caught the sensitiveness and melancholy which are distinctive characteristics of the famous dilettante nobleman. The execution of the armour, with its rich reflections of surrounding crimson draperies, is consummate. It is interesting to contrast with this great work Vandyck's not less masterly presentation of the same personage in more advanced years, with one of his grandchildren. This was contributed by the Duke of Norfolk to the Grosvenor exhibition of Sir Anthony's works two years ago. From Lady Ashburton's collection comes a magnificent piece of decoration, "Peasants going to Market," executed by Rubens in collaboration with Snyders. The more than life-size figures of this canvas are designed and painted with rare mastery and decision; and, it being treated as a piece of pure decoration, they are marked by a greater regard for mere beauty of line and contour than generally characterises the master. The "Marriage of Mars and Venus" (Martin Colnaghi, Esq.), which lately appeared in somewhat dilapidated condition at Christie's, is, above all, instructive as showing the system of production followed in the master's studio when he had attained to the zenith of his reputation. The picture has been carefully under-painted throughout—not merely sketched or outlined—in warm grey and umber; and this part of the work has very probably been done by one of the master's best pupils from one of those preliminary designs of which so many are yet extant. Upon this preparation the master-hand has been vigorously at work, flitting from one part of the canvas to another, and with comparatively little labour imparting Promethean fire to the fairly-fashioned clay of the pupils' work. The touches on the basket of fruit, the breast of Pomona, and the hair of Venus, are such as no brush but that of Rubens himself could have given.

The Dutch pictures of the year are, apart from the great series already dealt with, comparatively few in number, but of choice quality. They show, as a fine collection of works of this class always does, that tempered and limited realism which is marked by simplicity and truth, but by little breadth or depth of observation; save in portraiture proper, which the schools of the Low Countries have, with rare exceptions, approached with a certain appropriate solemnity, yet without the *emphase* of contemporary schools in France and elsewhere. Fine, sober works of this class are the "Portrait of a Lady," by Cornelius Jansen van Ceulen, and the less well-preserved "Portrait of a Gentleman," by the same. Admirable for sobriety of conception and pathetic simplicity is the "Portrait of William van de Velde," by the scarce Michael van Musscher (Lord Northbrook), who was pupil of Adrian van Ostade, though his colouring in this little piece is that of a black Terborch portrait. A still greater rarity is the signed "Interior of a Cottage," by Esaias Boursse, of Amsterdam (Sir R. Wallace), painted with a masterly breadth and a sobriety which in some respects recalls Vermeer of Delft; to whom, indeed, one of his works in the Berlin collection is attributed. Other pictures by this master are to be found in the Amsterdam Museum, and in the Suermondt Gallery at Aix-la-Chapelle. An unusually fine and elaborate Metsu is Lord Northbrook's "The Intruder," in which the painter has dealt with difficult problems of light and colour with unusual success, and with less than usual of that prevailing hotness of tone which is peculiar to him. Exceptional, too, in the beauty of its brown-and-silver harmony, is the little panel by D. Teniers, the younger, entitled, "The Archers" (127). Lord Northbrook's famous "View near Dordrecht (81), by A. Cuyp, is certainly, so far as the execution of the well-worn theme is concerned, of exquisite quality. It lacks, however, even more than do usually the works of the artist, that nameless charm, that suggestion of an intimate connexion between the painter and his subject, which—to say nothing of modern artists—is to be found in the best productions of such widely diverging contemporaries as Van Goyen, Ruysdael (in his purely Dutch scenes), Vermeer of Delft, and P. de Koning. A large measure of this subtle quality—so hard to define, yet so inevitably missed if it be absent—is to be found in Jan van de Capelle's "Shipping in a Calm" (Lord Northbrook), one of the most beautiful works of a consummate artist whose reputation has deservedly advanced of late years.

CLAUDE PHILLIPS.

NOTES ON ART AND ARCHAEOLOGY

AT a meeting held last week, with Lord Spencer in the chair, it was resolved to form a committee to receive subscriptions for a memorial to the late Frank Holl, R.A. It is proposed to place a tablet, with medallion portrait, in St. Paul's; and to purchase one or more of his portraits of public men for presentation to the National Portrait Gallery. Subscriptions are limited to five guineas. The hon. secretary of the committee is Mr. William Agnew, 39b, Old Bond-street.

THE statue of the late William Barnes, the Dorset poet, by Mr. E. Roscoe Mullins, is now cast, and can be seen by those interested at Mr. Moore's foundry, Thames Ditton, until January 19. It is to be erected at Dorchester, and unveiled by the Bishop of Salisbury on February 4.

MR. THOMAS TYLER announces a course of three lectures at the British Museum on "The Hittites and the Hittite Inscriptions," illustrated with diagrams. The lectures will be given on Fridays, at 2.30 p.m., beginning on January 18; and the first lecture will deal with recent discoveries, confirming the views maintained by Mr. Tyler last year in *Nature*.

The editorial vigour of the *Art Magazine* has never been more conspicuous than in the number for January. It commences with a hitherto unpublished letter by John Flaxman, addressed to the Royal Academy in 1797, on Italy, the art centre of the world—a letter of great interest, if not of much present value. The "Poems and Pictures" series are recommenced with a Scotch ballad by Mr. Swinburne, illustrated by Mr. W. Hole. A paper by Mr. Wemyss Reid on Mr. Gladstone and his portraits, is excellently illustrated by a photogravure of Sir John Millais's portrait of 1885, and by many another in the text, including a sheet of caricatures from *Punch* from 1859 to 1888, redrawn by Mr. Harry Furniss. Then comes a very interesting and valuable letter from Mr. Watts on the Art of To-day; and this is followed by the first of a series of papers by Mr. William Telbin on Art in the Theatre—a subject which has hitherto been strangely neglected in English literature. The common-sense side of art is represented in a paper on Art Education by Mr. Frith.

THE new Album of the *Gazette des Beaux-Arts* (the fifth) is quite equal in merit and interest to its predecessors. It contains engravings by M. E. Gaujean after Botticelli's "Birth of Venus," and by M. Guerard, after the same artist's "Spring"; one of Helène Fourment and her son, after Rubens, engraved by Rajon; and

Digitized by Google

Rembrandt's "Danaë," in the Hermitage Gallery, by M. Flameng. Raphael, Watteau, Franz Hals, Meissonier, Whistler, Baudry, Clouet, and Ruysdael, are a few of the other artists represented in this charming little gallery of fifty engravings and etchings.

THE STAGE.

STAGE NOTES.

"THE PANEL PICTURE" is, it is said, to be the name of the new play with which Mr. Rutland Barrington will re-open the St. James's in about a week or ten days hence. Mr. B. C. Stephenson—well known to fame—and Mr. Outram Tristram, who did some very tolerable work in "The Red Lamp," are the joint authors of the piece.

LONDON is already aware of the success of Mr. Augustus Harris's pantomime. The veteran, Mr. Blanchard, has this year had less to do with it than usual, which may, from the literary point of view, be some loss. But pantomime was never superfluously literary, and it is now not literary at all. The words—the stories even—are but the web on which is placed a gorgeous broidery of spectacle. Scenes without end, processions without end, ballets which end only to be given again, pretty people all over the stage—these, with a few comicalities thrown in, are what the fathers, uncles, brothers, of all good children now betake themselves to see; it matters very little about the good children. At Drury Lane, the enterprising parent, the devoted uncle, the self-sacrificing brother, crowd the box-office for half the day; and at night Messrs. Campbell and Nicholl, Miss Harriet Vernon, Miss Maggie Duggan, and minor gods and goddesses innumerable, help to throng the stage. Mr. Augustus Harris is a magnificent organiser—he is an epoch-making man.

MISS MARION LEA will give, we understand, before the middle of February a matinée performance of a new adaptation of the elder Dumas's "Mademoiselle de Belle Isle." This is one of the pieces in which the father of one of the best writers of our day proved that he, too, could write as well as merely construct. The adaptation, by Mr. Osborne Buckle, goes, we hear, much nearer to the original than anything that has been done in England. It was Mdlle. Mars who "created," nearly fifty years ago, the part which Miss Marion Lea is now for the first time to assume.

"TARES," which Mrs. Oscar Beringer produced with some success at a matinée last season, has been to a certain extent modified and re-arranged; and Mrs. Beringer will, on the evening of January 19, put it into the evening bill at the Opera Comique, with a strong cast. And "The Real Little Lord Fauntleroy"—which has been played to even fuller houses than it was last summer—will then be seen every afternoon.

"THE SILVER FALLS," by Mr. George Sims and Mr. Henry Pettitt, is a melodrama by aid of which the Adelphi Theatre may hold its own, with its honest bourgeois public, even against the attractions of Mr. Irving at the Lyceum and of unlimited spectacle at Drury Lane. For "The Silver Falls"—albeit not especially engaging to the literary person—is a melodrama of distinctly a good kind, the story having in it some elements of freshness, some of the dialogue being vigorous and earnest, and the spirit of humour not being wholly banished from the scene. Moreover, the cast is in some respects even stronger than that to which a fairly enterprising management has already accustomed us at the Adelphi, and the piece is exceedingly well played. Mr. William Terriss—a naval man no more, but attired in faultless boating flannels, for a cruise in the neighbourhood of Richmond—is of course the young hero. His manly grace is decidedly sympathetic; and there is a smoothness and a fittingness in all that he does. Mr. Charles Cartwright is a sinner not without hope—a villain of the deeper dye it would be quite a mistake to call him. But perhaps the writers of melodramas are becoming more tolerant or more discriminating, and are recognising that there are many shades between the white and the black. The character of Marcos Valles, at all events—whether by authors or actor—is a study whose moderation we welcome. But to make Mr. Beveridge—who has served a long apprenticeship to stage crime—into a man not only endurable, but positively genial and welcome, is a very revolutionary proceeding. It must be said, however, that Mr. Beveridge bears admirably the suddenness and the completeness of the transition. Mr. Shine and Miss Clara Jecks, inventive and lively, do their utmost for whatever in the piece is intentionally funny. Mr. Royce Carleton—sometimes picturesque in wickedness—suggests the character of one Dick Redmayne with discreet and skilled touch. As Marie, Miss Adrienne Dairolles has probably no chance of passing beyond the limits within which her excellence has been recognised. Greater opportunities, of course, are vouchsafed to Miss Millward and Miss Olga Nethersole. Miss Millward's part is not the stronger of the two, but no one who has spent ten minutes at the theatre can doubt that it is the more sympathetic. Miss Millward does her love scenes very prettily; and never, perhaps, has she looked as well. Miss Olga Nethersole—engaged here for the first time—does more, perhaps, than confirm the good impression that she made in "The Dean's Daughter." Considering how limited has been her experience, there is certainly something remarkable in the extent to which she can command the resources of her art. Her intelligence in detail and the variety of her facial expression are noticeable; and it seems, too, that she has the capacity to conceive of a *rôle* broadly—to look at it as a whole. The student of modern melodrama will not find that he has wasted his evening if he spends it at the Adelphi, though the conventions of the stage do hold sway there more than at the theatres of comedy.

MUSIC.

MUSIC NOTES.

THE first Popular Concert of the new year took place last Monday. Mdlle. Janotha played Chopin's Barcarolle in F sharp (Op. 60), a piece she has often played with great success. Her performance on Monday, except for an excess of soft pedal, was good. She gave, by way of encore, the same composer's "Berceuse" with excellent technique, though at a somewhat rapid rate. If Mr. Chappell furnishes such short pianoforte solos, the public perhaps think they have a right to insist on an encore. How seldom one hears a Sonata now at these concerts! The programme included Beethoven's so-called Harp Quartett, which was magnificently rendered under the leadership of Lady Hallé. Mr. Santley was the vocalist.

MISS DAMIAN, the well-known contralto singer, who is about to start for a tour in Canada with Mdme. Albani, gave a farewell concert at the Prince's Hall on Wednesday evening. She sang Schubert's fine song, "Aufenthalt," supported with excessive vigour by Mr. Randegger at the pianoforte. Mdme. Larkcom, Miss A. Whitacre, Messrs. B. Lane and B. Foote, and other artists, took part in the programme. There was a fair attendance.

The *Spectator* says:—"'The Recluse' is a beautiful supplement to the 'Prelude.' It is a new and beautiful exemplification of the poet's chief sources of inspiration."

THE COMPLETE POETICAL WORKS OF WILLIAM WORDSWORTH.

Copyright Edition. With an Introduction by JOHN MORLEY, and Portrait. Crown 8vo, 7s. 6d.

This Edition contains in addition to the Author's Notes, which are still copyright, a hitherto unpublished Poem of about 700 lines.

The *Spectator* says:—"Mr. Morley has seldom written anything fresher and more vigorous than the essay on Wordsworth which he has prefixed to Macmillan's new and admirable one-volume edition of this poet—the only complete edition."

A NEW VOLUME OF POEMS BY MR. GEORGE MEREDITH

A READING OF EARTH.

By GEORGE MEREDITH,
Author of "Poems and Lyrics of the Joy of Earth," "Ballads and Poems of Tragic Life."
Extra fcap. 8vo, 5s.

A SEQUEL TO "A LITTLE PILGRIM IN THE UNSEEN."

THE LAND OF DARKNESS,

Along with Some Further Chapters in the Experiences of The Little Pilgrim. By the Author of "A Little Pilgrim in the Unseen."
Crown 8vo, 5s.

Profusely Illustrated by HERBERT RAILTON and HUGH THOMSON.

COACHING DAYS AND COACHING WAYS.

By W. OUTRAM TRISTRAM. Extra crown 4to, 21s.

The *Field* says:—"Beautifully printed on very superior paper, and adorned with many excellent illustrations, Mr. Tristram's is a taking volume. . . . He has made himself acquainted with the seven great coach-roads out of London, the houses situate thereon, and the people who have lived, died, eaten, drunk, and been murdered therein. In the collection of such knowledge the Author has been a diligent student, and few records of a bygone age have escaped him. . . . It is the sort of book to read before and after a journey on one of the coaches running out of London in the summer. . . . Mr. Tristram's letterpress is written crisply and amusingly; but it is only fair to say the book owes much o its interest to the illustrations."

SOLUTIONS of the EXAMPLES in a "TREATISE ON ALGEBRA." By CHARLES SMITH, M.A., Fellow and Tutor of Sidney Sussex College, Cambridge. Crown 8vo, 10s. 6d.

MICROSCOPICAL PHYSIOGRAPHY OF THE ROCK-MAKING MINERALS: an Aid to the Microscopical Study of Rocks. By H. ROSENBUSCH. Translated and Abridged for Use in Schools and Colleges by JOSEPH P. IDDINGS. Illustrated by 121 Woodcuts and 26 Photomicrographs. 8vo. 24s.

LITERATURE.

A Modern Faust, and other Poems. By the Hon. Roden Noel. (Kegan Paul, Trench, & Co.)

THE Hon. Roden Noel, as a poet, has never yet received the attention he deserves. This is not altogether the fault of the English public. Mr. Noel's poems are not exactly such as he who runs may read. To be appreciated they require patient study, not only because their thought is often abstruse, but also because their expression is not unfrequently perplexing. Indeed, no other poet of our age, with the exception of Mr. Robert Browning, has added so much of verbal and rhythmical difficulty to the difficulties of pregnant meaning and bold speculation. He is what Goethe would have called an incommensurable man; and his work cannot be measured by any common standard or sounded by any average plummet. It is probable that his poems will not receive due recognition until a Noel Society has been founded. Then people will discover that an impassioned singer, a philosopher of marked originality, a tender-hearted Christian, and a democrat in the noblest sense of that term, has been appealing to them in words of wayward beauty and varied melody during more than a quarter of a century, almost unheeded.

"A Modern Faust" justifies this somewhat audacious prophecy. It is at once the most intelligible and the deepest of Mr. Roden Noel's poems, the purest in style, the widest in scope, the ripest in artistic execution, and the maturest in expression of its author's views. Those who, like the present writer, have watched Mr. Noel's career with interest and admiration, qualified by grave doubt as to his ultimate attainment of the poet's crown, may stake their critical reputation upon this remarkable performance, and invite an indifferent public to its perusal with confidence that the study it demands will be repaid.

This is not saying that the peculiarities of manner which have repelled fastidious lovers of verse are absent from Mr. Noel's latest work, or that the subtlety and remoteness of thought which render his poems inaccessible to careless readers have been exchanged for facile treatment of momentous themes. At first sight, "A Modern Faust" is even more amorphous than its predecessors. It combines lyrical measures with narrative blank verse, prose, and unrhymed metre. It grapples with the thorniest moral problems, and attempts a provisional solution of what most men regard as the insoluble. Its philosophy—strongly tinged with mysticism, and assuming the fundamental doctrine of spiritualism—is such as only a small minority of thinkers can at present accept. Yet, so far as form is concerned, the lyrics are so musical in their peculiar kind, the blank verse is so characteristic, the prose is so vigorous and packed with sense, the unrhymed metre is so well adapted to its purpose, that unprejudiced students will be forced to recognise a master's hand; and in a master it is assuredly a merit, not a defect, to have created a manner of his own. As regards the thought, difficult as that may be to seize, it has the same virtue of originality and decision. We need not agree with Mr. Noel's theory of man's relation to the universe; but we are compelled to admit that no poet of this century in England has more resolutely faced the riddle of the world, prepared himself for his gigantic task with more anxiety of study, and presented an ambitious metaphysical system with more manful effort after coherence.

The philosophy which distinguishes Mr. Noel among his brother poets is better adapted, I think, to the medium of verse than to prose exposition; and in "A Modern Faust" it reaches final expression. To characterise it by any single term is difficult. One might, perhaps, venture to call it an uncompromising idealism. The universe appears to Mr. Noel, as to Giordano Bruno, a God-penetrated unity. Nothing is real except spirit, and all is spirit. This does not make him a shallow or complacent optimist. No one has felt the world-pain, the agony of sin, the cruel curse of evil, more acutely. No pessimist, not Leopardi nor James Thomson, has depicted what men and women suffer, with such poignant realism and such tender sympathy. Unlike metaphysicians, he deals with no mere vague abstractions. His grasp upon the concrete is even more remarkable than his habit of looking beyond and through the concrete to its thought-substratum. In like manner, his familiarity with speculative problems does not make him a mere visionary. The poet's eye for colour, shape, all things of sense, remains undimmed. To some tastes, indeed, his descriptions of natural joy, his appreciation of the voluptuous and gorgeous, will appear even extravagant. In this book, the "Triumph of Bacchus" and the ode on "Pan" must be reckoned among the most sensuous and passionate productions of our literature. With the same keen sense of reality he feels the pure, the tender, the pathetic, the holy things of life; the heroism of brave men and martyrs, the sublime beauty of the loving, suffering Christ, the saintliness of noble women, the saving innocence of children. What constitutes this poet "incommensurable" is the extraordinary range of his sympathies, the justice of his touch upon so many diverse aspects of the outer and the inner worlds, his combination of idealistic philosophy with artistic realism.

"A Modern Faust" is the history of a man's life-experience, cast mainly in autobiographical form. It begins with the picture of innocent childhood in a religious country home. The boy, growing into youth and early manhood, travels, loves, marries, loses a fondly-cherished child. Doubts about the goodness of God assail him when he considers the sufferings of human beings, especially of children; but in this stage of his experience he is inclined to charge the fault on man's perverse will and evil customs. He seeks relief in carnal pleasure, and intoxicates his imagination with the spectacle of triumphant nature. In this stage its due value is assigned to what we call pantheism. But sensual opiates cannot numb the spiritual ache within him:

"For you, Tannhäuser, who have seen the Christ,
Those earlier pleasure-houses are a ruin,
Nor any of you may build them! Nay, for thee,
For thee in glamour of the Venusberg
There hides no refuge from the modern woe!
Wander abroad again! begone! nor linger!
I flash my sword of cherubim before
The fair wall of earth's Eden, lest returning
Ye take, and eat, and live content with earth.

"Ye may not quell your proud dissatisfaction,
Nor feed the hunger of a highborn soul
With husk of sweet illusion like to these,
Nor shut your heart from any bitter cry,
Lapped in a luxury of degradation,
Rendering indifferent to alien loss;
Anon, even fearfully athirst for pain."

Then he takes refuge in seclusion from the world, and woos asceticism. Yet he cannot submit to authority or stifle his reason. Next he tries study, and resolves to explore the riddle of his destiny upon the paths of thought and erudition. Finding the isolation of a library barren and unbearable, he once more wanders out among his brethren, surveys the contradiction between religious ideals and practical worldliness in the church, learns the flimsiness of art and aestheticism, explores the empty wilderness of good society with all its hollow shams and false pretensions, listens to the conflicting theories of literary men, scientific speculators, philanthropic panaceamongers, socialists, preachers, politicians, all the babel of our highly cultivated age. This part of the work is executed in prose; but a poem called "Ragnarok (or Twilight of the Gods)" is interpolated, which contains the following wild passage of description:

"Bells clang jingling-jangling in the steeples,
Drunken steeples, flickering like fire,
Thunder rumbles in the dungeons of the earth-god
And the gaping earth gulphs all!
Lo! the masquers, and the mummers, in confusion,
Hurrying panic-stricken through the highway,
In disordered gala dresses from the revel,
With the lions, panthers, horses from the show,
Shaking scared, with their man-tamers, while the flowers
Are strewn about the pavement where they fell
From the white hands of inebriates who threw them,
Mad with orgy, mad with joy!
Sinuous wine from tumbled goblet dyes the palace;
And the men want not the women any longer;
Flimsy booths of the gay fair are all awry;
No resounding more of brazen vaunting accents
From the humourous showman showing off the monster;
The man of motley runneth swiftly flying. . . ."

Stunned and bewildered by social and intellectual chaos, the man takes flight to nature. He has loved nature from boyhood; and he flatters himself that, rocked upon her breast, he may yet find relief from the sin, the misery, the madness, and the cruelty of his own kind. This is a vain hope. Nature proves no less honeycombed with evil, pain, and strife, no less tyrannical, no less insane, than was the world of man. Wanton waste of life, disease, hereditary madness, deterioration working spiritual ruin by corruption of nerve-cells, wreckage through elemental wilfulness, the whole horrible array of sentient creatures dwarfed and doomed by inexplicable but

Digitized by Google

inexorable law, drives him back in rebellion. He

"Learns at length that not alone
Fault of ours hath wrought our moan.
Whence cometh evil, who shall say,
In man, the creature of a day?
The dumb Sphinx-Nature dooms no less
Than men, though ne'er so pitiless;
Turns her thumbs down, votes for death.
The whole creation travaileth
With conflict, suffering, and care!"

Must, then, the fault be laid on God? Is the whole scheme of things awry, or deliberately intended to be torturing? Man, at any rate, is not responsible for nature's cruelties. Human anguish, in the claws and jaws of nature, assumes the shape of martyrdom rather than of sin. Just at this point, when the man's power of resistance is reduced to a minimum, the supreme trial awaits him. Satan, the Tempter, the Seducer, the Spirit of Despair, the living symbol of the Everlasting No, appears.

I break off my analysis here to say that this part of the poem displays Mr. Noel's genius in its plenitude of power. On those who have once submitted to his influence and accepted his manner book v. of "A Modern Faust" will produce an ineffaceable impression. The utter annihilation of all hope—the exclusion of all consolatory loopholes—the absolute asphyxiation of a human spirit by mephitic vapours, rising not from the imagination, but from hard, dull, grinding facts forced in upon the understanding and the senses, has, in my opinion, been never more cogently presented than in these pages.

What is the deliverance which Mr. Noel's philosophy offers to the human heart and soul in prison, stretched upon the rack of this tough world, the cords of which are tightened by apparent powers of evil? I leave the discovery of this to those who read his poem. It is enough to say that the concluding forty-two pages of "A Modern Faust"—those in which a solution of the painful riddle is at least provisionally attempted—are quite as powerfully written as the hundred and sixty-four which have preceded them. Owing to the fact that death is ever present on our earth, and that sin and suffering and incompleteness are conditions of our existence here, the case for the devil can always be more convincingly and lucidly stated than the case for an all-sustaining and all-constituting Deity, in whom "evil and good are complemental." It is easier to describe disorder than order in the world, when we are dealing, not with its physical laws, but with its moral aspects. Yet the ethical didactic value of Mr. Noel's work consists in the fact that he holds firmly by the belief that the everlasting No is illusion, the everlasting Yea reality; and he contrives by the force of his utterance to bring this belief home to our intelligence. So far as poetry goes, he displays no less vigour in the presentation of the faith that is in him, than he previously displayed in the presentation of despair. In particular, I may mention that the style of these concluding sections assumes a gentle radiance, an ethereal suavity, for which we are hardly prepared by the yeasty turbulence, the sultry splendour, and the fuliginous gloom which mark his descriptions of mortal conflict. The most exquisitely wrought and delicately tinted of his lyrics, called "Fountain Song," occurs in this Book of Order. The vision of imparadised child-spirits, soothingly contrasted with the dreadful picture of tortured children in the first Book of Disorder, is touched throughout with a Blake-like purity of imagination. Indeed, Mr. Noel's conception of the universe might be compared with that of William Blake, both in its essential spirituality and quality of faith, and also in its uncompromising recognition of evil as a misunderstood factor in the scheme of things. But, after all is said and done, faith, like wisdom, is justified of her children; and how far the consolation offered in this poem will be found acceptable to those who have been saddened by its panorama of anguish and of sin must depend upon the natural aptitude for faith in those who study it. With these words I quit what seems to me one of the most remarkable products of poetico-philosophic genius in the literature of our prolific century.

JOHN ADDINGTON SYMONDS.

The State Trials: New Series, Vol. I. (H.M. Stationery Office.)

A new series of state trials is a grave and extensive undertaking, and this first volume is executed in a manner worthy of it. A careful and impartial report of a state trial, apart from its value as a purely legal authority, is a valuable contribution to history, worth many pages of the discussions and half-truths that so often do duty for historical statements. Howell's series terminates with 1820; and, although the number of cases which come within the very elastic denomination of state trials has diminished with every decade since then, there is still a large number of cases of the utmost importance, of which a first-hand knowledge was only to be obtained from newspapers, pamphlets, Home Office papers, and other inaccessible or undigested sources. This series is to continue from the point at which Howell left off. It is prepared under the direction of a numerous and strong committee of judges and counsel; and the editor, Mr. John Macdonell, has performed the task of collecting and consolidating the different reports and illustrating them by appropriate notes in the most praiseworthy manner. With the exception of sundry rather numerous, but, perhaps, inevitable misprints (*e.g.* columns 109, 311, 526, 1121, 1128, 1136, 1186, 1340), the editing seems as good as it can be.

The definition given to the term "state trials" is tolerably wide—"trials relating to offences against the state and trials illustrative of the law relating to officers of high rank, *e.g.* ministers or governors of colonies." The greater part of this volume is occupied with the various proceedings arising out of the "Peterloo" meeting. It contains the trial, at York, in March, 1820, of Hunt and his associates, for conspiracy and unlawful assembling, and of Knowles and Morris, at the Lancaster assizes, immediately after, for unlawfully making and selling arms, shortly after Peterloo. There are also the trials of Dewhurst and others, for an indignation meeting to protest against the Peterloo massacre; of Burdett, for a seditious libel contained in an address about the massacre to the Westminster electors; and the trial of the action of Redford, one of the persons injured on that day, against Birley and others, magistrates or officers of yeomanry, who ordered or carried out the charge upon the crowd. These trials are illustrated by a very interesting plan of St. Peter's Field, as it then was, showing the space now covered by the Free Trade Hall, the Theatre Royal, and various private buildings, as an open green of considerable extent; and there are also extracts from the correspondence and papers of the Home Office, which show the apprehension that existed in the minds of the authorities before the meeting, and the state of unrest and poverty in which the Manchester population then was. The report of Hunt's trial tends rather to modify the view hitherto current of the events connected with the suppression of the meeting. Mr. Justice Bayley conducted the trial with conspicuous fairness and impartiality; and Hunt had the opportunity, of which he freely and with characteristic self-importance availed himself, of conducting his case in his own fashion, insulting Scarlett, alternately fawning upon and disobeying the judge, and eulogising himself. In spite of hostile demonstrations in court, the jury seem to have been open-minded. They found the prisoners guilty of unlawful assembly. So far as the evidence goes it is difficult to see in what respect the meeting, though very numerous—sixty or seventy thousand strong—was more than an ordinary and orderly political meeting of enthusiastic agitators, preceded by processions of the sort we are now familiar with. They carried banners, of which one was black and another was surmounted by what appeared to be a pike or dagger; but the inscriptions on the flags—"Vote by Ballot," "The Saddleworth, Lees, and Mosely Union," and even "Equal Representation or Death"—were not very terrible. Many persons in the procession carried sticks, and after the crowd had been dispersed many stones and brickbats were found upon the ground; but it was not until the yeomanry charged that the weapons, such as they were, made their appearance, and of firearms only two or three were deposed to altogether. Still there is the fact that a number of persons, apparently reasonable men, spoke to the alarm which the procession caused them, and the terrific shouting of the meeting. "I believed then, and I believe now," said Mr. Hulton, chairman of the joint bench of Lancashire and Cheshire magistrates, "that if the crowd had remained at Manchester till night, Manchester would not have been standing." Drilling by night had been going on for some time previously, and members of the crowd used various threatening and disorderly expressions to bystanders. The fact most against the authorities is that the military was called in not to disperse a meeting that had become riotous, but to protect an inadequate force of constables in executing a warrant for the arrest of Hunt. It was to drive a way to the hustings for this purpose, through the crowd, that the horse were employed. Then, the yeomanry being apparently outnumbered, the regular cavalry charged. For anything that appears, if the meeting had been let alone it might have dispersed peacefully. Curiously enough, the number of persons killed and wounded on that day could never be accurately ascertained. Mary Dowlan swore that she dressed fourteen wounded persons, and added—"My house was

Digitized by Google

liker to a slaughter-house, than to a Christian house, with human blood." But the total number was probably much exaggerated. On the whole, these trials produce an impression less unfavourable to the Sidmouth system than has hitherto prevailed. "Peterloo" has been a safe subject for denunciation, and writers on the other side have felt that the best apology for the "Six Acts" and their authors was to ignore them. These reports, however, disclose no deliberate plan of dragooning and riding down the people, though the magistrates gave way too soon to a fussy panic. What comes out most clearly, however, is the need of a large and organised police force, such as Peel instituted. Nadin and his few regular "runners," even with the assistance of three or four hundred special constables, were powerless to have held the crowd in check had anything begun to go wrong. Hence the magistrates' alarm. They fell back upon mounted soldiers, who, however disposed to be temperate, inevitably inflicted much injury; and, where a few heads would have been broken and a few ribs driven in by constables, men were slashed about with swords, and women trampled to death under horses' hoofs.

The remainder of the volume is occupied with trials of less interest or importance. Two are for blasphemous libels, namely, the cases of Mary Ann Carlisle and Samuel Waddington. The trial, however, of Andrew Hardie and others for high treason at Sterling, before a special commission, is interesting. Jeffrey led for the defence, and began by taking objection to the appearance of Serjeant Hullock, as an English barrister, among the counsel for the Crown at a Scotch trial; but the court, having considered various precedents, held that "the parallel is direct between this court and the House of Lords. This court administers neither English nor Scotch law, but the law of Great Britain." Serjeant Hullock was accordingly permitted to appear. Hardie had taken part in what was an armed rising, though on but a small scale; the insurgents were equipped with firearms, and had fired upon a body of cavalry sent to capture them. Jeffrey made an able speech for the prisoners; but the case was too clear, and they were condemned to death. The sentence included decapitation and quartering; and two men, Hardie and Baird, were executed. Of the other trials, the most interesting is that of Burdett, not only for the very full and important discussion of the functions of judge and jury since the passing of Fox's Libel Act, but for the remarkable range of Scarlett's citations from the classics when arguing the rule for a new trial on behalf of Burdett. Not content with the XII. Tables and Cicero, he entered into an elaborate consideration of the exact meaning of the word "famosum" in Horace and elsewhere—a matter almost entirely irrelevant, but evidently precious to the advocate for the opportunity it gave him of entering a new field. The trial of Queen Caroline has been thought to be sufficiently reported elsewhere, and all the more so because it ended abortively. Accordingly it is omitted; but there is a report of the discussion in the Privy Council of her claim to be crowned in 1821.

The volume is provided with an excellent index, and has prefixed to it an unsatisfactory print of a portrait of Lord Tenterden. In the next volume one may hope to have not only the comparatively trivial blemishes of this one removed, but an equally interesting collection of cases edited in an equally careful manner.

J. A. HAMILTON.

The Truth about Russia. By W. T. Stead. (Cassell.)

THIS is a most remarkable book. For the sake of both Russia and England, it is to be hoped that it will be widely read and carefully studied. Most of the works hitherto published about Russia have been productions of the poorest kind. There were, of course, among them a few brilliant exceptions, notably, the *Russia* of Sir Donald Mackenzie Wallace. But the great majority were written either by tourists who had the smallest possible acquaintance with their subject, or by enemies of the country which they attacked under the pretence of describing it. Mr. Stead's book is of a very different nature. About all that he has himself seen he has written brightly, forcibly, courageously, and, I think, wisely. Almost all the statements contained in the first five and the seventh books of the present volume I should be prepared to endorse. The sixth book, which is devoted to a violent assault upon the Holy Synod and its procurator, Mr. Pobédonostseff, is quite out of keeping with its companions. After a Pentateuch of benediction, the journalistic reverser of Balaam's conduct, who came to Russia on purpose to bless, suddenly breaks into a sixth book of cursing. To it I will refer again later on. At present I will deal only with the actual truths to which Mr. Stead gives utterance with regard to Russia and the Russian emperor.

The most interesting, and to many Englishmen the most novel and surprising, part of the present volume is that which describes as he really is the Emperor Alexander III. Here is what Mr. Stead says of him. It will astonish those Englishmen who have based their opinions about him on the calumnies of that reptile press of Germany which has lately attempted to smirch the character of that typical English gentleman, Sir Robert Morier.

"The emperor is a strong man who takes short views. He does what he believes to be his duty from day to day, and he does it honestly to the best of his ability, in the spirit of the maxim that 'sufficient to the day is the evil thereof,' and in the faith that strength sufficient for the day will be given him from on high. . . . From his childhood the emperor, like his sister the Duchess of Edinburgh, has had an almost physical horror of a lie. When he detects any of his ministers in deceit, that man ceases to be minister, and no ability or genius is allowed to atone for that one cardinal crime."

Mr. Stead goes on to speak of the emperor's kindliness, of his honesty, of his horror of war, and of the other traits of his character which prove him to be exactly the opposite of what too many English journalists, hoodwinked by German writers of the lowest class, have described him as being. A more noble gentleman than the Emperor Alexander III. does not exist, and Mr. Stead has done right good service by showing him to English eyes as he really is. To the reptile mind such an English gentleman as Sir Robert Morier, such a Teutonic paladin as the late Emperor Frederick, such a Russian *bogatyr* (or hero) as the Emperor Alexander III.—all these are naturally offensive. The snake, probably in all good faith, invests man with diabolical attributes. The "reptile press" of Germany (which is thoroughly detested and despised by all good and honest Germans, to whom the Semitic race is not specially attractive), certainly in all bad faith, attempts to smirch the character and blast the reputation of any antagonist who deserves to be called a man. It is the nature of the reptile, if endowed with poisonous power, to sting. If anyone is doubtful as to the stinging power of the German "reptile press," let him study pp. 74-79 of Mr. Stead's book, and he will see, to use Mr. Stead's own words, "how impotent are the unorganised forces of truth when pitted against the tremendous park of journalistic artillery under Prince Bismarck's command." Nothing can show how courageous—one might almost say *splendide mendax*—a German (?) reptile can be, when an enemy of Russia commands, than the fact, of which I recently became conscious, that a Russian official of high standing, whom I have known intimately for more than twenty years, and who is one of the very best men I know, whether at home or abroad, has been charged in a book, entitled *Russland am Scheidewege* (Berlin: Wilhelmi), p. 195, with spending his days and nights in card playing and drinking, in the company of dissolute Russian merchants. I know for certain that he never touches a card, and, as regards drink, is almost too abstemious. But the lie survives all the same, and its publisher, Herr Richard Wilhelmi, is no doubt considered (by himself) an honourable man. Unfortunately, a lie of this kind produces at least some effect. The majority believe what they see in print. I used to do so myself until I read one day in the *Scotsman* that I was dead, and in the *Frankfurter Zeitung* that I was an impostor, a charlatan, and even a hyaena. In spite of the deserved authority of print, I have never been able fully to accept any one of these statements, especially the first.

Almost as astonishing to the ordinary English mind as Mr. Stead's revelations about the "White Tsar," will prove his statements about Gen. Ignatieff. That able diplomatist is the *bête noire* of Jingoism. Even to moderate politicians he is generally known by his nickname of "the Father of Lies." With reference to that uncomplimentary *sobriquet*, he spoke to Mr. Stead as follows:

"This is the way in which that name was applied to me. Many years ago, just after I had been appointed ambassador at the Porte, a certain German Jew, who had been employed as an agent of the Third Section of the town police, thought that he could make a little addition to his income by publishing a book about people in St. Petersburg society. When the book was passing through the press he wrote to me a letter, in which he informed me that he had included me in his sketches, and that he had seen fit to describe me as bearing the name of the 'Father of Lies.' It was his title for me, and he intimated that if I would transmit

Digitized by Google

to him at once the trifling sum of 2000 gulden he would desist from giving me this pleasant appellation; if, on the other hand, I refused to send him the money, his book would shortly appear at Vienna, and I should find myself branded all over Europe as a liar and the 'Father of Lies.' I declined to pay him the money, and he made good his threat. *Voilà tout!*"

Not being personally acquainted with General Ignatieff, and having no special information with regard to his veracity or mendacity, I cannot speak on the subject with authority. But I can fully endorse all that Mr. Stead says in his very interesting chapters about the great novelist, Count Leo Tolstoi, and the life which that man of genius—whose utterances remind us at one time of John Ruskin, at another of Thomas Carlyle, and again of Lawrence Oliphant—leads at Yasnaya Polyana, his country seat, near Tula. Equally true are the greater part of Mr. Stead's statements about the condition and the sentiments of the Russian peasantry. It is sincerely to be hoped that they will not be addressed to deaf ears.

I will now pass on to Mr. Stead's sixth book, entitled, "The Shadow on the Throne." I fully appreciate and respect his motives for writing it, but I look upon its insertion into the present volume as a misfortune. Mr. Stead's information on the subject consists almost entirely in the hearsay evidence of interested persons; the rest is composed of extracts from such works as Kostomaroff's *Istoricheskie Monografui*, which he quotes under the misleading title of "Historical Monographies," thereby (of course, unintentionally) inducing his readers to believe that an English book, which he has consulted, exists under that title. The work is a Russian work, which Mr. Stead would not for a moment, I am sure, pretend to have personally perused. We are all apt to be misled by titles. (I may be allowed to mention that once, when I was at the British Museum, a reader, the son of a most distinguished archbishop, evidently disbelieved me when I told him that no journal existed in French under the title of the *Invalide Russe*.) Extracts made by a partisan from a work in a tongue totally unknown to the writer who bases his opinions upon them can scarcely be considered admissible evidence. I am not in any way holding a brief for Mr. Pobédonostseff; but I object to the evidence brought forward by Mr. Stead in his fiery denunciation of that official's conduct. Until his witnesses have been cross-examined, the public ought to suspend their judgment as to the charges which he brings. As regards actual religious persecution, no man can detest it more strongly than I do; but advocates ought to be able to prove their facts before they expect their conclusions to be accepted. Not only should the authenticity of charges against officials be critically tested, but full allowance ought to be made for the circumstances under the influence of which the deeds alleged in those charges were performed by those officials. Mr. Stead understands the conditions of Russian life to an extent remarkable in a foreigner who has been only for a short time in Russia. But he does not quite understand, or he refuses to admit, the arguments which render it impossible for the Holy Synod and Mr. Pobédonostseff to act precisely as he wishes them to act. He accuses them of religious intolerance. He admits, it is true, that men are not in the least persecuted in Russia because they belong to alien churches, that no man is troubled on the ground that he is a Protestant or a member of the Church of Rome, or that he believes in Islam, Buddhism, or Shamanism. Only one thing will render him liable to prosecution—his attempting to induce an Orthodox sheep to enter into his own fold. Rightly or wrongly, the Russian law looks upon such an attempt as a crime. For carrying out the law upon this point in certain cases, the procurator of the Holy Synod is stated by Mr. Stead to belong to the firm of "Diocletian, Torquemada, Pobedonestzeff [*sic*] & Co., Limited." This reminds one of the famous story of the "piggs." Before blackening M. Pobédonostseff's good name, Mr. Stead might have taken the trouble to learn how to spell it. It means "Victory-Bringer," the Greek Νικηφόρος. The oddest part of the attack is that on p. 328. Mr. Stead begins by saying:

"Far be it from me to speak evil of M. Pobedonestzeff. By almost universal repute he is a good and honest man. He is a lawyer of integrity and erudition, he is an omnivorous reader, and he is a very faithful son of the Greek Church. If, after exercising such great power for so many years, he should have succumbed to the temptations of personal ambition, or if he should have been somewhat nepotist in his patronage, or a little unscrupulous in misrepresenting his opponents for the sake of the orthodox cause, these are the worst offences which even scandal has ever laid at his door."

After this friendly and respectful exordium, one cannot but be astounded at the concluding words of Mr. Stead's peroration on p. 329:

"I felt that there was only a difference in degree between the various members of the firm of Diocletian, Torquemada, Pobedonestzeff & Co., Limited, and that the sole surviving partner is a worthy representative of the Roman Emperor and the Papal Inquisitor."

The words "only a difference in degree" may of course cover anything. There is only "a difference in degree" between the Lord Chancellor and the most junior member of the Bar, between the saint who had obtained God's grace and the criminal who was being conducted to the gallows. After all, Mr. Stead probably intended to pen only a friendly remonstrance; but a "savage indignation," such as "ulcerated" Swift's heart, led him not only into "dissembling his love," but even into attempting to kick the Procurator of the Holy Synod down the Synodial stairs. I venture to think that fortune will smile upon the "Victory-Bringer."

And now I will explain why I think that the publication of book vi. is "a misfortune." Firstly, it can do no good in Russia, and it may do a great deal of harm. It will not in the least turn the authorities aside from the line of action which they have deliberately chosen, but it is very likely to lead to more stringent measures being adopted against Mr. Stead's clients. Nothing is worse for a prisoner in the dock than to have a speech made by his counsel in which the presiding magistrate is roundly abused. Secondly, Mr. Stead's conduct, in accepting the hospitality of Russia as an honoured guest, and then hitting his host a blow on a most tender spot, will render it very difficult for subsequent visitors to obtain the confidence of the Russian people. The man who is once stung by a writer, whom he has fostered in his bosom, is not likely to try the fostering process a second time. Thirdly, the enemies of Russia—the persons who wish to excite and keep alive an angry feeling between that country and our own—while they will ignore the sixth-sevenths of Mr. Stead's book which sing Russia's praises, will probably make capital out of the penultimate seventh which will serve their purpose admirably. For these reasons I wish that Mr. Stead had, at least, postponed the publication of "The Shadow on the Throne." But I feel so convinced of the rectitude of his purpose, so glad that there exists a journalist who, when he thinks that a wrong has been committed, does not shrink from expressing his indignation with honest boldness, that I cannot blame him for doing what he has, to my mind, unwisely done.

Englishmen, as a general rule, have but little idea of the devotion of the Russian people to their church. And it must be remembered, paradoxical as the statement may seem, that the action of the Russian government is, to a great extent, the expression of the people's will. Out of the (in round numbers) seventy millions* of "Orthodox" Christians in Russia, or say sixty millions, if the "Raskolniks" be excluded, there are not as many hundreds, among the masses, who would accept Mr. Stead's conclusions or vote for his propositions. What is good and laudable, or at least permissible, in England would be fatal in Russia. Take the case of the "Salvation Army" for instance. In spite of what my respected friend, Mr. Llewellyn Davies, has written, I believe that the Salvation Army has done good service in many "slums." Only the other day I heard that at Luton, which I can remember as one of the most dissolute towns in England, the police have testified that crime has diminished immensely since the Army conquered it. I state the story as I heard it from a magistrate. I have no means of testing it. But in Russia that Army would be not only a nuisance, but a source of deadly peril. Take away their faith—superstitious faith, if you like so to call it—from the Russian masses, and you disturb the equilibrium of force over "one-sixth of the territorial surface of the globe." From the Russian point of view—which may be right or wrong—it is not worth while to endanger the peace of the universe; and it would be seriously endangered if the Russian peasantry were to rise in revolt, for the sake of an abstract idea, or from respect for such well-meaning but most dangerous enthusiasts as the fanatical nobleman, of whom Mr. Stead's description ends with the words (p. 354)—"I could have shaken him for sheer disgust, and I left." If I may be allowed to quote from my own book on *Early Russian History*, I will conclude with a passage descriptive of the services rendered to Russia by that church which Mr. Stead's clients would like to destroy:

"It was the church which sustained the

* These figures are taken from *Whittaker's Almanack*, but the real numbers are understated.

Digitized by Google

courage of the Russian people during the agony of the Tartar invasion, which comforted the countless mourners over the dead, which took away its sting from death itself for those who were doomed to die.

"Enter any country church in Russia—not some gorgeous cathedral conveying the idea of a church triumphant, but some humble edifice, plain as a meeting-house in many of its details—and watch the rustic congregation at their devotions. Study the expression, pleading or grateful, which softens or enlivens so many ordinarily dull and stolid faces. And then, as you think of all that their ancestors have suffered, you will be able to realise to some extent what the church was for Russia during the terrible time of the Tartar invasions.

"And again, pass through some Russian village after nightfall, and mark amid the darkness, the tiny spark which gleams through one of the windows of every house. That spark burns in the lamp which hangs before the icon, the holy picture, the central point of the Russian homestead. In it we, knowing what Russia has been, may be allowed to see a type of the kindly light which the almost heart-broken people of devastated Russia saw gleaming from amid the surrounding gloom—light which, though dim and fitful, was for them the presage of a coming dayspring from on high; light which for them, almost whelmed beneath the wave of Mongol barbarism, kept before their eyes the form of Him who of old, when the bark of His disciples seemed to be foundering in the Lake of Gennesaret, 'rebuked the wind and the raging of the water; and they ceased, and there was a calm.'"

W. R. S. RALSTON.

The Life and Work of Duncan McLaren. By J. B. Mackie. (Edinburgh: Nelson.)

HAD Duncan McLaren been born in the south of England, he might have risen to the dignity of the nestor of the parish, or possibly (as his abilities were exceptional) to that of "Mayor of Casterbridge." Happily for him and for the state he lived to serve so well, he was not born under our iron system of caste, but in the Lowlands—a district fertile in strong men. The English rustic has been described as one to whose eyes knowledge "rich with the spoils of time did ne'er unroll" her ample page. The Scotch peasantry produced from their own ranks the nation's bard. The difference between the labourers of the two countries is a radical one, and arises from the difference in their education. The old "use and wont" of the Scottish educational system was that the children of all classes, the sons of the laird and of the labourer, should meet on equal terms in the schoolroom and in the playground. The English use and wont, with its so-called "public" schools, was as little likely to produce a Duncan McLaren as a Robert Burns.

If we have any fault to find with the tone of this biography, it is that the author endeavours to slur over the low birth of his hero. Duncan McLaren was "born poor, and he never forgot or strove to conceal the fact" (p. 8); but we cannot say as much of the author. In talking of that great Scotch mystery, the clan, he forgets the greater mystery, that a man born in a humble cottage, unaided by patrons or indeed by genius, should raise himself to be "member for all Scotland." In some respects the story of the poor lad of Renton is more amazing than that of the poor lad of Ayr; but both emphatically belonged to the peasantry, and not to the middle-classes of Scotland. Patience, calmness, pertinacity of purpose, the resolve to test everything for himself—these were the qualities to which Duncan McLaren owed his success in life; and when we remember how rarely they are met with, we shall wonder less that they carried him so far.

The work before us consists of two volumes of about 300 pages each; but, after making due allowance for the insertion of many complimentary speeches about the subject of his work, Mr. Mackie cannot be charged with prolixity. It is one of the drawbacks to modern biographies that they are written too much in the style of electioneering literature, and that the warts are quite left out. Duncan McLaren would have objected to this method as strongly as Cromwell himself, but the best panegyric of the late "member for Scotland" is the record of his work. We have not space here to give even a catalogue of McLaren's public achievements, but perhaps the most remarkable was his support of household suffrage at a time when Mr. Coleridge had been selected to move an instruction for the substitution of a rating franchise (vol. ii. 161). McLaren saw that the country was tired of reform bills, and that "neither the Whig nor the Tory party *alone* could lead on to victory." As an advanced Liberal he felt that if the Tories were defeated in their attempt to introduce household suffrage, no advantage would accrue to any class or any party except the Tories themselves. For his fidelity to the cause of reform he was called many harsh names by the official Liberals; but, as he said, writing eighteen years after to the late Mr. Seely, he "did not mind the abuse, which did him no harm." He also voted against Mr. Gladstone on a clause providing vote by ballot, and on John Stuart Mill's woman suffrage amendment. But nothing in his parliamentary career was more characteristic than his opposition to the proposals for the repeal of the "picketing" clauses. The Criminal Law Amendment Act of 1873 gave great offence to many workmen, mainly because it forbade the "picketing" of workmen who disowned the authority of the trade unions. No one sympathised with workmen in their honest aspiration after social advancement and free education more than McLaren; but he would no more tolerate tyranny among workmen than he would from the political coteries which had striven so hard to keep him out of Parliament. His colleague promised to support the repeal, but he would not. As a general election was approaching, and as Edinburgh is a Radical constituency, his seat appeared in danger; but in the result, not McLaren, but his colleague, lost his seat.

In the new Parliament of 1880 McLaren had the gratification of being joined by two of his sons. The eldest of them was appointed Lord Advocate, and on seeking re-election lost his seat. McLaren determined to resign and make room for his son, who as "Lord Advocate had sketched out for himself important legislative work." With good reason does Mr. Mackie say that "on no other occasion was his adhesion to justice more severely tested, nor more faithfully acted upon" (vol. ii. 225). He put aside all considerations of self, and resigned the position he had won after so long and arduous a struggle. Of his parliamentary career nothing became him more than the close of it. McLaren's activity terminated only with his death. But a fortnight before the end—April 11, 1886—he dictated a long letter to Mr. John Bright on Home Rule.

"I understand," he writes, "that Gladstone is prepared to apply the same principles by giving Scotland a separate parliament, with equal powers to that of Ireland. This, I think, would be a great calamity for Scotland; and if I had the health and strength which I possessed in Anti-Corn Law times, I would be prepared to do what you and other noble patriots did, and to do what our ancestors used to call 'to testify' against the proposed injustice" (vol. ii. 252).

This is not the place to reply to McLaren. It is more becoming and more agreeable to point out the temperate spirit in which the dying veteran criticised Mr. Gladstone's Bill:

"The bill should be withdrawn, and some of the wisest heads in the three kingdoms, without regard to party, ought to be employed in devising a measure of Home Rule which would apply to each of the three kingdoms, and have a tendency to unite them more and more in one friendly bond of brotherhood, in place of separating them into distinct nationalities."

Duncan MacLaren was sixty-five years of age when he won a seat in Parliament; but his career of public usefulness dates from 1833, when he entered the reformed Town Council of Edinburgh. For a period of fifty years and more he was "his country's friend."

"Without flattery I may say that I have seldom found among men employed in the highest functions, and accustomed to the management of great affairs, a mind more statesmanlike than yours" (p. 216).

Thus Macaulay wrote to MacLaren in 1840; but an even more unfriendly witness bore the following testimony to his ability and independence:

"He who, as Carlyle says of Knox, was not one of the nobles of the land, but simply a subject born within the same—he, a retail dealer of woollens in the High-street of Edinburgh, could, through the influence which he exerted on the Whig Ministry as the lay leader of voluntaryism, do more to thwart and prevent the right settlement of one of the most important questions Scotland ever saw than profound talent such as that of Chalmers, and high political position, such as that of the Marquis of Breadalbane, could do to secure it" (p. 295).

This graphic description was written by the luckless author of *My Schools and Schoolmasters*.

The reader of this biography cannot fail to feel that he has had brought before him an extinct type. Able and independent as the majority of members for Scotland are, not one of them is so typical a representative of Scotch thought and prejudice as was Duncan McLaren. He can with justice be compared to James Mill, his own critic Hugh Miller, and John Leyden. He was blessed with length of days, and was therefore able to accomplish more than poor Leyden; but the energy and industry of the two men, though directed to very different objects, was the same. The inability to rest and be thankful, the refusal to pass by on the other side when an injustice is being done, the reluctance to couch like the ass of Issachar and become a servant unto tribute because the land is plea-

Digitized by Google

sant—these are the characteristics which in the past have won for Scotchmen fame and fortune.

In closing this brief notice we cannot refrain from expressing regret that the book does not contain more letters from Mrs McLaren. Her letters are so picturesque and so original that they would be an addition to any literature.

J. G. Cotton Minchin.

NEW NOVELS.

This Wicked World. By Mrs. H. Lovett Cameron. In 3 vols. (White.)

Mistress Beatrice Cope. By M. E. Le Clerc. In 2 vols. (Hurst & Blackett.)

The Bulbul and the Black Snake. By L. D'Aguilar Jackson. In 2 vols. (Spencer Blackett.)

The Dalbroom Folks. By Rev. J. Smith. In 2 vols. (Alexander Gardner.)

A Man Story. By E. W. Howe. (Boston: Ticknor.)

The Prophet's Mantle. By Fabian Bland. (Henry J. Drane.)

The Sisters of Ombersleigh. By Rosa Mackenzie Kettle. (Fisher Unwin.)

A Ghost's Philosophy. By J. I. Stuart. (Sonnenschein.)

Galloping Days at the Deanery. By Charles T. C. James. (Spencer Blackett.)

In view of the prevalent sensationalism of the age, one was prepared for some harrowing details of vice, selfishness, and greed, in a book with such a title as *This Wicked World.* But Mrs. Lovett Cameron lets us down gently, keeping her characters out of those pitfalls into which they are in imminent danger of precipitating themselves. True, there is a society beauty who sacrifices her daughter, and pays the penalty woefully herself in the end, and there is a stiff race on the part of others to take the prize for meanness; but, as the writer is not a Thackeray, their peccadilloes do not create any profound impression. This novel is not strong from either the literary or philosophical point of view, and its thinness of texture is not compensated for by originality of conception, or indeed by any other special quality. Neither is the plot at all intricate, and for that reason it would be unfair to the author to expose it. But Mrs. Lovett Cameron is an agreeable writer; and, as novels go, there is nothing to be ashamed of in this. It will probably hold its own with the majority of those published. Yet, why does one of the characters speak of a quatrain as an acrostic, and aggravate the offence by spelling the word "accrostic"? In the matter of similes, too, there is something offensively incongruous in a woman of fashion bouncing into a room, "with her fluffy hair piled up high above her forehead, and a strong odour of Ylang-Ylang, which came in with her in like manner as the pillar of cloud was said to accompany the Sacred Tabernacle in the Scriptures." Then, through ignorance or misfortune, the name of the great woman pioneer of fiction appears as Austin. The political portions of this novel will cause considerable amusement, those "Whig dogs," as Dr. Johnson called them, getting the worst of it. Marcus Cunningham, the brilliant young Conservative M.P., is a sad prig in the outset, but he develops grit towards the end. By the irony of fate, a passage in which we are assured that "it is always the woman who goes to the wall, and always the man who goes scot-free to the end of his days," follows hard upon a love story in which it is the man who is decidedly hardly used.

To write the historical novel acceptably, and really project the reader into a bygone age, is probably to essay the most difficult task in fiction. I cannot say that Miss Le Clerc has successfully done this in her *Mistress Beatrice Cope*, which is devoted to certain passages in the life of a Jacobite's daughter. The story is extremely pleasant, and, though very slight, is well told; but compare the characters with those of Sir Walter Scott, or even those drawn by inferior men, and we feel the want of flesh and blood at once. In the present story, moreover, the *dramatis personæ* do not seem to act from any over-mastering necessity, and this of itself is a fatal flaw in fiction. But in other respects *Mistress Beatrice Cope* is well worth reading, for the style, if not vigorous, possesses a grace and a delicacy which carry one smoothly onward to the end.

The author of *The Bulbul and the Black Snake* evidently writes with a considerable practical knowledge of the inner working of our Indian administration. If the facts cited in this volume be correct—and he pledges himself to their accuracy—then the legal injustice which can be perpetrated under the sanction of British officialism is enough to make the mother country ashamed of herself. Mr. Bright would find much material here to support his theories for a radical reformation in the government of India. Putting all debateable matter on one side, however, the story has a general as well as a particular application. Its fanciful title covers a description of the good and the evil which are to be found in close juxtaposition in the life of a British civilian in the East. The bulbul warbles and delights, the black snake bites and envenoms. Mr. Jackson brings out the contrasts very strikingly, but in more than one chapter he becomes offensively realistic. However, he never commits the unpardonable sin of being dull; and some of his pages are exciting enough, though they scarcely bear out his opening homily that "even the sweetest siren may be a monster of selfish greed, and the desperate assassin a hero protecting himself and his friends." The adventures of Leif Hardson may be followed with interest and advantage, but we hope similar trials and misfortunes do not overtake other volunteers in the Indian service. The writer occasionally gives utterance to an epigrammatic thought. For example, "If death be a leap in the dark, the plunge into life is certainly another." And again, "If the Norns are the weavers of human destiny, the philosophers are merely the rag-pickers."

Although *The Dalbroom Folks* does not reveal the practised hand at novel writing, its studies of Scotch character are not to be despised. We have Scots of all kinds—priggish, Calvinistic, whisky-drinking, grasping, manly, and womanly; and all are well differentiated. This is, perhaps, the highest praise that can be awarded to the book, for the story has little plot or artistic method. In the chapter headed "Sunday in Dalbroom" the author ingeniously makes the bells of the various kirks—the Established, the Free, and the U.P.—ring out the characteristics of the different religious institutions.

Mr. Howells and Mark Twain have made themselves sponsors for the excellence of Mr. Howe's previous stories; and after reading *A Man Story*, one can have no hesitation in ascribing to this popular American writer undoubted freshness and originality. His talent seems to lie in turning a human soul inside out, and while he does it thoroughly he also does it tenderly and lovingly. This book is by far the most uncommon on our list; and its principal character, Uncle Tom, is one of the most unhackneyed of conceptions. After his strange career, we part from him with the desire that he will live to carry out his final resolve:

"For every sorrow I have caused I shall endeavour to provide a double measure of joy; for every wrong in my past I shall endeavour to supply a double measure of good in the future, to the end that I may hear hereafter: there is forgiveness, and peace, and goodwill."

A touching story of Russian patriotism is unfolded in *The Prophet's Mantle.* There is something melancholy, as well as heroic, in the sacrifices which men are willing to make of themselves generation after generation, in order to overthrow the despotism of centuries. But the saddest reflection of all is that the system remains, even though the Czar personally may be willing to modify or abolish it. Mr. Bland's work is very entertaining, and the love and devotion of Clare Stanley impart a strong personal interest to the narrative.

Miss Kettle always writes with clearness and intelligence; but her story of the South Downs, *The Sisters of Ombersleigh*, is extremely thin, and would never have given its author the position she holds in literature had it been her first work. There is some little originality about Isabella Charlton, the eldest of the three sisters; but all the rest of the characters are lay figures. The best we can say for the book is that it is written in a pleasant style.

The ghost in the Christmas story entitled *A Ghost's Philosophy* is a rattling, jovial, loquacious kind of spirit, who describes himself as "a double-distilled conundrum, a very hard nut to crack." In reality he is a very easy ghost to read. He brings all kinds of visions of the past to the curmudgeon, Silas Grimster, but we wish he had allowed Shakspere and some other notabilities to rest undisturbed. Mr. Stuart seems to have founded his sketch on the model of Dickens; but one of his ghostly embodiments is sadly in need of a Board School education, for he actually spells "fettishism." Our author also tells us that his hero, Silas, had "a *moat* in his eye." Let us hope that by the time Christmas comes round again he will have got rid of this serious obstruction.

A hearty laugh may be got out of *Galloping Days at the Deanery.* The horsey niece of a

Digitized by Google

grave dignitary arrives at the Deanery, turns everything topsy-turvy, and scandalises the whole county. She will attend the meets, and generally ride about like a mad thing. On one occasion, upon her spirited steed, she makes the running for the Dean's quiet little cob, who strangely loses his head, and leaps into the air with the Dean, with the result that they come to earth separately. However, there is nothing really bad in Helen Masters; and, after an extraordinary courtship in the hunting field, all ends happily. There is real comedy in this sketch.

G. BARNETT SMITH.

SOME VOLUMES OF SERMONS.

School Ideals. Sermons preached in the Chapel of Rossall School. By Herbert A. James. (Macmillan.) The late Dean of St. Asaph—who has now again taken up the duties of a headmaster at Cheltenham—writes a preface to this collection of his Rossall sermons in which he states the principles which he thinks "should not be lost sight of by those to whose lot it falls to address a school congregation." These are roughly two—that "schoolboys should not be allowed to keep their religion for Sundays and to forget it in the week," and that "dull sermons are worse than useless." If the preacher indulges in conventional platitudes "his congregation is out in the playground or the class-room." This excellent preface introduces a volume of sermons unusually sincere and sensible. The schoolboy is preached to on religious subjects in a style he can understand, and with an earnestness he must respect. The preacher does not evade the difficulty of addressing a school audience by the usual method of substituting a string of picturesque anecdotes for the sermon supposed to be given. He treats the schoolboy as a thinking being, and his own religion as something which the schoolboy can understand and sympathise with. We have rarely read a wiser or clearer exposition of the meaning of the doctrine of the Trinity than that contained in Sermon X. It will be found useful by Christians of all ages, because very few of us when schoolboys had the good fortune to hear anything like it. Everyone of the twenty-one sermons is worth reading.

Wellington College Sermons. By E. C. Wickham. (Macmillan.) Mr. Wickham's discourses are remarkable for a scholarly accuracy of arrangement by which he secures himself against repetition and over-statement. The reader of his book will be very grateful for this; but his hearers must sometimes find a difficulty in following his train of thought, and a still greater difficulty in retaining his sermon as a whole. The careful arrangement of the sermons makes them thorough so far as they go, although their shortness forbids anything like exhaustive treatment of the more important subjects. Of the thirty-nine discourses contained in the volume, we may mention "Irreparable Follies" and "Faith" as illustrating what we have said, but Mr. Wickham rarely falls below his own high standard of excellence. His style is marked by frequent felicity of expression, which, however, is oftener that of the scholar than of the priest or prophet. He has not quite enough animation, and is occasionally didactic when he ought to be eloquent.

Dives and Pauper, and other Sermons. By A. C. Auchmuty. (Kegan Paul, Trench & Co.) The discourse that gives its title to this volume strikes a note which is more or less audible through the thirteen sermons which follow it. Mr. Auchmuty is in strong sympathy with the ideals at least of that form of Socialism of which Mr. William Morris may be mentioned as a representative; and he attempts to show that some of the main contentions of Mr. Morris find support in the New Testament. The sermons call attention to those passages in Christ's teaching which can be appealed to by the Socialist; and the work is done very clearly and plainly, and yet with a certain bald and unadorned eloquence which is impressive. Mr. Auchmuty's mind is penetrating rather than careful, and penetration is so rare a quality in the thought of divines and preachers that when it occurs it is at once welcomed. His style is eminently readable. It is marked by a curt, straightforward bluntness which at once puts the preacher on the rock of reality, and raises him above the sands of conventional and second-hand interpretation. Mr. Auchmuty's courage and independence of judgment deserve hearty praise; but he must be warned of the danger of mistaking a sneer for an argument, and of confounding an off-hand manner, which is easily acquired, with accurate sincerity of statement. Humility is necessary as well as earnestness if the latter quality of style is to be acquired; and, although an eager and unselfish Socialist is right in deprecating the supreme necessity for the former among dock-labourers and female operatives, he is, nevertheless, in constant need of it himself.

The Seven Sayings from the Cross. Addresses by William Bright. (Parker.) The grace and beauty of these addresses, delivered at St. Barnabas' Church, Oxford, will be felt by all classes of readers. They have been most suggestively and carefully annotated by their author, and issued by Messrs. Parker in a volume beautifully printed and becomingly bound. The notes will be found instructive as well as interesting. In books for devotional reading, they are often mere impertinences; but when learning and insight are used in their selection, notes connect the teaching of the text with the thoughts and emotions of preceding Christians, and give it an authority which, in isolation, it can scarcely possess. We note, with pleasure, the graceful acknowledgment in the preface of obligation to "an eminent Nonconformist theologian, Dr. Dale, of Birmingham."

The Blessedness of the Dead in Christ, and other Sermons. By the late William Maturin. (Macmillan.) It is very difficult to preach sermons on death and the state of the dead—whether conceived of as blessed or cursed—without striking false notes. There is no subject which tempts more to sentimentality and unreality, and there is no subject in the treatment of which sentimentality and unreality are more intolerable. We cannot feel that Dr. Maturin quite succeeds in avoiding all false notes. In the first sermon, for instance, we are told to "try to accustom ourselves at all times" to the thought of death, which is merely foolish advice. We are then warned that we must leave all the delights of this life, and advised, therefore, not to prize them overmuch; but, if the delights in question are never to come again, is not our one chance of appreciating them to be made use of? We are told of a "young girl," who "burst into tears of joy" when she heard the doctors say there was no hope of her recovery; and she is apparently held up to admiration because St. Paul, in the midst of his arduous labours and constant anxieties, desired to depart and be with Christ. Dr. Maturin seems to think that life to a young person need not be, and ought not to be, a delight. Again, in the twenty-second sermon, on Women's Rights, there is much that is unsatisfactory. And yet, in spite of these blemishes, which spring generally from narrowness of view, Dr. Maturin's sermons are exceptional. What he wishes to say he says earnestly and well; and, within a somewhat limited range, his thought is acute and careful. Of the two dozen discourses contained in the volume, we have been most taken with the thirteenth and fourteenth on the Prodigal Son.

Sermons. New Testament Series. By Bishop Woodford. Edited by H. M. Luckock. (Rivingtons.) The shortness of these seventeen sermons is to be commended, but we can detect no other qualities in them to raise them above the average. Although all preachers are not careful and painstaking, yet care and pains alone do not necessarily make sermons worth publishing. In the sermon on the shut doors of the parable of the Ten Virgins, Bishop Woodford enlarges with great earnestness on the dreadful effects upon sinners which may be expected to follow on the separation of the good from the bad in the next world. He seems quite unaware that to many minds his picture will be a most convincing argument against the separation he supposes; and he makes no attempt to justify the desertion of the bad by God and by the good, the consequences of which he declares will be so dreadful. We mention this as one instance of a certain bluntness of ethical perception frequently observable in these sermons.

The Preachers of Scotland from the Sixth to the Nineteenth Century. Twelfth Series of the Cunningham Lectures. By W. G. Blaikie. (Edinburgh: T. & T. Clark.) The Cunningham Lectures are the Scottish Free Church's "Bamptons"; and, like all such series, of necessity they vary very much in quality from year to year. We remember well being struck some years ago by the ability displayed by Prof. Bruce in his Cunningham Lectures on *The Humiliation of Christ*, and some other useful volumes have appeared in the interval. The lectures now before us do not pretend to be anything more than popular sketches of the preachers who have gained general esteem in Scotland. One who knows is tempted to smile at the subject of the chapters on the preachers of the early Celtic Church, inasmuch as the material for forming a judgment on the Celtic saints as preachers is so thin as to leave almost all to the imagination of the writer. A whole volume, however, on Scottish preachers must needs have "padding." Prof. Blaikie is most in sympathy with the covenanting heroes and field preachers. The "martyrs," such as Cargill and James Guthrie, and "confessors" like "prophet Peden," John Blackader, John Welch, of Irongray in Dumfrieshire, and Richard Cameron, are congenial topics upon which the imagination of the Professor of Apologetics can disport itself; and we need not say that in the defence of these enthusiasts there is ample scope for the display of apologetic ingenuity. The "moderate" school of the next century, and Dean Stanley as its eulogist, come in for what are meant to be very hard knocks; and the concluding lectures deal with the evangelical revival and the Scottish pulpit of to-day.

NOTES AND NEWS.

IT is reported that a large number of cuneiform tablets have reached Berlin, which are in the Hittite language, some of them being bilingual, and that the problem of the Hittite inscriptions has at last been solved.

PROF. W. MINTO, of Aberdeen, will deliver a lecture before the Philosophical Institution at Edinburgh, on Tuesday next, January 22, upon "The Poetry of Burns in its Historical Relationships," in which he proposes to bring forward one or two somewhat neglected aspects of the influence of books on the poetry and character of the poet.

AN English version of Baedeker's *Handbook to Greece*, of which two German editions have

Digitized by Google

already appeared, will be published immediately. One of its most interesting features will be a historical sketch of Greek art by Prof. Reinhard Kekulé, of Bonn. We understand that the English editor (Mr. J. F. Muirhead) has had the advice and assistance of several eminent English scholars in preparing the work for British and American travellers.

General Gordon, the first of Messrs. Macmillan's new series of "English Men of Action," already announced in the ACADEMY, will be published in February. It is written by Col. Sir William Butler. The next volumes, to follow at intervals of a month, are *Henry the Fifth*, by Prof. A. J. Church; *Livingstone*, by Mr. Thomas Hughes; *Lord Lawrence*, by Sir Richard Temple; and *Wellington*, by Mr. George Hooper.

MESSRS. LONGMANS have in the press *Speeches by Lord Randolph Churchill*, from 1880 to 1888, revised by himself, with an introduction and notes by Mr. Louis J. Jennings.

THE same publishers also announce, for publication in a few days, *The History of the Corps of Royal Engineers*, in two volumes, by Major-Gen. Whitworth Porter. It will be illustrated with portraits of Sir John Burgoyne and Gen. Gordon, five coloured plates showing the uniforms of the corps at different periods, and numerous sketches and plans of sieges, &c.

MESSRS. GEORGE BELL & SONS will publish immediately a volume entitled *Chronicle of King Henry VIII. of England;* being a contemporary record of some of the principal events in the reigns of Henry VIII. and Edward VI., written in Spanish by an unknown hand. It has been translated, with notes and introduction, by Major Martin A. Sharp Hume, knight of the order of Isabel the Catholic.

AN autobiography of the Nun of Kenmare, the lady who so nobly distinguished herself in the Irish famine of 1879, will be published in this country in a few days by Messrs. Hodder & Stoughton, by arrangement with Messrs. Ticknor & Co., of Boston.

MR. FISHER UNWIN will publish in a few days a volume dealing with some curious phases of Indian life and thought, under the title of *Glimpses of Indian Life—Religious and Social*, by Mr. J. C. Oman.

THE same publisher will issue directly a third and cheaper edition of Mr. Robert Horton's *Inspiration and the Bible*.

MESSRS. CHAPMAN & HALL have in preparation a translation of M. Renan's second volume of *The History of Israel*, from the reign of David to the capture of Samaria.

MESSRS. KEGAN PAUL, TRENCH & Co. will publish immediately a Life of Bishop Selwyn, by Canon Curteis, of Lichfield.

The Circle of the Seasons: Hymns and Verses for the Seasons of the Church, by K. E. V., is the title of a volume of verse announced by Mr. Elliot Stock.

MESSRS. DEAN & SON announce *The Dog-Owner's Kennel Companion and Referee*, illustrated with portraits of the latest champion dogs.

MR. EDWIN DREW will shortly publish *Irving's Elocution*, with studies of stage-speech, as exemplified by Miss Ellen Terry and leading Lyceum actors.

AT the Royal Institution on Tuesday next, January 22, Prof. Romanes will begin the second part of his course of lectures entitled, "Before and after Darwin." His special subject is "The Evidences of Organic Evolution and the Theory of Natural Selection." On Thursday next, January 24, Prof. Judd will begin a course of four lectures on "The Metamorphosis of Minerals." On Saturday next, January 26, Prof. Ernst Pauer will begin a course of four lectures on "The Characters of the great Composers and the Characteristics of their Works," with illustrations on the pianoforte. The first lecture will be devoted to S. Bach and Handel. At the first Friday evening meeting of the season, January 25, Prof. G. H. Darwin will give a discourse on "Meteorites and the History of Stellar Systems."

THE volume of the *Journal of Education* for 1888 shows no falling off from the high standard of excellence which that periodical has maintained for many years. Among the articles which have attracted our attention we may mention especially Mr. W. H. Widgery's thoughtful and original series of papers on "The Teaching of Modern Languages in Schools." Dr. Abbott's address on "Latin through English" contains some valuable suggestions, though we doubt whether all of his methods could be successfully worked by teachers in general. An article by Mr. J. A. Aldis, on "The Ideal Education for 'Commercial' Boys," deserves special attention. The reviews of books in most cases show competent knowledge of the subjects. The monthly "translation prize" column is continued, and appears to attract a large number of contributors. We do not envy the "Prize Editor" his laborious task; but we cannot but admire his skilful selection of passages, and the fine taste and the linguistic knowledge displayed in his critical remarks.

THE FORTHCOMING MAGAZINES.

THE forthcoming number of the *Jewish Quarterly Reformer* — edited by Messrs. I. Abrahams and Claude Montefiore, and published by Mr. David Nutt—will contain the following articles: "Four of the Oldest Epitaphs after the Re-settlement of the Jews in England," by Prof. David Haufmann; a second paper by Dr. A. Neubauer on "The Ten Tribes," dealing with Eldad the Danite; "The Book of Hosea in the Light of Assyrian Research," by Prof. Sayce; and a proposal for the establishment of a Massorite school in England, by Mr. Joseph Jacobs.

Mr. JOSEPH JACOBS will also contribute to the February number of the *Archaeological Review* an article on "The Pipe Roll Entries of the Twelfth and Thirteenth Centuries relating to the Jewish Community in England." The entries are printed in full, many for the first time; and explanatory notes have been added.

THE *Century* for February will contain: an illustrated article on "Gérôme, the Artist" by Mr. F. J. Hering; "Fairies and Druids of Ireland," by Mr. Charles de Kay; "Portraits of Mary Queen of Scots," with engravings, by Mr. Laurence Hutton; "Exiles at Irkutsk," by Mr. George Kennan; and "Hand Spinning in Westmoreland," by Mr. Albert Fleming.

St. Nicholas will include: "The White Pasha," by Mr. Noah Brooks, with a portrait of Stanley; "Seeing the Real Mikado," by A. L. Shumway; and "Lassooing a Sea Lion," illustrated.

OUIDA has written an article on "War" for the February number of the *Woman's World*, which will also contain a story by Annie Thomas, a paper by the author of "How to be Happy, though Married," and contributions from Mrs. Oscar Wilde, Mrs. Harriette Brooke-Davis, Mrs. Swanwick, Miss Florence Layard, Mr. Oscar Browning, &c.

The author of "Joined to an Idol" will contribute to the next issue of the *Monthly Packet* an account of her experiences in the Riviera earthquakes of 1887; and, in contrast therewith, a description of the fêtes held in Florence in May of the same year at the unveiling of the façade of the Duomo.

MR. ROACH SMITH will contribute an illustrated paper to the February number of the *Antiquary*, in which he puts forward his views on "The Walls of Chester," in a slightly modified but final shape; Mr. Talfourd Ely will give a further instalment of his survey of "Recent Archaeological Discoveries"; and the Rev. R. S. Mylne concludes his paper on "Ancient Peru."

ORIGINAL VERSE.

THE QUAKER'S GRAVE.

(*Burton, Cheshire.*)

A LITTLE village with a church above,
A church whose founder's name was surely love,
And yet within its pale no place was found
For this one grave, this green and silent mound.
'Tis in a wood, and oft my rambles led
Me past the spot where lies the quiet dead;
I was a child, knew nought of party strife,
Nor all the discords that distract our life,
Yet felt how strange it was to shut out one
Whose life a pure and gentle stream had run.
It seemed a grave where birds would love to sing,
And green leaf-shadows dance in breezy spring;
Not lonely, for the path runs close that wends
Still upward till the wood in moorland ends;
There the gaunt mill spreads out its whirring sails,
To catch each wind that moans around and wails,
Here Peace herself has come, and where she trod
Rest, silent worshipper, thou Friend of God.

B. L. TOLLEMACHE.

MAGAZINES AND REVIEWS.

In the *Archaeological Review* for January is printed Mr. Arthur J. Evans's recent lecture at Oxford upon "Stonehenge." Short as it is, it is probably the most scientific examination yet made of the subject. From an examination of the facts from many points of view—the physical constitution of the monument, the contents of the surrounding tumuli, the analogy of similar megalithic structures in other places (especially those in Arabia and India)—he arrives at certain conclusions with regard to its date and its purpose. He thinks that it was erected, probably at intervals of time, between the end of the fourth and the beginning of the second century B.C.; and he regards its purpose as representing the change from sepulchral to ritual worship. More tentatively, he advances a theory that the original holy object within the central triliths was an oak, thus bringing us back again to the Druids. The same number contains the conclusion of Bahnson's elaborate survey of ethnographical museums; a sixth catalogue of Roman remains in England, this time dealing with the great county of Yorkshire, by Mr. John E. Price; a reply by Mr. Pell to Mr. Round, in the matter of Domesday measures; and reviews of Mr. Petrie's two memoirs on "Tanis," by Mr. Talfourd Ely, and of Prof. Earle's "Handbook to Saxon Charters" by the editor. Altogether, an unusually good number.

Both the original articles in the December *Livre* are thoroughly well suited to the publication. That learned bibliographer, M. Drujon, begins a catalogue, with remarks, of books which have been the victims of what he calls *bibliolytie* (a word we do not greatly love), that is to say, which have been destroyed by their unnatural authors for reasons known or unknown. This will be useful; but we like still better as a whole, though we may not always agree with the particular laws it lays down, M. Delauney's paper on "Le Livre Harmonieux." This has nothing to do with music.

Digitized by Google

It is a short tractate on the proportions and the mechanical architecture of a printed volume. We must say that something of the kind was much called for. We have ourselves, if we mistake not, called attention more than once to the outrage on harmony which is committed by some well-meaning publishers who, in issuing "large paper" editions, simply extend the lower and outer margin of the book, leaving the upper and inner ones practically the same as the "small paper," and thus "skewing" and distorting the whole proportion of the square of print to its frame. But this is only one instance; and M. Delauney has done a good deed in calling attention to the whole subject.

CORRESPONDENCE.

THE CODEX AMIATINUS.

Cambridge: December 29, 1888.

I should hardly venture to inflict on the readers of the ACADEMY a third letter about the Codex Amiatinus, were it not my fate to have to retract a retractation made in its columns a year and a half ago. In the first letter which I wrote on the subject (Feb. 26, 1887, p. 148) I took for granted, as others had done, that the highly ornamented quaternion containing preliminary matter was written at the same time as the rest of the manuscript. On this assumption it would be a copy (with additions) made for Ceolfrid from a corresponding preliminary quaternion of the Old Latin "Pandect" brought from Rome. A careful examination, however, by Mr. (now Professor) G. F. Browne, to whom I had communicated some doubts privately expressed by Dr. P. Corssen, led him to think it more probable that at least the sheets containing the two pictures (the Tabernacle and Ezra) were the original sheets of the Cassiodorian "Pandect," not copies of them: see his letter, April 30, 1887, p. 309. To this supposition I expressed assent in a letter printed June 11, 1887, p. 414; or, rather, I extended it to the whole quaternion without distinction, regarding the connecting link formed by the three biblical lists as rendering improbable a difference of origin for the two pairs of sheets.

I have now to confess that, on a fuller knowledge of the evidence, I have been obliged to return to the simpler *prima facie* view which I had taken for granted at starting; and again I have to thank Dr. Corssen for supplying the impulse. In a private letter of February 14 he informed me that a renewed examination of the MS. had not confirmed his own former misgivings, or the results at which Prof. Browne and myself had more confidently arrived, respecting the origin of the preliminary quaternion; and I could not but feel at once that the question was re-opened by the new evidence adduced. Most of what Corssen wrote to me has already in substance been laid before the readers of the ACADEMY from his own hand in greater detail (April 7, p. 239), and need not be repeated. On April 17 I had an opportunity of handling the MS. afresh; and though, as happens too often in hasty visits to libraries, some points were overlooked till too late, I saw enough to satisfy myself that Corssen's main contention is justified by the facts. On various subsidiary particulars I fear we are not in agreement; but the external phenomena of the four preliminary sheets do not now appear to me, when considered together, to point to an origin earlier than that of the rest of the book. Of some evidence of a more internal kind I will speak further on.

With respect to the evidence supplied by the external phenomena (painting, writing, and material), it has to be remembered throughout that these sheets might well be painted and written for Ceolfrid, to stand as part of the Amiatinus, and yet this work be entrusted to other hands than those which he employed to write the text itself. The case is pre-eminently one in which a division of labour was to be expected. This consideration materially affects the argument from differences between the preliminary pictures of the Tabernacle and Ezra, and the picture of the Evangelists, &c., on the *verso* of the last leaf of the Old Testament. It is not necessary to assume that the artist would in both cases be the same. But this is not all. As Corssen has hinted, though we may be sure that the two former pictures, if copies, were copies of Cassiodorian originals, we cannot tell whether the picture of the Evangelists had a Cassiodorian or some totally different parentage, the texts between which it stands being certainly not taken from the Cassiodorian Old Latin Pandect, or even whether it was a copy at all; and evidently some differences, at least, of copies might proceed as easily from difference of originals as from difference of copyists. I ought to add that the actual differences appeared to me considerably less than I had expected to find them; but possibly with better trained eyes it would have been otherwise.

All this is merely negative evidence. Not so the fact pointed out by Corssen, that the handwriting of the three biblical lists resembles that of "the corrections and marginal notes of the texts." He allows the possibility of a century intervening between the handwriting of the lists and that of the text; doubtless meaning, as his preceding observation implies, that the lists, and the corrections and marginalia, may conceivably be thus much later (not earlier, as Prof. Browne appears to understand him) than the text. But he puts forward this interval as a maximum only, and I do not gather that in his own opinion there was probably any appreciable interval at all. The decision must turn on the apparent absolute age of the small and, as it were, spontaneous writing of the lists, &c.; for no secure dating can be obtained from comparison with the archaistic grandeur of the text. I cannot but suspect that the corrections and marginalia are due to the contemporary *corrector* of the text; and, if so, he may well have also written at least the three lists in the preliminary quaternion, though it would not be safe to speak confidently on this point without further scrutiny. It is, at all events, very difficult to place these lists a century and a half before the corrections and marginalia, as they must be placed if they were written for Cassiodorius.

Once more, the supposed evidence of the material used is even less tangible than that of the paintings. The four preliminary sheets are certainly a trifle shorter than the adjoining sheets; and it may be that the thickness and the surface of the parchment are not identical in the two cases. But these surely are points on which correspondence might easily, within certain limits, fall short of completeness, if the preparation of the highly ornamented preliminary sheets was a separate piece of work, executed independently of the text which they were intended to precede.

So much for painting, handwriting, and material. An interesting piece of evidence of another kind is deducible from an observation of Corssen's (perhaps originally, he seems to say, of Anziani's), though he does not himself apply it to the question of the identity or non-identity of the existing sheets with the Cassiodorian originals. Since a Lamb is depicted above the Hieronymic list, and a Dove above the Augustinian list, Corssen urges that the variously interpreted human or quasi-human Head above the Old Latin list must stand for the First Person of the Trinity; and consequently that the leaf containing it must have preceded the other leaves. He does not notice the *prima facie* difficulty that the representation of the Father otherwise than by a Hand is commonly believed to be of later date than either Cassiodorius or Ceolfrid. Sufficient comparatively early examples have, however, come to light to justify and illustrate this interpretation of the symbol in our MS. (see for instance Kraus in his own *Real-encyklopädie*, i., 628 ff.; Victor Schultze, *Die Katacomben*, 149); and it is difficult to see how the association with the other symbols can be reasonably explained on any other interpretation. The order of the Cassiodorian sheets thus determined by Corssen from the order of the symbols is the same as that which was originally suggested on other grounds by Prof. Browne.

But this conclusion makes it impossible that the present sheets, in their present condition, should be identical with the Cassiodorian sheets, the two manifestly Northumbrian additions, the Amiatine list and the Donation verses, being of course left out of account. There are two independent difficulties, both connected with the sheet which in the Cassiodorian MS. must have held the middle place of the three. *First*, as I pointed out before, it is simply incredible that the Pentateuchal circles should have been thrust in between the first and second biblical lists, and thus shut off from the beginning of the Pentateuch by the leaves containing the second and third lists. Corssen thinks the collocation "can be explained in some way or other," but has not supplied an explanation. Two alternatives are possible. First, the Pentateuchal circles may not be Cassiodorian at all, but an (third) addition made by Ceolfrid to the actual Cassiodorian sheets before or after transposition of them. Secondly, the Pentateuchal circles may be Cassiodorian in origin, but changed in position at the time of transcription, on the supposition that the preliminary sheets generally were transcribed for Ceolfrid. The *second* difficulty is the position of the purple leaf. The order of the symbols makes it stand third, that is, preceded by two uncoloured leaves; and so unmeaning an arrangement is inconceivable.

Digitized by Google

Here again there are two possible alternatives. First, as Prof. Browne suggested, the purple leaf, now undeniably divided from its fellow, may have been substituted by Ceolfrid for a discarded Cassiodorian leaf, the other Cassiodorian leaves being retained. Secondly, on the supposition that the present leaves are only copies, Ceolfrid may have both transposed his leaves and caused the purple dye to be applied to the leaf which was to stand first in his own new order, not to the leaf standing first in the Cassiodorian order.

In each case the first alternative is possible: but, taken together, as they must be, are they likely? On the hypothetical late insertion of the Pentateuchal circles I prefer to say nothing at present, having neglected to compare the handwriting of the remarkable passages enclosed in them with that of the biblical lists. The theory that the purple leaf alone is of Ceolfrid's date implies that no Cassiodorian leaf was purple; for, as we have seen, the predecessor of that one leaf must have been uncoloured, being in the third place. Hence, the supposition makes Ceolfrid in Northumbria introduce a purple dye where the *librarii* of South Italy a special home of empurpled MSS., had left the parchment plain. Nor has an adequate motive been suggested for replacement in the case of this solitary leaf. The present *recto* has the old Cassiodorian Prologue without any correction of its discordance as to the number of books; and the new list of Amiatine books on the *verso* is more likely to be an addition to a blank page than a substitute for a (supposed) earlier list of the books of the Old Latin "Pandect," which would have been an unmeaning duplicate of the Old Latin list in the second half of the quaternion.

On the other hand, the two second alternatives combine naturally as parts of what I cannot but think a simple and coherent supposition, in harmony with what we have seen to be the evidence of the handwriting. The Cassiodorian arrangement of leaves being accepted as fixed by the order of symbols, the first leaf (a blank one) may be taken as empurpled on both sides, and the last pages of the quaternion as coloured (yellow, green, and blue), and as inscribed with the Pentateuchal circles and the enclosed matter. The contents in a tabular form would be as follows. (For a reason which will appear presently, the Tabernacle is left out of account. The numbering is that of the modern order.)

1 r. *Blank* (Purple).
1 v. *Blank* (Purple).
5 r. Picture of Ezra.
5 v. *Blank*.
4 r. Prologue.
4 v. *Blank*.
7 r. Old Latin list [HEAD].
7 v. *Blank*.
6 r. Hieronymic list [LAMB].
6 v. *Blank*.
8 r. Augustinian list [DOVE].
8 v. Pentateuchal circles (variously coloured).

Here the Old Latin list stands first, as would be natural in an Old Latin Bible. Ceolfrid's Bible was to be Vulgate, Hieronymic in text, Augustinian in canon; and so he might well prefer that the Hieronymic and Augustinian lists should take precedence in the adapted copy (or copies) of the decorated quaternion which *ex hypothesi* he caused to be made, this new order having likewise Cassiodorius's own authority in his *De Institutione*. The most obvious way of attaining this end was simply to shift the copy of the inmost of the three sheets and place it outside the copies of the two others. But if no more than this were done, two untoward results would follow: the purple leaf would become second, and the leaf containing the Old Latin list would shut off the coloured page of Pentateuchal circles from the beginning of th Pentateuch. Such staring incongruities could not escape notice, and they were easy to rectify. Nothing was needed but to empurple the new first leaf instead of the copy of the old first leaf, and to paint and write the Pentateuchal adornment and instruction on the page opposite the first page of the Pentateuch, that is, on the *verso* of the new last leaf, not on the *verso* of the copy of the old last leaf. Then came the addition of the new matter, the contents of the Amiatinus on the blank *verso* of the first leaf, and the Donation verses on the blank *verso* of the second leaf; and all was done. Here is the resulting arrangement, agreeing with the single arrangement which I suggested in June, 1887 (p. 414):

4 r. Prologue (Purple).
4 v. [Contents of Amiatinus] (Purple).
1 r. *Blank*.
1 v. [Donation Verses].
5 r. Picture of Ezra.
5 v. *Blank*.
6 r. Hieronymic list [LAMB].
6 v. *Blank*.
8 r. Augustinian list [DOVE].
8 v. *Blank*.
7 r. Old-Latin list [HEAD].
7 v. Pentateuchal circles (variously coloured).

Corssen's objection, that in this arrangement a blank leaf is left between the first leaf (an inscribed leaf) and the picture of Ezra, is not without weight, I think, on the supposition (shared by myself a year and a half ago) that the Cassiodorian order was the same as Ceolfrid's. As part of an original plan such a collocation would have been somewhat irregular. But as an accident of a subsequent rearrangement it would be quite endurable, even were the blankness complete; whereas the blankness of Ceolfrid's second leaf is confined to the *recto*, the Donation verses being written on the other side. It is worth notice that, while in the (supposed) first Cassiodorian leaf the purple dye served to relieve blankness as well as to give the book a rich front, Ceolfrid's first leaf had to carry writing on its purple; but this was inevitable, because he had to find room for two new pages of writing. An undeniably awkward result of the transposition of the lists was the transposition of the symbols at their head. But this is a result that might easily escape notice; nor, indeed, if it were noticed, was Ceolfrid likely to venture to dissociate each symbol from the list to which he found it attached by a theologian so studious of hidden meanings as Cassiodorius.

Having had occasion to profess myself still unable to accept Prof. Browne's alienation of the purple leaf from its fellow, I ought to add that I am likewise no better able than before to assign a date to their actual severance. It may be that the operator was the still living binder, as Corssen maintains; but his suggested explanation of the cause, if I understand it rightly, is not satisfying. If the purpose was simply to bring together the two leaves of the Tabernacle, previously separated by the two inner sheets, and if part of the process was, as Corssen himself supposes, to take out the inner sheet entire, one sees not why the next sheet should be divided in two, when the slighter and more merciful treatment was as easy to apply in the one case as in the other.

It will be remembered that the great picture occupying a whole sheet has been variously described as representing the Temple or the Tabernacle or both. After looking at it afresh with special regard to this difference of view, I find myself wholly in agreement with Prof. Browne, who declares it to represent the tabernacle and nothing else. Such is also, I am glad to see, the present opinion of De Rossi, as expressed in his recent *Memoria* on *La Bibbia offerta da Ceolfrido abbate al sepolcro di S. Pietro*, for a copy of which I have to thank his kindness. On the other hand, it seems to me hardly less certain, not only that pictures of both Tabernacle and Temple were inserted by Cassiodorius in his "Pandect," as Prof. Browne fully allows to be possible, but that Bæda had seen Temple as well as Tabernacle. Such is surely the natural interpretation of the words "Haec ut in pictura Cassiodori repetimus distincta breviter annotare curavimus" (*De Templo*, 16), taken in connexion with the elaborate context. A similar testimony is borne by an independent and equally elaborate passage on the same subject, hitherto apparently overlooked in Bæda's *Quaest. in Libb. Regum*, 18, where he in like manner describes his authorities, "Sed Josephi scriptura *vel pictura ab antiquis formata* plenius quo sint haec ordine facta distinguit." Nor does it seem a very heinous slip on Bæda's part to have failed to distinguish the courts of Solomon's temple (for which of course he cites 1 Kings vi. 36; 2 Chron. iv. 9) from the courts of Herod's temple.

The only difficulty is the fact that, not many lines before the words cited above from the *De Templo*, Bæda makes Cassiodorius refer in his exposition of the Psalms to his delineation of the courts (or rather the porticoes dividing them) in his "Pandect"; whereas the tabernacle is explicitly the subject of the one passage of the *Expos. in Psalt.* (on xv.= xiv. 1) which, in any respect, answers to Bæda's description. A highly probable explanation is however offered by De Rossi; namely, that Bæda remembered the fact that the *Exposition of the Psalter* contained an allusion to one of the two associated pictures in the Cassiodorian Pandect, familiar to himself as a possession of the Jarrow Library, but forgot to which of the two pictures Cassidorius had there referred. It may be added that the confusion was the more natural because the temple courts are repeatedly mentioned in the Psalter, and Ps. cxxxv.=cxxxiv. 2 ("in atriis domus. Dei nostri") is quoted by Bæda himself with reference to these courts in both his descriptions of the temple.

It is of course impossible to say whether Ceolfrid caused both pictures to be copied, or only that of the Tabernacle; antecedently one would scarcely expect him to be satisfied with one alone. On the former supposition the Amiatine Temple must at some unknown time have been lost. On the same supposition, while the Amiatine Temple existed, it could hardly find place in the extant preliminary quire; for the two pictures could not both be in the middle, the only place in which both pages of either could be seen together, the quire being assumed to be folded in the usual way, sheet within sheet. Unless then, by an arrangement too clumsy to be probable, the Temple were parasitically stitched in between the Tabernacle and the adjoining sheet, it must have stood independently outside the quire. In a former letter I hinted that the extant picture might conceivably have been independent of the quire; and if there was a Temple picture likewise, it is more likely that both pictures would be independent of the quire than that one would be within it, one without. What under these circumstances would probably be their place or places in the volume, we need not conjecture. The quire itself, at all events, may well have consisted of three sheets only; but this contingency does not affect what has been said as to their order and their date. As regards the Tabernacle, wherever we may suppose it to have originally stood, within the quire or without, it is doubtless easier to believe that this picture had a different history from the other three sheets than that either of the three had a different history from the other two. Yet, bearing in mind, first, the various similari-

Digitized by Google

ties of the parchment leaves, and next, the connecting link supplied by the Ezra picture, we shall do well, I think, to regard the whole present quaternion as of the same date, and that the date of the text itself, till we have very clear evidence indeed that such a picture as that of the Tabernacle was beyond the imitative skill of Ceolfrid's age.

F. J. A. HORT.

P.S.—I ought to apologise for the length of this letter, which has lain by me in rough draft since early in the summer. It will not be necessary, I hope, to return to a subject which has already beguiled me into a larger expenditure of time than I should find it easy to justify.

THE CLIFF OF THE DEAD AMONG TEUTONS.

Berkeley, California: Dec. 24, 1888.

Though I admire Mr. Stevenson's skill in associating *neowol* and *nifol*, and in resolving *næs* into *-nes* (ACADEMY, December 8), yet there seem to me various reasons why his views cannot be accepted. These reasons may thus be summarised:—

1. Though there is a substantive *neowolnes*, there is also an adjective *neowol*, sometimes conjoined with the substantive *næs* in an attributive relation to it, though not always in contact with it, and sometimes found in the same context with it as the attribute of some other noun. Examples of the latter are the passages already quoted (ACADEMY, December 1) "Sat." 31, 91, "Guthlac" 535; as an example of the latter I must again cite "Elene" 832, *néolum, níðer, næsse*. No one would contend, I presume, that in the latter case *næs*=*-nes*.

2. It being postulated that *neowol* and *næs* may stand together in an attributive relation as independent words, why should we assume that they do not in "Judith" 113? The MS. plainly has *neowelne næs* (not *neowul -ne nes* (*s*) as Mr. Stevenson writes), these words occupying the middle of the fourth line of fol. 202ᵃ.

3. Sweet and Sievers agree respecting the etymology of *néol* (*Oldest English Texts*, p. 491; *O.E. Gram.* § 43 note 4, § 51). Does not this agreement practically close discussion, except upon the introduction of new evidence tending to invalidate their conclusion?

4. The *w* of *neowol* is epenthetic, secondary, and inorganic. In his new edition of the *History of English Sounds* (§ 503), Sweet speaks of O.E. *h* as being sometimes a hiatus-filler. The introduction of *w* in the later form of *nihold* may be explained in the same way, on the assumption that it was a hiatus-filler. The process may be represented thus: *nihold, nihol*ᵃ, *ni-ol, néol* or *neowol*, according as there was fusion into a diphthong, or as the hiatus was recognised and provided for. If *w* be regarded as ending the first syllable rather than as beginning the second, *neowol* will have much the same phonetic value as *néol*, and *w* can hardly be said to have distinct consonantal value at all (*cf.* the adverbs *áwas, néowan, néon* in Grein). On the other hand, the *f* of *nifol* did have distinct consonantal value, probably that of Mod. E. *v* (*O.E. Gram.*, § 192, 2; *cf. Hist. Eng. Sounds*, § 521). This *f* could not be lost in O.E., whatever may have been the case in O.N.

5. If *néol* (*neowol*) were to be identified with *nifol*, it could only be on the assumption that the latter, on its way to becoming *níol*, was borrowed from O.N. into O.E. Such borrowing could only have taken place at a comparatively late period (*Hist. Eng. Sounds*, § 577), whereas *néol* (*níol*) is early, occurring in the Corpus Glossary (eighth century).

6. Mr. Stevenson, in discussing *neowol* as "dark," seems to ignore my suggestion that "*neowol* may have become associated with darkness through the idea of the underworld, Hades."

To recapitulate, Mr. Stevenson appears to me to err (1) in reasoning from the single instance "Judith" 113, to the rejection of *næs* as an independent word in some cases; (2) in too lightly rejecting authorities of the very first order, like Sweet and Sievers; (3) in his willingness to substitute conjecture for MS. evidence, as in "Judith" 113; and (4) in confounding the phonetic phenomena of Old Norse with the quite distinct phonetic phenomena of Old English.

ALBERT S. COOK.

HWÆTMUNDES STANE—NEWGATE MARKET.

Wynfrid, Clevedon: Jan. 14, 1889.

I think "the normal modern form" of the name, as "Whatman," suggested by your reviewer of Prof. Earle's Land Charters (ACADEMY, January 12, p. 29), may be safely remitted to the company of his "indisputable" reconstruction of "Celtic . . . Eburācon." What I wrote about "Hwætmundes stane" in the *Antiquary* for July, 1880, will, I trust, be found to justify Mr. Earle's "apparent approval," against what Prof. Max Müller would call a "pharisaical air of infallibility," in a pursuit in which, as he says, "we are all masters."

Your reviewer may not object to be told that most of the manumissions from Bishop Leofric's Missal have been printed in several "general collections of charters" before Mr. Earle's—in Hickes's *Dissertatio Epistolaris*, in Kemble's *Codex*, in Thorpe's *Diplomatarium*, and in Haddan's Cornish volume of the *Councils*. One most valuable improvement to be found in Mr. Earle's is this: the entries had been made in the MS. on chance spare blank spaces, at different times. Mr. Earle has given what may be called bibliographical means of realising these circumstances of the several entries, and so approaching an acquaintance with their successive interpolation.

THOMAS KERSLAKE.

THE WORD "BORE," A TIRESOME TALKER.

London: Jan. 12, 1889.

If you are not already becoming bored with this subject, perhaps you may think the following worth printing. It is a footnote to p. 11 of Dr. Matthews's (of Belmont) *Eloisa in déshabille*, first printed in 1794, and again (privately) in 1822. It is a very clever parody or transcription of Pope's Epistle, and was one of the things of which Porson was not unwilling to be considered the author.

Pope wrote:

"I can no more; by shame, by rage suppress'd,
Let tears and burning blushes speak the rest."

Matthews parodied:

"But what am I writing? the subject must **bore* ye;
Too well you're acquainted with all the sad story."

"* This word has happily survived the usual period of these *Ephemerides* of the fashionable vocabulary; if, however, the Beau Monde should at length think fit to banish it before this work itself is buried in oblivion, let it be remembered that between the years 1772 and 17— the proper mode of expressing a dislike to any noun-substantive, whether masculine, feminine, or neuter, was to pronounce him, her, or it *a monstrous bore*, which immediately conveyed the sentiments of the speaker with great brevity and precision; whereby the intolerable fatigue of circumlocution was avoided. The verb in the text signifies, of course, *to affect with disagreeable sensations*. The derivation I leave to more able etymologists."

J. DYKES CAMPBELL.

"FRENCH AND ENGLISH."

Pré Charmoy, Autun: Jan. 14, 1889.

I see a note in the ACADEMY concerning my forthcoming book "French and English." It is not simply a reprint of my articles in the *Atlantic Monthly*. It is a new work with those articles for a basis. The publication in England has been postponed for the convenience of my American publishers. P. G. HAMERTON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Jan. 21, 4 p.m. Royal Academy: Demonstration, "The Trunk," I., by Prof. J. Marshall.
5 p.m. London Institution: "Astronomical Photography," by Mr. A. A. Common.
8 p.m. Society of Arts: Cantor Lecture, "Egyptian Tapestry," I., by Mr. Alan S. Cole.
8 p.m. Victoria Institute: "The Science of Language and Ethnography," by Dr. Leitner; "The Ethnology and Ancient Chronology of China," by Dr. Gordon.

TUESDAY, Jan. 22, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," I., by Prof. G. J. Romanes.
8 p.m. Society of Arts: "Some Recent Movements in Relation to the Applied Arts," by Sir James D. Linton.
8 p.m. Civil Engineers: Discussion, "The Compound Principle as applied to Locomotives," by Mr. Edgar Worthington.
8.30 p.m. Anthropological: Annual General Meeting; Report of Council for 1887; Presidential Address, by Mr. F. Galton; Election of Council for 1889.

WEDNESDAY, Jan. 23, 4 p.m. Royal Academy: Demonstration, "The Trunk," II., by Prof. J. Marshall.
8 p.m. Geological: "The prevailing Misconceptions regarding the Evidence which we ought to expect of former Glacial Periods," by Dr. James Croll; Remains of Eocene and Mesozoic Chelonia, and a Tooth of *Ornithopsis*," by Mr. R. Lydekker; "The Dentition of *Lepidotus maximus*, Wagn., as indicated by Specimens from the Kimmeridge Clay of Shotover Hill, near Oxford," by Messrs. R. Etheridge and H. Willett.
8 p.m. Society of Arts: "Electric Meters for Central Stations," by Prof. George Forbes.
8 p.m. Cymmrodorion: "Minor Welsh Poets of the Georgian Era," by Mr. R. H. Williams.

THURSDAY, Jan. 24, 3 p.m. Royal Institution: "The Metamorphoses of Minerals," I., by Prof. J. W. Judd.
6 p.m. London Institution: "The Times of the Twelve Caesars," by Canon Benham.
8 p.m. Electric Engineers: "The Insulation Resistance of Electric Light Installations," by Prof. Andrew Jamieson.
8.30 p.m. Antiquaries.

FRIDAY, Jan. 25, 2.30 p.m. British Museum: "The Hittites and their Inscriptions," II., by Mr. T. Tyler.
4 p.m. Royal Academy: Demonstration, "The Upper Limb," I., by Prof. J. Marshall.
7.30 p.m. Civil Engineers: Students' Meeting, "Water Softening and Filtering Apparatus for Locomotive Purposes, at the Taff Vale Railway Company's Penarth Dock Station, near Cardiff," by Mr. W. W. F. Pullen.
8 p.m. Society of Arts: "The Asiatic Colonization of East Africa," by Mr. H. H. Johnston.
9 p.m. Royal Institution: "Meteorites and the History of Stellar Systems," by Prof. G. H. Darwin.

SATURDAY, Jan. 26, 3 p.m. Royal Institution: "The Great Composers and their Works," with Illustrations on the Pianoforte, I., by Prof. Ernst Pauer.
3 p.m. Physical: "Polarised Light." "The Structure of Natural Diffraction Gratings of Quartz," "Ahrens's Modification of Delesenne's Polariser," "The use of Two Quarter-Wave Plates in Combination with a Stationary Polarizer," and "A Relation between Magnetization and Speed in the Dynamo-Machine," by Prof. S. P. Thompson; "The Divergence of Electro-Motive Forces from Thermo-Chemical Data," by Prof. E. F. Herroun.
3.45 p.m. Botanic.

SCIENCE.

THE NEW SERIES OF "RECORDS OF THE PAST."

Records of the Past: being English Translations of the Ancient Monuments of Egypt and Western Asia. New Series. Edited by A. H. Sayce. Vol. I. (Bagster.)

THESE "Records of the Past," of which the first series, in eleven volumes, edited by the late Dr. Birch, met with a very favourable reception, are now taken up again by the well-known Assyriologist, Prof. Sayce. The plan of issue has been somewhat altered, the intention being to combine Egyptian and Assyrian texts in each volume, whereas in the former series a whol volume was dedicated to Assyrian and Egyptia

Digitized by Google

texts alternately. The editor, moreover, proposes to publish the historical inscriptions, so far as possible, in chronological order, to add queries to any passages, or words, or readings of doubtful character, and to provide the reader with proofs of any new renderings given. The present writer can but fully approve of such an intention; but he is himself unfortunately of so sceptical a nature (or, at least, is accused of being so) that he would like to advise the learned editor to multiply such queries and proofs in the following volumes far more than is done in the present. It is certainly not the fault of Assyriologists that even among the "historical" inscriptions there is scarcely a couple of lines in which not one or more queries ought to be put. How many more will be required in the mythological, astrological, and commercial texts, chiefly written in ideographs!

The first volume begins with a transliteration, and explanations, of the dynastic tablets and chronicles of the Babylonians, by the editor, followed by an admirable paper of M. A. Amiaud on some inscriptions from Telloh. The two following translations of a text of the early Chaldean ruler, Sin-gashid (?), and of a so-called bilingual inscription, are due to Mr. Pinches. For the rendering of the Prism-text of Tiglathpileser I., it is a pity that the editor could not make use of the excellent translation of this inscription by Dr. Winckler, in Schrader's *Keilinschriftliche Bibliothek*, vol. i. Then follow the Assyrian story of the creation, of which a very considerable portion in the neo-Babylonian script was recently published by Mr. Budge; and the so-called Babylonian story of the creation according to a text from Kutha, of which the original (K. 5418 *a* of the British Museum) is still unpublished, and consequently, the examination of it is impossible. We hope that Prof. Sayce will advise one of his *collaborateurs* to publish those texts of which translations are prepared for the "Records," in order to make it possible to test the exactness of the renderings given. A learned paper by Dr. Oppert, on a juridical text in the British Museum, lately translated by himself and Dr. Peiser, and treatises on two non-Assyrian inscriptions by the editor, conclude the present volume, which is handy and well printed.

C. B.

SCIENTIFIC SERIALS FROM AUSTRALIA.

The Proceedings of the Linnean Society of New South Wales. Second Series. Vol. III., Part 1, containing the papers read at meetings in January, February, and March, 1888, with six plates. (Trübner.) Another goodly part of this excellent miscellany has just reached us, containing many memoirs of both technical and economical interest. In zoology Mr. North continues his articles on the nests and eggs of certain Australian birds, and on the nesting of *Alcyone pulchra*; Messrs. Ramsay and Ogilby send an article on the genus Tetragonurus; an important memoir, of more than one hundred pages, on the fisheries of the Oriental seas, is contributed by the Rev. J. E. Tenison Woods; and one on the venom of Australian snakes, by Dr. Oscar Katz. In entomology, the first valuable contribution to the knowledge of Australian Diptera (occupying 130 pages, including descriptions of nearly 100 gall-midges, with details of the history of several of them) is given by Mr. F. A. A. Skuse; and a catalogue of the Coleoptera of New Guinea (968 species, to the end of the Oedemeridae), by Mr. G. Masters; also notes on the Hemiptera of the Hawaiian Islands, by the Rev. T. Blackburn; and a short note on the Lepidoptera-Rhopalocera from Mount Bellenden-Ker (containing the description of one new species of Satyridae), by Mr. Olliff. In botany, a short article by Baron von Mueller contains descriptions of two hitherto unrecorded West Australian plants; also notes on the flowering seasons of Australian plants, No. VIII., by Mr. E. Haviland; notes on *Jussiuaea repens*, and some rare plants from the Lachlan, by the Rev. W. Woolls; and on some reputed medicinal plants of New South Wales (indigenous species only), by Mr. I. H. Maiden. In geology, M. C. W. De Vis contributes an article on the extinct genus of Marsupials allied to Hypsiprymnodon; and Mr. Etheridge, jun., descriptions of fish remains from the Rollingdowns formation of Northern Queensland; also, description of a new trilobite from Bowning, by Mr. J. Mitchell; and, lastly, a valuable series of notes on the bacterioscopical examination of ice supplied in Sydney, by Dr. Oscar Katz.

We have also just received the first part of the *Transactions* of the Royal Society of Victoria, published in quarto at Melbourne, and hail the appearance of a new natural history publication, which promises to be an excellent adjunct to the works of Prof. M'Coy. This first part is devoted to an elaborate anatomical memoir on *Megascolides australis*, the giant earthworm of Gippsland, by Mr. W. Baldwin Spencer, recently appointed professor of biology in the university of Melbourne, to which he was elected from the assistant biological demonstratorship in the museum at Oxford. This memoir is accompanied by six very full anatomical plates.

J. O. W.

CORRESPONDENCE.

THE AUGMENT IN INDO-EUROPEAN.

Indian Institute, Oxford: Jan. 14, 1889.

Admitting Prof. Sayce's theory of the origin of the person-endings of the Indo-European verb (Techmer's *Zeitschrift*, Bd. i.) we may conclude that Sanskrit *émi* (εἶμι) and *yámi* represent primitive Indo-European **éym*, *yá'm*. By contamination a third form **éyám* (Sanskrit *áyám*, Gothic *i-ddja*) may have arisen, which adopted the accentuation of the first form, and which was latterly employed to denote the past, by the side of **yá'm*, which indicated the present relation. Then from the association of **éyám* with **yá'm*, the initial *é* of the former would at a later period come to be regarded as a particle indicative of the past relation. From **éyám* the initial vowel would by analogy spread to **éym* (kindred in meaning to *yá*), forming **é-eym* (*áyam*), and on the other hand to *sthá* (opposite in meaning), thus *áyám* : *á-sthám* (*cf.* ἵσταμαι : ἵ-στα-μαι), and hence to other verbal stems.

E. Sibree.

SCIENCE NOTES.

A general meeting of the Association for the Improvement of Geometrical Teaching is to be held to-day (January 19) at University College, Gower Street. In the morning, the report of the council will be read, and new officers will be elected; and in the afternoon, Prof. Minchin, of Cooper's Hill, will deliver an address on "The Vices of our Scientific Education."

Messrs. Baillière, Tindall & Cox are about to publish *From Generation to Generation*: a Prelude to the Study of Heredity, with special reference to Disease, by Dr. Douglas Lithgow. The volume is a reprint of articles which have been appearing for some time past in the *Provincial Medical Journal*.

The last part of the *Internationales Archiv für Ethnographie* (London: Trübner) concludes the first volume, which consists of about 250 large quarto pages, together with twenty fine chromolithographed plates, in return for a subscription of £1. Not the least interesting article in this part is a description, by Dr. E. B. Tylor, of "Powhatan's Mantle," preserved in the Ashmolean at Oxford, which is here figured for the first time. It forms part of Tradescant's original collection, which was the nucleus of Ashmole's; and it seems not improbable that Tradescant obtained it directly from Capt. John Smith. It is thus described in the early MS. catalogue (*circ.* 1685): "205, Basilica Pohatan regis Virginiani vestis, duabus cervorum cutibus consuta, et nummis indicis vulgo cori's dictis [oowries] splendide exornata."

The note in the Academy last week about the article on Prof. Sylvester in *Nature* was not altogether accurate. The analysis of his mathematical papers alone was the work of Prof. Cayley; the biography was written by Mr. R. C. Tucker.

PHILOLOGY NOTES.

The following are some of the volumes in preparation for Trübner's series of "Simplified Grammars," edited by Dr. Rost, of the India Office:—*Panjábí* and *Gujaráti*, by the Rev. W. St. Clair Tisdall; *Telugu*, by Mr. Henry Morris; *Chinese*, by the Rev. Dr. Joseph Edkins; *Spanish*, by Mr. W. F. Harvey; and *Bulgarian*, by Mr. W. R. Morfill.

The last number of the *Journal of Philology* (Macmillan) contains an unusual number of interesting articles, to which we must be content merely to call attention. Latin predominates very largely over Greek. Mr. Verrall and Mr. Housman both contribute "Horatiana." The former emends *Car.* iv. 8, by leaving out six lines (15-20); the latter makes some bold conjectures, of which we may mention *Car.* i. 12, 35-37 (an *catenis*, nobile, laetum Regulum); *Car.* ii. 2, 2 (*minuitque* lamnae); and *Car.* iii. 4, 10 (limina *pergulae*). Prof. Nettleship gives reasons for translating *quo numine laeso* (Verg. *Aen.* i. 8) as, "what sign of her deity had been slighted." Prof. Unger, of Halle, sends a number of textual corrections in the *Aetna*. Mr. J. W. Mackail most ingeniously reconstructs the *Pervigilium Veneris*, on the hypothesis that the poem originally consisted of twenty-two quatrains, apart from the refrain. Prof. Postgate fills no less than forty-two pages with "Catulliana," which, we hope, will not be too late for consideration by Mr. Robinson Ellis in his forthcoming new edition. We are glad to see that he accepts the common text of the three last lines of the first poem. Dr. J. S. Reid gives an elaborate examination of the Merton College codex of Cicero, so far as concerns the *De Divinatione*. Mr. H. E. Malden discusses the vexed question of Caesar's landing in Britain, concluding in favour of Romney Marsh. Mr. F. Haverfield reports upon some Roman sites in South-eastern Europe, with cuts and plans, and a few unpublished inscriptions. Mr. J. H. Onions comments upon several passages in the *Histories* of Tacitus. In Greek, Mr. D. D. Heath examines at some length the general scope of Plato's *Cratylus*, finding in that dialogue something more than philological speculation; and Prof. Butcher attempts a new solution of the geometrical problem in the *Meno*.

MEETINGS OF SOCIETIES.

Edinburgh Mathematical Society.—(*Friday, Jan. 11*)

George A. Gibson, Esq., president, in the chair.—The Rev. Norman Fraser read a communication on the number of elements, real and imaginary, in space; Mr. J. Watt Butters discussed the solution of a particular equation; and Mr. R. E. Allardice contributed a note on a formula in Quaternions.

Digitized by Google

NEW SHAKSPERE SOCIETY.—(*Friday, Jan. 11*)

DR. F. J. FURNIVALL in the chair.—Mr. R. G. Moulton read a paper on "The Distinction between Classical and Shaksperian Plot, illustrated by the recasting the Plot of 'Macbeth' in Classic Form." Mr. Moulton apologised for his boldness in asking the society to go somewhat out of its course, his excuse being that it was through his study of Shakspere that he had been led to the ancient drama. The point of the paper was to recast "Macbeth" as an ancient drama. Now, the ancient drama was not drama at all, in our sense of the word. It was a compound of the lyric and dramatic, and it was important to remember the large part borne by the chorus. So "Macbeth," in its recasting, must have a lyric part, or chorus, added. And the play contains quite enough lyric matter for this; only the lyric matter must be collected, drained out as it were, from the body of the play. The unities admitting of one story only, the part of Banquo must be dropped out. So, too, the unity of standpoint demanding that the story must be told from one point of view, we may not hear it through Macduff, an adversary to the sympathies of the chorus, who will naturally be the clansmen of Macbeth. And as, from the unity of standpoint the crisis only can be acted, the scene must be confined (say) to the courtyard of Dunsinane Castle, and the time to the day of Macbeth's death. We had a prologue ready-made, in Hecate's speech (III., v.), which reads quite like an Euripidean prologue. For Parode, we might have the chorus of clansmen coming to inquire after the Queen's illness (V. i.), leading up to Ode 1, thoroughly Greek in subject—"Many are the woes of man, but none surpassing a passion-driven woman, or a man inflicted with frenzy sent from heaven." Episode I.: Physician and lady-attendant discuss the Queen's condition with the chorus in "parallel verse." The sleep-walking scene following would give an opportunity for stage lyrics—strophe and antistrophe. We find three ideas predominant in Lady Macbeth's delirious utterances, which would be treated thus: Strophe—Lady Macbeth, the idea of blood; antistrophe—the chorus (in the same rhythm) recognise the dark story of Duncan's murder; strophe—Lady Macbeth on the idea of her husband, and his cowardice; antistrophe—the chorus remember the old suspicions of Macbeth; strophe—Lady Macbeth, "The Thane of Fife had a wife"; antistrophe—the chorus, "Is this then some new iniquity, as yet unknown to us?" &c. As Lady Macbeth retires, blank verse is resumed; and the scene ends with Rhesis from the Physician on the theme "Can I minister to a mind diseased." Ode II. celebrates the night of Duncan's death (II. iii. 58-68; III. ii. 40-53, &c.) Ode III., on the wonders of clairvoyance, brought in at last the whole story, which could not be acted, because it did not come within the crisis. The forensic contest found much favour with the Athenians, particularly fond of legal points; and this formed the chief feature of Episode III., in which Mr. Moulton introduced a herald from the English army, to play the part of advocate for Macduff's side, in a disputation with Macbeth; the materials for this contest being found in two scenes, Macbeth's arguments being found in Lady Macduff's words concerning her husband's flight, and the talk between Malcolm and Macduff supplying matter for the other side. Ode IV. indicated the shadow of turning in the action—"Evil hath its judgment in this world" (II. vii. 1-12). Episode IV. was occupied with a messenger's speech, which would give opportunity for epic poetry; while Ode V. dealt with a favourite Greek theme, "How oracles have misled." In Episode V. the climax had to be arranged for, which would be the declaration of the story of Macduff's birth, and consequent consternation of the chorus. This was necessary, as of course no duel could be fought on the stage. In Ode VI. the chorus declare how the oracles have paltered with them (V. viii. 17-22). Exodus: the corpse of Macbeth is brought in; entry of Macduff in triumph, who consoles the chorus; he has warred only against the tyrant (III. vi. 34-6; V. viii. 66). The chorus conclude with a strain of pity for their late chief; but the will of heaven has triumphed.

ARISTOTELIAN SOCIETY.—(*Monday, Jan. 14*)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Mr. M. H Dziewicki read a paper on "The Starting-point and First Conclusions of Scholastic Philosophy." It is possible to find in scholasticism, properly understood, a point of agreement between every system of philosophical thought. For these can be classed under two heads—idealist and empiricist systems. Both, if urged to their full logical conclusions, culminate in scepticism. Scholasticism, on the contrary, standing between idealism and empiricism, is at the greatest possible distance from scepticism, and eminently dogmatic. Scholasticism and Scepticism. It is a fact that we cannot doubt of everything; it is a fact that we can so doubt. These two seemingly opposite propositions can only be conciliated by qualifying them. In a line stretching from right to left, any point is to the right and also to the left of other points; but the more it is to the left, the less it is to the right. So also of doubt and certitude. The most doubtful position is certainly doubtful; the most evident truth is doubtfully certain. But doubt and certitude are everywhere in inverse ratio. The more or less difficulty we have in affirming or denying any proposition is the criterion of doubt or of certitude. This, when increased beyond measure, becomes infinite, when we have absolute certitude, all doubt vanishes away. Scholasticism and Idealism.—Take Hegel's axiom: "The ego and the non-ego are identical." Scholastics have hitherto denied this; but they may grant it, with the same qualification as above. The non-ego, ever diminishing, extends to the very centre of the ego; which, in its turn, is to be found everywhere in the non-ego, but decreasingly as otherness increases. Scholasticism and Empiricism.—Empiricism, denying the distinction between mind and matter, the inextended and the extended, sets up the identity between unity and multitude. But, as anything is more one, it is less many; though we do find these conceptions mixed together in all our thoughts. We may, therefore, grant this identification of contraries, provided we bear in mind that they are contraries still. Of the Absolute.—Have we any idea of absolute certitude, of the absolute ego, of utterly indivisible unity? These three terms denote a limit of thought, and belong to it as equivocally as a limit belongs to the thing limited. But, whether we may be said to know the absolute or not, we have as true a cognition of it as of anything else, though the cognition is indeed *sui generis*. This follows clearly from the principles laid down.

FINE ART.

THE STUART EXHIBITION.

PLATONIC devotion to the extinct cause of the Stuarts is an aristocratic weakness to which it has of recent years been fashionable to plead guilty. There can be no possible harm in a number of amiable enthusiasts avowing such a cult, at a time when there is attached to it about the same amount of significance, and the same amount of danger, as there would be in professing oneself Guelph or Ghibelline, Nero or Bianco. It is an open secret that in the highest quarters Stuart-worship is viewed with a certain amount of favour; and that the august lady herself who lends her sovereign sanction and assistance to the exhibition takes the keenest interest in all that appertains to those princes whom her ancestors excluded from the throne. Even thus, there is an amusing incongruity in the way in which the ultra-legitimists of to-day have, in the catalogue, appearing under the immediate patronage of the Queen, described the Chevalier de St. Georges—alternatively be it owned—as James III., the young Chevalier as Charles III., and Prince Henry Benedict, Cardinal York, as Henry IX.! However, let us not dissect too minutely the motives of those whose enthusiasm, in this instance well-directed, has been the cause of bringing together one of the most interesting exhibitions that London has seen for a long while—whether it be considered from the historical, or from the purely artistic, point of view. It was inevitable that the historical significance of the works collected being, in this instance, rightly deemed of paramount importance, much that is not of absolute artistic value, and not a little that is doubtful, should creep into the show. We might wonder that the standard of executive merit should be so high as it is, did not the exalted rank and the refined taste of many of the personages with whom we have to deal in a measure account for this.

Of altogether exceptional interest is the great diptych formerly in the church of the Holy Trinity at Edinburgh, and now lent by the Queen from Holyrood Palace. Of this, one wing shows, on the obverse, James III. of Scotland kneeling bareheaded in prayer with his son—afterwards James IV.—under the patronage of St. Andrew. On the reverse is represented the Holy Trinity. The other wing shows, on the obverse, Margaret of Denmark, consort of James III., under the patronage of St. George (?), who appears in golden armour, leaning on a spear. On the reverse is shown the portrait of Sir Edward Boukil (?), Provost of Trinity College, Edinburgh, who is assumed to be the donor of the altar-piece—if altar-piece it be. He kneels in prayer, flanked on the one side by an azure-robed angel playing on an *orgue portatif*; on the other, by a companion angel of similar type and vesture, who works the bellows. Some too ardent patriots, seizing upon four letters of doubtful import found in an angle of the queen's head-dress, have sought to interpret them as the signature of a local painter — Pratt by name. Seeing what is the importance of the work under discussion, and how strongly marked the peculiarities of its style, this piece of *Local-patriotismus* need not be seriously discussed. The name of Mabuse has often been mentioned in connexion with the diptych, but with very small reason. Save that it is in all its parts unquestionably Flemish, it shows very little, if any, affinity with the style of Gossaert of Maubeuge; besides which he could not well, at the date of the work—ascertainable within a year or two from the portrait of the young James IV.—have painted in such mature fashion. The fact is that the four distinct sections of the work are not all from the same hand. The three wings with the "Trinity," and the portraits of the king and queen respectively, are by a Flemish painter trained in the school, or, at any rate, following the manner, of Roger van der Weyden, and having more softness and ideality of conception, but infinitely less skill, than his great model. The fourth wing—with the portrait of Sir Edward Boukil, or Boucle, as it is variously spelt in the catalogue—is vastly superior in execution to its companion panels, and by an entirely different hand. The ashen greys of the firmly-modelled flesh, the peculiarly realistic representation of the hands, the strange type of the music-making angels, conclusively prove this. Further, we are acquainted with no other work which so closely resembles in style and system of colour the famous Portinari altar-piece by Hugo van der Goes, now in the Hospital of St. Maria Nuova at Florence. Especially let comparison be made between the angels in the Holyrood picture, and those who kneel in the foreground of the central panel of the Florentine triptych: the peculiar head-ornaments and quaintly-draped robes of these are in singular agreement the one with the other. Though the Holyrood panel is not on a par, whether in conception or execution, with this, Van der Goes' most famous and authentic work, we have little hesitation in attributing it

Digitized by Google

to the same master. If this attribution be accepted, the wing with the donor's portrait must have been executed before the remaining three, seeing that Van der Goes died brain-sick in 1482; or, in the alternative, we may hazard the guess that it belonged to an entirely different work, and that the three remaining panels formed a triptych of themselves, with the "Trinity" for its central division.

The Marquis of Lothian's companion pictures of Margaret Tudor and her spouse James IV. have been confidently attributed, but, as it would appear, without reason, to Holbein. The lady's portrait is certainly not by that master, but rather by a limner of the court of France, painting not before 1530-40. The delicate modelling in full light, the nearly black background, and the distinctively French headdress worn by the lady may be taken as proof of this. The jewels, too, are painted in the fashion originally derived from the Van Eycks, with a yellow impasto imitating gold, whereas Holbein would have most probably painted them in real gold, modelled and shaded. Seeing what is approximately the date of the picture, it is hard to believe that it really represents Margaret Tudor, who was first married in 1503. The portrait of James IV. exhibited as a pendant to this picture is by another and a much inferior hand. It reveals a German, or perhaps rather a Flemish, origin.

Popular interest centres of course in the unrivalled collection of authentic portraits representing Mary Stuart now brought together. These have been selected with great care, and are much less irreconcilable with each other than are those usually put forth as presentments of the Scottish queen. It has long been pretty well ascertained that the ineffable charm possessed by her must have depended less on mere plastic beauty of feature than on a subtlety of expression which is unfortunately the very quality that, save in the hands of a supreme artist, most easily evaporates. And Mary, after the early days of her youth, was not lucky in her painters. They were apparently, with one or two exceptions, industrious, quite unimaginative, and technically third-rate artists, incapable of doing justice to so fascinating a personality as that of the ill-fated princess. Could she have been painted by a master gifted with the power of suggestion of a Leonardo da Vinci, or even by such artists more or less of her own time as Bronzino, or the Dutchman, Antonio Moro, we might better have understood the magnetic attraction which she undoubtedly exercised throughout her career. Of the early portraits, the most subtle and the most exquisite is the black chalk drawing by François Clouet, showing the young Dauphiness—or it may be queen—in a rich court dress; the original, of which a photograph is exhibited, being in the Bibliothèque Nationale. With this may be ranked the beautiful miniature sent by the Queen from Windsor, which we should be inclined to assign with tolerable certainty to the same hand, were it not that the drawing of the nose and mouth is less than consummate. The other chalk drawing from the Bibliothèque—also shown in photographic facsimile—is evidently a preparation for the famous "Deuil blanc" portrait lent by the Queen, and as such cannot be from the hand of Jehannet himself. This picture, formerly in the collection of Charles I., represents Mary in the white mourning robes of a widowed French queen; and, with all its uncompromising accuracy of delineation, it has none of the exquisite finesse of execution or the delicacy of colour which mark the few really authentic productions of the third Clouet. After this no real physiognomist appears to have portrayed Mary. We are unable to accept as an authentic presentment of her the finely-painted, yet uninspiring, full-length of a comely but stolid lady in a red, gold-embroidered dress, attributed to F. Zucchero, and lent by the Duke of Devonshire. Far more expressive, and well reproducing the features defined in the early French portraits, is the Queen's full-length from Hampton Court, bearing the date 1580. This is incomprehensibly attributed to D. Mytens, who, at the date inscribed on the picture, can hardly have been born. Neither the two practically identical full-lengths by P. Oudry, nor the three memorial portraits painted after the Queen's death—of which that from Blair's College, Aberdeen, is evidently the first original and the model—have much merit as works of art, though they are invaluable as historical landmarks. The last-mentioned work, mediocre as it is in execution, gives more impressively Mary's undaunted mien and royal dignity of bearing than do any of the other portraits. It must be pointed out that it is impossible to accept the legend which describes the queen as herself working, during her captivity, the elaborate piece of needlework exhibited in the central hall, showing—as we are told—in allegorical form, Mary herself supplicating the Virgin on behalf of the young James VI. The subject may be such as it is stated to be, though this is open to much doubt; but the embroidery cannot by any possibility be contemporaneous even with Mary's latest time. The costumes, the coiffures, the whole style of drawing and composition, point to a period not long, if at all, anterior to the middle of the seventeenth century.

Even after the Vandyck Exhibition at the Grosvenor Gallery, the portraits of Charles I.—of which there are here several which did not appear in that collection—arouse and deserve an uncommon share of interest. The replica of the great family group at Windsor, lent by the Duke of Devonshire, is by no means of first-rate quality. Very unconvincing too, is the Earl of Warwick's well-known repetition of the great equestrian portrait, also among the Windsor treasures, though, hung in its own place, it has always commanded a certain amount of respect. On the other hand, the Vandyck ideal of Charles is incomparably well represented by the Duke of Norfolk's noble portrait, in which he appears bare headed, and clad in complete armour—a very type of dignified irresolution; and by the still more consummately executed, if inevitably less individual, picture, showing three distinct views of the king's face, and painted as the groundwork of a bust to be wrought by Bernini (the Queen, from Windsor). Of great importance is the portrait "Charles I., and James Duke of York, aged 14" (Duke of Northumberland), which is by Sir P. Lely, and must have been painted by him soon after his arrival in England, in 1643. This prosaic version of the king's features—which is not necessarily, or even probably, the more essentially true one, seeing that the Dutch limner knew his sitter infinitely less well than did Vandyck—shows him with a morose and discontented mien, and an aspect lacking distinction. On the other hand, Dobson's portrait of Charles, in royal robes of dark-blue bordered with ermine (Hon. A. Holland-Hibbert), though it is not painted with any especial brilliancy, has in its very heaviness of aspect a tragic dignity, a hopeless sadness, which are in entire consonance with the personality truly and subtly expressed by Vandyck. With these works it would have been interesting to compare the great full-length of the king at the age of 27, painted by D. Mytens, and now in the royal collection at Turin. Altogether unique is the sober-hued and firmly-executed portrait by Le Fevre (Mr. A. Morrison), showing Queen Henrietta-Maria in old age, standing erect with a devotional work in her hand. It is, in its perfect simplicity, a conception of infinite pathos. The woman here portrayed commands our pity, even though we may not forget the part she played in the tragic events of the time; for her, as she then was, life could have had no longer either hope or terror. The "Prince Rupert and Prince Maurice," belonging to the Marquis of Lothian, is a copy of the picture which is No. 144 in the Long Gallery of the Louvre, where it is catalogued as "Prince Charles-Louis, (Ludovic) of Bavaria, and his brother Prince Rupert." Of the appearance of the latter in later life, the bold sketch No. 90, attributed to Kneller, but more probably by Lely (Lord R. Gower), gives a striking idea; but the haughty, sensitive features of the prince, who was both warrior and artist, are best seen in the exquisite miniature by Samuel Cooper (Duke of Buccleugh). By the same artist is a superb portrait on the like small scale of James Duke of York, in a flowing fair wig. A very Stuart in the tragedy of her short life and her unexplained end was the beautiful Henriette d'Angleterre, Duchess of Orleans—the "Madame" whom Bossuet's world-famous funeral-oration has immortalised. Her sprightly and delicate beauty is here best recalled by three portraits due to the hand of P. Mignard, of which No. 87 (Earl of Ashburnham) bears no ascription, while No. 97 is erroneously attributed to Largillière. Rightly named is, on the other hand, the full-length of the duchess in an amber-coloured dress (Duke of Grafton). It is a pity that the great Windsor picture, by the same courtly, if not a little insipid, painter, showing Henrietta with her two children, could not be lent for exhibition here. When we approach the period of Charles II. and James II., it is impossible not to be struck with the entire absence of the most irregular, but pictorially the most attractive, section of the court. As Hampton Court Palace shames not to show to the world the whole series of the so-called Windsor beauties, and even the National Portrait Gallery has not excluded the *maîtresses attitrées*, we are inclined to think that the promoters of the exhibition have in this instance shown themselves over-squeamish. The most attractive figure here is the youthful Mary of Modena—represented with a dog—one of the finest works of Sir P. Lely (Earl Spencer). She appears in very simple attire, fronting the spectator in a pose full of voluptuous and truly Southern languour. Interesting, too, is the small equestrian figure of the Duke of Monmouth, by Netscher and Wyck, standing out against a conventional battle in the background (Marquis of Bute). The elder "Pretender," Prince James Francis Edward, is very well represented: first by a delicious little portrait by Kneller, showing him at the age of one year; then by the well-known and most charming Largillière picture which depicts him at the age of about eight, stiffly yet daintily posed, with the still younger Princess Louisa, his sister; next by a whole host of portraits giving his altered features in maturer life. Of these, the three-quarters length, life-size figure in armour, with a powdered wig, is one of the most remarkable (Blair's College, Aberdeen). The large "Marriage of Prince James Francis Edward and Princess Maria Clementina" (Earl of Northesk) is erroneously ascribed to Carlo Maratta, who in 1719—the year in which the event depicted took place—had been dead six years. Of the very numerous presentments of the younger "Pretender," Prince Charles Edward, none have much artistic merit, or give with any degree of distinctiveness the attractive individuality of his earlier and better time. His faithful Flora Macdonald appears, however, portrayed to the life, if in somewhat harsh and crude fashion, by Allan Ramsay, in the picture from the Bodleian

Digitized by Google

ibrary. The firm jaw and high cheek-bones xpress resolution, but scarcely high breeding; et the lady's Highland freshness and vigorous ersonality are by no means devoid of charm.

Space is lacking even to refer to the large and nteresting collection of personal relics—welery, ornaments, embroideries, furniture, nd works of art of all kinds—bearing some ort of relation to the royal house of Stuart. hese will, no doubt, to the faithful—the oughty Jacobites without fear and with-ut reproach—constitute the most interesting ection of the unique show. Even the scoffer ay be delighted to inspect not a few treasures goldsmiths' work, enamel, and ivory, of the ost exquisite workmanship, worthy, indeed, all respects, to grace the royal and rincely owners to whom they are severally ttributed. CLAUDE PHILLIPS.

LETTER FROM EGYPT.

Helwân: Jan. 3, 1889.

THE removal of the antiquities in the Boulaq Museum to the Palace of Gizeh has now been decided upon, and the work will be begun, if not finished, next summer. It will necessitate not only a good deal of labour, but also the outlay of a considerable sum of money, which it is intended to defray out of the proceeds of the sale of the ground on which the present museum stands. The invaluable collections preserved in it will thus be removed beyond the reach of the damp; and there will be plenty of space in which to arrange and exhibit them. The new museum, however, will be further from the hotels than even that of Boulaq; judging from the number of visitors to the later, it is not likely to be overcrowded by tourists. Indeed, since the establishment of an entrance fee it is astonishing how deserted the museum has become. It is only on the single free day of the week that the rich visitors to Cairo still come in any numbers to inspect the mummy of Ramses.

I have completed the task I set before myself; and, thanks to the courtesy of the officials of the museum, and the facilities they have afforded me, I have had little difficulty in copying all the tablets and fragments of tablets from Tel-el-Amarna, now preserved at Boulaq, before my departure from Cairo. The tablet containing the dispatch from the king of Arzapi to Amenophis III. now seems to me even more interesting than I thought it at first. I am beginning to believe that the language of the greater part of it belongs to some Hittite dialect. If so, the forms of the personal pronouns *mi* "my" and *ti* and *tu* "thy" lend support to Mr. Ball's hypothesis that the Hittite language or languages belonged to the Indo-European family. On the other hand, *bibbil* "chariots," and *kilatta*, which appears to mean "brother," have nothing Indo-European about them; and the verbal forms are Accadian.

Among the tablets I have copied since I last wrote are two which relate to affairs in Palestine. Unfortunately they are both fragments, about one-half the tablet having been lost in each case. The one tablet reads as follows:

"To the king, my lord [my gods], my Sun-god, I speak [by] letter, I, Su-arda-ka, thy servant, the dust of thy feet; at the [feet] of the king my lord, my gods, my Sun-god, seven times seven I prostrate myself. The king of . . . set himself to make war: in the city of Keilah (*Kelti*) thy enemy made [war] for the third time. An attack was directed against myself. My city (that had been entrusted) to myself rose against (?) me. (Then) Ebed-khiba sent to the men of Keilah; he sent gifts and they marched against my rear, and subdued the domains of the king my lord. Keilah, my city, Ebed-khiba removed from my jurisdiction. The stables (?) of the king my lord and the dwelling-place of my lord and the stables of the animal[s] he removed from his presence and his justice. Lab-api, the wicked in speech, had occupied the fortress of . . ni-nu, and at that time Lab-api with (?) Ebed-khiba and . . . occupied the fortress of . . ninu."

Keilah, it will be remembered, is mentioned in the history of David (1 Samuel, xxiii. 2, &c.).

The second fragment is as follows:

"And again, the city of Pir(qar?), the fortress which is in front of this country I made faithful to the king. At the same time the city of Gasa (*Khasati*) belonging to the king, which is on the shore of the sea to the west of the country of the city of Gath (*Ginti*) and the city of Kirmil (?), fell away to Urgi and the men of Gath. In my chariot I rode for the second time, and we marched up (out of Egypt) and Lab-api and the country which thou holdest [went over] to the confederates (*or* the people of Hebron) along with Milki-ar'il for the second time . . . . he delivered their request to the men of Kirjath, and we defended the city of Uru[s]ei. Khapi, the general, collected the garrison whom thou hadst left in it. Addasi-rakan, the governor of his house, the governor of Gasa [sent for help?] to Egypt."

It is possible that Kirjath is Kirjath-sepher, which seems to have been one of the most important of the Canaanitish cities in the south of Palestine, just as it is also possible that the word *Khabiri*, which I have translated "confederates," may really denote the people of Hebron, since it is followed by the determinative of locality. The word occurs in one of the tablets belonging to M. Bouriant, which I copied last year.

Another tablet at Boulaq is a long letter to "Nimutriya," or Amenophis III., from a certain Lan-makhsi, who calls himself "king of the country of Karandu," about the marriage of his youngest daughter. There is a second royal despatch from Subbi-kuzki, the king of a country the name of which is lost with the exception of the last syllable *ti*. It is addressed to the Egyptian king "Khûrî[ya]," a name in which we may see the original of the Horos of Manetho. A third tablet, which is unfortunately much worn and injured, tells us that "at that time the king of the Hittites was captured in the vicinity of the country of Kutiti"; and the statement is followed by the mention of "the king of the country of Mittani" on the eastern bank of the Euphrates, and of "the king of the country of Nabuma."

There is another curious text in the collection which has no historical reference, but is of a mythological character. Fragments only of it are preserved, but these relate to Namtaru, or destiny, who "consulted with the gods" and marched behind the narrator of the legend. Unless the missing portions of the tablet are at Berlin it is not likely that we shall make much out of the story, which may be of either Babylonian, Egyptian, or Canaanitish origin. A. H. SAYCE.

NOTES ON ART AND ARCHAEOLOGY.

MR. R. S. POOLE, keeper of the coins in the British Museum, has been appointed to the Yates chair of archaeology at University College, London, vacant by the resignation of Sir C. T. Newton.

THE annual winter exhibition at the Grosvenor Gallery will open on Monday next, January 21; the private view is fixed for to-day.

MR. MORTIMER MENPES'S long-expected drypoint plate after Frans Hals's picture at Haarlem—"Banquet of the Officers of the Arquebusiers of St. Andrews"—will be on view at Messrs. Dowdeswell's on and after Saturday next, January 26. It contains twelve figures, and is asserted to be the largest drypoint ever executed.

MR. THOMAS MCLEAN will have on view next week, at his gallery in the Haymarket, a series of pictures and sketches by Mr. James Webb, entitled "At Home and Abroad."

WEDNESDAY next, January 23, has been appointed as the day for sending in works intended for the spring exhibition of the Nineteenth-Century Art Society in Conduit Street.

THE Salon will be opened as usual in the Palais des Champs-Elysées on May 1, but the date of its closing is more doubtful. The Minister of Fine Arts has given notice to the President of the Society of Artists that the building will be required on June 15 for a series of fêtes in connexion with the centenary; but hopes are entertained that the Salon will be allowed to retain possession till June 30 as usual.

THE Municipal Council of Paris have voted £100,000 for the decoration of the interior of the Hôtel de Ville.

A MONUMENT to Claude Lorraine is to be erected at Nancy, and one to Barye at Paris. In order to assist the fund for the latter an exhibition of his works is to be held next May at the Ecole des Beaux-Arts.

AN exhibition of the paintings of the late Feyen-Perrin is being organised in Paris.

THE interesting portrait of a young man at the Uffizi which, according to the catalogue, represents Pico della Mirandola, and, according to Dr. Bode and Signor Frizzoni, was painted by Botticelli, is the subject of a note by M. Eugène Muntz in the *Chronique des Arts* (December 30). He gives good reasons for supposing that it is a portrait of the younger Piero de Medici, the son of Lorenzo, and confirms its attribution to Botticelli. The ground for this opinion is the marked resemblance between the portrait in the Uffizi and one of Piero at Naples, a miniature (ascribed to Cherardo) engraved in M. Muntz's *Histoire de l'Art pendant la Renaissance*.

THE STAGE.

A FANTASTIC COMEDY.

MUCH reminiscence of eighteenth-century comedy and a little reminiscence of "Faust"—these, with the contributions of his own prolific fancy, are the materials out of which Mr. Buchanan has wrought his new piece for the Vaudeville. Simultaneously with what is meant to be the presentment of the manners of everyday humanity in the last years of George III., there proceeds such action as may be supposed to be the natural consequence of the sudden liberation of one who is none other than Dan Cupid from a bottle in which he has long been confined. Cupid places himself good-naturedly at the service of the youthful gentleman who has accidentally and unconsciously set him free; and through the remaining acts of the piece he is engaged in compassing that youth's desires, now with much ingenuity, and now with a clumsiness that comes of a want of recent practice. Surprising are the pranks he plays, and the effects of them upon old and young. The scene is laid first at Cambridge, where Cupid is emancipated, and afterwards at Bath, where he practises. His is, undoubtedly, the

Digitized by Google

leading part. The best scenes are the scenes in which he scores, and the movement of the comedy is chiefly in his hands. His character we will not attempt to describe, for he is one of the oldest, one of the most familiar, and, probably, the most popular of personages upon the world's stage.

But—though we do not propose to follow in any detail the action of the drama—the other *dramatis personæ* must have a word about them, and the literary treatment deserves some notice. In Sir Timothy Racket, whose will or whose ire is an obstacle to his nephew's marriage, we have, of course, no new creation, but a figure is, nevertheless, presented which the forcible methods of Mr. Frederick Thorne can make spirited and entertaining. Harry Racket is the nephew—a person whose impecuniosity and ardour, whose loves and jealousies, Mr. Frank Gillmore has to illustrate. In every comedy a youthful hero is permitted a friend—not only a "pal," but an intimate. And in eighteenth-century comedy, and that which takes after it, the friend is kept carefully less interesting than is the youthful leader. Mr. Cyril Maude, partly by aid of his own personality and partly by aid of an assumed stutter, represents that drier and less seductive secondary hero. These are the chief men, though Mr. Scott Buist, Mr. Pagden, and Mr. Grove do more or less effective service in the minor characters required by a comedy of old-world fashion, in which, of course, there must needs be a young man's man-servant, in which there must needs be a money-lender, and in which there may very reasonably be a "beau," whose function is to exist beautifully. Two elderly women—a Miss Bridget Constant, aunt to the first heroine; and a Mrs. Veale, old Sir Timothy's housekeeper—are personated by Miss F. Robertson and Miss Dolores Drummond. The impersonation of neither lady passes beyond the limits of the conventional in prudery and the conventional in fascination; but Miss Drummond is the better of the two. For Miss Robertson's part the presence and the mannered piquancy of Miss Larkin—so long connected with the Vaudeville—would have been a distinct advantage. As Kate Constant, the popular Miss Winifred Emery is agreeable and sufficient. In a part more charged with feeling the delicacy of her touch is wont to be more perceptible. Mrs. Bliss, an exceedingly youthful widow, of whom the second hero is enamoured, is played, with humour and largeness of gesture, most thoroughly in the spirit of the time, by Miss Marion Lea, who, in the quaintest of costumes, looks, for the life of her, like a desirable Hoppner. She does all that can be done. But the part which overshadows the rest is that of Dr. Cupid, in which every possible opportunity is given for the display of Mr. Thomas Thorne's humours. Yet, notwithstanding the excellence of his chances and the skill with which he uses them, there is nothing in Dr. Cupid that need cause Mr. Thorne to withdraw his preference, lately made public, for the part of Parson Adams.

To the ingenious construction of the piece witness has already been borne. Yet it is a little doubtful whether it was not in pure extravaganza—extravaganza untouched with realism—that there lay the best occasion for the development of such a theme as that of the new play. As for the writing, Mr. Buchanan has his poetic moments, and then he returns to the recollection that he long ago decided to be a popular dramatist. His gift of fancy is his own. By dint of labour he seems witty; and, out of reverence perhaps for the plain utterance of the eighteenth century, he essays to be forcible. His genuine natural gifts, the School he more or less imitates was wholly without. It had them no more than it had Charles Lamb's tranquil yet wandering humour. But, on the other hand, that School's completed art—the completed art of Sheridan—would acknowledge only a very distant connexion with the roughish dexterity of the modern playwright.

Frederick Wedmore.

MUSIC.

RECENT CONCERTS.

Sir C. Hallé played Schubert's Fantasia Sonata in G at the Popular Concert last Saturday afternoon. It has not been heard at these concerts since 1881. It is one of the composer's finest works for the pianoforte, and has been somewhat unjustly neglected. Sir G. Grove tells us that Schubert did not use the word *fantasia*, the inscription on the autograph being simply "Sonate für Pianoforte allein." In the new edition of Schubert's works, now being published by Breitkopf, the word is properly omitted. The pianist scarcely did justice to the beautiful opening movement—the reading was cold; but the rest of the work, especially the sparkling Finale, was admirably interpreted. The programme included Mozart's Quintet in G minor and the Kreutzer Sonata. Mrs. Henschel was the vocalist. With such a feast of good things, it is not surprising that the hall, despite bad weather, was well filled.

Mdme. Haas, an excellent pianist, played on the following Monday evening. Her solo was Chopin's Impromptu in F sharp. We shall, however, defer notice of her until next week. She is announced to play a more important solo next Saturday—Beethoven's Sonata in A flat (Op. 110).

Haydn's "Seasons" was performed on Monday evening by the Hackney Choral Association at Shoreditch Town Hall. This work of the old master has not been heard for many years in London; and, though it may not equal his "Creation," it contains some very genial and effective music. The choir sang well, and the soloists gave general satisfaction. They were Mrs. Hutchinson, who received special applause for her rendering of "O how pleasing to the senses"; Mr. Henry Piercy, and Mr. Robert Hilton. Mr. Prout conducted with his usual ability. This gentleman deserves special praise for the works which he selects for performance. At the Hackney Society have been given, from time to time, Brahms's "German Requiem," Schumann's "Paradise and the Peri," and other masterpieces which are rarely heard in the metropolis. And in accordance with this plan, Mendelssohn's "St. Paul" has been selected for the next concert (February 28), rather than the more popular "Elijah."

Mdlle. Esperanza Kisch gave a pianoforte recital at the Steinway Hall on Tuesday afternoon. The programme was an ambitious one. Beethoven's Sonata in F minor makes heavy demands upon an executant; and Mdlle. Kisch, though showing many good intentions in her reading, lacks at present the necessary strength—intellectual as well as physical. How often do we find pianists attempting a difficult work with but indifferent success, when, with one less exacting, they might win favour! Mdlle. Kisch played a number of short solos. She has taste and feeling. She wants more study and more experience.

The programme of the London Symphony Concert given last Tuesday evening was varied and attractive. Mendelssohn's "Hebrides" Overture, Beethoven's Symphony in D, and Wagner's "Siegfried" Idyl—each, in its way, a masterpiece—were all well performed, particularly the last named. Mr. Willy Hess, leader of Sir Charles Hallé's orchestra, played Spohr's Violin Concerto in D minor (Op. 9). His tone is full, his intonation excellent, and his style good. He was well received. The last piece in the programme was an "Ouverture Solennelle" by the Russian composer Peter Tschaikowsky. To the title of the work is appended the date "1812." This, and the introduction of the "Marseillaise," make one at once understand that the composer is attempting to illustrate a famous page in Russian history. With a descriptive programme, this work, common in character, though clever in construction, would find greater favour than it did with Mr. Henschel's audience. It is an overture which might suitably be played in Russia to celebrate the victory of Smolensk or Borodino.

J. S. Shedlock.

MUSICAL PUBLICATIONS.

From Mr. C. Woolhouse we have received:

Two Songs. By Gerard F. Cobb. The first is a Spanish Lullaby, the second a Spanish Lament. The words are by Bryant. They have both an *ad lib.* part for violoncello. They are simple in form and the melodies pleasing, while in the accompaniments there are many musician-like touches. The Lullaby ought to become popular.

Suspense. By Sydney Shaw. A smooth flowing ballad.

Three Songs. By A. Fox. The words of all three are by Shelley. The music is good. The first pleases us best: the harmonies are quaint. The second and third are somewhat spoilt by commonplace phrases here and there.

Suite. For Violin and Piano. By G. St. George. An extremely good work. The Bourrée and Passepied are particularly charming. There is quaintness and freshness about the music—and thought. The numbers are all fairly easy to play.

Treatise on Musical Intervals. By W. S. B. Woolhouse. Second Edition. It is many years since the first edition of this useful little work appeared, and it is, indeed, out of print. The book treats of temperament, harmonics, beats, and chords up to the thirteenth. In the table of intervals only one way of obtaining diminished intervals from major is given. Again, it is scarcely correct to speak of the Tritone fourth in the diatonic scale as an augmented fourth. The writer says it is sometimes so called; but he should have added that this term applied to the interval is, in this case, a misnomer.

LITERATURE.

The American Commonwealth. By James Bryce. In 3 vols. (Macmillan.)

SOME one has said of an eminent statesman of our day that it would need a syndicate to write his life. In like manner, one may say that it would need a committee of American and English politicians, lawyers, merchants, journalists, and men of letters to review Prof. Bryce's great book. To attempt in a few columns of the ACADEMY to discuss its merits and its shortcomings, and to speak with a reviewer's ordinary confidence on this feature or the other, would be an ill recognition of the vast labour which it represents, and of the high title of its author to speak almost with authority on the institutions and public life of America. The task of fault-finding may well be postponed for a time; and it will go hard with later critics if they fail to find in these three large volumes plenty of room for difference of opinion. There need be no hurry to check the first feeling of gratitude towards Prof. Bryce for having had the courage to undertake and carry through an enterprise of extraordinary magnitude and difficulty. This much may be said without misgiving, that, in respect as well of the largeness of its subject as of the judicial dignity of the treatment, *The American Commonwealth* will rank among the few great books of our generation. In its special field, indeed, it may be said to stand alone.

Putting aside all thought of discussing the many subjects here treated, which range from high matters of state to social fashions, I shall content myself with a brief description of the work itself. The first volume contains so clear and careful an account of the central, national, or federal government of the United States that Prof. Bryce's fellow-politicians will be left without excuse if henceforth they are satisfied with the vague and inaccurate ideas on the subject which have done service during the last two years. Having very shortly indicated the history of the constitution, he proceeds to a minute survey of its component parts, describing the position and powers of the president and of the heads of departments; the differences between the American and the English and French cabinets, which result from the president's personal responsibility; the Senate; the House of Representatives; the relations of the two houses to one another and to the executive; the federal courts; and the working of the federal system as a whole. The sketch of these institutions is full of life and movement. Prof. Bryce has sought not only to present their outward form, which has often been done before, but by means of incidents in American political life and by contrast with European governments to show us the constitution actually at work. The reality of a constitution is widely different from what Mr. Bagehot called its "literary theory." No constitution is so unworkable as the best one looks on paper. Some of the defects, indeed, of the American system, particularly the want of unity which has resulted from the excessive pains taken to separate the executive, legislative, and judicial powers, can be traced to the influence of the literary theory of our own constitution. "Each power in the state goes its own way, or wastes precious moments in discussing which way it should go, and that which comes to pass seems to be a result not of the action of the legal organs of the state, but of some larger force which at one time uses their discord as its means, at another neglects them altogether." Now, as Prof. Bryce points out, and as other writers have noted (Sir Henry Maine, for instance, and Prof. Fiske fn his recent work *The Critical Period of American History*), this care to separate the different powers was in great part due to the influence of the English system not in its reality, but as observed through the spectacles of Montesquieu and his follower Blackstone, who seemed to see in the separation of functions the secret of English freedom. Thus, while we in England are told that the literary theory is so far from fitting the facts that our national danger is the encroachment of the legislature upon the functions of the executive, in America the theory has been so successfully carried out that the complaint is made that the president cannot sufficiently guide and stimulate Congress nor Congress the president. In quiet times the machine works smoothly; but in a crisis it is strained severely. From that weakness, however, no system of government is free. In a great national crisis the only trust is in the sobriety and loyalty of the citizens, and in the courage, resource, and foresight of their leaders; and therein lies the strength of the American constitution. In Prof. Bryce's judgment "the American people have a practical aptitude for politics, a clearness of vision and capacity for self-control, never equalled by any other nation." It is a strong statement, but it is made deliberately. He recurs to the idea again and again, and leaves no doubt that his estimate of the national character, whether unduly high or not, rests upon a very solid basis of fact. Such a people, as he says, can work any constitution.

So far Prof. Bryce has been following a path trodden by many English writers, who have vainly sought, as he has done successfully, to make the American constitution a reality to English readers. In the second volume he passes to the State governments, which, save in relation to the central authority, have received comparatively little attention. Availing himself not only of their written constitutions and statutes, but of records of debates, official reports, local newspapers, and of what he has himself seen and heard, he describes the various constitutions of the States in their development and existing form; their legislatures, executive, and judiciary; their modes of taxation; their politicians; and their parties. An account follows of local government in rural districts and in cities, to which Mr. Seth Low, a former mayor of Brooklyn, has contributed an additional chapter on municipal government. On the whole, Prof. Bryce's judgment of public life in the States is far from high. He finds only a few of them, among which Massachusetts is distinguished, whose legislatures are free from corruption, the worst being those where the influence of European immigrants in large cities is greatest.

"New York, Philadelphia, Baltimore, Chicago, San Francisco," he says, "have done their best to poison the legislatures of the States in which they respectively lie by filling these bodies with members of a low type, as well as by being themselves the centres of enormous accumulations of capital. They have brought the strongest corrupting force into contact with the weakest and most corruptible material; and there has followed in Pennsylvania and New York such a witches' Sabbath of jobbing, bribery, thieving, and prostitution of legislative power to private interest as the world has seldom seen."

Yet the demoralisation of the legislatures does not imply a corresponding badness in government; for they are checked, on the one hand, by their constitutions, which are scrupulously careful of the rights of property, and, on the other hand, by the increasing influence of the federal authority. The average American does not take a close interest in the business of his State. He says to himself that the chief harm that a bad legislature can do is to waste some public money; and he is persuaded that the regular party organisations are so strong that independent effort is not of much use. It appears, however, that better ideas of citizenship are beginning to prevail, and that independent men are bestirring themselves to put down corruption. The remainder of the second volume presents a minute study of the party system. In Europe the dividing lines of political parties, though crossed here and there, are fairly distinct, for the most part marking broad differences of political principle or temperament; but, in the America of to-day, no such differences separate the Republican from the Democrat. For ten years or more there has been no great question to divide the country. The reader will not gather from Prof. Bryce's pages any simple distinguishing test, because there is none. The distinction turns partly on tradition, largely on mere competition for office, a good deal on race and on geographical position, and only to a small extent on economical or constitutional questions. Yet it is in a country where the outsider sees the party lines thus blurred and faint that party organisation has been carried to its perfection. What a feeble instrument is our English caucus compared with the huge American machine for registering votes, which paralyses the independent voter, keeps the best men out of politics, "and grinds out places, power, and the opportunities for illicit gain to those who manage it"! Prof. Bryce has minutely described the system and its results, and a sadder creation of distorted ingenuity cannot well be imagined. And yet there could be no greater mistake than to dwell upon its worst features as a reflection of the character of the American people. In fact the domination of the professional politician is tolerated because his power for mischief is far more limited than it is in countries with a flexible constitution. Evils which touch only the surface

Digitized by Google

of life in America would involve general degradation in England.

The third volume deals with a variety of subjects, a mere list of which would be long. In the course of a detailed examination of the sources, operation, and strength of public opinion, Prof. Bryce dispels a good many misconceptions, and robs the railers at democracy of much of their thunder. One turns with special interest to what he has to say of the tyranny of the majority. He quotes De Tocqueville, who said half a century ago: "I know no country where there prevails in general so little independence of mind and real freedom of discussion as in America." In Lord Grey's Essay on the Reform of Parliament, published thirty years ago, the same passage is relied upon as exhibiting the evils which result from the unbalanced power of the democracy; and most observers of America, with their eyes fixed on "rings" and "bosses," have continued to repeat the charge. Prof. Bryce, with fuller knowledge of the facts, has come to a different conclusion. Whatever may have been the case formerly, "the tyranny of the majority," he says, "is no longer a blemish on the American system, and the charges brought against democracy from the supposed example of America are groundless." Following the study of public opinion, come a number of more or less disconnected essays of illustration and reflection, including the story of the Tweed Ring (written by Prof. Goodnow of New York), the Philadelphia Gas Ring, Kearneyism in California (the story of the rise and fall of the party of Denis Kearney, drayman and demagogue), the problem of territorial extension, *laissez faire*, women's suffrage, the faults of American democracy, its strength, and the question how far American experience is available for Europe. The work concludes with a survey of social institutions and social life, in which are dealt with law and lawyers, railroads, the money market, the universities, religion, the position of women, the intellectual characteristics and literary tastes of the people, the social and economic future, and other matters.

Let this suffice as a bare indication of the scope of a work, whose chief demerit is its length. Even at the risk of omitting some of the most interesting chapters, a cheaper and smaller edition might be worth the issuing. For it is a work very rich in political instruction, if it be read in the same calm spirit in which it is written. Prof. Bryce has often insisted on the danger of arguments from history and from the experience of other countries, and he has here done his best to enforce his teaching. He has guarded himself with especial care against the temptation of exaggerating the influence of forms of government—a temptation to which the ordinary politician so easily succumbs. Both friends and foes of democracy will find in his work an ample store of illustrations and facts to support their theories. Side by side there exists in the public life of America such corruption as would need the pen of a Juvenal to describe, and such a spirit of law-abidingness as has never been witnessed in any other country under the sun. Seeking to establish or confirm no theory, the author has faithfully recorded the evil as well as the good. "I confess," said Dr. Tocqueville, "that in America I saw more than America: I sought the image of democracy itself." Prof. Bryce has left the image of democracy alone, and, while freely expressing his opinions, has made it his chief aim to give us a record of careful and impartial observation. In the constitutional and social controversies of our own country his authority will be appealed to by men of every shade of opinion, passages will be torn from their context, and his qualified judgments will be quoted as dogmatic utterances. Of that he cannot complain. It has been the fate of philosophers and observers, from Aristotle to Mill; and no writer can avoid it who strives, as Prof. Bryce has done, to see and describe things as they really are.

G. P. Macdonell.

The Ingenious Gentleman Don Quixote of La Mancha. Done into English. By Henry Edward Watts. Vol. iii. (Bernard Quaritch.)

In a former notice (Academy, No. 842) of vols. i. and ii. of this work, I treated chiefly of the excellent Life of Cervantes; to-day I would confine myself to a brief examination of the translation of the first part of the Quixote, concluded in vol. iii.

Mr. Watts presents us with decidedly the best and most agreeable prose version of *Don Quixote* that has yet appeared. I say "prose," because in the poetical portions he appears to me to be almost as far behind his predecessors as he is before them in prose. His attempts are not to be compared with those of Mr. Gibson, nor do they even equal those of Mr. Ormsby; in fact, it is sometimes difficult to extract any clear meaning from Mr. Watts's lines in passages where there is no such obscurity either in the original or in preceding versions. As an example of mere carelessness, in iii., p. 263, note, Mr. Watts renders—

> "Amar á cristianos moras
> Eso vese á todas horas:
> Mas que amé cristianas á moro,
> Eso no."
>
> "For Christians to love Moorish woman
> That is seen every hour:
> But for a Moor to love a Christian woman,
> That never"—

which is contrary to fact and to the context. Of course, it should be "For Moorish women to love Christian men," and "for a Christian woman to love a Moor." Yet, after all, the poetical portions of the *Quixote* are to the prose as Falstaff's proportion of bread was to the sack which he consumed, and it is by the prose that a translation must be judged.

Mr. Watts has one immense merit—respect for his author's text. This alone would almost atone for the little slips inevitable in so long a work, which I may have to point out. Again and again he proves that the edition of 1608 is superior to any emendations made upon it, and that there is no need of alteration. Another commendable feature is the familiarity which he shows, not only with the bibliography, but with the contents of the Amadis, of Ariosto's epics, and with other romances and epics of chivalry. He most aptly applies this knowledge in illustration of the text. The appendices are excellent in the same sense. We know not where to find a better epitome of the history and literature of the Cid than in Appendix C., vol. iii. If that on Roland and Archbishop Turpin is not quite so successful, it is perhaps because this hardly belongs to Spanish literature. For a full knowledge of the sources of the so-called Chronicle of Turpin, we must still wait for the publication of the Compostellan *Codex Calixtinus*, now in preparation by the Academia de la Historia. For explanation of words derived from the Arabic, Mr. Watts trusts wholly to Prof. Dozy, a by no means worthless guide. I would only mention the still fuller *Glosario* of Señor de Eguilaz (Granada, 1886), where citations are given at length, and many a difficulty in old Spanish writings is successfully cleared up.

I perfectly agree in the criticism of the stories too lavishly interpolated in the first part of the *Quixote*, and that "The Impertinent Curiosity" is the worst and most tedious of them all. It is wise, too, to refrain from attempting any reconciliation of the chronology of Cervantes with that of the events recorded. The slips of memory are undoubted. In fact, while Cervantes held most firmly to the consistency of the characters which he had once created, so that they are always the same, the incidents themselves, and especially the humorous ones, seem as if they had been jotted down whenever or wherever they flashed into the author's brain, and were afterwards strung together with but little regard for what went before or should follow after.

The one drawback to unalloyed pleasure in reading these volumes is the way in which Mr. Watts girds at the mistakes of former translators. This gives an appearance of kicking away the ladder by which he has himself mounted. There can be no doubt that the renderings of Messrs. Duffield and Ormsby, and still more Mr. Gibson's verse translations, have raised the standard for all future translators. It can hardly be by accident that Leonella's *Alphabet of Love*, vol. iii., 169, should (except in the omission of P) coincide so closely with that of Mr. Duffield. The music of the *Seises*, or *Seixes*, of Seville, ii. 152 note, which Mr. Watts could not procure, is noted by Mr. J. Lomas; *Sketches in Spain*, p. 89 *seq.* (Black, 1884). In the difficult passage, ii. 94, I think Mr. Watts is right, but the meaning would be more clear if *pues* were translated "since" instead of "for." On Cato Zonzorino, Cato the dullard, I hold for certain that Cervantes is laughing at the great school-book of the Renaissance, the Distichs of Cato, and its many imitations. Sancho, the personification of rude mother-wit and common-sense, sees through its sententious dulness. Don Quixote, with lofty learning, affirms in answer that "there is no proverb which is not true." To take Sancho's blunder in his Latin on hell—*nulla est retentio*, iii. 16 note—"as a sly hit at the church's doctrine of eternal punishment," is a curious instance of reading the ideas of one's own day into an older text. I cannot see the necessity for coining a new word *stantrel* for *estanterol*; even "quarter-deck" would be near enough, as the place where the captain stands during an action.

But all these minute and trifling slips, and others like them, which must per-

Digitized by Google

force occur in a work of this length, do not induce me to modify my judgment that, on the whole, with the exception of the poetry, this is both the most correct and the most readable version of *Don Quixote* that has yet appeared in English. It is the one, I think, which is the most likely to acquire, and to retain, popular favour if ever it is presented to the public in a popular form.

WENTWORTH WEBSTER.

Through the Heart of Asia, over the Pamir to India. By Gabriel Bonvalot. With Illustrations by Albert Pepin. Translated from the French by C. B. Pitman. In 2 vols. (Chapman & Hall.)

THE invasion of India by MM. Bonvalot, Pepin, and Capus, was unquestionably an exciting adventure. Prevented by the Afghans from travelling by way of Balkh and Kabul, M. Bonvalot, who seems to have been the leader of the party, determined to try the Pamir route. They thus entered India by the Baroghil Pass and Yassin; and, since this is one of the very shortest roads from the Russian to the British frontier, the journey has a special interest for us. In his new celebrated memorandum on "The Defence of India," the late Sir Charles MacGregor (I quote from the *Life*) assumes that a Russian column might advance from Marghilan in Ferghana over the Terek Diwan Pass and the Pamir towards Kashmir, its object being to set up an irritation on the Kashmir frontier, while other columns were pushing on to Herat and Balkh. This was much the same route that the French travellers took, except that they crossed the Alai range not by the Terek Diwan, but by the Taldik Pass (11,600 ft.). It is worth noticing that their footsteps are being followed by the Russian political officer, Captain Grombtchefski, who when last heard of had crossed Kunjut, and was examining the eastern slopes of the Mustagh range. But the Russophobist will search M. Bonvalot's book in vain for any precise information. The account given of the Baroghil Pass is brief in the extreme; and the writer seems more intent on describing his own personal exploits and his appearance *en costume de voyage* than on giving topographical details. Of course there is some excuse for saying but little about the people whose countries he visited—

"The wandering Khirghises
Who come on shaggy ponies from Pamere."

The fact is that in winter time hardly a living soul is to be met with on the Roof of the World, which becomes a trackless uninhabited waste for all the traveller can see.

M. Bonvalot speaks of the Kara Khirghis of the Pamir as Mongols; whereas they are a Turkish tribe identified by Mr. Howorth with the Buruts, being the Khirghis proper in contradistinction to the so-called Khirghis Kasaks. The prefix Kara—found also in Kara Turcoman, Kara Kitai, &c.—means something more than "black," as the word is usually translated. A *kara khel* is not a black ibex, but an animal of inferior or spurious breed. The natives of Chinese Turkestan say their former masters were Kitai; but the Chinese now in the country, who come mostly from Szechuen and Yunnan, are spoken of as Kara Kitai. Mr. Ney Elias informs me of this. I do not know if the same explanation applies to the *kara kumis* mentioned by Rubruquis.

M. Bonvalot has almost as little to tell us about the people of Chitral, among whom he stayed some weeks; while M. Pepin's drawings show very poorly beside the admirable photographs of Chitralis and Kafirs which Sir William Lockhart's mission brought back from the country, and which were exhibited at a *soirée* of the Royal Geographical Society a few months ago. Lastly, M. Bonvalot displays the fault which is so frequent with travellers. He seems utterly indifferent to previous labours in the same field. For instance, the party camped on the shores of Lake Rang Kul. There is not even a footnote to remind the reader that, according to Sir Henry Rawlinson, this is the famous Dragon Lake mentioned by the Buddhist pilgrim, Hiouen Tsang, the holiest spot in the entire Buddhist cosmogony. The intrepid and accomplished explorer, Mr. Ney Elias, visited Rang Kul when on his way from Yarkand to Shignan; and it was his careful account of the locality that enabled Sir Henry Rawlinson to complete the identification. In particular, Mr. Ney Elias mentioned a rock known as the Chirágh Tagh, the Lamp Stone, standing 100 feet from the water's edge, and famous all over the Pamir for a light that burns unquenchably in one of its caves, in which, the Khirghis affirm, a vast treasure is stored, under guard of a dragon with a shining light in his forehead. Of all this M. Bonvalot says not a word.

But enough has been noted, perhaps, concerning the omissions of the book; and we may turn to one or two points on which the writer is less reticent. The first volume is taken up with an account of the journey through Khorassan to the Oxus. The subjugation of the Tekke Turcomans by Russia has almost, if not quite, put a stop to the cruel slave-catching raids that, till recently, devastated "the delightful province of the sun." The towers of refuge in which the timid Persians sought safety at the first alarm of Turcomans are used no longer, and are being suffered to fall to ruin. Peace, says M. Bonvalot, reigns supreme; the sense of security is complete. The Russians, however, have not yet put down sheep stealing; and at Lasghird the travellers heard of a raid by Yomud Turcomans in which 800 sheep had been "lifted" from the Shah's dominions. Some useful information about the trade of the regions traversed may be gathered here and there. In the bazaar at Nishapur the travellers found large stocks of English and Russian cotton stuffs, Russian and English needles, Russian and French sugar, and writing paper from Angoulême. The paper and sugar were the only French wares met with; the mercery with French trade marks proved to be of Persian, German, or Austrian manufacture. At Karatag, in Bokhara, were found small boxes of French make containing percussion caps. English needles were sold here and leaden toys from Moscow. At the neighbouring town of Hissar English calicoes from India were on sale, Russian handkerchiefs, needles, and matches, and percussion caps from Hanover.

At Shahtepe, in Afghan Turkestan, an Afghan officer gave the travellers an account of the attack on the Cavagnari embassy in Kabul.

"The British, said the Afghan, fought like heroes. Our soldiers, he continued, made a breach in the walls and set fire to the house; but the Englishmen fought as long as there was breath left in their bodies. One of them was a splendid shot; he killed more than a hundred Afghans to his own gun. A bullet shattered his arm. He did not fall, but loading his rifle with one hand continued fighting until another bullet struck him in the side. He then sank down, and one of our men went up and hacked him to pieces with a sword. He was a hero."

The journey from Ferghana over the Pamir to Chitral was, of course, the most arduous part of the expedition, and the hardships undergone lose nothing in the telling. They remind one not a little of M. Tartarin de Tarascon's prodigious adventures in the Alps. The intense cold, the difficulty of breathing at altitudes so far above sea level, the weary and often perilous struggle over the snow-fields—all this is described at great length. M. Bonvalot also mentions that at 7800 feet above the sea meat cooks badly, and tea has not the flavour it possesses on low ground, which is just what Marco Polo says of cookery on the Pamir. After leaving the Dragon's Lake the travellers seem to have ascended the Aksu or Aktash River (called lower down the Bartang or Murghabi), to its source in the Oi Kul Lake. There is little doubt that M. Bonvalot is right in describing the Aksu, and not the river which rises in Lake Victoria, as the head stream of the Oxus. There is, however, a serious difference of opinion on this point; and, since the difference involves the possession of a vast tract of territory, M. Bonvalot's opinion, if he would only condescend to give his reasons for it, might carry considerable weight. From the neighbourhood of Oi Kul, which is not mentioned by name in the narrative, the travellers found their way to the valley of the Wakhan river. Thence they made an attempt, which luckily for themselves proved futile, to reach Kunjut. Baffled by the deep snow, they turned back and presently crossed by the Baroghil Pass into Chitral, where they were detained by the Mehtar-ul-Mulk's son, Aman Afzul, pending a reference to the government of India. "It is evident," M. Bonvalot infers, "that the Chitralis, deny it though they may, take their orders from India"; and this obsequiousness may, no doubt, be regarded as one of the many satisfactory results of Sir William Lockhart's mission. The Mehtar's son excited M. Bonvalot's antipathy; but Sir William Lockhart describes him as a fine manly young fellow, every inch a soldier, and exchanged turbans with him in token of lasting friendship. Afzul afterwards visited Calcutta and created the same favourable impression there. A letter from the Indian foreign office secured the release of the French travellers and their safe conduct through Yassin, Gilghit, and Kashmir to Simla, where they were hospitably entertained by Lord Dufferin, to whom M. Bonvalot dedicates the English version of his travels.

M. Bonvalot evidently thinks very highly of his own way of dealing with Orientals, but it may be questioned if he has done much

Digitized by Google

to make the name of Feringhi respected by the people among whom he travelled. His method alternated between brutality and sprightliness. In Khorassan, on the road from Meshed to Mozderan, three men were flogged till they brought bowls of milk for the thirsty travellers. On the Rang Kul Pamir, M. Bonvalot found it necessary to chastise a Khirghis chief with his own hand, while the rest of the party were ready with revolvers and rifles to check any attempt at resistance or flight. Later on he instructed his servant to beat a wretched Chitrali, whose offence was saying something rude. No doubt a certain display of severity is often requisite in dealing with Asiatics; and, had M. Bonvalot's journey served any useful purpose, every excuse would be made for his conduct. Possibly, however, these French travellers created an even more unfavourable impression when in their kindly moods. According to M. Bonvalot, the Afghans were extremely friendly, "thanks to our sprightliness; and when their brains were not muddled by haschish, they took part in our gambols and laughed heartily with us." Now, with all deference to M. Bonvalot, I think I am right in saying that an inclination to sprightliness is just what the Afghan, like most Mohammedans, will detest and despise. Sternness and severity he can understand, and sometimes appreciate; but what we should call a cheery, easygoing disposition, is to the Afghans foolishness. Perhaps it is as well for M. Bonvalot and his companions that by order of Mahomed Ishak Khan they were turned back.

Mr. C. B. Pitman, who has translated the book, deserves credit for so promptly presenting it in an English dress, but it would have been well to have adopted a more familiar spelling for the names of places. "Guriani" for "Ghorian," "Zerebchane" for "Zarefshan," "Chibberghan" for "Shiburghan," "Giulguit" for "Gilghit," and "Jelhum" for "Jhelum" in the Punjaub, sound strange to alien ears. "Baranla" (ii. 51) is a misprint for *baranta*, or *barumpta*, as it is called on the Peshawur border, a raid or reprisal. "White slave" (ii. 145) is an odd rendering of *la pierre blanche*.

Stephen Wheeler.

"Statesmen Series."—*Bolingbroke*. By Arthur Hassall. (W. H. Allen.)

The "Statesmen Series" certainly keeps up to the mark with its biographies of "great men who have influenced the political history of the world." Mr. Montague's Life of Peel has now been speedily followed by a Life of Bolingbroke by Mr. Arthur Hassall.

In a series of this description, a "study" of the great Lord Bolingbroke well deserves a place. Apart from the peculiar fascination which Bolingbroke's character and career have always possessed for the student of history, his direct and personal influence upon English politics in the eighteenth century was much greater and more extensive than is generally appreciated. From his earliest appearance in the House of Commons in 1701 until his flight in 1715, during his exile in France from 1715 to 1725, and as the directing genius of the opposition to Walpole's government until his second retirement to France in 1742, he was ever closely and inextricably connected, in one way or another, with the history of his country. Or whatever he took up, whether it was the administration of an office or the organisation of an opposition, he left the impress of his own individuality. His influence was so pre-eminently personal that posterity does not clearly understand whence it originally arose; and after his death "his immediate survivors were unable to explain the sudden decline of the influence of his ideas." However matchless his skill as a pamphleteer, his contributions to political science were practically worthless. He was not a profound and original thinker. He could only revive in the most exquisite of English prose—to use the words of his disciple—

"What oft was thought, but ne'er so well express'd."

This new *Life of Bolingbroke* will not only prove a valuable addition to this series, interesting the general reader, but it will also be found extremely useful by the student of eighteenth-century history. Mr. Hassall adds nothing of importance to the stock of information which we already possess relating to Bolingbroke's career. He shows, indeed, that the tradition as to his education at Christ Church may be perfectly true, in spite of his name not appearing on the books or the buttery lists of the House; for St. John may (like many other students in the seventeenth century) have "studied with a Christ Church tutor, never lived within the walls of Christ Church, and left Oxford without having matriculated." But it is as an estimate of Bolingbroke's career as statesman under Queen Anne that Mr. Hassall's work is of the greatest value; and the two most important chapters in this little volume are naturally those devoted to "The Peace of Utrecht" ("the greatest monument of Bolingbroke's fame") and to "The Succession Question." Mr. Hassall has evidently given a very careful consideration to the voluminous correspondence and the intricate negotiations covering the years between 1710 and 1714; and he deliberately inclines to a much more favourable view, not only of the peace of Utrecht, but also of "the means taken to bring it about," than that which historians have generally adopted. He does not venture on a complete defence, but he pleads for a mitigation of the severe judgment which has generally been passed upon Bolingbroke's conclusion of the treaty—mainly, it would seem, upon the ground that Bolingbroke had so many impediments in his way. But even those who would go as far as Mr. Hassall does, and would pronounce the conduct of the Whigs "as throughout most unpatriotic," would surely not maintain that "no fault can be found with the advantages gained for Great Britain." The conclusion of peace, independently of the allies, may, perhaps, be justified on the ground that "they had so often acted disloyally to England"; but the desertion of the Catalans is wholly indefensible, and Mr. Hassall justly terms it "the greatest blot on Bolingbroke's statesmanship."

Mr. Hassall's opinion on the Succession question is equally emphatic.

"Bolingbroke," he says, "was never a Jacobite, that is to say, he never had any settled design of bringing in James Edward. . . . That he had intrigued with the Pretender is undoubted; but who had not? . . . Bolingbroke, like most of the politicians of the day, negotiated with both the Elector and the Pretender. The unmistakable preference of George for the Whigs tended undoubtedly to incline the ministers to weigh seriously the chances of the Pretender; but Bolingbroke's immediate object was, by consolidating the Tory party, to command the situation on the Queen's death."

It is easy to give a bald endorsement to Bolingbroke's own oft-repeated assertion, but it is practically impossible to test its accuracy. We have not enough evidence to allow us to pronounce authoritatively upon his real intentions. We know that Bolingbroke had nothing to expect from the Hanoverian succession, everything from a Stuart restoration; but the rest is mere matter of conjecture. We may follow Mr. Hassall, if we like, in regarding Bolingbroke's elaborate negotiations with the Jacobites, which give to the pages of De Torcy their special value, as merely part of a policy of "consolidating the Tory party." Or we may follow Mr. Lloyd Sanders, the editor of this very series, and himself no mean authority on this period, who pronounces as follows:

"Everything combines to prove, and historians seem as a rule to believe, that Bolingbroke was, as far as might be expected from his unscrupulous character, a zealous supporter of the Stuart line."

Viewed in this light, his flight in 1715 otherwise "a fatal mistake," becomes perfectly intelligible. Confronted by such divergencies of authority on so perplexing a question, we can but philosophically conclude that it is still too early for an impartial judgment. Those eventful times are still too near our own. They still—to use Hallam's well-known phrase—"call forth the warm emotions of party spirit, and afford a test of political principles."

The three chapters which Mr. Hassall devotes to Bolingbroke's life after the year of his fall, though not the most important, are among the most interesting in the volume. Their clear arrangement is admirable. The only fault that could be found with them is a tendency—not confined to this portion of the work alone—towards too much general history. The sketches of the contemporary state of affairs are excellent in their way; but they occupy much valuable space which might otherwise have been devoted to the main subject, and the general information so essential to a due appreciation of Bolingbroke's position we can easily obtain from the works of Mr. Lecky or Mr. Wyon. Mr. Hassall has thus unnecessarily aggravated a difficulty which he has had all along to contend with—that of compressing into 230 pages an amount of matter which might reasonably have filled three times that number. This difficulty shows itself in different ways, but more especially in the cramping effect it has had upon Mr. Hassall's style, which is in startling contrast with the freedom and copiousness of Bolingbroke himself. When unconstrained by the limits of "brief biography," Mr. Hassall's style is very different. The following passage from his concluding chapter demands quotation:

"No greater compliment could, perhaps, be paid to his memory than the interest which is still taken in his meteoric career, in his soaring

Digitized by Google

ambition, in his keen literary tastes. As long as there remains a classical scholar, so long may we look for translations of Homer; as long as mediæval history is studied, fresh monographs on Dante and his divine poem will continue to appear. And we may say that as long as human nature, with its lights and shades, still occupies the attention of men in each succeeding generation, writers will be found ready to make fresh studies of this extraordinary character, in which, as Lord Chesterfield said, 'good and evil were perpetually jostling one another.' Most of his contemporaries are allowed to sleep in comparative peace; but who can say that the final word has been said of the author of the Peace of Utrecht?"

The book as a whole is a marvel of accuracy. There are one or two slight errors uncorrected in the "Errata," and one curious mistake in the pedigree of the St. Johns. One sentence shows signs of carelessness. It is this:

"There [at Dawley], in Bolingbroke's own words, 'he was in a hermitage where no man came but for the sake of the hermit': for then he found 'that the insects which used to hum and buzz about him in the sunshine, fled to men of more prosperous fortune and forsook him when in the shade.'"

The original passage, of which the above is a clumsy paraphrase, is simpler and more elegant. It occurs in a letter from Bolingbroke to Swift, written in 1723, and runs as follows:

"Those insects of various hues, which used to hum and buzz about me, while I stood in the sunshine, have disappeared since I lived in the shade."

What can be the object of taking a sentence like this, of misquoting it, and of misapplying it by making it refer to Bolingbroke's residence at Dawley—an estate which he did not purchase till 1725?

Mr. Hassall has succeeded in bringing out in special prominence the three most remarkable points in connexion with Lord Bolingbroke's life—the untiring energy, not to say restlessness, of his character; the many extraordinary vicissitudes of his career; and, above all, the marvellous versatility of his genius. This latest biography would be most welcome if it led only to a more extended study of Bolingbroke's correspondence with Pope and Swift. "The letters from Lord Bolingbroke," as Lord Orrery said,

"which are inserted in this collection, are written with an elegance and politeness that distinguish them from all the rest. We see they were not intended for the press; but how valuable are the most careless strokes of such a pen!"

WILLIAM E. GREY.

NEW NOVELS.

The Land of Darkness. By the Author of "The Little Pilgrim." (Macmillan.)

Red Towers. By Eleanor C. Price. In 3 vols. (Bentley.)

Toilers of Babylon. By B. L. Farjeon. In 3 vols. (Ward & Downey.)

The Brown Portmanteau. By Curtis Yorke. (Jarrold.)

The Last Von Reckenburg. By Louise Von François. (Alexander Gardner.)

St. Veda's. By Annie S. Swan. (Edinburgh: Oliphant, Anderson & Ferrier.)

The Tory's Daughter. By A. G. Riddle. (Putnam's Sons.)

The Peckster Professorship. By J. P Quincy. (Houghton, Mifflin & Co.)

THAT an allegory about the other world is nearly as fearful a wildfowl to meddle with as its kinsfolk on the banks of the Nile is a well-established fact; but in the process of establishing it during past ages there are instances in which the monster has been so signally vanquished that one hardly wonders at fresh adventures in the same direction. The author of the *Little Pilgrim*, which was, we believe, not unpopular, has tried a continuation which, unlike most continuations, strikes us as better than the original. The surprise ceases to be surprising, however, when it is added that *The Land of Darkness* (as, indeed, may be guessed) meddles with hell, not heaven, at least in its major part; for there is a comforting piece of Universalism tacked on at the end, in which the "Little Pilgrim" herself reappears. The old relations, so far as interest goes, of the *Inferno* and the *Paradiso* are wont to repeat themselves. This new "Land of Darkness" is not ill-imagined, but it is rather unequally carried out; and the style, which, in such things as this, should either be as simple as Bunyan, or as careful as Dante, is sometimes careless. The opening sentence is very risky. "I found myself standing on my feet" is apt to destroy all proper solemnity of feeling by suggesting that it would, on the whole, have been more remarkable if the gentleman had found himself standing on his head. To "stand upon one's feet" is indeed excellent English; but in excellent English it always has (so far as we remember) an incessive sense—"to rise upon the feet and stand"—which is wanting here. On the next page, we find "the electric or some other scientific light," where "scientific" seems to mean "artificial." These blemishes, however, do not matter much after the reader has got into the thought of the thing, which, if not wholly novel, is ingenious and forcible enough, though, as we have said, unequally carried out. Reversing the Platonic idea of punishment by impotent desire, the author has imagined a hell in which the damned are almost literally filled with the fruit of their own devices. There is the city of pure malevolence and anarchy, the city of tyrannical order, the city of pleasure, the city of art, the city of applied science, and so forth. A purely selfish, and in each case, at the same time, enforced indulgence by turns, brings on the sinner the same horrible satiety, complicated often by actual physical suffering. For our author does not favour purely spiritual torments. The weakest division of all is the city of pleasure, which is childish. It may or may not be intentional, and connected with his Universalism (for you *can* get out of the Land of Darkness, though hardly), that, in another rather curious and perhaps not wholly intentional way, the author reverses the proceeding of a great predecessor. Dante begins with the lightest sins, and gives them the lightest punishments; while our author begins with pure malice—the worst of all—and progresses in the other direction, hinting, however, that the agony, if not the actual punishment, increases as the "cities," which are at once circles of hell and of purgatory, are passed.

Red Towers is a good average novel in plan, and decidedly above the average in execution. Celia Darrell, Celia de Montmirail, Celia Percival, who but for an accident would (either instead of or as well as these) have been Celia Romaine, is a very good study of a not uncommon kind of young woman. Our great-grandfathers would have called the book "The History of a Coquette"; and it is much to Miss Price's credit that in drawing her coquette she has kept to the strictest verisimilitude, without either "analysis" on the one side or sensationalism on the other. The admirers of the analytic may call the book shallow; those gasping ones who shout "*à bas* the young person!" may be disgusted to find that Celia, though a coquette to the tip of her nails and the core of her heart, neither does nor is apparently tempted to do anything more shocking than getting married a second time to the man for whom she has had a kind of affection, before the husband whom she had taken without loving him is well cold in his grave. Also her lover, Vincent Percival, though represented as a bad young man, seems not to have had any unholy designs on her while she was still married. In other words, Miss Price, while taking what is now called the conventional, and what is luckily still the real, view of English morality, has shown that you can be as real and natural as you like without Realism or Naturalism. Celia's company is, we confess, rather less interesting than herself. Paul Romaine, her first lover, would have had a hard time of it, in any case, in getting out of the most hopeless of all novel situations, that of a jilted lover who has been almost totally blind to his mistress's little ways; but as it is, he is also an unnecessarily good young man. Canon Percival and his worldly wife; the "Uncle of America," Colonel Ward, who means to do a good turn to his young friend Paul, and is the pretty direct instrument of enabling Miss Celia to pursue her own devices; the sulky Vincent; the amiable French Marquis de Montmirail and his "candid" daughter—are all very well in their way, but not striking. Celia is striking, because of the combination of adequacy and moderation with which the author has hit her off. Most people who compare books with life will remember at least one Celia Darrell—attractive, intelligent, amiable enough, "proper" enough, not in the least a monster, but "as cold as a fish and as hard as a stone," and certain if she ever cared for anyone to care for the least worthy aspirant.

With Mr. Farjeon we get into a very different atmosphere, in which truth of any kind is not the most remarkable ingredient. A novelist of long practice and writing well in his way, Mr. Farjeon seems to have, at one of those times of life when one catches things and never gets rid of them, imbued himself with some of the crudest of Dickensisms, the Dickensisms of *Hard Times* and the *Child's History of England*, and worse. Thus, he tells us in his second volume, speaking *ex cathedra*, that "there exist in England instances of Feudalism [it would be a little interesting to examine Mr. Farjeon regularly and see what he knows about Feudalism] almost as marked as any that can be drawn

Digitized by Google

from the time that is gone. In those places, the high hand is still employed to destroy any hope of progress among the people," &c.; and so on for some pages, the reader being gratified, though surprised, to learn that if these dreadful "instances" are rare it is the doing of "penny newspapers." Now all this is, of course, bosh; and even if it were not bosh, and mischievous bosh, too, it would have no more business in the pages of a novel than any other kind of misplaced didactics. Unluckily, it is not only in Mr Farjeon's addresses to the reader that the thing appears: it pervades his scheme. We have the virtuous working man, his daughter, and the wicked young capitalist (let us, as optimists, be thankful that he is not a duke's son also), and all the rest of it. That Mr. Farjeon opens with a prettily drawn scene enough, and that such scenes recur now and then, only makes this weary old "Vic" melodrama business more wearisome.

The remaining books on our list are in every sense slighter; but Mr. Curtis Yorke has got together a very fair collection of fairly told magazine stories—the old and never failing "I-awoke-and-behold-it-was-a-dream" story, the gambling story, the comic uncle story, and so forth. By this enumeration we intend no sort of disrespect; for it is the fact that Mr. Yorke tells his stories quite pleasantly and neatly, and with hardly any fault but an occasional propensity to italics, and, still worse, to (!). We like best, we think, "Our Expectations" (the comic uncle story above referred to), which is preposterous but funny, and "Was it a Mistake?"

The Last Von Reckenburg also has merit, though it shows not a little of the heaviness which has infected so much of the novel writing of Germany between the earlier works of Freytag and the stories of the Galician school. There is a little too much writing about things, and not enough action and dialogue.

This criticism could be "turned," in the sense of men's tailors and women's tailors, to suit *St. Veda's*, though there is dialogue enough here. The plot is a variation on "Lady Clare," but with a less happy ending.

Let no follower of Mr. Gladstone fear that his principles are exposed to danger from the wiles of *The Tory's Daughter*. She was only a Tory's daughter in that limited and rather provincial sense of the word which is equivalent to "American Loyalist in the revolutionary war"; and her biographer, taking up the half-forgotten vein of Cooper, has a great deal to say about General Brock, Tecumseh, and the Indian wars. The book is oddly written, as a single sentence—"The hours of darkness brooded prolongingly to them"—will show.

Indeed, if the present influx of American novels continues, we shall have to suggest that they be translated for the use of those who "have" only English and a few other dead or old-world tongues. For we open *The Peckster Professorship*, and we find that a certain proceeding "came perilously near the margin of reputable value-filching." *The Peckster Professorship* is "an episode in the history of psychical research," which will explain it sufficiently, and no doubt commend it to some folk. Our own Psyche is at present researching the meaning of "reputable value-filching," and the ants and the birds have not yet helped her as of old.

George Saintsbury.

CLASSICAL SCHOOL BOOKS.

Introduction to Latin Lyric Verse Composition. By J. H. Lupton. With Key. (Macmillan.) Mr. Lupton desires to restore a certain purism to the practise of Latin lyric composition, which has, he thinks, been unduly free in its vocabulary of late years. Compounds, and diminutives, and purely prose words which are intentionally avoided by Horace have, he urges, intruded themselves into modern composition, which presents, in consequence, a set of ingenious and varied surprises, rather than a reproduction of the forms and vocabulary of Horace and the Augustan poets. We may admit his facts and yet demur to his implied censure. If we artificially diminish our view of the resources of a language, we gain precision, neatness, and thin classicism; but we lose width and variety, which are the charm of imaginative literature; we manufacture scholars, but we discourage literary imagination; we leave boys under an impression that Virgil and Horace lived in a close pinfold, and used, in their surviving poems, all the words which they thought legitimate and poetical. Mr. Lupton sees the danger of a careless and miscellaneous vocabulary. He shows no sign that he recognises that of an arbitrary restriction. If he will count the ἅπαξ λεγόμενα in Horace and Virgil, and the words which are used more than once yet exceptionally, he will, we feel sure, realise that these poets drew from a deeper well, or broader lake, than he would allow to their modern imitators. With this demurrer, we welcome his careful and concise disquisitions on the Horatian language and metres; but we call his attention to a curious accidental defect in his book. The latter pages (xxxii.-xlviii.) of his introduction are omitted; pp. 97-112 of the Exercises appear twice over—probably one sheet has been dropped and another duplicated. The retranslations, whereby poems, like Shelley's "The World's Great Age," are moulded into English prose-poetry suitable to the right metre, are done with great skill and taste. The "Hints" appended to each piece, though good, are, we think, too numerous. It is only too possible to *over*-help boys. The real training is in the effort, not in the result. The "Key" (printed separately) contains some beautiful versions, mostly, though not entirely, by Cambridge scholars, such as Kennedy, Shilleto, Paley, and Holmes. But why a "Key" at all? Masters, like boys, are easily demoralised, intellectually, by being saved all trouble.

Easy Passages for Translation into Greek. By J. Y. Sargent. (Oxford: Clarendon Press.) The condition under which this well-prepared compilation would find its full usefulness is one seldom fulfilled in modern public school education. Half of it consists of "prepared" passages, *i.e.*, graduated in difficulty, with copious help in vocabulary and idiom appended at the bottom of the page. The second part consists of passages without that help, but chosen on the principle of resemblance to the first part, so that the result of having worked through part i. is available in the right manner for the subsequent attack on part ii. It is a good method; but the time is lacking, under modern conditions and the pressure of other subjects, to make it effective. Greek prose cannot secure so large a share in a sixth-form boy's curriculum of work. Able boys do acquire a reasonable proficiency in Greek prose by mere reading of Greek authors, far more easily than they acquire the art of Latin prose, or of verse composition in either language. Hence, a manual of this kind will scarcely find the acceptance it deserves. Two or three months' regular work at this book would, no doubt, confer the art of writing Greek prose; but where and how is concentration of that time on the subject to be secured? It is needless to say that the skill in discovering Greek idioms for English phrases is conspicuously possessed by Mr. Sargent. It is a real treat, for instance, to see (p. 90) Lord Beaconsfield's celebrated anathema on Mr. Gladstone turned by happy suggestions into the Greek style of Aeschines. The selections, too, particularly those of narrative passages, have the merit of being interesting; and those called "Platonic" are as attractive as the subject-matter permits, in regard to schoolboys.

Selections from Lucian. With Notes by W. R. Inge and H. Macnaghten. (Rivingtons.) The defect in Mr. E. Abbott's selection from Lucian was the absence from it of any part of the *Vera Historia*. We are glad to see the present editors are alive to the merits of that delicious fiction. On the other hand, Mr. Abbott inserted the Δικὴ Φωνηέντων, which is here omitted; both give us *Timon*, for which we must be thankful. The editors (p. viii.) seem to us rather to underrate the merit of their author. He is "not very thoughtful, imaginative, or original." We should say that only the last adjective could be refused to Lucian, and scarcely that, as originality goes. The notes avoid the normal vice of modern editions. They are suggestive without being exhaustive. Here and there an explanation is given which might have been left to the lexicon or the grammar to administer, *e.g.*, p. 2, l. 11; p. 6, ll. 22, 27; p. 32, l. 13; p. 34, l. 20; p. 87, l. 20, and others of the same sort. For other reasons the comment on p. 86, l. 28, is surely superfluous. But, on the whole, we congratulate the two editors on a useful performance. The humour of Lucian has a sparkle in it which lights up the approaches to Greek literature so often found dull by ingenuous youth. There be those who can see the jest of the *Vera Historia* who yet cannot discern anything in Aristophanes except long words and boredom.

Analecta. Passages for Translation, selected by John Strachan and A. S. Wilkins. (Macmillan.) This book, prepared for the use of classes at the Owens College, is published in the hope of being more widely adopted. It consists (1) of Greek selections, poetry and prose, from Homer to Polybius; (2) of Latin, from Ennius to Suetonius. It is better, because more varied and copious (it contains about 250 closely printed pages), than most books of the kind. There is no index—a serious inconvenience which is partly remediable by a table of references obtainable from the publishers. We should like to have seen among the Homeric passages either the Death of Hector, Priam's interview with Achilles, or something of the Slaying of the Wooers; something from Virgil's Eclogues, or the close of Georgic IV.; something from Aeneid IV.; something of Cornelia's Elegy, from Propertius; something of Juvenal's noblest words, *e.g.*, the close of Sat. x., or the episode of Hannibal. But perhaps the editors intentionally avoided the stock beauties, which, however, can hardly become too familiar. The pressure of other subjects on classics guarantees us only too well against that danger.

Latin-English Dictionary. By G. C. Gepp and A. E. Haigh. (Rivingtons.) This little book is, as its authors tell us, intended to be a cheap and handy dictionary of all the words which

Digitized by Google

junior boys in schools are likely to encounter, while at the same time it aims at sufficient completeness for the ordinary student. We are afraid it cannot be called a success. The book is no cheaper than several other Latin dictionaries, and its handiness is simply the result of using very small type. No sane schoolmaster would nowadays condemn his boys to employ a book printed throughout in such an eye-destroying fashion as this is. And, even apart from "external" considerations, the book is not so good as it should be. It is very difficult, to begin with, to make out the principles which governed the selection of words. One infers from the preface that the book includes only words likely to be met by the ordinary student. Then why does one stumble upon *antistrophe, antitheton, anus, anulatus, pridianus, valetudinarium*, and a host of other words which occur in no literature likely to be read by the ordinary student? And why are "words peculiar to Lucretius purposely excluded"? The ordinary student sometimes reads Lucretius. And, if Lucretian words *are* "purposely excluded," why do we come across such an entry as "*variantia*, only in Lucr."? To complete our perplexity, we find Livy dealt with in a very arbitrary manner, and admission denied to some even of Vergil's words. An examination of the matter supplied leads also to a somewhat unsatisfactory conclusion. The authors claim to have eliminated a number of traditional errors, and sometimes —*e.g.*, in the article on *alapa*—they have done so. But they have certainly retained much that is undeniably wrong. The first meaning of *carbasus* is still given as "Spanish flax," despite an article on the word in the *Journal of Philology*; the original senses of *tristis* and *laetus* are still mis-stated; the old blunder about *heres ex libella* still turns up to convict dictionary writers of unverified references. *Primipilaris* and *patres conscripti* are equally uncorrected, and "*nympha*, a young woman," ought not to have passed Mr. Gepp. In other cases, more precision is needed in Englishing and distinguished senses. The naked "*rivulus*, brook" will deceive verse-writers; *scitum* is not very happily done, nor are the Ciceronian and poetical uses of *tempestas* noted. Some of the etymologies, too, are very odd. It is late in the day to be told that *Quirites* comes from the Sabine town Cures, or *redivivus* from *red* and *vivo*, while the reappearance of the equation *provincia* = *providentia* is simply disgraceful to the author who is responsible for the latter part of the book. It may be, indeed, that other elementary dictionaries contain as many blunders as the one before us. If so, we can only regret that Messrs. Gepp and Haigh have added to the list of unsatisfactory books.

A Compendious Greek Grammar. By W. D. Geddes. New Edition. (Edinburgh: Boyd.) This book, which was originally issued in 1885, now appears in an entirely new edition. The editor claims to have kept the old system, but enlarged the details, and revised the philology. On the whole, the information seems correct and well chosen, but the philology is not quite up to date. Dr. Geddes is apparently somewhat afraid of the "new views," as he is of the new method of atticising, *i.e.*, introducing correct Attic forms—ἐλελύκη, not ἐλελύκειν; βασιλῆς, not βασιλεῖς. He sticks to παύω instead of λύω, or τύπτω, as the "model" verb for paradigms; but his second aor. ἔπαον is not very happy. On the whole, the book is fairly well arranged; but the third declension of nouns is not treated very clearly, nor is the verb printed well. The "Abridged Syntax," too, is rather crowded, and the section on metre too long. But we have no doubt that the book will be found useful in Scotland. In England it is hardly likely to supersede the established grammars.

Caesar de bello civili. By H. Awdry. (Rivingtons.) This book is an "easy abridgment" of the *Bellum civile*, of about the hardness of Nepos, and arranged so as to be continuous. It is furnished with full introductions, several maps, and rather abundant notes, many of which are historical. So far as we can judge, the abridgment is well done; but the introductions and notes are rather full—certainly the account of the army goes into quite unnecessary detail. The information given is generally correct, but traditional; *e.g.*, the old statement is repeated that *platea* has usually the *e* long. Here and there one finds slips: thus in § i. 49, *ex litteris* does not mean "on the proposals," and *referretur* needs a better explanation.

NOTES AND NEWS.

WE regret to say that the issue of Mrs. Pfeiffer's new volume of poems, entitled *Flowers of the Night* (not as erroneously given, "The Witch's Last Ride") has been interrupted by the death, sudden at the last, of her husband, who had always taken upon himself the correcting of the proofs of his wife's work. Mr. Pfeiffer was a man of varied accomplishments, and his loss will be deeply felt in a large circle of friends.

WE understand that Mr. Whitley Stokes's edition of *The Anglo-Indian Codes*, in two big volumes, has been adopted as a text-book by the Civil Service Commissioners for selected candidates for the Indian service.

PROF. MASPERO is making rapid progress with his History of Ancient Egypt, which will be abundantly illustrated.

MESSRS. G. ROUTLEDGE & SONS have in preparation a second and cheaper edition of Miss Amelia B. Edwards's book of Dolomite travel, entitled *Untrodden Peaks and Unfrequented Valleys*, to be uniform with their recently-issued edition of *A Thousand Miles up the Nile*. The former work has been out of print for several years.

MR. ALEXANDER GARDNER will shortly publish *Scotland in 1298*, edited by Mr. H. Gough, of the Middle Temple. It will consist of documents relating to the campaign of King Edward I. in that year, and especially to the battle of Falkirk. Among these—the greater part of which have not before been printed—are two copies of the "Roll of Arms of the Commanders" on the English side, and copies of two "Rolls of the Horses," forming a kind of army list.

THE Rev. W. Campbell, of the English Presbyterian Mission at Taiwanfu, the capital of Formosa—who has recently reprinted the oldest linguistic document of that island, the translation of St. Matthew's Gospel into the Sinkang dialect, made by a Dutch missionary in 1661—will shortly publish (with Messrs. Trübner) another reprint, entitled *An Account of Missionary Success in the Island of Formosa* (London, 1650). Only ten years after this book first appeared, all the converts made by the Dutch in Formosa were exterminated by an invasion of Chinese rebels.

THE next volume in the series of "Great Writers" will be *Captain Marryat*, by Mr. David Hannay.

MESSRS. W. H. ALLEN & Co. are on the point of issuing the first number of the *Civil Service Directory*, to be published annually. It will contain a list of all the government offices and the officials therein, together with a detailed statement of their services, and also an appendix containing the regulations and subjects of examination, &c., and Acts of Parliament, Treasury Minutes, &c., relating to the Civil Service.

MESSRS. SWAN SONNENSCHEIN & Co. will issue shortly *The Dead Leman, and other Stories from the French*, by M. Paul Sylvester and Mr. Andrew Lang. The volume contains nouvelles by Mérimée, About, Théophile Gautier, Th. Bentzon, Tolstoi, and Balzac; and an introductory essay by the authors on the place of the "short story" in literature. Almost the whole of the fifty large paper copies have been already applied for.

THE same publishers have almost ready *John Newbold's Ordeal*, a novel, in two volumes, by Mr. Thomas Pinkerton, author of "The Meadow-sweet Comedy."

CANON RAWLINSON'S new volume on *Phoenicia* will be published next week in the "Nation" series, by Mr. T. Fisher Unwin.

THE Rev. Hugh Price Hughes has a volume in the press, to be entitled *Social Christianity*; being a selection of his Sunday afternoon addresses delivered in St. James's Hall. It will be published by Messrs. Hodder & Stoughton.

THE first volume in Messrs. Trübner's new "Lotos" series, already announced in the ACADEMY, will be a reprint of *Baron Munchausen*, with Alfred Crowquill's illustrations. This is to be followed by a new and enlarged edition of the *Breitmann Ballads*.

MR. JOHN HODGES will publish next week the second and concluding volume of Father Gasquet's *Henry VIII. and the English Monasteries*: an Attempt to illustrate the History of the Suppression. The first volume of this work, which appeared only last year, is already in its third edition.

MR. J. HORSFALL TURNER, of Iden, near Bradford—an industrious editor of publications relating to Yorkshire—has undertaken to prepare for the press the unique collection of Yorkshire ballads formed by the late Abraham Holroyd.

THE Free Library system at Nottingham is about to be extended by the establishment of the eleventh branch.

THE FORTHCOMING MAGAZINES.

"THE BISMARCK DYNASTY" is the title of the opening article in the next number of the *Contemporary Review*. Although it is anonymous, the special information on which it is founded is sure to command attention. Another important article will be by Mr. Lewis Morris, on "The University of Wales." Lady Grant Duff, Mdme. Novikoff, Earl Nelson, Sir Frederick Pollock, Dr. R. W. Dale and Mr. Frederic Harrison will also be among the contributors to the number.

THE February number of the *Library* will contain an article on Henry Bradshaw, by Mr. A. W. Verrall; also papers on the "Burleigh Correspondence at Hatfield House," by Mr. W. J. Hardy; "Appledore Press," II., by Mr. A. H. Bullen; and a monograph on that great but somewhat neglected bibliographer, Robert Watt, by Mr. Thomas Mason.

THE Dean of Armagh will contribute an article on "The Group of the Apostles," and Prof. Delitzsch a paper, entitled "In Self Defence—Critical Observations on my Hebrew New Testament," to *The Expositor* for February.

THE February number of the *Scottish Art Review* will contain an article on "The Scenic Aspects of the Lyceum 'Macbeth,'" by Mr. William Archer, illustrated with seventeen original sketches by Mr. W. G. Barry Murdoch

THE February number of *Time* will contain articles on "Modern Art and Artists," by Mr. W. P. Frith (in the "Work and Workers" series); "The Religion of Dante," by Mr.

Digitized by Google

Oscar Browning; "Rough Shooting," by Mr. T. E. Kebbel; "'Macbeth' as a Society Play," by Mr. J. M. Barrie; a short story by Owen Balair; and papers on the stage and drama in China, medical etiquette, Jane Austen, &c.

The February number of the *Westminster Review* will contain, in the independent section, an article on "The Trials of a Nonconformist Minister," by the Rev. H. W. Perris, of Hull.

A new series of sensational stories is about to be commenced in Cassell's *Saturday Journal*. Among the writers who have already promised to contribute are Charles Gibson, F. W. Robinson, Q. (author of "Dead Man's Rock"), J. Berwick Harwood, W. Clark Russell, G. Manville Fenn, R. E. Francillon, Richard Dowling, Theo. Gift, and Frank Barrett.

UNIVERSITY JOTTINGS.

Prof. Stokes has been nominated by the vice-chancellor at Cambridge to be Rede lecturer for the present year.

In Convocation at Oxford, next Tuesday, it will be proposed to confer the degree of M.A. on Sir William W. Hunter, who is now a resident at Oxford and an examiner in the oriental school; and also to constitute Mr. C. D. E. Fortnum a perpetual visitor of the Ashmoleum museum.

Dr. Peile, university reader in philology at Cambridge, has appointed Prof. Postgate as his deputy for the present term.

The delegates of the common university fund at Oxford have appointed Sir Charles E. Bernard, late chief commissioner of Burma and now head of the revenue department at the India office, to deliver a course of six lectures on "The Land Revenue System of India."

In connexion with the Teachers' Training Syndicate at Cambridge, Mr. J. Bass Mullinger will deliver a course of ten lectures this term upon "The History of Education," from classical antiquity down to the present time.

At Cambridge, Prof. J. H. Middleton is continuing his lectures on "Domestic Decoration and Architecture"; and Prof. G. F. Browne is also continuing his course on "Anglian Sculptured Stones of Pre-Norman Type." Prof. Middleton's tenure of the Slade chair of fine art ends with the present month, being limited to three years; but he is eligible for re-appointment.

Among the philological lectures at Cambridge this term we notice that Mr. R. S. Conway, of Caius—the author of *Verner's Law in Italy*, and of a work on a cognate subject shortly to be published by Messrs. Trübner—is delivering a course on "The Italic Dialects," under the authority of the special board for classics.

Mr. Arthur J. Evans, keeper of the Ashmolean museum, delivered two lectures this week upon the Fortnum collection, and a third lecture upon other recent acquisitions of the museum.

Mr. Robert Dunlop has been elected to a Berkeley fellowship at Owens College, Manchester. The special historical work to which he proposes to devote himself is the writing of a book on the Plantation of Ireland, preliminary to a larger history of the Great Irish Rebellion.

In connexion with the London University Extension Society, Mr. S. R. Gardiner will deliver a course of lectures at Chelsea on "Modern History," beginning with the year 1805. At the first lecture, on Monday next, Mr. W. E. H. Lecky will take the chair.

Prof. Buchheim is delivering a course of lectures at the ladies' department of King's College (Kensington Square) on "Goethe's 'Faust,'" in which he proposes to introduce the results of recent discovery and criticism in Germany.

The *Oxford Magazine* for January 23 contains a futher instalment of Mr. F. Haverfield's extracts from the *Gentleman's Magazine* during the last century relating to Oxford, covering the period from 1774 to 1783. We notice a complaint that Wykehamists obtained an undue proportion of the university prizes.

ORIGINAL VERSE.

NOCTURNAL VIGILS.

Why do you chide me that when mortals yield
To slumber's charm, from sleep I ask no boon,
But from my casement watch the maimed moon
Fainting behind her ineffectual shield;
Unto the chime by stately planets pealed,
My song, my soul, my very self attune,
And nightly see, what none can see at noon,
The runic volume of the sky unsealed?
Haply the time may come when grateful night
Will these brief vigils endlessly repay,
And, on the dwindling of my earthly day,
Keep, like her stars, my heavenly fancies bright;
And glorious dreamings, shrouded now from sight,
Dawn out of darkness, not to sleep for aye.

Alfred Austin.

OBITUARY.

W. M. HENNESSY.

On Sunday, January 13, at his residence, 71, Pembroke Road, Dublin, aged sixty years, died William Maunsell Hennessy, whose name has for years been familiar as their own to all who, professionally or otherwise, were drawn to those studies in which he was at once an enthusiast, and, in his own line (from which he never deviated), a master. Furthermore, such contingent of his survivors in the field as, being competent to form an opinion, may also be blessed with candour sufficient to give it words, will find no difficulty in admitting that by his removal an important and difficult branch of Celtic research has suffered loss which it is not too much to call irreparable.

Hennessy was a man of talent, and certain it is that after him other men of talent will arise and wish to follow in his steps; but, for want of similar qualifications to start with, never again will any to such purpose spend the better part of forty years in close familiarity with the great tomes (to speak of Dublin only) known as "The Book of the Dun Cow"; the Books of Leinster, of Ballymote, of Lecan; the *Lebhar Breac* and the Yellow Book of Lecan; and, in the same degree as did Hennessy, know them from end to end. Changed times forbid the hope that he, any more than Eugene O'Curry and John O'Donovan, can be replaced by a compatriot. As for the foreigner, his orbit is well defined; in that let him be content to revolve and, as sometimes he does brilliantly, to shine; accepting the inevitable, and recognising that with the subject of this notice vanishes a mass of special knowledge forbidden to outsiders, the lack of which makes itself felt in their every page. But in proportion to his erudition was the hearty liberality which ever placed it unreservedly at the service of all comers; the genial welcome and the hospitality which in his house awaited the "angehender Keltolog" from foreign parts. To his friends, his books and transcripts were as accessible as to himself, and freely lent to take away.

Hennessy's chief works were as follows: *Pedigree of the White Knight* (from the Russell and Colter MSS.), by James Graves, revised by W. M. H. (1856); *Annals of "Loch Cé"*: A.D. 1014-1590, text and translation, in the Master of the Rolls' series (1858); *Chronicon Scotorum*: earliest times to A.D. 1141, text and translation, in the same (1858); a translation of the *Tripartite Life of S. Patrick*: printed by Mary Frances Cusack (1871), and Rev. J. O'Leary (New York, 1874); the *Book of Feenagh*, text and translation, privately printed (fifty copies) by Denis Kelly of Markree Castle (1875); *Poets and Poetry of Munster*, 3rd ed., Irish text revised by W. M. H. (Dublin: Duffy, 1883); *Annals of Ulster*, vol. i., text and translation, for the Royal Irish Academy (1888). To the *Revue Celtique* (i., p. 3) he contributed a paper upon "The Ancient Irish Goddess of War," based on a lecture delivered in the Royal Irish Academy, May 25, 1869; and again (ii., p. 86), a tract on "The Battle of Cnucha," text and translation, from *Lebhar na hUidhri*. In *Fraser's Magazine*, for September, 1873, is his translation of that curious tract called "MacConglinne's Dream," from the *Lebhar Breac*; in the Academy, August 1 and 15, 1871, an article on Ossian; and in the same, July 1, 1872, a review of Ferguson's *Stone Monuments*. His editions of *Mescad Ulad* (in type so far back as 1883) and *Bruiden Dáderga* had long been anxiously looked for. What is to be the fate of these?

If it be asked why the purely Irish work of such a man should not have been more abundant, suffice it to answer that his official duties in the Public Record office, of which he was latterly chief clerk, necessarily absorbed much of his time; and for the rest, that in some most important matters he was, to their great detriment and the public loss, purposely set aside, and the rich store of his knowledge left unutilised.

Hennessy was born at Castle-Gregory, some twelve miles west of Tralee, and in early life visited the United States. Upon his return to Ireland he became a journalist, and was appointed to the Public Record office (Dublin) in 1868. He enjoyed the friendship of the Cavaliere Nigra, himself an accomplished Celticist, and was his guest at the Italian embassy in Paris. In 1885 he was visited by a family bereavement almost tragic in its sadness; and this, again, was before long followed by a second blow, the effect upon his sensitive and affectionate nature being such that he never fairly rallied, and now is gone.

Standish H. O'Grady.

MAGAZINES AND REVIEWS.

In the current number of *Mind*, Mr. Stout carries on his exposition of Herbart's psychology by comparing it with that of the English psychologists and of Beneke. He thinks, and no doubt with reason, that Herbart has attempted, by help of his hypothetical system of psychical forces and interactions, a more thorough-going explanation of mental phenomena than our associational psychologists. Yet perhaps he hardly does justice to the latter when he places them on the side of the faculty-psychologists, against whom Herbart directed his vigorous assault. So far as they were associationists—*i.e.*, called in the aid of the laws of association—they directly struck at the roots of the idea of separate faculties and powers, reducing not only all the various intellectual phenomena, but cognitions, feelings, and volitions together, to the results of similar processes. Yet, with all his admiration for Herbart's system, Mr. Stout thinks Beneke's psychological hypotheses supply the modern psychologist with a better starting-point. The treatment of Beneke, however, is far too cursory, and the reader is unable to appreciate the essayist's reasons for giving him this pre-

Digitized by Google

ference. Prof. Seth contributes an interesting criticism of the evolutionist's ethical doctrine under the somewhat misleading title, "The Evolution of Morality." This may be profitably compared with the similar objections proffered in an earlier number of the journal from a very different point of view, by Prof. Sidgwick. Mr. Leslie Stephen cannot but be fresh and quaint (in the old and better sense of the term), whatever subject his pen chooses; and his commencement of a study on "Some Kinds of Necessary Truth," is ingeniously thought out and happily expressed. Of course Mr. Stephen agrees in the main with Mill, that all necessity is dependent or hypothetical; but he works out this idea in his own way, diverging now and again very plainly from the path of his predecessor, and in some directions, notably in his analysis of the idea of "Time," striking out a new line of enquiry. Readers of *Mind* will anticipate with curiosity the further developments of Mr. Stephen's thesis. The remaining article of the number is an elaborate examination, by Prof. Adamson, of Prof. A. Riehl's work on philosophical criticism. The essayist regards this as one of the most important products of the recent Kantian movement in Germany; and his exposition and criticism certainly tend to support this estimate. Of the lesser matter it may suffice to say that Dr. Bain carries on vigorously his defence of the position that feelings may be indifferent as well as pleasurable and painful; and that Prof. W. James and Mr. Ward have something pertinent to say, as against a recent criticism of the editor, in justification of their views on "The Psychological Theory of Extension."

THE current number of the *Magazin für die Litteratur des In- und Auslandes* contains a masterly German version, by Mrs. Freiligrath-Kroeker, of Matthew Arnold's sympathetic poem, "Heine's Grave."

NOTES FROM VEVEY.

Montreux: Jan. 10, 1889.

DURING a month's hunt after health (December 1, 1888—January 2, 1889) in this bright little town, whose modern growth is exceptionally great, I noticed, like all tourists, two inscriptions, public and modern, and was informed by my hospitable Veveysan friends that both are based upon erroneous "factology."

No. 1, placed behind the Halle aux Blés, to the north of the Place du Marché, runs:

"Ici
Jean Jacques Rousseau logea en 1732."

A large gilt key, horizontally swung, denotes that the building was of old *La Clef*, the hostelry noticed pleasantly in his *Confessions* by the Father of Sentimentality; and the eating-house, which in these high and mighty times looks humble enough, bears the name of Café-Restaurant Bollinger. The only interesting part of the epigraph is that 1732 remains uncorrected, while known to all as a mistake for 1730. Rousseau, writing his *Confessions* after an interval of some twenty years, forgot that his trip to Vevey took place when Mdme. de Warens and M. d'Aubonne were staying in Paris on business. Let us hope that M. Albert de Montet, of whom more anon, will publish a new edition of the *Nouvelle Heloise*, with notes explaining the recondite allusions, and will prefix thereto his "Jeunesse de Mdme. de Warens," now printing in the *Revue Internationale* of Rome (vol. xix., part 6, September 1888).

No. 2, which has more interest for Englishmen, runs thus:

"Ici habitait | Edmund Ludlow | Lieut.-Général, Membre du Parlement Anglais, | Défenseur des Libertés de son Pays. | L'illustre Proscrit avait fait placer | cette Inscription sur la Porte de sa Demeure, | Omne solum forti patria quia patris. | Energiquement protégé par les Autorités | et accueilli avec sympathie par les habitants | de Vevey, Edmund Ludlow a vécu | dans cette ville de 1642 à 1693, | année de sa mort."

The inscription has been placed at the south-eastern and external corner of the terrace-wall separating the Hotel du Lac from the lake-road. But, according to all local authorities, the topology is mistaken, and the "Illustrious Proscribed" lived, together with his friends in exile, not at the east end, but to the west and outside the town-walls. M. Albert de Montet of Vevey, ex-officer of Austrian cavalry, diligent collector of local legends, and author of the *Dictionnaire Biographie des Genevois et des Vaudois* (two thick octavos, Lausanne, Bridel), and of *Extraits des Documents relatifs à l'Histoire de Vevey jusqu'à 1565* (Benda, Vevey, 1848), has kindly furnished me with the following notes:

"Les Mémoires de Ludlow en 3 vol. in 12, Amsterdam, 1707, contiennent les mentions suivantes sur la maison où il logea pendant son séjour à Vevey.

"Vol. iii., p 127: 'Après nous être logés dans la maison de M. Dubois, un des membres du Conseil du lieu.'

"*Id.*, p. 148: 'M. Dubois notre hôte sortit de bonne heure pour aller à l'église, et il aperçut en chemin qu'il y avoit une barque au bord du lac.'

"*Id.*, même page: 'Un certain M. Binet dit à M. Dubois que deux hommes qu'il soupçonnoit de quelques mauvais desseins s'étoient postés auprès de sa maison, et qu'on en avait vu trois ou quatre de plus dans le marché.'

"*Id.*, p. 152: Outre que le gouvernement m'avait permis de sonner le tocsin en cas de nécessité, et que je le pouvoir faire sans sortir de ma chambre parceque nous étions logés tout joignant une des portes de la ville.

"Une tradition qui s'est établie vers la fin du siècle passé, et qui a été favorisée par une inscription placée sur la maison de M. Grenier (située sur une partie de l'emplacement de l'Hôtel du Lac actuel), rapporte que c'est dans cette maison que Ludlow a vécu. A la morte du pasteur Dubois, survenue il y a peu d'années, ce Monsieur, qui se croyait un descendant du conseiller Dubois, mentionné dans les Mémoires, légua à la ville un capital sous condition spéciale d'ériger en cet endroit une plaque commémorative. C'est ce qui fut aussi exécuté.

"Si l'on lit attentivement les Mémoires de Ludlow on y trouve des données qui jettent déjà du doute sur l'emplacement, indiqué par la tradition. Ludlow parle à plusieurs reprises de cette maison comme ayant été une auberge. Et bien cette auberge était placée de sorte qu'en allant de là à l'église on passait par le port (où les barques étrangères pouvaient seules aborder). Elle était ainsi non loin de la place du Marché, puisque des gens postés sur cette place pouvaient faire le guet pour ceux qui entouraient la maison, enfin elle se trouvait près d'une porte dans laquelle existait une cloche où l'on pouvait sonner l'alarme. Toutes ces conditions ne sont point remplies par la maison Grenier. De là on ne pouvait point aller à l'église en passant par le port (place de l'ancien port actual) sans faire un grand détour, elle était loin de la place du Marché et se trouvait bien à côté de la porte du bourg Bottonens, mais cette porte n'avait pas de cloche. Les manuaux du Conseil de la ville de Vevey et les régistres du Consistoire parlent plusieurs fois de Ludlow et de ses compagnons dans les derniers temps de leur séjour à Vevey (en 1689 et 1691). On y voit qu'à cette époque encore (comme du reste depuis leur arrivée dans le pays) ils habitaient chez Jacques Dubois, membre du Conseil des Cent-vingts de la ville. Une mention porte même que la maison de ce Dubois était l'hôtel de la Balance. Le plan cadastral de la ville de Vevey place cet hôtel au dehors de la porte du Sauveur, touchant à la tour qui surmontait la porte. Cette maison, la seule qui appartint à un Dubois à l'époque où fut levé le plan, époque contemporaine du séjour de Ludlow à Vevey, répond en tous points à la situation qu'il lui donne. Pour se rendre à l'église (à Ste. Claire comme à St. Martin) le chemin le plus direct était bien de passer par le port. Elle se trouvait auprès de la place du Marché. Dans la porte du Sauveur se trouvait véritablement une cloche, destinée à sonner l'ouverture du marché et qui était en même temps la cloche officielle du tocsin pour la partie occidentale de la ville. (Celle de la partie orientale était à la Tour St. Jean, à l'hôtel de ville, donc bien éloignée de la maison Grenier.) Il n'y a aucune preuve dans les actes en faveur de la maison Grenier; il y en a en revanche de concluantes en faveur de la maison du Sauveur."

The place pointed out to me is No. 49 Rue de Lac, occupied by the Imprimerie Loertscher et Fils, which still prints the famous *Métsager Boiteux*, an almanac dating from 1707. The alley setting off to the north, and called "Ruelle des Anciens Fossés de la Ville," shows that the exiles were then lodged outside the town, and consequently a strict guard was necessary for their safety. Lausanne failing in this matter, Mr. John Lisle, M.P., another of the gallant band, was there shot in the back by a hired assassin.

Ludlow returned to England in 1689, before the accession of Charles II., risked his life for nearly two years, and finally hurried back to Vevey in 1690, or three years before his death (*aet.* seventy-two). Possibly he may then have lodged at the place noted by the epigraph. There is a local legend known to all—even to the guide-books—that early in the present century an English couple introduced themselves as Mr. and Mrs. Ludlow to M. Grenier, who had bought the house from M. Cottier, the successor of M. Dubois. While the lady remained pleasantly chatting with the ancient proprietor, the gentleman slipped out of the room and carried off the wooden tablet bearing the epigraph, "Omne solum," &c.

Vevey behaved with characteristic hospitality and the true Switzer's love of liberty in protecting the "regicides" against the bravos of Savoy, paid with English gold by the Merry (and most unchivalrous) Monarch. She should take more pride in this one heroic action than in having harboured a host of royalties and quasi-royalties, the Empress Maria Federowna, the kings of Bavaria, Wurtemburg, and the Netherlands, Princes Alexander and George of Prussia, Princess de Lignitz, the Grand-duchess Anne of Russia, and many a minor star. She also, at the instance of Mistress Ludlow, gave to her guests their last homes under her most honoured roof—the church of St. Martin (built in A.D. 1498). The five rest side by side in the northern aisle—Andrew Broughton and John Phelps (clerks to the court who read out the death-sentence), Gawler, Love, and Ludlow. The latter has a memorial-tablet on the northern wall over his grave, surmounted by a most un-Puritan crest—a lion rampant—and (therein) he "winged his way to the eternal mansions." Phelps has also a brand-new slab of black marble facing eastwards, set up by two Anglo-American kinsmen of the same name. Broughton, who "slept in the Lord," was placed under the aisle-pavement, and all the other grave-stones are hidden by a boarding which we hope to see removed as soon as the fine old pile, whose massive masonry is splitting, and whose western portal and huge belfry with turretted angles are palpably sloping northwards, shall have found certain funds for repairs now necessary. The view from the church-terrace is inimitable. Here no art can equal nature, and it is a sufficient illustration of Mendelsohn's dictum (Lady Wallace, p. 96)—"The Swiss can paint no beautiful scenery, precisely because they have it the whole day before their eyes."

R. F. BURTON.

P.S.—In reading Ludlow's memoirs we must beware of his truly British cacography—*e.g.*, *Baron de Chatteler* (for Châtelard, vol. iii., p. 153); *Tunno* (for Thonon, in Chablais, p. 157); and *Ouches*, (for Ouchy, port of Lausanne, p. 158). And, while etymologising, I

Digitized by Google

may remark that Vevey (or Vevay, as formerly written) is not the Latin Vibiscum, but Bivium (*i.e.*, bis viae vicus), the fork-village, because the Roman military highway which ran over the Simplon (not the St. Bernard) here bifurcated, the southern branch hugging Lake Leman, and the northern running over the uplands to Meudon. A strip of the latter is still to be seen, I am assured, on the Mont de Chardonne above the picturesque village of that name. R. F. B.

CORRESPONDENCE.

DANTE'S REFERENCES TO ALEXANDER THE GREAT.

Oxford: Jan. 17, 1889.

There are two references by Dante to the history of Alexander the Great, the source of which it is difficult to trace. Some of your readers may be interested in such results as I have been able, after much search, to arrive at.

The first passage is *Inf.* xiv. 31-36.

"Quali Alessandro in quelle parti calde
D'India vide sopra lo suo stuolo
Fiamme cadere infino a terra salde;
Perch' ei provvide a scalpitar lo suolo
Con le sue schiere, acciochè il vapore
Me' si stingeva mentre ch' era solo."

Two sources are suggested for this. Longfellow refers to one of the metrical romances of Alexander current in the Middle Ages in several languages. Among the old commentators, Boccaccio says that he cannot find the origin of the story, though he has looked for it "not once, but often," in Quintus Curtius, "William of England" (who was this?) and others. Buti assigns it to the "libro de' fatti d'Alessandro," whatever this may be. Benvenuto da Imola says that neither Quintus Curtius, nor Justin, nor "Gallicus ille qui describit Alexandreidem metrice" (who was this, again?), nor many other writers about Alexander in prose or verse, have mentioned this; but that Dante is not dreaming after all, for Alexander himself describes this incident in a letter to Aristotle, which he proceeds to quote (inaccurately, however, as we shall see) by almost repeating the words of the text here. He also refers, as does Castelvetro later, to Albertus Magnus *De Meteoris* for an explanation of the phenomenon. (Albertus, however, does not refer definitely to this circumstance; but only to the cause of meteors and fiery exhalations generally.)

This spurious epistle of Alexander is entitled "De Mirabilibus Indiae," &c., and is printed in the *Secreta Secretorum Aristotelis* (Paris, 1520). If, however, Dante referred to this, he was probably quoting from memory, and it is curious to see how he has mixed up the story as there given. (It occurs on fol. cix.) Large fires had been made in the camp because of the cold, when a fierce wind arose, which blew down the tents, which thus became ignited. This conflagration was immediately followed by a heavy fall of snow.

"Quarum congregatione metuens ne castra cumularentur *calcare militem jubebam ea primum ut injuria pedum tabesceret.* Prodebantur et ignes aliquatenus, qui nive poene erant extincti."

Next followed a very heavy rain, and after this there came over them an exceedingly black cloud, and then

"Visae sunt *nubes ardentes de coelo* tanquam faces decidere, ut incendio earum totus campus arderet . . . jussique milites *scissas vestes opponere ignibus.*

It seems likely enough then, especially remembering the assertion of Benvenuto (who is followed in this by Landino), that we have here the origin of Dante's allusion in this first passage, though, if so, his reminiscence of it is a good deal confused.

The second passage is more difficult of explanation, and Dr. Witte, in fact, gives it up, supposing "Dantem fabulis . . . nostratibus incogntis usum esse." It occurs in *De Mon.*, ii. 9:

"Alexander rex Macedo maxime omnium ad palmam monarchiae propinquans, dum per legatos ad deditionem Romanos praemoneret, apud Aegyptum, ante Romanorum responsionem, *ut Livius narrat*, in medio quasi cursu collapsus est."

In the first place, Dante is, of course, wrong in attributing this to Livy. He makes a somewhat similar mistake in book ii., chap. 5, when he assigns to Livy what he apparently derived from Orosius, and probably also again in book ii., chap. 4 (See *Orosius*, iv. 17). In the present case I have no doubt he is referring (either from very inaccurate recollection, or possibly having access to a different version of the legend) to a story which is found with minor variations in several authors, the substance of which is as follows: That Alexander, at Babylon, in the height of his glory received an embassy recognising his supremacy from all the chief nations of the west, the Romans being sometimes mentioned among them and sometimes omitted; immediately after which he died suddenly from poison administered by one of his attendants. Those who narrate the story almost always proceed at once to moralise on the vanity of greatness, the nemesis attending on pride, &c. This is found in (1) Orosius, iii. 20, and is referred to again in vi. 21. He enumerates Spain, Africa, Gaul, Sicily, Sardinia, and "plurimae praeterea partes Italiae," but does not mention the Romans. (2) Arrian (vii. 15) says that the Bruttii, Lucani, Tusci, and others sent, and observes that Aristus and others add the Romans, but that he does not believe it, because no Roman writer mentions it, and some only of those who have written about Alexander do so. (3) Diodorus Siculus (xvii. 113) enumerates a great many nations but omits the Romans. (4) Clitarchus (*Commentaria*) is cited by Pliny, *Nat. Hist.* iii. c. 5, § 57, as stating that the Romans sent an embassy to Alexander. (5) Finally, I have found the incident described at great length in a mediaeval poem, entitled *Alexandris, sive Gesta Alexandri Magni* (in ten books), *Auctore Gualtero de Castellione* (printed at Paris, 1659), which has the colophon—"Scriptus fuit liber iste Anno Domini MCCLXXVIII." Thus, it would rank among "recent literature" in Dante's time. In book x. we have a pompous description of the discussion in an infernal conclave of the tremendous achievements and still more daring projects of Alexander, and the means by which they could be put a stop to. At last "Proditio" undertakes to remove him, and inspires the traitor Antipater to poison him. At the very moment of Antipater's arrival at Babylon for this purpose, there arrived also an embassy from all the nations of the West, "cursum flexura tyranni" by gifts and supplication:

"Muneribus toto peregrina cucurrit ab Orbe
Ad mare descendens plenis Legatio velis"
(p. 215).

Then the nations are enumerated who joined in this mission, Carthage, all Africa, Spain, Gaul, the nations of the Rhine, and those of Italy (Italiae gentes), with special mention of Sicily (Trinacria). After this the gifts sent by each nation separately are described. So far, there is, it is true, no mention of Rome, but in a pompous and vain-glorious oration addressed by Alexander to the embassy, after receiving their presents, he refers to Rome having formerly sent him by Aemilius, a royal diadem,

Digitized by Google

and addressed him as king, but as having afterwards repudiated this action; and he proceeds:

"Nunc igitur nostris ne pars vacet ulla triumphis
Neve meis titulis desit perfectio, Romam
In primis delere placet. Dedit hoc ubi, solvit
Concilium," &c.

Then the writer proceeds to relate how, immediately after this, amid fearful signs and portents, "in heaven above and in the earth beneath," "that very night his soul was required of him." He drinks the poisoned cup,

"Et Pater et Dominus cadit et perit inter amicos.'

Not, however, before he has addressed to them a long, moralising harangue, in the course of which he mourns that he is thus struck down at such a supreme moment:

"Cumque per Alpinas hyemes, turbamque latronum
Romuleas arces et avarae moenia Romae
Cernere solliciti," &c.

It will be observed that the general drift and the moral significance of the story in Dante is precisely the same as in the other writers quoted. The differences between him and them are in details only, which do not affect its general purpose, and they might well occur in a quotation from memory. (1) Dante places the scene in Egypt instead of Babylon; but he quotes Lucan *Phars.* viii. 692 in the passage in question in the *De Mon.* 4 for this feature of the narrative, and he would also have found the same in *Phars.* x. 20 &c. (2) In Dante's version the embassy spoken of is *to* and not *from* the Romans; unless perhaps Dante may have supposed the "praemonitio ad deditionem" to have been sent to Rome in connexion with the threat of its destruction uttered at the council above described, the answer to which could, of course, never have been received by Alexander. (3) It seems doubtful whether the Romans were generally represented as taking part in the embassy at all; but we have seen that at least one version of the story included them, and another author recognised the existence, though criticising the probability, of such a tradition.

If any of your readers should be able to quote or suggest any authorities coming still nearer to Dante's statement, it would be very interesting to students of Dante to hear of them.

E. MOORE.

THE CODEX AMIATINUS.

Stanbrook, Worcester: Jan. 21, 1889.

The idea that the preliminary quire of the Codex Amiatinus is, in the main, a copy from the Old Latin pandect at Jarrow is so intimately involved in Prof. Hort's theory that he will, I am sure, forgive me if, with profound deference to his learning and judgment, I venture to disagree with him in that particular.

The fact that the leaves of the quire differ, not only in texture but in superficial dimension, from the rest of the volume, supplies a strong presumption that the parchment was not prepared at Jarrow; and the fact that the Tabernacle picture differs in some very important details from that which Beda knew at Jarrow leaves us free to believe that all the artistic portions of the quire may have been executed in Italy.

The Commendatore de Rossi, to whose undeserved kindness I have long been indebted for a copy of his monograph on the codex, after describing the differences between the Cassiodorian altar of holocaust and the altar of holocaust in Amiatinus, seems to regard those differences as accidental and unimportant (p. 21). He seems to be unaware, and so do our two Cambridge professors, that they result from divergent interpretations of the text of Exodus xxvii., interpretations which interested and puzzled the mediaeval critics. Petrus Comestor (Migne, *S.L.* cxcviii. 1180), in his *Historia Scholastica*, describes four distinct accounts of the altar of holocaust—which may be roughly named the conventional, the Jewish, the Josephian, and the Cassiodorian—and then enters upon further questions, with which it would be impossible to burden the pages of the ACADEMY. And Adam, the Praemonstratensian (*ib.* 665), is only less diffuse and punctilious than Petrus Comestor. Both authors make free use of Beda's *De Tabernaculo*. My own belief is that Ceolfrid procured the empurpled and painted quaternion in Italy, and that the Tabernacle picture in it is in no sort of way a reproduction of the picture mentioned by Beda, but that, on the contrary, it had been painted in illustration of a distinctly non-Cassiodorian interpretation of the crucial passage in Exodus xxvii.

If this belief should be shared by others, a further question may fairly be raised. Regard being had to the risk of painting on parchment, whose impermeability by ink had not been practically tested, I would hazard the suggestion that the Old Latin list was written on fol. 7, perhaps by Ceolfrid himself, before the pentateuchal circles were executed on the other side of the leaf; and, further, that the other biblical lists were written before their accompanying symbols and other decorations were laid in by the artist, written, therefore, out of England. I may add that, even should it be proved that the present fol. 4 and fol. 7 were at one time component halves of a sheet, they may well have been separated at a very early moment in order to facilitate the empurpling of the former.

The dedicatory inscription was, no doubt, written in England. Its first two letters are marked by peculiarities that have escaped the practised eye of De Rossi. One is that they are on a slightly larger scale than the rest of the inscription, so much so that the widespread "culmen" and "colmen" are put out of court, and we are thrown back on the shorter "corpus." The other and more important peculiarity is that for rectitude of pose, symmetry of form, and clearness of outline they differ, if slightly yet essentially, from the other extant letters of the inscription, and thus lend countenance to my surmise that the codex as a whole was written in an adapted hand, so as to be in conformity with the Old Latin pandect which Ceolfrid had brought from Rome.

As this may be—I say not must be—my last communication on the subject, let me add evidence as to the meaning of "bibliotheca" and "pandectes" which I have found since the appearance of the Bishop of Salisbury's letter two years ago. It is taken from a ninth-century life of Abbot Ansegis, whose relation to Fontenelle and Saint-Germer was analogous to Ceolfrid's relation to his own Northumbrian houses. Nothing could be more to the point: "In hoc igitur Fontanellensi coenobio haec munera contulit . . . de libris autem hanc dedit copiam, bibliothecam optimam continentem uetus et nouum testamentum cum praefationibus ac initiis librorum aureis litteris decoratis. . . . Domum uero qua librorum copia conseruaretur . . . ante refectorium collocauit."—Migne, *S. L.* cv. 738 D.

"In Flaviacenci quoque coenobio . . . pandectem a beato Hieronymo ex Hebraeo uel Graeco eloquio translatum."—*ib.* 741 C.

A complete Bible in one volume was "pandectes"; an Old Testament in one or more volumes, a New Testament in one or more volumes, or a combination of the two, was "bibliotheca"; a library, as distinguished from a bookcase, was not "bibliotheca," but "copia librorum." All three expressions, it may be remembered, occur in Beda's account of Ceolfrid.

MARTIN RULE.

THE CLIFF OF THE DEAD AMONG TEUTONS.

Nottingham: January 19, 1889.

Prof. Cook's letter neither strengthens my conjectures nor proves them to be groundless. The phonological examples that he gives were familiar to me when I wrote my letter, and I then admitted most of the points upon which he insists. This being so, it would not be necessary for me to ask for any space for a reply, were it not that Prof. Cook has charged me with making assertions that are not to be found in my letter.

1. This argument is forestalled by my admission that "there are several passages where it is impossible to thus explain *næs*"—that is, as a form of the suffix *nes*. Leo has, as I stated, suggested that the *under nēolum niðer næsse* of "Elene," 832, should be read as *under nēolre niðernesse*. Like me, he did not think it necessary to lay stress upon the change of the case-ending of the adjective; for, granting the possibility of the scribe being misled by the division of words in his copy, it is not very rash to assume that he would alter the case-ending to suit his version. Such alterations are common enough in classical MSS., and they are, I believe, not altogether unknown in O.E.

2. That the "Judith" passage presents difficulties is proved by the fact that Prof. Cook has to bring an illustration from the Yosemite Valley to attempt to explain it. I can see no reason why we should not assume a scribal error in such MSS. as the poetical ones, which are notoriously unreliable for phonology and dialectology. Mr. Sweet corrects the *næs* of this very passage to *næss*, and the levelling of *e* and *æ* is frequent in MSS. of about this period.

3. What I said was that "Sievers's etymology of *nēol* does not account for the meaning 'abysmal,' 'dark.'" Prof. Cook calls this "lightly rejecting authorities of the first order, like Sweet and Sievers"! Yet he himself is compelled to assume that *nēol* took up the meaning "dark" through its frequent application to Hell. On his own showing, therefore, my assertion is correct.

4. My quotation of *hwēowel* for *hwēol*, and my query whether the *w* of *neowel* was a similar insertion, anticipated the arguments of this section. Prof. Cook cannot deny that *w* in the combinations *eowu, eowe*, had in some cases a distinct consonantal value. The conclusion of this section is quite superfluous; for I never assumed a loss of medial *f* in O.E., and I most certainly never attempted to prove such loss by citing the O.N. *njōl*.

5. As I never derived *nēol* from *nifol*, it is quite unnecessary to assume a borrowing from O.N. *njōl*. What I suggested was that two independent words, *neowol* and *nifol*, had become confused in meaning through their resemblance in form. This is a very different thing from deriving one from the other.

Recapitulation: (1) I did not reason from the single instance of "Judith," 113; (2) I did not reject, lightly or otherwise, authorities like Sweet and Sievers; (3) would Prof. Cook maintain that the poetical MSS. are never corrupt? As for Prof. Cook's charge (4) of "confounding the phonetic phenomena of O.N. with the quite distinct phonetic phenomena of O.E.," I can only say that this is news to me. I have read through my letter carefully to find any sentence that could justify such a charge. The only possible foundation for this charge is the remark that "the O.N. sb. *nifl* . . . answers in form to this O.E. *nifol*, and the 'mysterious' O.N. *njōl* is . . . a parallel formation." It will be evident to anyone who reads the context with ordinary care that the correspondence in form meant is the common derivation of these three words from a compound of Aryan *nébh-os* with some form, or forms, of the suffix

Digitized by Google

lo. Prof. Cook might just as fairly accuse me of confounding Old Irish phonology with Old English because I cited the Old Irish *nél* from *neblo* in the preceding sentence.

Is not Prof. Cook himself guilty of a little rashness when he translates the essentially masculine "nicor" by "mermaid" or "nixy," neither of which terms suggests to us anything so awe-inspiring as a "nicor"?

W. H. Stevenson.

LEGENDS OF THE OLDEST ANIMALS.

London: Jan. 15, 1889.

Since sending the example from the inscription on the floor at Westminster Abbey, I have found another in the "Mabinogion," not noticed, I think, by any of your correspondents, which bears the most striking resemblance to the early Buddhist version quoted in the Academy.

The story—"Kilhwch and Olwen"—which Lady Guest considers of British origin, and without parallels in Middle-Age romance, would seem to be based on a "Descent story," or a quest like Jason's, and the structure of the plot is "cumulative." Some of the passages must rejoice the Solar school; as where the betrothed of a hero is carried off by another, and they two are fated to fight for her every 1st of May until the day of doom, when the conqueror shall have the maiden, who until that time waits in her father's house.

To obtain certain information, one who knows the language of birds and beasts goes to the ousel of Cilgwri to enquire, and the bird answers:

"When I first came here there was a smith's anvil in this place, and I was then a young bird; and from that time no work has been done upon it, save the pecking of my beak every evening; and now there is not so much as the size of a nut remaining thereof. . . . There is a race of animals who were formed before me, and I will be your guide to them."

So they go to the stag of Redynvre, who says:

"When I first came here there was a plain all around me, without any trees save one oak sapling, which grew up to be an oak with a hundred branches. And that oak has since perished, so that now nothing remains of it but the withered stump. . . . Nevertheless there is an animal that was formed before I was."

So they go to the owl of Cwm Cawlwyd, who says:

"When first I came hither the wide valley you see was a wooded glen. And a race of men came and rooted it up. And there grew there a second wood, and this wood is the third. . . . Nevertheless, I will be the guide until you come to the place where is the *Oldest Animal* in this world, and the one that has travelled most—the eagle of Gwern Abwy."

The eagle said:

"I have been here for a great space of time, and when I first came hither there was a rock here, from the top of which I pecked at the stars every evening; and now it is not so much as a span high. From that day to this I have been here."

This must be own cousin to the Garuda, the Roc, and other worldly birds.

The legend has been quoted by an old author given in Lady Guest's notes.

W. R. Lethaby.

THE FIRST RUSSIAN IN ENGLAND.

London: Jan. 12, 1889.

Mr. Jacobs has not quoted Stow, or his modern editor, Mr. Thoms, correctly. Stow prints the epitaph thus:

חן מצב חר משח בן חרבר יצחק

Mr. Thoms thus:

זח מצב חרי משח די ה־בן יצחק

A fully revised text would be very desirable, if we could supplement Stow from the City records. But, while the initial word זח *neh* (Thoms) is the demi-pronoun "this[is]," or חן *hean* (Stow), means "behold"—the memorial of the Rabbi Moses or Meshach, son of [חרבר, which Stow (first edition, 1598, p. 32) renders honourable, seems to mean chief priest, the German Ober Rabbiner, our Haham or Chacham bashi, the chief rabbi] Isaac.

I believe there is a question as to when this designation, office, or title was first assumed in England.

A. Hall.

BASQUE NAMES IN NOVA SCOTIA.

Malvern: Jan. 1, 1889.

I notice in Mr. George W. Cable's book *Bonaventure*, the name "Iberia" mentioned among the place-names brought by the Acadians to their new home in Louisiana. Can anyone account for this, and tell me whether there are any other names in Louisiana which hint, however vaguely, at Basque settlements in Nova Scotia, &c.? I know of several Biscayan names on the Newfoundland coast and along the St. Lawrence; but this "Iberia" seems to fall into a different category. Have the Basques in Europe, at any period, used the name "Iberia" for their country? I fancy not.

E. E. Knight.

APPOINTMENTS FOR NEXT WEEK.

Monday, Jan. 28, 4 p.m. Royal Academy: Demonstration, "The Upper Limb," by Prof. J. Marshall.
5 p.m. London Institution: "Modern Wit," by Mr. Armytage Bakewell.
8 p.m. Royal Academy: "Roman Architecture," I., by Mr. G. Aitchison.
8 p.m. Society of Arts: Cantor Lecture, "Egyptian Tapestry," II., by Mr. Alan S. Cole.
8 p.m. Aristotelian: "The Empiricist Position," by Dr. A. Bain.
8.30 p.m. Geographical: "The Gran Chaco (Argentine Republic) and its Rivers," by Capt. John Page, Argentine Navy.

Tuesday, Jan. 29, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," II., by Prof. G. J. Romanes.
8 p.m. Society of Arts: "Gold and Silver Mining in Colorado," by Mr. Thomas W. Goad.
8 p.m. Civil Engineers: "The Steep Incline on the Puerto Cabello and Valencia Railway, Venezuela," by Mr. J. Carruthers; "Cost of Working the Harts Mountain Railway," by Mr. R. Wilson; "Further Information on the Working of the Fell System on the Rimutaka Incline, New Zealand," by Mr. J. P. Maxwell.

Wednesday, Jan. 30, 4 p.m. Royal Academy: Demonstration, "The Neck and Head," by Prof. J. Marshall.
8 p.m. Society of Arts: "The Construction of Photographic Lenses," by Mr. Conrad Beck.

Thursday, Jan. 31, 3 p.m. Royal Institution: "The Metamorphoses of Minerals," II., by Prof. J. W. Judd.
6 p.m. London Institution: "The Times of the Twelve Apostles," by Canon Benham.
8 p.m. Royal Academy: "Roman Architecture," II., by Mr. G. Aitchison.
8.30 p.m. Antiquaries.

Friday, Feb. 1, 2.30 p.m. British Museum: "The Hittites and their Inscriptions," III., by Mr. T. Tyler.
4 p.m. Royal Academy: Demonstration, "The Figure in Action," by Prof. J. Marshall.
7.30 p.m. Geologists' Association: Annual Meeting.
8 p.m. Philological: "The Names *Jah* and *Jahveh*," by Mr. T. G. Pinches.
9 p.m. Royal Institution: "The Life-History of a Marine Food-Fish," by Prof. W. C. McIntosh.

Saturday, Feb. 2, 3 p.m. Royal Institution: "The Great Composers and their Works," with Illustrations on the Pianoforte, II., by Prof. Ernst Pauer.

SCIENCE.

SOME RECENT FOREIGN WORKS ON OLD TESTAMENT CRITICISM.

Geschichte der Hebräer. Von R. Kittel. 1. Halbband. (Gotha.)

La Religion dans la Bible. Par C. G. Chavannes. Vol. 1. (Leide.)

Die Ueberlieferung. Von Ernest von Bunsen. (Leipzig.)

Ewald's great History of Israel is now entirely obsolete; but its place is being rapidly supplied by a number of excellent productions in course of publication. Besides the charming *causerie* of M. Renan, we have the profound and original work of Bernhard Stade, which, although comparatively unknown in England, received a warm welcome in America on its first appearance. Both histories are partly based on the results attained by the critical labours of Kuenen, Wellhausen, and others of the same school, as is also the masterly sketch included in that wonderful monument of condensed research, Ed. Meyer's *Geschichte des Alterthums*. Finally Herr Kittel sends us the first instalment of a handbook on the same subject, which, so far as it goes, is less an independent history of Israel than a running commentary and criticism on the views of some of the writers just mentioned. It is, indeed, a principal object of the series to which he contributes to make students acquainted with what is thought by all the best authorities on the various branches of ancient history, and to set them on the track of fuller information than can be comprised within the limits of a handbook.

In this instance the author seems to have done his work extremely well. So far he only carries his story down to the death of Joshua; but, as a necessary preliminary to this part, and indeed to the whole of Hebrew history, his first instalment includes a critical examination of the Hexateuch—a title now substituted with great advantage for the old and misleading denomination of the Pentateuch and the Book of Joshua. Such an examination involves three distinct questions which, in the interest of sound criticism, should be carefully kept apart. We have to ask ourselves: (1) What are the sources of the Hexateuch; in other words, from what independent documents has it been compiled? (2) At what date were those documents composed? (3) What is their value as historical records? That the Hexateuch is in fact a compilation from older documents may now be assumed as admitted by all persons entitled to speak on the subject. A certain general agreement seems also to have been attained as regards the analysis itself. At any rate, Herr Kittel, whose leanings are rather on the conservative side, accepts as sufficiently well established the results reached by the school of Kuenen and Wellhausen. According to their view, the Hexateuch primarily resolves itself into four great constituents, respectively known as the works of the Jahvist, the Elohist, the Deuteronomist, and the Priestly Legislator. Each of these layers again subdivides itself into thinner laminae, as to whose exact lines of cleavage opinions still differ. On passing to question (2) we find less unanimity in the answers given, but still a great deal more than is imagined by outsiders. The Jahvistic and Elohistic narratives—generally called by scholars J. and E.—are assigned to the second half of the ninth century B.C.; and the legislative portion of Deuteronomy either to the reign of Josiah, when it was first promulgated, or to the period of idolatrous reaction under Manasseh. The latter date, which is that preferred by Herr Kittel, seems to have nothing in its favour but the wish to save Hilkiah and his friends from the charge

Digitized by Google

of a pious fraud. May we not observe in the existence of such a wish what M. Renan has well called the "lourde bonhomie" of the West? Deuteronomy was, on any theory consistent with the acceptance of its late origin, a forgery; that is, the work of one who, to win credit for his own composition, signed it with a name that was not his. According to our standard of veracity such an action is unquestionably wrong, nor would it now be excused by the best of motives. But if the Deuteronomist was justified by the very different standard of his own race and age, as well as by the exigencies of a unique religious crisis, in doing what would now rank him with Shapira, would he not also have been justified in arranging the stage-surprise of a long-lost roll suddenly discovered in a corner of the temple? The material improbability that Hilkiah's story was true is very great; the moral improbability that it was fictitious is very small. It is about the date of the third Hexateuchal stratum, the Priestly Code, with its introductory narrative and its appended account of the settlement of Canaan, that critics differ most widely; and here we find Herr Kittel taking sides, though not without hesitation, against the brilliant and powerful school who relegate its composition to the post-exilian period. His own view is that its oldest portion goes back to the time of Solomon, if not even earlier; while the second and most important stratum, including the organisation of the priesthood and of public worship, with the narrative sections thereto appertaining, are referred to the eighth century B.C. The code, as a whole, he considers to have been completed in all its essentials before the Captivity, although enlarged by subsequent additions during and after that period. For the priestly Thora there is not, any more than for Deuteronomy, the slightest question of a Mosaic origin; and the tabernacle, as described in Exodus, is treated as a pure fiction. Herr Kittel holds that the claims of the priesthood were at first only formulated as an ideal, and never came near being fulfilled while the monarchy lasted, if, indeed, they were made known to the public at all. Such a position seems hardly worth fighting for, and in my opinion it is wholly indefensible. I need not press the celebrated declaration of Jeremiah (vii. 22) that Jahve gave no commands relating to sacrifices in the wilderness. There is some force in Herr Kittel's reply that a literal interpretation of this passage would prove too much, for it would tell equally against the prophet's acquaintance with Deuteronomy and with the much more ancient prescriptions of Exodus xxiii.; although, supposing Jeremiah to have read Leviticus, the exaggeration of his rhetoric assumes almost incredible dimensions. But it is certain that the Deuteronomic code was, if not actually composed by the Jerusalem priesthood, at any rate published under their authority. Now, whatever Herr Kittel may say, Deuteronomy claims nothing more than a local superiority for the Jerusalem priests over the other Levites, and admits any of the latter who may be visiting the capital to the temporary privilege of offering sacrifices in the temple; although this, according to the priestly code, was an impiety for which they would have paid with their lives. It is by Ezechiel that the distinction between priests and other Levites is first drawn; and it is ordained by him as something quite new, the exclusion of the ordinary Levites from the highest sacerdotal functions not being explained as a disability attached to their inferior birth, but denounced as a penalty for their scandalous idolatry. Now, Ezechiel was a priest himself, and must have known if a professedly Mosaic code had existed embodying the very distinction that he was enforcing on other and less cogent grounds. Herr Kittel denies, indeed, that Ezechiel enounces his restriction as anything new; but for no better reason than that the prophet has already assumed it as existing in the restored temple. Of this I need only observe that a cause is already lost when it can only be defended by such a miserable quibble. Passing to the third question—Of what historical value are the documents worked up into the Hexateuch?—we find that our author, in accordance with his conservative leanings, attaches more value to the ancient traditions of Israel than is conceded to them by Stade and Meyer; though, perhaps, not more than by M. Renan, whose first volume seems to have appeared too late for him to use. He believes in the real existence of Abraham; and even in the case of those patriarchs whom he treats as mere eponymous heroes, ideal personifications of the tribes claiming to be descended from them, he tries to disengage a core of historical truth from the family legends in which they figure. Thus, he takes the story of Joseph to represent the adventures of a tribe bearing that name which migrated to Egypt in consequence of a quarrel with the other tribes of Israel, and afterwards induced them to join it in the new settlement, while room is still found for the personal Joseph of Genesis as the sheikh of this tribe. The sheikh could have had little, if anything, in common with our old friend; and, although it would be interesting to know on other grounds that a powerful Semitic chieftain became at some remote period prime minister of Egypt, some better reason for believing in the reality of such an occurrence should be offered than the evidence of a disjointed fairy tale. We need not follow the historian in his laborious efforts to disengage a nucleus of truth from the Hexateuchal narrative of the Exodus and the occupation of Canaan. They leave us with the impression that on these points nothing can be established of sufficient solidity to support any further inference; in other words, for the only purpose that makes history worth studying, history does not here exist. We can only know, what is after all the most important thing to know, that from some undated epoch the faith of Israel in divine righteousness was inspired and upborne through all ages by the story of his miraculous deliverance from oppression, and of the miraculous assistance that enabled him to become in turn the oppressor and despoiler of those who worshipped other gods.

Unlike Herr Kittel, M. Chavannes, a friend and disciple of Prof. Kuenen, accepts to the fullest extent those revolutionary results of Old Testament criticism which his teacher so powerfully advocates. Nevertheless, his present work seems to aim a a certain softening down of the antithesis between the Prophets and the Law on which attention was naturally enough concentrated in the early days of Graf's theory. M. Chavannes shows that the Prophets were far from discarding the outward forms of ritual and sacrifice, and that their conception of Jahve, however exalted and purified, never transcended the moral limitations of a national deity, while their conceptions of right and wrong remained equally narrowed by a belief in the necessity of temporal and material sanctions. On the other hand, the burdensome ceremonialism of the later Thora, however far it fell below the prophetic ideal, constituted a vast progress on the immoral idolatry before prevalent in Israel; just as, to quote the author's Protestant parallel, Roman Catholicism, though a descent from primitive Christianity, was an immense improvement on the Paganism that it superseded. M. Chavanne's work is to be completed by a volume on the religion of the New Testament, which, if it equals its predecessor, will be read with interest and instruction.

The book that is named last in the heading of this article takes a wider sweep than either of its companions. Herr Ernst von Bunsen's object is to show that the tradition of a common ancestry or of common experiences may be traced in the narratives of Genesis, the recollections of the primitive Arians, and the records of Babylon and Egypt. On any method the enterprise seems a rather hopeless one; and this author does not possess the most elementary qualifications for his self-appointed task, neither can any amount of undigested erudition and perverted ingenuity supply their place. In fact, Herr von Bunsen belongs to that exegetical school of which Philo-Judaeus, Mr. Gladstone (as a mythologist), Mr. Hine (the prophet of Anglo-Israelitism), and Mr. Donelly are the most distinguished ornaments. His main thesis is that the Semitic, or brown race, originated in a blending of the Japhetic, Arian, or white race, represented by the Medes, with the Hamitic, or black population of ancient Babylon, which, according to Berosus, they captured in the year 2458 B.C. The birth of Shem, "according to the clear indications of Genesis" (as interpreted by our author), falls in the same year—a convincing proof that the Hebrew annalist believed the Semitic race to have originated just at that time. Even did the coincidence exist, it would go for nothing, as the statement of Berosus is not accepted by serious historians; but it does not exist, the alleged date of Shem's birth being derived, not from the Biblical text, but from some most arbitrary chronological combinations, foisted on it by our cryptogrammatist. It need hardly be added that science gives no countenance whatever to the pretended hybrid origin of the Semitic race. As applied to explain the story of the Fall, the theory becomes simply grotesque. Adam, we are told, was a black man, and Eve a white woman, whom he tempted into a *mésalliance*. He is identified with the Serpent; and she with the forbidden fruit. This equivocal position does not prevent our common ancestor from doing duty elsewhere as the constellation Taurus, formerly the sign of the vernal equinox, in extreme antithesis to

Digitized by Google

the constellation Serpens. Our author has precession of the equinoxes on the brain, and employs it freely as a key to mythology wherever his Semitic craze proves inadequate to the occasion. Among other unexpected references, he finds it alluded to by the prophet Daniel, whom he supposes to have flourished in the year 552 B.C. One wonders what the late Baron Bunsen would have said to this. A few more gems of exegesis may be cited. The twelve sons of Jacob mean the twelve signs of the zodiac, Reuben standing for Aquarius in the blessing of Jacob —a presumption that the prophecy known under that name was composed by Ezechiel (p. 214). The latest canonical book composed in Hebrew is Jeremiah; therefore, the Hebrew original of Ecclesiasticus must have been written before 588 B.C. (p. 290); while Ecclesiastes dates from some time between 240 and 181 B.C. (p. 292). In what language does Herr von Bunsen suppose Ecclesiastes to have been written? Even such extravagances as these pale before the crowning disclosure that the LXX. transfer the foundation of Solomon's temple from 971 to 473 B.C. for the purpose of bringing it into connexion with the date of Buddha's death, which took place four years earlier (p. 322). We may here take leave of a work which, but for the great name inherited by its author, would not be entitled to a single line of notice.

ALFRED W. BENN.

SCIENCE NOTES.

AT a recent meeting of the Royal Society of Edinburgh, the Duke of Argyll read a paper on "Certain Bodies, apparently of Organic Origin, from the Quartzite Beds near Inverary." Careful examination of the quartzite of this locality has led to the detection of a number of brown elliptical markings which are regarded by certain palæontologists as representing the burrows of annelids, similar to the well-known worm-tubes in the Silurian quartzites of Sutherlandshire. The ovate form may result from the tubes, originally circular, having been cut obliquely, while in some cases the rock has been so crushed that the sections are drawn out into mere threads or otherwise distorted. Dr. A. Geikie differs from the Duke of Argyll, and is disposed to regard these enigmatical markings as of mineral origin, possibly representing iron pyrites or clay concretions, though it is not unlikely that the pyrites itself may have resulted from the reducing action of decomposing organic matter no longer recognisable.

THE Cumberland and Westmoreland Association for the Advancement of Literature and Science has just issued a new volume of *Transactions*. It contains a number of scientific papers of local interest, including a report on Pallas's sand grouse in the north-west of England, by Mr. H. A. Macpherson. The editor, Mr. J. G. Goodchild, contributes two papers—one on "The Physical History of Greystoke Park," the other on "The Old Lakes of Edenside." In the former, he gives an admirable survey of the successive geological changes that have swept over the district. The Siluro-Cambrian rocks, forming the base of the country, were uplifted and denuded so as to produce a fairly uniform plain, which, when submerged, formed a floor upon which the carboniferous rocks were built up. These in turn were upraised and denuded, as a pre-triassic plain, which formed part of a great continental area with inland lakes. At last submergence again occurred and Jurassic rocks were deposited; these were then raised as a third plain of pre-cretaceous age. After renewed submergence and the deposition of fresh strata, the land again emerged, perhaps during the Miocene period; and the final phase in the history of the country was its glaciation.

PHILOLOGY NOTES.

WE have received the first part of *Epigraphia Indica*, the new serial publication of the Archæological Survey of India, which is published at Calcutta by the superintendent of government printing, and may be obtained in this country through Messrs. Trübner or W. H. Allen & Co. It is edited by Dr. James Burgess, the director-general of the archæological survey, with the assistance of the provincial surveyors. As the name implies, the main object of this new periodical is to publish texts and translations of inscriptions, edited by competent scholars from photographs or squeezes, together with facsimiles on a reduced scale of the more important. But it is also intended to form a record of the general work of the survey, including prehistoric remains, treasure trove, anthropology, &c. The present part is limited to inscriptions in Sanskrit and Prakrit, of which seven are here given (with ample notes) by Prof. Bühler, of Vienna, and Prof. Kielhorn, of Göttingen—both formerly connected with Bombay. Perhaps the two most generally interesting are: (1) A set of eight copper plates from Southern India recording a grant by the Pallava King Śivaskandavarman. No date is given, nor is it otherwise possible to fix the period. But the language is Prakrit, though the religion of the king was Brahmanical, not Buddhist—which tends to corroborate the view (now everywhere gaining ground) that Prakrit was both the vernacular and the official language, and was only superseded gradually by Sanskrit, the modification of it amoug the educated class. (2) A fresh recension, by Prof. Bühler, from new materials, of what is known as Aśoka's twelfth rock-edict of the Shâhbâzgarhi series, recently discovered in the Panjab.

MEETINGS OF SOCIETIES.

ELIZABETHIAN SOCIETY.—(*Wednesday, Jan. 9*).

FREDERICK ROGERS, ESQ., vice-president, in the chair.—Mrs. S. A. Barnett read a paper on the "Educational Value of Art." After giving definitions of "education" and of "art," Mrs. Barnett remarked that to consider education only as a preparation for adult life is to fall into the same mistake as those religious folk do who consider religion only as a preparation for heaven. Religion is to teach one to live so as to turn earth into heaven. If, then, education is the drawing out of faculties already existent, and the putting in of tastes, interests, and aspirations that are not naturally inherent, the next step will be to see what value art has as a helpmate in the difficult task of education. Mr. William Morris says: "Art is the joy of the workman in his labour"; Mr. Walter Crane says: "Art is the result of that rapid sympathy between brain and fingers plus imagination"; Mr. Ruskin says that "art is nothing but a noble and expressive language." Rejecting and accepting parts of these definitions, Mrs. Barnett said that "art was perfect expression by sound, line, colour, and action, this definition embracing the art of music (sound), the art of sculpture or architecture (line), the art of painting (colour)." Art, said the lecturer, speaks to the mind through the eye and senses, and is capable of conveying truths and suggesting facts to learners of all ages. By pictures the imagination can be trained as well as the observation; and the Whitechapel denizen can be helped to conjure up rolling waves, wide-stretching plains, stately cathedrals, snow-capped mountains, deeds of daring, ideals of life, historic scenes, and poems of achievement and endurance. But more than this, art gives help in the difficult task of distinguishing between good and evil. "Ye shall be as gods," said the tempter, "knowing the difference between good and evil"—surely a more attractive bait than any apple! But pain-stricken, labour-worn man has got confused amid the countless ages, and the artist who "keeps up the road between the seen and the unseen" is needed to show us what is good and what is evil. In this flippant and democratic age, when the foundations of social respect are upturned, and those of obedience to God and duty appear likely to follow them, it is, said the lecturer, one of the most difficult of all the difficult problems awaiting solution to know how to teach humility, which is the source of reverence. To show ideals seems the only way—by biographies of noble men, by novels embodying noble thoughts; but, above all, by pictures setting forth noble types of life. Whether the educator be his own or his neighbour's teacher, he will not, if he be wise, ignore art, which teaches—(1) to observe, (2) to imagine, (3) to reverence; and yet more she does—she teaches the relation of things. Again and again are we warned not to "labour for that which profiteth nothing"; and yet we do, seeing, thinking, feeling, that the nothing is a very big something. Art will put things in the right relation, telling what is nothing and what is something. She puts things as parts, not as a whole. Art has indeed proved its value to us, if she educates us to see life in relation; and as she has done so much for us, may we not yet hope more? As science has taught us to know something of what Emerson calls the skirts "of the eternal T's," may not art, her sister, lead time and us a step further, and show us dimly and faintly, but yet surely, the hinder parts of the Most High?

FINE ART.

THE WINTER EXHIBITION AT THE ROYAL ACADEMY.

II.

IT may be said that the French school this year reigns supreme in the second gallery at Burlington House, even though the exquisite examples of seventeenth and eighteenth-century art there shown are confronted with the very choice collection of Dutch masters already noticed. Two finer specimens of the noble Italo-French style of Claude le Lorrain it would be difficult to find than Lord Northbrook's pendant pieces, entitled, "Shepherd teaching a Shepherdess to play on the Pipes," and "Shepherd playing on a Pipe." The latter, especially—a reposeful twilight pastoral, penetrated with the tender light of vanishing day, and having as its dominant note of sentiment a perfect peace and unity of all nature—is worthy to rank with Lord Wantage's great "Castle by the Sea," exhibited last year at the Academy. Higher praise it would be difficult to bestow.

To accurately define the peculiar quality which places the art of Antoine Watteau not only above, but altogether apart from, that of his imitators, and of the brilliant if seldom profoundly moved masters of his century, would be a difficult, if not an impossible, task. Beyond mere technical exquisiteness — accuracy and incomparable spirit in drawing and composition: a delicate glow of colour, now marred, alas! by the injuries of time; the magic of melancholy sunset landscapes, suggesting, with a more subtle and reticent charm, those of Rubens—beyond all these qualities is the happy expression of the man himself in his work: the sensitive, finely-attuned nature of the true poet asserting itself through the veil of the apparently trivial subjects which, under the influence of the taste of the hour, were chosen for representation. Watteau is in a sense the Giorgione of the eighteenth century, making use of a different pictorial language because, as a true artist, he could not be other than the man of

Digitized by Google

his own time; coming therefore less near to truth, but, nevertheless, expressing all the exquisite charm which belongs to an intimate and loving conjunction of humanity with nature—even though the humanity be too dainty in its mannerism, and the nature trimmed to an over-luxurious smoothness. Both masters instinctively corrected a certain natural, if refined, sensuousness of temperament by the gentle melancholy which unconsciously they breathed into all their works; by the moving suggestion of a passionate regret for the one perfect, harmonious moment of repose and peace which, once lost, may not again be attained.

So uncertain are even now—after the labours of MM. Edmond and Jules de Goncourt—the actual facts of Watteau's short career, that it is difficult, in dealing with all but his early productions, to establish a chronological order of sequence. Of those here exhibited, the first in order of date is, however, evidently the "Accordée du Village" (A. de Rothschild, Esq.). With many charming passages of local colour, and a happy illumination of the central group, the whole lacks unity and individuality. The background, consisting of trees and castellated buildings of a markedly Flemish character, has an artificial appearance. Next in order may, perhaps, be placed "La Cascade," from the same collection, in which, if the figures still lack interest, the garden landscape, with its plashing fountain in the foreground, is superbly rendered. Admirable are the two great landscapes—"The Garden Party" and "Le Rendezvous de Chasse" (Sir R. Wallace)—showing far-stretching, park-like glades, which frame in a tempered glow, chequered with shadow, happy parties of ladies and their cavaliers. It is in these beautiful, broadly yet lightly painted backgrounds that the influence of Rubens most clearly appears, though a peculiar charm is superadded which is all Watteau's own. In the blackness of the shadows and the partly obscured purity of the flesh-tints is seen the result of his carelessness in the practice of his art; of that "dirty palette" of which his contemporaries complained. Rubens is again suggested by the superb *académie* here styled "The Toilet" (Sir R. Wallace), in which a nude female figure seated on a couch is rendered with admirable clearness and force in the flesh tints. To appreciate the genuineness of the painter's quality in this study it should be compared at a certain distance with the two good specimens of Greuze which hang on the same wall. Unfortunately, the head of the model is singularly lacking in interest and individuality. This brings us to one of the master's chief peculiarities, which is the tendency to accentuate rather what is generic in character and movement than that which is proper to the individual and goes to make up the distinctive human personality. In his very best and most mature style, with a rich yet chastened glow of colour such as perhaps has not again been attained by a French painter, are Lord Northbrook's "Masquerade," and Sir R. Wallace's "Gilles and his Family"—the latter slightly marred by a curious disproportion in one of the female heads. Thoroughly characteristic, too, of the artist's most typical manner is the larger "Music Lesson," which contains some of his finest work, and has for background a landscape of perfect truth and unsurpassed charm. Here the head and bust of one of the female figures would appear to have been repainted in a smooth style entirely at variance with Watteau's own broad crisp handling. The figure of the lounging guitarist in this work—a shade vacuous in expression—has again been utilised in the smaller and better preserved "Music Lesson," which comes also from Manchester House. "Arlequin et Colombine," from the same collection, has been widely popularised by the almost contemporary engraving. The touch is here looser, the harmony more subdued, but hardly less exquisite. Very subtle is the twilight atmosphere cast over the personages in the "Sérénade Italienne" (A. de Rothschild, Esq.), poetising the well-known figures of the Italian comedy, and giving to the whole scene an indefinable charm. Of one of the rarest phases of the master's colouring—the pleasant greyness of open-air daylight, so finely exemplified in the two famous canvases of the Dresden Gallery—no specimen is shown at the Academy. This was the scheme of colour, the development of which enabled Watteau's pupil, Pater, to claim a kind of minor originality of his own. We might have hoped to find some of his work in the exhibition, where it would have been useful, if only as a foil to the inimitable excellencies of his master. Lancret, the fellow-student and the imitator rather than the pupil of Watteau, has rarely, if ever, been seen to such advantage as at Burlington House. With him we touch earth, and are brought into a closer and more real contact with the sprightly and superficial elegancies of the eighteenth century. A certainly not disagreeable sharpness of colour, an angular vivacity of movement, an undisguised *mièvrerie* in the characterisation of the often ill-drawn heads, are among the distinguishing marks of a painter who, with all his obvious limitations, came much nearer to expressing in its essence one whole side of the general character of his time than is admitted by those who choose to regard him merely as the conventional delineator of modish scenes and figures. While the comparatively large "Pastoral Group" (Sir. R. Wallace) is an undisguised *pasticcio* of Watteau, and might almost have been suggested by that painter's "Pastoral Scene" in the same collection, the "Winter" (A. de Rothschild, Esq.) shows a vivacity of movement, a joy in the delineation of mere life and action, which are very distinctive of Lancret. His most consummate performance—and, indeed, the best piece of painting from his brush with which we are acquainted—is the "Group of Bathers" (Sir R. Wallace), showing women, some wholly, some partially disrobed, bathing in running water under the overhanging shadow of green trees. The audacity with which the reflections cast by the foliage are made to colour the flesh-tints forestalls some of the most modern *plein-air* fashions of to-day. The more ordinary, the regular *égrillard* phase of French eighteenth-century art is shown in the "Broken Necklace" (Sir R. Wallace); its most mannered form of suburban pastoral in "The Bird Catcher." The "Harlequin and Punch" gives with real zest and *entrain*, if with a somewhat crude colour-harmony, the Italian comedy as it was, without the mysterious charm with which Watteau knew how to invest it. The brilliant "Portrait de Mdlle. Carmargo," the famous dancer, is a thoroughly artificial rendering of a subject the successful portrayal of which could only be attained by artificial treatment. This radiant and decently-attired nymph—shown as she appeared in the pastoral ballet of the time—has a feminine charm which her undraped sisters of to-day, in their vigorous gymnastic exercises, conspicuously fail to attain. The lines of Voltaire on La Camargo and La Sallé—happily quoted in the catalogue—recall that fair rival, who was the faithful friend of Maurice Quentin Latour, by whose pencil her sprightly graces have many times been lovingly expressed. We may group with this example the "Portrait of an Actress of the Comédie Française" (Sir R. Wallace), represented in a rich *négligé* of red trimmed with fur. This is especially remarkable for the unusual softness and harmony of the colouring. May it be hoped that on an early occasion the exquisite collection now shown will be supplemented by the bringing together of examples illustrating the too-little known art of Chardin—most loving and faithful delineator of French bourgeois manners, and more than rival of the Dutch as the painter of still life; the superficial and mannered grace of Boucher; the passion and vivacity of Fragonard; the not very convincing if elegant portraiture of a Tocqué, a Nattier, a Drouais? It is perhaps too much to hope that the unique power of Latour can ever be adequately illustrated in an English exhibition; though, like so many of his fellow-countrymen and contemporaries, he practised in early life in England, and at his *début* in Paris was even styled, or styled himself—if we remember rightly—the "peintre anglais."

English art of the last and the present century is, as usual, satisfactorily represented, though its fame is maintained by fewer masterpieces of the first rank than usual. Francis Cotes has seldom been seen to greater advantage than in the "Portrait of a Lady" (Chas. Butler, Esq.)—a work of unaffected charm, and a perfect presentment of an English gentlewoman. The half-tints and shadows have the unpleasant greenish tone peculiar to the painter. A very interesting puzzle is afforded by the "Portrait of Mrs. Thomas Scott" (A. J. Scott, Esq.), showing a lady in the costume of the middle of last century, wearing a charming pink, lace-trimmed gown of French fashion, and leaning nonchalantly on a polished table of dark wood. Great skill and refinement are shown in the modelling and painting of the hands and neck, and in the rendering of the elaborate costume; while on the other hand the face is not very subtly or truly modelled, and lacks individuality. Though the sitter be English, there is much in the conception and execution of the picture that suggests a modish French painter of the period. Sir J. Reynolds has never before been so feebly and unsatisfactorily represented on the walls of the Academy. On the other hand, the true Gainsborough may be seen in the double portrait of "Henry and Edward Tomkinson"—two charming and ingenuous youths, who breathe and gaze at the beholder with the inimitable Gainsborough vitality. The picture is, however, carelessly and awkwardly composed. A fair average specimen of his manner, when he was not over-interested in his subject, is the full-length of the stolid and uninspiring "William Henry, Duke of Gloucester." The great "Landscape," lent by the Duke of Rutland, has all the painter's charms of rich sunset glow and facile execution; but there is a provoking insincerity in the rustic group skilfully disposed in the foreground which mars the work as a serious production. Romney once more successfully confronts his more famous contemporaries with a number of works, at least three of which are in their way quite first-rate. These are the "Miss Mellon" (Duchess of St. Albans), the "Miss Sophia Shutz," and the delightful portrait of a somewhat older lady, "Mrs. Trimmer," who appears against a red background, in a white dress, with a white gauze cap. In these paintings the natural hardness and opacity of his colour is corrected by a kind of *sfumato*, which he assumed, apparently, in order to emulate by other means the exquisite graces and more real command over colour of his rivals. The peculiar distinction and charm appertaining so especially to English womanhood is here most happily expressed. As translated by Romney, it is of a more reposeful if less penetrating quality than that which Gainsborough extracted from similar subjects.

CLAUDE PHILLIPS.

THE OPENING OF THE PYRAMID OF HAWARA.

Hawara, Medinet el Fayum: Jan. 12, 1889.

The pyramid of Hawara which I tunnelled into last year has at last yielded, and we know for the first time the arrangement of a royal tomb of the XIIth Dynasty.

The entrance is not on the north side, nor in the middle of the side; but it is on the south side, a quarter of the way from the south-west corner. It is, moreover, outside of the pyramid, on the ground, and probably opened from the labyrinth, as Herodotos states. The passage does not run straight into the chamber, but slopes down some way northwards; then a branch turns east, while the main line continues as a blind. The east passage ends blank, and is left by a great trap-door in the roof. Thence the passage goes north again, and turns west; here it ends blank again, and another roof trap-door leads up into a passage running further west. From this a forced entrance has been made into the chamber, by which we at present enter. The passage, however, ends in a well, leading to a short passage southward; then another well, which is now full of water. This, I conjecture, leads to a short passage eastward, from which a well ascended into the chamber.

The chamber itself is nearly all cut in one block of sandstone, which is 22 ft. long and 8 ft. wide inside, and all one up to 6 ft. high. It must weigh between 100 and 200 tons. A course of stone supports the roof slabs, of which there are but three. In the chamber is a great sarcophagus also of polished sandstone, quite plain and without inscription; but around the base is a projecting foot decorated with panelled ornament. By the side of this another sarcophagus has been made by adding two slabs between it and the wall, and a narrower lid has been put over this. There were also two boxes in the chamber, one now broken up; both decorated around the foot like the sarcophagi. In the chamber we have found some pieces of the funereal furniture in alabaster, but without any inscriptions. There can, however, be no doubt that this is the tomb of Amenemhat III., as his name is so often found in the two temples adjoining it.* The second added sarcophagus may be that of Sebaknefru or of Amenemhat IV. The chamber is at present over three feet deep in water, which makes it difficult to explore. The present entrance is by the forced hole in the roof, which will only admit a slim person.

The cemetery here proves to be pretty well exhausted; but I have explored the great pits and caves of the tombs of the XIIth Dynasty and obtained a few pieces of inscription from them. Many minor objects have been found of a late period: a fine glass lense, a pair of large keys, two wax figures (one, female with crescent-dressed hair; the other, male with a donkey's head), a large number of amulets from mummies, three large and complete Greek deeds of the Christian period, beside a few more wax portraits.

At Illahun I have begun work; and great numbers of wooden coffins with carved and painted heads have been found, probably of the XXIIIrd Dynasty; also a fine stela of the XIIth Dynasty. I expect shortly to take up the work at Illahun more closely when I can live there.

W. M Flinders Petrie.

* Since receipt of the foregoing, further intelligence has been received from Mr. Petrie to the effect that the name of Amenemhat III. has been found on a fragment of an alabaster vase in the sepulchral chamber; thus placing the identity of the founder beyond doubt.—Ed. Academy.

NOTES ON ART AND ARCHAEOLOGY.

Mr. W. L. Wyllie—the marine painter, best known for his pictures of shipping at the mouth of the Thames—has been elected an Associate of the Royal Academy, in the place of Mr. Hamo Thornycroft, who was recently promoted to the rank of full Academician.

The collection of pictures that are being despatched this month to Sydney by the Anglo-Australian Society of Artists vies in importance with those exhibited last year in Melbourne. Sir Frederick Leighton contributes his "Phryne," Mr. Watts two important pictures, Mr. Jacomb Hood his last work from the Grosvenor, and Messrs. Ingram and Gotch their "Helpless," Mr. Weedon sends a large drawing of Loch Maree, and Mr. Arthur Hacker his picture "Motherless." The etchers will also be well represented, Mr. Whistler sending some twenty plates, and Messrs. Mortimer Menpes, Wilfrid Ball, David Law, and Theodore Roussell forwarding representative specimens of their work. Messrs. W. L. Wyllie and S. J. Solomon, among the painters in oil, and Messrs. Frank Walton and E. F. Brewtnall, among the water-colour men, are contributing. The exhibition, which is to be held in the National Gallery at Sydney, will be superintended personally by Mr. W. Ayerst Ingram.

Mr. T. Humphrey Ward has written the *brochure*, descriptive of both the painter and the etcher, on Mr. Mortimer Menpes's dry-point plate, after Frans Hals's picture at Haarlem, the "Banquet of the Officers of the Arquebusiers of St. Andrew," proofs of which are to be shown at Messrs. Dowdeswell's to-day. The plate is one of the largest dry-points ever undertaken, measuring 36 by 26 inches. The etcher's endeavour has been to preserve, so far as his medium permits, not only the light and shade, but also that glorious glow of colour that pervades the original.

By an arrangement between the two societies, the next and future exhibitions of the Royal Society of Painter-Etchers will be held in the spring of each year in the gallery at the Royal Society of Painters in Water Colours, Pall Mall East.

Mr. Talfourd Ely proposes to deliver a course of six lectures, at his house in Parliament Hill Road, Hampstead, on "The Sources of Greek History," with special reference to coins, the monuments of art, and inscriptions. The lectures will be given on Thursdays, at 3 30 p.m., beginning on February 7; and they will be illustrated by photographs, electrotypes, &c.

On Thursday evening next, January 31, Mr. Walter Crane will deliver a lecture at Toynbee Hall to the workmen and pupils of the School and Guild of Handicraft. The lecture will be given in connexion with the arts and crafts, and will also refer to his picture, "The Bridge of Life," now at Toynbee Hall.

Miss Amelia B. Edwards will deliver a lecture on "The Influence of Ancient Egypt on the Art of Portraiture in Sculpture and Painting" at the Town Hall, Manchester, on Wednesday afternoon, February 13; and a lecture, entitled "The Explorer in Egypt," on February 21, for the Fine Arts Club, at Alderley Edge. Miss Edwards will also lecture on "The Buried Cities of Ancient Egypt" at the lecture hall of the Presbyterian Church, Sefton Park, Liverpool, on February 7.

There is now on view in the Continental Gallery, New Bond Street, a small selection of paintings from the recent international exhibitions of Munich and Antwerp.

THE STAGE.

"TARES."

Mrs. Oscar Beringer's play, "Tares"—said to be derived from a German source, from Freytag, indeed, but surely very much altered—is a piece with two or three marked defects and many admirable qualities. It is not only constructed, but written, with extreme vigour; and as, with only one or two exceptions, it is exceedingly well acted, I do not doubt that for many weeks it will draw to the Opéra Comique an intelligent portion of the play-going world.

If the story were told with less of crispness—if the play lasted three hours instead of a few minutes over two—the comparative absence of the comedy-element would be more conspicuous than it is now, and more detrimental. As it is, a few amusing things said by the illegitimate child, a few words from a labourer and a few from a dairymaid, a scene between a doctor who knows his own mind and a lively young person sitting in a swing, and some really clever and pungent observations that pass between the doctor and the hero, and between the hero and his unprincipled cousin, constitute the sole and, perhaps, the sufficient relief to the sombreness—nay, to the suspense and tearfulness—of the main story. A graver fault, no doubt, yet a fault by no means unforgiveable—since in the very finest fiction a point has sometimes to be stretched to grant a writer's premises—is the extremely small basis of evidence, or even of statement, on which the heroine believes bad things of her lover. Thus, and thus only, is made possible a misunderstanding which ought never to have occurred. But, the misunderstanding once granted, Mrs. Beringer's conduct of her *dramatis personae* is remarkably able. Not only has this *débutante* in stage-writing a sense of dramatic fitness lacking sometimes to the people who one most supposes to be experts, but she guides, likewise, the action of her characters with true regard to their natures and their interests. Each person on the boards, who is of any importance whatsoever, is a real force in the play; and the play's course seems happily dictated, not by the mere exigences of the stage, but by the almost inevitable, the instinctive, the appropriate action of this or that person of the drama. So the story—the story of one woman's mistake and of the faults of many—goes on to its end: an end in which the hero and heroine are permitted indeed a certain happiness, yet a happiness which can never be wholly rid of the ghost of the Past; an end, too, in which sympathy is not withheld altogether from the bad woman of the set, who had been, indeed, disgustingly soured and was hideously revengeful, but whose life had given her two great affections, one of which it was her crime, and the other her fate, to lose.

The dialogue in which this story is set forth is, on the whole, modern in touch. It is happy, and for the most part natural, in its expression of feeling. Here and there, in critical moments, the people who are most vitally interested talk a little too long and a little too well. But they are never feeble; they are never sentimental. The view of life is not a thing of convention and tradition. A difficult subject is dealt with face to face.

Digitized by Google

And from the writer who can give us work so reasonably masculine—so clear-headed, and, in feeling, so just—we ought to receive, in the future, work which shall have the merits of the present piece and none of its defects.

The cast of "Tares" has, speaking generally, been chosen with judgment: even with penetration. I can indeed conceive an actor better fitted than Mr. Canninge to play the clergyman who is the heroine's father. Mr. Canninge knows his business—takes, it seems to me, the ordinary capable actor's view of the matter—but is without either the make-up, or the presence, or the hundred little touches which suggest a study from the life. The sympathetic personality of Mr. Grahame and his discretion in his work enable him to present very pleasantly the young doctor who is an agent of good throughout the piece; while Mr. Somerset, as an agent of evil, comports himself with hardly less skill. The young squire who, notwithstanding his past, loves the heroine very thoroughly, is played by Mr. Forbes Robertson. This actor—who is not undeservedly a favourite of the public—I have never before seen to so great advantage. Casting away whatever may have lurked of "aesthetic" or mediæval in gesture or bearing, he is, in the second act especially, singularly direct and expressive, playing with real forcibleness what is more than a *jeune premier's* rôle—the rôle of a *grand premier*—with his emotions and his past. Mr. Ernest Hendrie, as a West country labourer, reminds us pleasantly of those agricultural characters who were to bring, and who did bring, I think, the famous "scent of the hay across the footlights," in Mr. Pinero's first success at the St. James's. A bright young person is represented a shade too noisily by Miss Hudspeth, and one or two minor women's parts are played not badly. But the public acceptance of the piece, clever and well constructed though it is, would have been quickly imperilled if there had not been thoroughly competent representatives of the two chief women. In Miss Kate Rorke and Miss Gertrude Kingston such have undoubtedly been found. The sympathetic heroine is, of course, Miss Rorke, who now unites fire and spontaneity of emotion with a grace that is justly popular. There were moments of explanation between "Nigel Chester" and herself, in which, judged from a high standpoint, she was really admirable. Miss Rorke, at her best times, has the air of acting from her heart; Miss Gertrude Kingston is rarely invited to act from anything but her head. Her exhibition of a character, repulsive in the main, and reminding us only once in a while of any fellowship with humanity, was very distinctly clever. And that which she had conceived correctly she executed with force. Nor was there in her performance — strongly marked though it was — a hint of that exaggeration of unpleasantness to which she yielded, I remember, at the Haymarket.

FREDERICK WEDMORE.

STAGE NOTES.

"STILL WATERS RUN DEEP"—which, as Mr. Cavendish Bentinck reminds the public through the columns of the *St. James's Gazette*, is one of those many plays by the late Mr. Taylor based upon French stories—will no doubt be found sufficiently attractive at the Criterion Theatre, where Mr. Charles Wyndham has just revived it. Mr. Taylor's departures from Charles de Bernard's novel were tolerably numerous; and, at the last, at all events, they were important. It will be remembered by those who have seen the piece in times past, either when the Alfred Wigans appeared in it, or at some less remote date, that there are three important characters—Mr. Mildmay and his young wife, and one Mrs. Sternhold. Mr. Charles Wyndham is at present the Mr. Mildmay; and if he is an actor whose qualifications for unlimited boisterousness are pretty well admitted, he is yet more, perhaps, a comedian capable of implying by quiet means the possession of strong feeling. This feature of his talent stands him in good stead in the part of Mildmay. Miss Mary Moore's aptitude for the part of a sympathetic heroine has been proved before the present performance, which, however, cannot lessen the reputation she may have gained. As Mrs. Sternhold, it is, perhaps, generally conceded that Mrs. Bernard Beere shows some advance in originality and power.

"HANDS ACROSS THE SEA" will not be played at the Princess's after this evening (Saturday), and on Monday Mr. Wilson Barrett will appear in "Hamlet." This favourite actor, after giving us twelve nights in the most important of his tragic characters, will, in about a fortnight's time, appear in a new piece. His London season will, however, we regret to say, be comparatively short. There has been arranged for Mr. Barrett an extended tour in America, which will occupy the whole of the autumn and winter.

"THE BEGUM'S DIAMONDS," by Mr. J. P. Hurst, was tried at the Avenue on Tuesday afternoon, and may, perhaps, after some modifications, appear elsewhere in an evening bill. It was well cast: Messrs. W. F. Hawtrey, Yorke Stephens, Eric Lewis, Sydney Brough, and Lewis Waller, and Miss Rose Norreys and Miss Vanbrugh having been engaged.

MISS RIVERS—a refined American actress from the Boston Museum and other theatres of perhaps equal importance—appears now, but only upon Saturdays, at the Comique, in the charming part of Mrs. Errol in the "Little Lord Fauntleroy." To succeed Miss Mary Rorke in a character curiously fitted to that artist's personality must, for any one, be an honourable enterprise; but Miss Rivers is a woman of talent, and her voice has the pathetic note without which a performance of the part would be as nothing.

AT the time of writing it is considered probable that Mr. Henry Irving's re-appearance in "Macbeth" will be postponed until next week. The attack of laryngitis from which the actor has been suffering was induced, no doubt, quite as much by the extent of his labours in producing the tragedy as by the weather under which Londoners have recently groaned. Meantime, Mr. Hermann Vezin, a useful and scholarly exponent of the part of the Thane of Cawdor, is filling Mr. Irving's place.

MUSIC.

RECENT CONCERTS.

THE programme of the Popular Concert last Saturday afternoon was most attractive. Father Haydn was represented by one of his finest Quartets—the one in C (Op. 76, No. 3) containing the variations on "God preserve the Emperor"; and Beethoven, by an early work, the Septet, and one of his latest pianoforte Sonatas. The composer, in his later days, somewhat despised this youthful production; having achieved higher things, he could afford to do so. To the public it is, apparently, a joy for ever. Mdme. Haas gave a reading of the Sonata in A flat (Op. 110) extremely good in the matter of technique, yet lacking in dignity. Mr. Santley, who was in splendid voice, sang Schubert's "Erl-King" and songs by Mendelssohn and Hatton. Mr. Sidney Naylor deserves a word of praise for his accompaniments.

On the following Monday evening, Mdme. Haas and Signor Piatti played Mendelssohn's B flat Sonata for pianoforte and violoncello (Op. 45), and this elegant composition was interpreted by both artists with much charm and refinement. Mdme. Haas gave, besides, Liszt's transcription of Bach's great Prelude and Fugue in A minor for organ. Her rendering of it was all that could be desired so far as fingers were concerned. But Bach's organ works, however skilful the transcriptions, however good the pianist, are cold and colourless on the pianoforte. Why are they allowed in a Popular programme, when there is no lack of genuine pianoforte music? Not all of Bach's Suites Françaises and Suites Françaises have been given at these concerts. Some of Schubert's Sonatas still await a hearing; and it is more than thirteen years since Weber's Sonata in A flat was performed here. Schubert's Octet was magnificently played by Mdme. Néruda and Messrs. Ries, Straus, Lazarus, Paersch, Wotton, Reynolds, and Piatti. Owing to the extreme length of the work, Mr. Chappell has, of late, given three movements in the first part of the programme, and the others in the second. On Monday, however, there was no break, and it was listened to throughout with profound attention. The vocalist was Miss H. D'Alton, who sang Maud White's "Come to me in my dreams."

At the sixth Symphony Concert on Tuesday evening, an Entr'acte from Weber's "The Three Pintos" was given for the first time in England. This comic opera was commenced by the composer in 1820, but he never completed it. In 1824 he writes in a letter to Lichtenstein: "I think as little of the Pintos now as of music in general. I am quite tired of it, and am not likely to undertake any more elaborate works in a hurry." Meyerbeer at one time thought of filling up the imperfect MS., but recoiled from the difficulty of the task. Afterwards he expressed a wish that the late Sir J. Benedict should take it up; but he, too, hesitated. Recently, however, the work has been completed and performed in Germany. The Entr'acte, consisting of two movements in different keys, is charming, and the scoring delicate. In Mendelssohn's "Hear my prayer," an attractive feature of the programme, the soprano solos were interpreted with much feeling by Mrs. Henschel; while Mr. McNaught's Bow and Bromley choir sang the choruses with vigour—more, in fact, than was, at times, necessary. Mozart's "Jupiter" Symphony went remarkably well. The concert commenced with Schuman's fine "Genoveva" Overture, and concluded with a selection from "Die Meistersinger."

Mendelssohn's "Elijah" was given on Wednesday evening at St. James's Hall, at the Novello Oratorio concert. This work is a tower of strength, not only at provincial festivals, but also in the metropolis. It drew a large and enthusiastic audience. The choir sang splendidly; but the orchestra was not all that could be desired. Mdmes. Nordica, Patey, and Mr. Lloyd were at their best. Mr. Henschel's impersonation of the prophet is interesting both vocally and dramatically; but we miss the rugged earnestness of Mr. Santley.

Digitized by Google

Miss L. Neal sang "Woe unto them" in a highly commendable manner. Dr. Mackenzie conducted.

J. S. SHEDLOCK.

OBITUARY.

FRANCIS HUEFFER.

THE death of Dr. Francis Hueffer, the musical critic of the *Times*, which occurred last Saturday, January 19, was most unexpected. He succumbed to an attack of erysipelas, after being confined to his house for a fortnight.

Dr. Hueffer was born at Münster in 1845, and took up his residence in England in 1869. His wide sympathies, great intellectual activity, and ready pen soon won for him a position in his adopted country both as journalist and author. For a short time he was assistant-editor of the ACADEMY, and he also contributed to many other papers. A critical edition of the works of Guillem de Cabestanh, the troubadour of the twelfth century, for which he received the degree of Ph.D. from Göttingen, supplied the motive for his subsequent book on *The Troubadours* (1878). He was an ardent admirer of Wagner, and one of his most prominent supporters in this country. His *Richard Wagner and the Music of the Future* was published in 1874; and an excellent biography of the Baireuth master in 1881. This latter work was the first of the series of "The Great Musicians." His interesting *Musical Studies*, reprinted from newspapers and various periodicals, appeared in 1880; they were translated into Italian and published at Milan in 1883. Dr. Hueffer contributed articles on Beethoven and other musicians to the ninth edition of the *Encyclopaedia Britannica*. He wrote the libretti of Dr. Mackenzie's "Colomba" (1883) and "The Troubadour" (1886), and of Mr. F. H. Cowen's "Sleeping Beauty." He has also written the libretto of a work to be performed at the next Leeds festival. His last important effort was the translation of the Wagner-Liszt Correspondence (1888); but we understand that he has left ready for publication a book entitled "Half a Century of Music in England," which will be issued by Messrs. Chapman & Hall early next month.

Dr. Hueffer married, in 1872, Cathy, the younger daughter of Mr. Ford Madox-Brown. He leaves a widow, several children, and many friends to mourn his loss.

LITERATURE.

With Sa'di in the Garden; or, The Book of Love. By Sir Edwin Arnold. (Trübner.)

IN this volume Sir Edwin Arnold endeavours, by presenting a Persian paraphrase amid exquisitely appropriate surroundings, to render its charm intelligible to Western readers. There is a want of proportion in Eastern poetry, an exaggeration of mysticism in its mystic masterpieces and of voluptuousness in its Anacreontic odes, rather wearisome to the non-oriental mind. Few, I suspect, come to the end even of Umar Khayyam's quatrains without a feeling of relief. His rhapsodies of love and wine, his delicate wit, his branding satire, his plaintive despondency, make the individual epigrams stand out as gems, and harmonise well with a cynical mood. But to be enjoyed by a healthy nature they must be taken in small quantities. The comparison of that Eastern iconoclast to Voltaire always seems superficial. The two masters treat the same themes in such a way as to produce a profoundly different effect on the Western mind. Umar Khayyam, even at his best, soon tires: Voltaire, when near his best, never.

Is our sense of disproportion in oriental poetry the result of transposing it to a false perspective? We pluck its beauties out of their soft Eastern setting, and thrust them down amid the hard actualities of European life. How would Mr Alma Tadema's Greek girls look if dissociated from his marble pavements, and seated with their lyres in ormulu chairs on one of Mr. Orchardson's parquetry floors? Can the exaggerated sentiment which we detect in Eastern poetry be toned down, and its faults in proportion be remedied, by replacing it in its natural surroundings, by enabling us to listen to Ferdusi in the palace of Mahmud, or to Hafiz in the gardens of Shiraz?

To this question Sir Edwin Arnold's new book affords a satisfactory answer. He has taken the third chapter of the "Bostan" or Fruit Garden of Sa'di, and recited it by the mouth of a venerable Munshi, amid a scene more lovely and more pathetic than ever entered the imagination of Sa'di himself—the Taj by moonlight, that dream in marble soaring up from its garden of cypresses and flowers and gleaming water, with the Mirza to read, the Saheb to listen, and two accomplished dancing girls to enliven the performance by interludes of music and song. It would indeed be impossible to conceive a more appropriate setting for a poem of Love and Death. The surroundings tend, if possible, to still further etherealise an intensely ethereal poet. The "orient pearls at random strung," which Sir William Jones found in Hafiz, have, in the Fruit Garden of Sa'di, as many hidden meanings to Sir Edwin Arnold as if he were an adept in the occult science of gems. This method of treatment will commend itself to theosophic students who see in Hafiz and Sa'di the prophets of Pantheism against Islam, and elaborate their loves and revels into the fine spun allegories of Sufiism. But in the case of Hafiz we lose sight of the real man—of the animal side of a nature which broke out in wine-bibbing and many a loose frolic—if we read all he wrote through transcendental spectacles. Hafiz cannot always be taken seriously; and the indefinable charm of his genius consists in the very circumstance that he does not always seem to know whether he intends to be taken seriously or not. "Sugar-cane Stem," whom he loved and sang, was a girl of unmistakable flesh and blood; the liquor which he drank overnight was not an unfermented beverage, but could leave behind a very realistic headache for next morning. Sa'di lends himself more legitimately to transcendental treatment. His earlier odes may deal with the actual pleasures of love and life as known to ordinary mortals. But his later works are unquestionably the outpourings of a saddened and chastened heart; of a man worn with travel, who had drunk deep of solitude and tasted of captivity. Sir Edwin Arnold has chosen the true didactic poet of Persia for his high discourse in the Taj. The transcendentalism of Sa'di is a genuine transcendentalism—a trying of pinions in the supreme fights of human yearning and of human thought. From these materials Sir Edwin Arnold has woven a beautiful and masterly poem. Over the whole rests the spell of the moonlit mausoleum amid the cypresses, as the Munshi expounds the

> "Grave secrets, hid in subtle verse
> Of Hafiz, underneath that merry veil
> Of 'Taverns,' 'Wine-Cups,' and the 'Magian Boy.'"

Perhaps the most charming part of the book is Sir Edwin Arnold's introductory description of the Taj. That wondrous offering of an emperor's sorrow to the woman he loved stands unique among the buildings of the world. Artists have painted it, architects have praised it, critics have carped at it, generation after generation of travellers of many nations and creeds have come and stood before it, and carried away the memory of the most beautiful thing that they have seen in their lives.

> "But the proud passion of an Emperor's love
> Wrought into living stone,"

has never been so worthily rendered in verse as by the opening passages of this poem. The following lines are selected at intervals, and scarcely do justice to the picture which Sir Edwin Arnold has drawn with patient hand and eye upon the spot.

> "Ah, the white wonder! have there been who came
> And gazed, and laid staff and surveying chain
> Along thy sacred sides, Fairest of fanes!
> Who with yard-rule would count the inches off
> From Aphrodite's Parian majesty,
> And stretch tape o'er Elysian asphodel.
> He hath not eyes to see whose eyes have seen
> The glory of the beauty of the Taj,
> Nor knew and felt, at seeing, how man's hand
> Comes nearest God's herein, touching His charm
> Of rounded silvery clouds in that poised Dome
> Which hangs between the sky's blue and the stream's.
> * * * * *
> A passion, and a worship, and a faith,
> Writ fast in alabaster.
> * * * * *
> Oh, friends! verse is too bold seeking to tell
> How beautiful this Eastern tomb doth rise.
> How fair by sun or moonlight, how superb
> This house of Love and Death—all lily-white
> In the green garden upon Jumna's shore!
> The city, swarming past the river's bend,
> Wafts no noise here; far off you may discern
> The bridge of boats, the Fort's red wall, the Domes—
> Three pearly foam-bells—of the Mosque of Pearl
> Suspended o'er those distant parapets;
> Ram-Bagh; the tall palm-groves by Akbar's grave;
> And Akbar's judgment-terrace. Here the stream—
> Yamuna, silver daughter of the Sun—
> Glides broad and silent, washing sandy flats
> And ancient water-gates. By avenues
> Of *neem* and *palas*; past low huts of mat,
> Gay painted country-dwellings, topes, and wells,
> Temples, and little shrines where gilded gods
> Squat with crossed legs—Balkrishna, Hanuman;
> By pân and bangle shops, by weaving-grounds.
> By creaking Persian wheels, rice fields, and tanks,
> Winds the cantonment-way, made populous
> With tread of patient feet, which come and go
> Doing the errands of their placid day.
> You meet the brown-limbed laden coolie girls,
> The ekkas with full freight of pots and wives,
> The camels stalking slow, the palanquins,
> The belted peon, the sweetmeat man, the ox
> Grave-pacing with his spirting water-skins;
> The spangled dancing-girls, the fishermen,
> *Byrâgis*, sepoys, *hamals*, jungle-folk,
> The people of an Agra afternoon:
> When, suddenly, wheels stop, bridles are drawn,
> One cries, 'The Taj' . . . the 'Exalted one'—
> Queen of her Sultan's heart, and Hindostan—
> Here by her lord and lover laid to sleep.
> And here, too, sleeps the stately king who planned
> This splendour for his sorrow. * * *
> "First a proud archway, reared of rosy stone
> Banded with marble; and a frontal wall
> Crowned by low cupolas. The demi-vault
> Of entry towers aloft, framing huge space
> Of azure heaven, broad groined with span and rib
> In marbles brown and white. * * *
> "* * * Through the vaulted door opens to sight
> A glorious garden, green for ever green,
> Since hither comes no harsh or biting time,
> With cypress intermixed ranged all the way
> On either border of the broad paved path,
> Like sentinels of honour. From the gate
> Straight to the threshold of the Taj Mahs!
> Those trees of mourning marshall you. * * *
> "Led thus by sombre cypresses and lines
> Of dancing water-jets, and lillied tanks,
> And glistening garden-causeway, the gaze lights
> On that great tomb, rising prodigious, still,
> Matchless, perfect in form, a miracle
> Of grace, and tenderness, and symmetry,
> Pearl pure against the sapphire of the sky."

Space precludes us from quoting the finely wrought picture of the Taj itself which follows. For much as we feel the injustice of selecting individual lines in trying to give some idea of its approach, the wrong would be greater if the process were extended to a building whose essential feature is an exquisite and a perfect unity. The main body of the poem consists of recitals from Sa'di's Fruit Garden under the shadow of the Taj—a poetical paraphrase in regard to which Sir Edwin Arnold makes ample and well-earned acknowledgements to the prose-rendering by Captain Wilberforce Clarke. Those who desire to acquaint themselves with the most graceful form which can be given to esoteric Sufiism, should study these poems. The multitude of readers, who take the East less seriously, will find them full of that

Digitized by Google

gentle mingling of realism and reflection, at once dreamy and despondent yet warm and human, which has given the Persian poets of the twelfth to the fourteenth centuries their subtle hold upon Americans and Englishmen of our own day. Nor upon the Western races of mankind only. For a semi-religious semi-literary society of Hindus has just published, at Benares, an edition of Sa'di's other great collection of poems—The Gulistan or Rose Garden. The appearance of a Muhammadan masterpiece under the auspices and at the expense of a Hindu association in the Sacred City of the Hindus is truly a sign of the times. Nor is it less significant that the Persian poet is rendered by the Hindu society not into Hindi, but, in the words of the title-page, is "faithfully translated into English."

It is scarcely possible to open Sir Edwin Arnold's version of Sa'di without finding something that one would like to quote. Here are the first verses from the long poem on "The True Lover," in which, of course, the esoteric school see a more transcendental meaning even than that which lies on the surface, and which may well enough suffice for us.

"Fair go the days of them that drink Love's wine,
Mighty and maddening! 'Tis a bliss divine,
Whether they suffer separation's anguish,
Or taste propinquity's sweet medicine.

"Earth's kingdoms shunning, these true Sultans be!
Rags of the prison wearing, these pass free
In changeless royal robes invisible,
For union's sake enduring poverty."

In a similar vein another poem runs:

"Shunners of earth there be beneath our sky,
Half angels, half wood creatures, wild and shy;
Like those, they rest not from remembering Heaven,
Like those, by day and night from men they fly.

"No expectation of the people's praise
Have these. Enough that God accepts their ways,
Enough He holds them dear, His Darvishes
Who without wool or waist cord pass pure days."

"The True Lover," "The Passionate Pilgrim," "The Bountiful Giver," who gives his all, "The Alchemyst" who throws his last piece of gold into the crucible—every type of unconquerable belief and of unshaken fidelity pass as a long procession of The Faithful through these poems. The perusal of them has something of the effect of a change of climate. We open the book, and forthwith leave behind our modern practical life, to find ourselves in a spiritual region of yearning, and ecstacy, and high-strung devotion. We close it, and come back to our work-a-day world with a feeling as if we had been breathing a softer and purer air.

W. W. Hunter.

A Memoir of Henry Bradshaw. By G. W. Prothero. (Kegan Paul, Trench & Co.)

"Those who felt the charm of Henry Bradshaw's personal presence will most easily understand the difficulty of presenting to those who did not know him an adequate portrait of his character." Thus writes Mr. Prothero in the preface to his memoir. Yet the portrait he gives of this quiet man of books, with his wide heart and strong intellect, with his quaint, loveable habits—"his very faults had something loveable in them"—will attract wide sympathy outside the number of his personal friends. Those who never knew the wealth of his friendship will readily realise with Mr. Prothero's guidance the genial scholar mid the litter of his books and papers, surrounded by all sorts and conditions of men:

"He never seemed to select his friends; they were drawn to him by some mysterious affinity, having often nothing in common but their liking for him. Athletes and students, senior classics and pollmen, young dandies with faultless collars, and sizars whose outward man told only too plainly of the *res angusta domi*, distinguished persons whose name was in every one's mouth, together with the retiring and unknown, sat on the same sofa and forgot their differences in the halo of his presence."

That much of Henry Bradshaw's influence was personal, and not the outcome of his writings, is clearly brought out by this memoir. We see large schemes of work planned—editions of Chaucer and Wyclif, histories of early printing, of breviaries or cathedral statutes—but little apparently completed. Masses of material are collected into voluminous note-books stretching over a long range of years; bibliography and palaeography become sciences in the master-mind, ready to reveal the history of the past; the linguistic knowledge and the topographical knowledge of MSS. and books widen with the years, till the late Cambridge librarian seemed able to lay his hand on any written or printed matter the student might require wherever it might be preserved in Europe, and in addition to *read* it, when he had taken it up. The whole apparatus possible to the man of learning was collected to an extent which surprised even the most specialised of foreign scholars; and then, with his task apparently scarcely begun, Henry Bradshaw dies, and his biographer can only set as his epitaph the lines:

"This high man, with a great thing to pursue,
Dies ere he knows it."

It seems to be the sad fate of mortals that each should plough and sow, but when the harvest is ripe, the sower be not there to reap where none but he can garner for the after-time. Many years it may be before the field is tilled again, and a like fate may perchance meet the new worker. What a small fraction of men's knowledge is ever handed down in books, what stores are made and lost in each generation, only to be remade and lost again in the next!

Mr. Prothero endeavours to explain the paucity of Bradshaw's published work by his "procrastination"—a peculiar kind of "chronic paralysis of the will," such as Bradshaw described himself as afflicted with when he was asked to return an interesting book. But there seems to have been other more potent causes at work—foremost, his determination "never to take anything at secondhand," as he said himself of accounts of books given by bibliographers whom the majority would implicitly follow. Henry Bradshaw always doubted till he had handled book or MS. himself; and if he did not then correct others' accounts, he invariably added new and often important features which had hitherto escaped notice. In the next place, we have the time taken up by his duties as university librarian, which post he occupied from 1867 to the time of his death. It would appear that he frequently thought of resigning his post with the object of giving undivided attention to his literary researches. Thus he writes in 1877:

"I cannot go on at the library much longer, and then, if I live, I ought to bring out some of the many things for which I have been collecting materials all these years; otherwise they will never come to anything."

His duties as librarian were incompatible with much private work; yet, when we read of the oft-repeated help to other students, we cannot but feel that his devotion to those duties enabled him to do more real work—unselfish work—for aftertime than if he had published a complete edition of Chaucer. A friend remembers taking to him a version of a mediaeval Latin hymn printed from a Cambridge MS., with a view to the elucidation of certain obscure passages. Bradshaw made several suggestions, and next day sent a German reprint of the MS. Most of the suggestions appeared as footnotes to the text, but the fly-leaf bore a dedication to "Henry Bradshaw." This we believe to be only one out of several German works dedicated to him for the really editorial help he had given in their production.

It must not, however, be supposed that because Bradshaw did not live to fulfil all the great schemes of work he had planned in his earlier years he yet left no contributions to his favourite studies. Even the published papers, a bibliography of which Mr. Prothero gives in Appendix iii., represent no small amount of original work and sound criticism. The bibliography ought, perhaps, to have included the "Half-Century of Notes on the Day-book of John Dorne," which Mr. Prothero refers to on pp. 319-320. These manuscript notes presented to Mr. Madan have been reproduced in facsimile; and besides their interest to Henry Bradshaw's personal friends, owing to the circumstances of their origin, they contain a mine of lore with regard to mediaeval writers and their works.

The diversity as well as depth of Bradshaw's researches are well brought out in Mr. Prothero's eleventh chapter, which contains a survey of his literary labours in various branches of study:

"The chief of these branches were bibliography, especially, perhaps, that of Irish literature; palaeography, and the study of manuscripts in general; Celtic antiquities; ecclesiastical antiquities, particularly mediaeval service-books and cathedral organisation; early English literature, especially the works of Chaucer; and the early history of printing" (p. 328).

One of Mr. Bradshaw's "discoveries" seems to have escaped Mr. Prothero's notice, and is of sufficient importance to be recorded here. We refer to the fragments of an Antwerp edition of Hinrek van Alkmer's version of *Reinaert*, published by Gerar Leue, in the eighties of the fifteenth century. These important fragments are now in the Cambridge Library. They demonstrate with absolute completeness that the Low German Reinke Vos—well known to English readers from Goethe's translation—had its origin in Hinrek van Alkmer's work, thus completing the last link of the chain from Goethe to the early mediaeval Latin fabulists.

Although, as a boy, Bradshaw had an instinctive love of books, yet his tendency

Digitized by Google

towards mediaeval studies appears to have become definite during the year of his schoolmastership at St. Columba's. While aroused, as all men of that day were, by the ritualistic controversies, while sympathising to a very great extent with a movement which at least brought a more accurate historical scholarship into the Church, he was yet not carried away by the theological torrent. It taught him to appreciate and understand the spirit and the work of the "dark ages," but it left him free from the dogmatism of any Church party. When we examine Bradshaw's Irish acquaintances and consider the influence they each may have had on the direction of his studies, we are compelled to attribute a very large share to his friend Dr. Todd. Dr. Todd belonged to the same school as Mr. Maitland, and was one of those scholarly Churchmen and historians whom to have produced is the special merit of the High Church movement. Incited to historical investigation by the various astounding myths which, since the age of the Reformation, have enveloped the origin of Waldensian, Lollard, and other sects, these High Church scholars, notwithstanding their party prejudices, succeeded in throwing a real historical light upon many difficult periods of mediaeval development. Their "appeal to history" might indeed be for party purposes; but their researches into original sources were almost invariably marked by real scholarship and erudition. It is these latter elements of their work which drew Bradshaw into such intimate relations with them. He appreciated their methods and imbibed their tastes, although he gradually ceased to have any warm interest in their special doctrines. To the end he remained a keen friend of many of the party, as he would have been to members of any party whose work he recognised to contain elements of genuine research.

When Bradshaw met Dr. Todd, the latter had already published, with introduction and notes, several Wycliffite MSS., he had edited the Irish version of Nennius's history, and was already busy with his *Hymns of the Antient Church of Ireland*. Although it was not till ten years later that Dr. Todd's *Books of the Vaudois* appeared, still his earlier writings exhibit traces of Waldensian studies. Finally, his catalogue of printed books in the library of Trinity College, Dublin, gives evidence of his bibliographical interests. Thus we may see as it were in Dr. Todd the focus of the divergent lines of Bradshaw's own studies. The debt of Dr. Shirley to Bradshaw for aid in his basic researches in the field of Wycliffite literature is referred to by Mr. Prothero on pp. 118-19. The delight he took in the steady production of Dr. Furnivall's Wyclif Society was great, and he was one of the few scholars who had not only read the *Trialogus*, but could give an intelligible account of Wyclif's metaphysics. Of Bradshaw's knowledge of mediaeval hymns and sequences, we believe Mr. Weale could give ample evidence. Bradshaw seemed to know his *Daniel* and *Mone* by heart. Of his Vaudois researches we have not only evidence in his discovery of the long-lost Morland manuscripts, but in the fact that he could translate Vaudois at sight—something more important than distinguishing it from Spanish. Indeed, there are few French or Italian scholars who have taken part in the recent revival of Vaudois studies who do not acknowledge their indebtedness to Bradshaw. Mr. Prothero does not lay too much stress on the results of Bradshaw's determination of the date of *La Nobla Leyçon* when he writes:

"It was thus placed beyond doubt that the date of the poem was the fifteenth, instead of the twelfth, century (p. 88). . . . Under these blows the foundation on which the supposed antiquity of Waldensian Calvinism had so largely rested crumbled away. The philological importance of the change of date need hardly be pointed out (p. 88)."

M. Comba's recent attempt to upset Bradshaw's results can hardly be treated as serious.

Nennius was not improbably the starting-point of Bradshaw's investigations with regard to the Arthurian legends, and thence, indirectly, of his Celtic studies. He would often say that till the relationship of the Breton and Welsh languages and folklore was more fully elucidated it was idle to hope for a solution of the Arthurian problems. It was his knowledge of Gildas and Nennius which brought him later into contact with Prof. Mommsen. And the samples of Bradshaw's letters to the German scholar which Mr. Prothero prints are (pp. 314-5) strikingly characteristic of Bradshaw's readiness to place his own results at the service of anyone who could value them:

"Do not scruple to ask any number of questions about the manuscripts which you think I may be able to answer for you. It will be no loss, much less *waste*, of time, to me; for I have longed for years past to find some one who will work at these books with grounded intelligence, and it is a real happiness to have lived to find the man."

Thus, if, as seems highly probable, much of Bradshaw's after-work was due to the incentive of Dr. Todd—including, perhaps, his increased interest in Irish books—it will be evident that his year of school-work at St. Columba's was indirectly of service, although he himself looked back upon it with feelings of aversion. Of the origin of the Chaucer studies we have not any clear history. Bradshaw appears to have read the poet with avidity as a boy; but between his school days at Eton and 1864 Mr. Prothero gives us no evidence as to the course of his work. Possibly his study of Wyclif's vernacular works led him again to the fount of English undefiled. The sketch, however, of the Chaucer researches in chap. xi. (pp. 346 *et seq.*) is very interesting, and we find Prof. ten Brink bearing equal testimony to Henry Bradshaw's scholarship and to his generosity.

The opportunity of pursuing investigation in these various branches was afforded by the unique post which Bradshaw held from 1856 to 1864 in the University Library. This post gave him a considerable amount of leisure and also turned his thoughts towards bibliography and typography. At this time he began to be an authority on Caxton, and Caxton led him to the Dutch printers. Here it is, perhaps, that he has been of most singular service to the University Library. Through his influence that library now possesses a museum of Dutch typography unparallelled in this country, and, perhaps, only second to the Royal Library of the Hague. It is arranged on the principle on which Bradshaw always insisted, namely the classification by printers and towns. This is, as all those who have touched upon early printing will admit, the only scientific method of classification. The scattering of the *incunabula* through a gigantic general catalogue, as is done in the British Museum, is hopelessly unscientific. It is impossible to discover all the output of a particular press unless the titles of the works are known; and what Bradshaw wrote, not a word too strongly, in 1870 still remains true:

"What I want is to ask if you can give me any encouragement to hope that some steps will be taken towards a systematic method of dealing with the vast treasures which the Museum contains in the way of fifteenth-century books? . . . . Of all the national libraries I have any knowledge of—Paris, Brussels, the Hague, Copenhagen, Vienna, and our own — the Museum is the only one where one can get no information, *except as it were by accident*, as to what specimens of early presses are to be seen there" (p. 206).

The result of the existing system is that some of the valuable early printed fragments appear to be catalogued solely under "Jesus Christ"!

From the Dutch presses, Henry Bradshaw's system led him up the Rhine to Cologne, and here his favourite printers were Arnold ter Huernen, Ulric Zel, and Nicholas Gotz, in whom he found traces of Dutch influence. But the magnitude of the typographical problems in Germany appalled him; and, although he did much for Mainz and Strassburg, he does not appear to have crossed over to the watershed of the Danube, or put his general lists of printers or the work of their presses into the same definite form as he gave to the Dutch publications in Mr. Conway's *Woodcutters of the Netherlands*. Possibly the "thirty-two stout note-books" in the University Library will prove on examination that he went farther towards a classification of the German *incunabula* than Mr. Prothero seems to indicate.

As a great number of early printed books are devotional works, it is not surprising that a study of early printing should have strengthened Bradshaw's interest in mediaeval service-books, and so in all matters of church ritual and discipline. Mr. Prothero mentions, in chapter xi., the chief contributions Bradshaw made to these subjects—notably, his bibliographical lists attached to the Cambridge edition of the *Sarum Breviary*, and his important, if not completed, inquiries into the history of cathedral statutes. We must not, however, follow him into these interesting points of historical investigation, nor into the manner in which he contributed to Celtic research through the medium of Mr. Whitley Stokes and Dr. Wasserschleben. We must content ourselves with quoting two remarks:

"His liturgical attainments were something extraordinary. One had to go back to the Benedictine ritualists of the beginning of the last century to find his equal" (p. 343).

"It is hardly too much to say that he almost re-discovered the Breton language (p. 338)."

We have sufficiently indicated the wide extent of Bradshaw's studies and the real magnitude of the work he accomplished. Those interested in the like problems will

Digitized by Google

undoubtedly read this memoir for the light it throws on Henry Bradshaw's views on many difficult points of criticism. But those who are not scholars by profession ought also to read Mr. Prothero's volume in order to measure the pure, unselfish character of this man of books. The perusal will enable them to understand better the noble qualities which often underlie the outer garb of learning. Mr. Prothero portrays for us a man who must have left a strong personal influence towards straightforward action, tolerant opinion, and honest hard work. The loss to Cambridge through his death becomes still more apparent as we read these pages than it did even in the brief memoirs which appeared in February, 1886. Let us hope that the "Darwinlike men" of whom he speaks in a letter of 1882 have at least entered the gap, if they cannot fill it. X.

The Letter and the Spirit. Bampton Lectures for 1888. By Robert Edward Bartlett. (London: Rivingtons.)

Remembering the somewhat narrow conditions of the Bampton Foundation, and that it has been in existence for more than a century, it seems a little curious that a subject coming so close to the terms of the original foundation, and capable of such brilliant and fruitful treatment, as that chosen by Mr. Bartlett should not have occupied the attention of previous lecturers. Certain aspects of the general theme have no doubt already secured consideration. Conybeare, in 1824, dwelt on the allegorical interpretation of Scripture. Hampden, in 1832, in those famous lectures which are still remembered, as well for the controversy which they raised as for the melancholy exhibition of clerical bigotry which they revealed, showed how scholasticism tended to engender a combination of literalism and materialism in which the spirit of Christianity was wholly lost. Again, the lectures of 1851 by the late H. B. Wilson, approaching the subject from a different standpoint, dwelt on the ideological aspect of creeds and formularies as well as of certain historical phases of Christianity. It was an eloquent plea—conceived in a genuinely Pauline spirit—of the worth of the spirit above the letter. In the lectures of last year Mr. Bartlett has taken up the whole subject, as I have remarked, for the first time, and with decisive and conspicuous success. Approaching the question with a due sense of its supreme importance, as well as with independence of judgment and competent learning, he has treated it in a broad and comprehensive as well as Christian spirit, so that his lectures may fairly claim—what cannot be conceded to those of the majority of his predecessors—the permanent position of a valuable exposition of Christian truth.

He begins his first, or introductory, lecture with St. Paul. To have given his work a philosophical as well as theological completeness he might, in my opinion, have started earlier both in time and matter. He might at least have glanced in a few prefatory remarks on the genesis of the dualism—letter and spirit. Had he done so, some manifestations in its later development would already have received approximate elucidation, and he might have claimed whatever merit may be assigned to starting his theme *ab ovo*.

As indicated by the words themselves, the correlation of spirit and letter emerges first in language and the inevitable relations of thought and speech. It is obvious that the letter—the spoken or written word—should have an immediate connexion with the thought of which it purports to be the outcome. It is equally obvious, on a consideration of the nature of the human mind, that such a connexion should be not always determinable or homogeneous. Indeed, the fact that language is an intercommunication between two minds or intelligent spirits necessitates a two-fold relation of spirit and letter. There is first the degree in which the letter represents the mind of the speaker, and next there is the measure in which that mind is truly reproduced in the hearer. In either case the relation between letter and spirit may be incongruous to a greater or less extent, even though the incongruity cannot be easily determinable in precise terms. Thus the letter can never be more than the humble, facile, and unsatisfactory servitor of the spirit, so that to represent language as commensurate with thought, and its complete adequate exposition, must be described as a *reductio ad absurdum* of philological enthusiasm.

Mr. Bartlett, as I have said, takes up the dualism as it is presented in St. Paul's Epistles. Little fault can be found with his exegesis. More clearly than most Pauline expositors, he has seen how utterly opposed St. Paul was not only to the letter of the Mosaic law, but to all external standards of truth whatsoever. It is an interesting speculation what St. Paul would have said of the documentary and literary sources of Christian truth which began to prevail towards the end of the second century A.D. It is quite clear that he never contemplated a Christianity that should be dependent on written documents. As Mr. Bartlett summarises his teaching:

"The kingdom of God does not consist in anything outward, not in Church government, not in apostolical succession, not in Catholic ritual, but in righteousness and peace and joy in the Holy Ghost" (p. 23).

We cannot gather from his Epistles what he would have said of the sources of Christian teaching and forms of Christian worship, as Christianity was carried further down the stream of time. Probably, with his own conceptions of the imminence of the second advent, the question did not suggest itself to him. The failure of the Quakers and similar sects to found an organisation without authoritative external standards may be accepted as the verdict of human nature and history on the possibility of realising the Pauline ideal in all its purity. Indeed, we must thank the letter of his own Epistles for that very exposition of its relation to the spirit which has so often opened men's eyes to new visions of Christian truth, and which has been received with acclamation by the noblest minds that have adorned our common faith.

Passing from St. Paul Mr. Bartlett discusses the relation of letter and spirit in Biblical exegesis, wherein he demands a liberty of interpretation which should satisfy every sane and serious thinker. In his application of his theme to the Church, Mr. Bartlett has a few remarks which read like a satirical comment on the proceedings of the late Pan-Anglican Synod:

"Can we look at Christendom as it at present exists, and believe that, while the Eastern Church is a legitimate branch of the Church Catholic, the non-episcopal communities of the West, with their manifold activities, their close contact with the life and thought of the present day, are outside the pale?" (p. 97).

The lecturer is even still more frank and outspoken when he comes to deal with letter and spirit in the Sacraments, and in Christian worship. His plea, in every case, for the superiority of spirit to letter is eloquently made, in entire harmony with the spirit of Christ himself, and from that and every standpoint wholly unanswerable. Nor dare we say that his appeal is either superfluous or untimely. In view of the teaching that is promulgated with increasing extravagance from so many hundred pulpits of the National Church, it is like a breath of a mountain breeze to be told that

"the essence of the Eucharist lies not in the mere ceremonial observance, but in the spirit of devotion to Christ, and of hopeful looking for his kingdom and of brotherly helpfulness to our fellowmen, and these things depend not on the hour of celebration but on the attitude of the heart towards God" (p. 170).

The last lecture, which deals with "the Church of the Future," is an eloquent and irresistible plea for growth in Christian theology and for Christian activity of all kinds. I had made sundry extracts from this lecture, but am unable to find room for them. Applying the subject of the lecture, I may be permitted to say that the *literal* evidence already conveyed by the above quotations is a sufficient attestation of its liberal and genuinely Christian *spirit*.

I have already incidentally glanced at the opportune appearance of Mr. Bartlett's lectures. Probably some of the literalists and materialists whose position it demolishes so effectually will put in their customary plea as to the importance of the letter and symbol in order to prevent the spirit falling into extravagance. At present, however, that does not seem to be the danger from which the English Church requires all the protection her saner members can give. Our most marked tendencies are towards a literalism and sacerdotalism in which the spirit of Christianity seems likely to be completely submerged and lost. I commend to the attention of such letter-worshippers the following anecdote, related in the recently published life of Robertson of Irvine. Admitting that the truth in certain Romanist legends lay more in the fiction or moral than in the fact or alleged story, he proceeds:

"I know some wise good people insist on separating the fact from the fiction, and throwing the latter away. But that may be the best of it—most likely is. They remind one of the ladies of England, who, when tea was first brought to this country, infused it, and then poured off the dusky brown water and ate the leaves with butter."

If we substitute spirit and letter for fiction and fact, the anecdote may well apply to certain prevalent customs and prejudices in the English Church. Here, too, the spirit, purport, and truth of Christianity is thrown

Digitized by Google

away, and the literal residuum, solid and innutritious, is served in its stead—also "with butter."

John Owen.

The Alphabet of Economic Science. By Philip H. Wicksteed. (Macmillan)

J. B. Say has said too sweepingly "On s'est égaré en économie politique toutes les fois qu'on a voulu s'en rapporter aux calculs mathematiques." J. B. Say himself *s'est égaré* seriously in his exposition of the relations between utility and value. And it may safely be affirmed that this important subject can never be apprehended perfectly without the aid of the conceptions at least, if not the symbols, which are furnished by mathematics. Sydney Smith was justified in leaving the Political Economy Club upon the ground, as the story goes, that there was nobody there who could explain value. There was nobody anywhere in what may be called the pre-Jevonian era. Jevons was the foremost, if not the very first, who introduced the ideas appropriate to the subject. But Jevons's *Theory*, fenced round with formidable symbols, is hardly accessible "to the general." The mathematical key of this economic treasure is furnished by Mr. Wicksteed. A considerable part of his book is devoted to explaining what is meant by a "differential coefficient." Nowhere else can the student of economics find ready to hand exactly the sort and amount of mathematical knowledge which he requires. Mr. Wicksteed brings the science of Jevons down to earth. How many tedious controversies about value might have been cut short, if the disputants had seized the points which he puts so clearly! How much more economic science is contained in this little textbook than in almost all the ponderous mass of German literature which relates to the theory of worth! We, of course, except the quasi-mathematical school founded by Menger, the "Graecos qui vera requirunt."

Our author appears to us to be particularly qualified to act the part of mediator between abstract science and human dealings. Gossen and some other mathematical path-breakers have been deficient in humour, and hardly enough in touch with real life. But Mr. Wicksteed is not a man of one idea. His economic illustrations would be valuable, even apart from his mathematical theory. Among many shrewd and original remarks the following may be instanced:

"It is rather unfortunate for the advance of economic science that the class of persons who study it do not as a rule belong to the class in whose daily experience its elementary principles receive the sharpest and most emphatic illustrations. For example, few students of economics are obliged to realise from day to day that a night's lodging and a supper possess utilities that fluctuate with extraordinary rapidity; and the tramps who, towards nightfall, in the possession of twopence each, make a rush on suppers and sleep out if the thermometer is at 45°, and make a rush on the beds and go supperless if it is at 30°, have paid little attention to the economic theories which their experience illustrates."

Again, it is well said:

"The reply, 'We don't make up ha'poths,' which damps the purchasing ardour of the youth of Northern England, is constantly made by nature and by man to the economist who tries to apply the doctrine of continuity to the case of individuals."

We do not remember to have seen it remarked before that in the case of "presents" consisting of objects "which no sane person is expected to buy for himself," the ordinary relation between the value of a product and the pleasure which it affords to the consumer does not hold. Mr. Wicksteed does good service to science in exposing the fallacy of the optimist orthodox doctrine that the commodities most desired by the community are sure to be produced under a *régime* of competition. He proves, in defiance of popular political economy, that "the conformity of the net result to any principle of justice or of public good would depend on initial conditions prior to all exchange." With equal rigour he follows out the postulates of the Socialists to their remote consequences.

The difficulties of Mr. Wicksteed's task have been increased by the narrowness of his limits. His treatise is the alpha and beta, but hardly the omega, of economic science. It is scarcely possible to discuss value apart from production. But our author has allowed himself only one or two short excursions into the latter field. His analogy of Robinson Crusoe, distributing his labours so as to maximise his gratifications, is well conceived, but must be applied with caution to a *régime* where a division of labour prevails. Perhaps, as to the relations of value and labour, our author would have done well to strike out independently of Jevons. At another point, we could have wished that he had kept at a greater distance from his distinguished guide. We allude to the case of bargain between two individual dealers in the absence of competition. It appears to us that Jevons here goes to the very edge of a certain pitfall, and that Mr. Wicksteed goes one step further. He teaches that in general, and with one unimportant exception, the contract between such isolated parties is determinate in the same sense as the rate of exchange in a perfect market. But, as Jevons admits in his latest work, and as, among our rising economists, Mr. Price has most clearly pointed out, the bargain between individuals and combinations is not governed by the ordinary law of market. There is a "Spielraum," as the Austrian school have it, in which the interests of the contracting parties play, undetermined by any economic law. To ignore this property is not consistent with mathematical precision. But let not the reader be alarmed by the severity of this criticism. The weak point, which it is our duty to indicate, is not like the link of the proverbial chain. The doubtful passage lies quite apart from the general course of the reasoning. The little slip may entirely be avoided by skipping or skimming the last three or four pages of the book. We are not precluded from judging that, on the important subject which this manual introduces, it is the best educational treatise known to us.

F. Y. Edgeworth.

NEW NOVELS.

The Story of Helen Davenant. By Violet Fane. In 3 vols. (Chapman & Hall.)

Beyond Cloudland. By S. M. Crawley Boevey. In 2 vols. (Alexander Gardner.)

Her Last Run. By the Hon. Mrs. Walter R. D. Forbes. In 2 vols. (White.)

The Ghost of Dunboy Castle. By Huberto. In 2 vols. (Simpkin, Marshall & Co.)

Young Maids and Old. By Clara Louise Burnham. (Trübner).

On the Wrong Tack. By A. E. Wilton. (Bristol: Arrowsmith.)

My First Offer. By Basil Blackett. (Burnet.)

The Story of Helen Davenant is the strongest novel that "Violet Fane" has yet written. Singularly enough, too, it is strongest where hitherto her writing has been weakest. She has frequently endeavoured to construct an attractive plot, but she has never achieved a genuine success until now. *The Story of Helen Davenant* cannot be better described than as a feat in literary natation. "Violet Fane" precipitates herself into the whirlpool-rapids of mesmerism and clairvoyance, and yet she contrives to struggle through them to land in such a way as to suggest the suspicion that occultism is simply one of her stage properties. Be that as it may, neither Miss Braddon, nor the author of *The House on the Marsh*, could have contrived a more ingenious story than that of Helen Davenant—an impressionable girl, who is mesmerised into marriage with a mysterious prince who has, in his turn, been mesmerised into murder by his sister, "the superior fiend" of the two. There is a subsidiary problem to be solved—the question of the paternity of Helen Davenant. The solution of this problem is well managed, thanks to certain letters which make their appearance in the beginning of the book. But it is repulsive and superfluous. The tracing home of the murder he committed to Helen's unfortunate prince is—talisman, Hebraism, and all—as closely-linked a chain of plot as has ever been manufactured. *The Story of Helen Davenant* is not remarkable in the department of character-study. Both her husband and her lover are phantoms. The ambassador at the Russian Court who takes such a warm interest in Helen, for reasons which are not fully explained till the end of the story, is rather too old-fashioned a *grand seigneur*; and even the female fiend is little better than the commonplace Brinvilliers—she is, indeed, vulgar as well as commonplace—of a second-rate sea-side novel. There is, however, one really good character in *Helen Davenant*—her governess, whose ambition it is to make the facts of her environment as strange as the fiction which she revels in, and who practically succeeds in realising her ambition. Miss Warden supplies all the humour in *Helen Davenant*, and it is never farcical.

But for the altogether unnecessary and positively irritating mystical element in it, *Beyond Cloudland* would have been a thoroughly good story of that ordinary English country life—of rolls and butter indoors, roses and honeysuckles out-of-doors—the monotony of which is relieved by

Digitized by Google

Beethoven and flirtation. As it is, there is some really good character-study in it. The lovers, Blanche Murray and Arthur Crampton, are both more than passable portraits of folk of the kind one may meet at any garden party. The description of the Tenterden household, and particularly of Minnie, who "was one of those beings who seem put into the world to add to its flavour, just as Harvey's sauce and pickles improve insipid food," is, in all respects so successful as to suggest the desirability of the author of *Beyond Cloudland* abandoning ambitious phantasy for unambitious social Thackerayanism. To judge from her too turgid preface, she has rather a contempt for "prosaic souls who neither possess the wings of imagination nor sympathise with her flight." But it is the "prosaic souls" in *Beyond Cloudland* that are at once the best and the best-drawn characters in it. Feminine readers will most emphatically resent the weakness of the heroine in returning to the lover who has treated her so shabbily. He deserves to be mercilessly humiliated and pigeoned to the extent that he is; but he does not deserve to have such a guardian angel as Miss Crampton or such a wife as Blanche. When all deductions are made, however, it must be allowed that there is both a great amount, and a great variety, of ability in *Beyond Cloudland*.

Her Last Run is a second-rate, but harmless, "sporting" novel, containing the average number of balls, steeple-chases, and feminine jealousies and slangy expressions. It ends badly; for the heroine, in the spirit of self-sacrifice, becomes engaged to a man whom she does not care for, and dies in the arms of the man she loves. This tragedy seems inartistic; for poor Madge is, by birth and temperament, one of those girls who seem born to triumph over troubles and enemies, and to be happy ever afterwards. The best thing in *Her Last Run*, at all events in the eyes of the more critical reader, is the reproduction of some genuine baby-talk.

Surely there never was such a preposterous combination of gorgeous diction and coarse seduction as *The Ghost of Dunboy Castle*. One might dwell at some length on the fact that, although the Ireland that figures in it—or rather in the story within this story—is the Ireland of 1651, the language (popular, scientific, and slangy) that is used is essentially that of the present close of the nineteenth century. It might be asked, among other things, how Rosa Gibson and her "paramour"—who, however, must not be confounded with her "destroyer"—could, "brilliant among the brilliant, have swept along the Boulevards to the Bois de Boulogne, to the Jardin Zoologique d'Acclimatation, or to the Bois de Vincennes." Anachronisms and other absurdities are, however, nothing to a writer who, like "Huberto," despises criticism in the manner in which he does in the extraordinary dialogue he terms a preface, and tells us in his first page that "night in seeming sympathy spread round her pall of darkness, and all creation, in emblematic mourning, assumed the sable investment—the judiciously selected garb which so well symbolises disfiguring melancholy." But "Huberto" might in any case have spared us Dr. Armstrong, with his heartless *liaisons*, the nameless horrors of his sound-proof "decoy-chamber," his murder-plots, his scientific "infidelity," and, above all, his unctuous repentance. The Noras and Toms, the Marys and the Geralds, the fighting and the fainting, the brogue and the blarney, in *The Ghost of Dunboy Castle* are all, however, genuinely Irish. Possibly enough "Huberto," if he ceased trying to walk on the stilts of an affected style, could write a readable story of humble Irish life in the present day.

Young Maids and Old is a really delightful story of New England life, about nothing in particular, and all the better for that. There is no special reason why the two couples in it—Irene Flanders and Leo Graham, Susan Farley and Phineas Thorne—should not have paired off at the end of twenty pages, instead of four hundred; for they have very little to do in such a quiet town as Proctor, that favourite retreat of Bostonians wearied out with the strain of their own intense intellectuality. But this happy dispatch would not have given poor Miss Emma Trowbridge time to make and mar a pretty matrimonial plan, or Irene Flanders to show the moral beauty of a nature which she can scarcely have inherited from a selfish father, or the light-hearted Susan Farley by looking on this picture and on that to discover and shelter herself under the goodness to be found beneath the almost boorish exterior of Phineas Thorne. *Young Maids and Old* is full of quiet humour, and is strong in the study of simple characters. It is above all things easy and yet enjoyable reading.

On the Wrong Tack is a passably written story, which runs on conventional lines. Noel Goffe, who, although a dramatist, is an "awfully jolly fellow," marries Christabel Burgoyne, the niece of a fine old admiral, and an affectionate, vivacious, but not very strong-headed, girl, whereas he ought to have married Dena Moore, "a queenly looking woman with beautifully moulded limbs and the face of a Greek goddess." But he has seen Dena fleeing from her aunt's house, and he takes it for granted that she is a fashionably frivolous woman leaving her husband and her home. Under these circumstances, he cannot well marry Dena, although he loves her and informs her of the fact. But he and Christabel live very happily, and, besides, Dena marries the fine old admiral. Here the story ought to have ended, and might have ended in a prettily pathetic fashion, like the genuine "Auld Robin Gray." It suits the author, however, to bring Dena and Goffe together again. It will thus be seen that *On the Wrong Tack* is, and is intended to be regarded as, a melancholy novel. But the author would be much more at home in a domestic story—of the type, say, that Miss Walford has, of late, rendered specially popular. She knows country scenery and country society; she is at home among the mild emotions of reasonably well-to-do people; and her style is in all respects careful.

There is a certain air of giggling schoolgirlishness in *My First Offer* which has all the appearance of a first experiment in fiction. It may be doubted, too, whether the author was well advised to present her (?) readers, not only with the town of Oakford—a "nice clean little place" with "delightful church services," and "the usual country-town society, lawyer, doctor, and so on"—but also with a poor and ferocious curate, who thinks of using a revolver upon himself, who cries "Tchut," who digs a pen into a table till it breaks, and whose "eyes, metallic in their lustre, absolutely scintillate with the fury of his passion," after making an offer of marriage in this fascinating fashion:

"I offer you an income of £200 a year, with the greatest improbability of its ever increasing. Straitened means are synonymous with very little society. Individually, I give you a self-sacrificing love, combined with jealousy, cruel and passionate, a querulous and exacting temper, unreasonable to a degree when provoked."

The curate apart, *My First Offer* is a fairly constructed and almost pedantically written story of jealousy, intriguing, murder, madness, and a lady who, because she has seen what she imagines to be a ghost, must needs take to somnambulism and to playing beautifully and cataleptically Mendelssohn's "Songs without Words." For a Manchester girl, still lingering in her teens, Miss White, the heroine, has a wonderful number of adventures; but why her biographer should declare her life closed because she cannot marry a man who has a wife in a *maison de santé*, does not clearly appear. The photographing of clericalised country life is much more in "Basil Blackett's" line than tragedy or even melodrama.

William Wallace.

BOOKS OF TRAVEL.

Rides and Studies in the Canary Islands. By Charles Edwards. Illustrated. (Fisher Unwin.) This book may be highly commended as one of the best of its class—that is, of books written to give readable information to intending visitors to season resorts, to help them over difficulties, to aid them towards gaining greater pleasure and benefit from their period of exile. The work has been called forth by the attempt to make the Canary Islands, and especially the town of Orotava in Teneriffe, a rival to Madeira as a winter station for consumptive patients. The question is one which can be resolved only by experience and by medical study. The heat so freely complained of would be no advantage, nor would the extreme dryness be beneficial, in all cases of pthisis. Great discrimination, we imagine, will be needed to decide whether Funchal or Orotava would be the more curative in any given case. Putting this aside, our author has written a delightful book, which may be read with pleasure by those who never think of visiting these fortunate islands. He has looked up his original authorities, and tells us just enough of the past history of the islands to stimulate the reader's interest to acquire more. We believe, however, that the remains of, and especially the inscriptions by, the aborigines are somewhat more numerous than are indicated here. The restrained descriptions of the riding tours round Teneriffe and Palma bring the scenery much better before the reader than any attempt at more brilliant word-painting would do. The drawbacks, as well as the pleasures, of such a tour are honestly told; and one of the greatest of the former seems to be, as in the case of the home Peninsula, the utter uncertainty of the conduct of the Spanish innkeeper in out-of-the-way places—at times civil, moderate in his charges, doing all he can to please with the means at his disposal; at others uncivil, scorn-

Digitized by Google

fully indifferent to the comfort of his guests, and extortionate. The traveller's complaint is not that he has been so badly treated on the whole, but that it is impossible to guess beforehand how he may be treated. We are astonished to find the wines of the islands have so very much degenerated. Five and twenty years ago good liquor was not so rare either in the Canaries or in the Azores. All intending visitors to Teneriffe should read this book before proceeding to their winter quarters. It is an honest piece of work done by a capable hand.

Letters from Majorca. By Charles W. Wood. With numerous illustrations. (Bentley.) This is a good book of the lively tourist kind, but its goodness consists not so much in the text as in the illustrations. There is the usual funny man, and the man who is the object of his jokes. Mr. Wood is a master in the art of expansion. His descriptions of art and architecture are most deliciously vague. He seldom commits himself further than to say that such and such a building is "Gothic." Happily for his readers, the woodcuts, taken chiefly from photographs, will often enable them to attain greater precision. His stay in Majorca was limited to some six weeks in November and December, 1886, and to a like period in May and June, 1887; but nearly the whole of this last visit is occupied with details of the illness of his host. Mr. Wood makes no pretence of a knowledge of history; there are no statistics given, nothing of the geology, botany, or natural history of the island. He attempts only descriptions of the scenery, and a reproduction of the lives of the two or three Englishmen on the island, and of their Mallorcan servants. He gushes over with sentiment at the smallest provocation. As a guide, he failed to reach the summit of the Puig Major; and his account of the wondrous caves of Arta is in such general terms that it might well have been written by one who had never seen them. One thing we must heartily commend. In spite of his enjoyment of the warmth of a Mallorcan November and December, Mr. Wood does not hold up the island as a resort for invalids, but shows the drawbacks to its apparent excellencies. His work is done by a hand practised in making much out of little. The pages can be turned over with pleasure; and, as we said at first, as much, or more, instruction is to be gained from the illustrations than from the text itself.

Untrodden Paths of Roumania. By Mrs. Walker. (Chapman & Hall.) Of the 354 pages of this volume Mrs. Walker devotes 250 to the religious houses of the country, and she might have more accurately entitled her book "The Monasteries of Roumania." It opens with three chapters on Galats and life on the Danube, and closes with two devoted to the history of the Principalities; the remaining chapters contain the author's diary and sketch-book. There is no accounting for tastes, and there may be readers who will accompany these three English ladies on their round of visits to monasteries and convents without *ennui*. For our own part we must own to some disappointment, more especially when we remember the vivid picture of convent life in Moldavia contained in Mr. Laurence Oliphant's *Episodes from a Life of Adventure*. On the important question whether monastic life tends to the good or evil of the general population, Mrs. Walker has absolutely nothing to say. She confines herself as a rule to descriptions of scenery which are pretty and bright, but become not a little monotonous. The following is a favourable specimen of her style, and is also one of the rare passages in which she shows some interest in human nature.

"Proceeding to one of the balconies I am watched by a very dirty old monk, emerged from a neighbouring room. He presently asks, 'Are you come to disturb and upset the arrangements of the monastery?' taking us, doubtless, for Government agents in disguise. He had placed his frugal breakfast—mamaliga and black beans—on a stone near the door of his cell, while he comes anxiously forward. He proves to be a Russian, capable of speaking a few words of French. I seek at once for information; but he instantly shuffles off, in a great fright, '*Non! je suis vieux! je suis vieux!*' in such dread of entanglement that he even forgets the little tin dishes in his precipitation. Presently he stealthily emerges like a rat from his hole and carries back his food" (p. 98).

An account of some of the flowers that bloom in these untrodden paths would have been very welcome; but only once does Mrs. Walker evince any interest in the local flora, and that is in alluding to a flower familiarly called "John and Mary" in Russia (p. 114).

With the Camel Corps up the Nile. By Count Gleichen. With numerous Sketches by the Author. (Chapman & Hall.) The literature of the ill-fated Nile expedition of 1884-85 is by no means proportionate in amount to the intense interest with which it was studied at the time. Sir Charles Wilson and Sir Henry Brackenbury have each written a little volume describing with authority the operations in which they severally took part; and one newspaper correspondent has also given us a somewhat critical narrative. There was therefore ample room—if only from the point of view of military history—for the present book, in which an officer of the Guards' Camel Regiment narrates, with equal modesty and good faith, what he actually saw and did. The book is eminently readable, and is enlivened with some clever sketches by the author.

Eighteen Hundred Miles on a Burmese Tat, through Burmah, Siam, and the Eastern Shan States. By Lieut. G. J. Younghusband. (W. H. Allen.) One of the paths to military distinction has always lain through adventurous travel in time of peace. Quite recently another officer of the name of Younghusband penetrated through Asia from China to India. The present author made only an excursion into the little-known borderland between Burma, Siam, and China; but we imagine that the risk he ran was greater than he cares to acknowledge, and that he owes much to the staunchness of his Gurkha orderly. After having once got reconciled to the flippant style of writing, which is probably the result of exuberant spirits, we follow the traveller with interest—though nothing can reconcile us to the illustrations.

A Ride through Syria. By Edward Abram. (Abram & Sons.) This little book is an agreeably written account of a pleasant trip through Syria. The traveller's route did not lie in the most familiar regions; and hence we are spared the oft-repeated details of things seen at Jerusalem or Bethlehem, instead of which we have a journey across the plains of Sharon and Esdraelon, with an account of visits to Mount Hermon, the sources of Jordan and Baalbec. Mr. Abram writes in a cheerful temper as regards his personal adventures, and in a spirit of devout yet intelligent reverence as regards the religious associations of the scenes he visited. The tour evidently left a pleasing impression on the writer's mind. The perusal of his account of it will leave the same on his reader's. The book is well got up, and there are many interesting pictures and an excellent map.

To Gibraltar and Back in an Eighteen-Tonner. By One of the Crew. (W. H. Allen.) This book reminds us of the Oxford story, how a man sailed to the Cassiterides in a canoe with an Ainsworth's Dictionary under his arm as cargo. Four friends with a couple of sailors and a boy make their way in a small yacht across the Bay of Biscay during the stormy weather of spring, loiter a few days at Vigo, Lisbon, and Tangier, and then sail home again. They seem to have retained their lightheartedness in the worst of discomforts, and it may be hoped found the good health which the captain sought from his two months' voyage. By means of the excellent chart appended, and the photographs and woodcuts of this little book, a stay-at-home reader may pleasantly share the cruise of the *Chiripa*, without the wettings and misery which at times it must have involved.

Four Months' Cruise. By Lady Ernestine Edgcumbe, and Lady Mary Wood. (Hurst & Blackett.)

"'The only thing to do is to write a book, and give an account of our cruise,' said one of the party.

"'So we will! Happy thought! and we will share the profits.'

"'Or the other thing,' unkindly murmured F."

This remark may not unfairly be described as the one happy thought of the book. We can only charitably hope that "the other thing" will not be very heavy. The English is surprisingly shipshod, even for the idle writing of an idle day. In two pages alone we find such expressions as "at once spotted the only house," "a look of homeiness. But if the literary partnership of these two ladies has not produced a delightful account of their yachting trip, their narrative is free from all suspicion of fine writing. It is written with simplicity, and may be of some interest to those who think of a cruise in the Mediterranean.

NOTES AND NEWS.

We understand that the two new volumes of Carlyle's letters, edited by Prof. Norton, which Messrs. Macmillan will publish very shortly, afford a tolerably continuous account of Carlyle's life from his marriage to the period when his fame was about to be established by the publication of his *French Revolution*.

Students of Spenser's poetry and bibliophiles will learn with interest that Dr. H. Oskar Sommer is going to edit, and Mr. T. C. Nimmo will publish, a photographic facsimile of "Immerito," the original edition of the *Shepheard's Calendar*, printed by Hugh Singleton (London, 1579), from the copy in the Grenville collection of the British Museum. The little volume, which is very rare, is in splendid condition, and consists of 56 leaves. The text is printed in black letter, the commentary and notes in Roman type. Each of the twelve Eclogues is preceded by a woodcut engraving appropriate to its contents. The editor's introduction will deal fully with the results of the studies on the subject up to the present time. Mr. L. B. Fleming will photograph, and Messrs. Ballantyne, Hanson & Co. will print, the volume.

An investigation into the Civil List pensions granted since the accession of the Queen has been conducted for the committee of the Incorporated Society of Authors by Mr. W. Morris Colles. The list of pensions, shewing the names, amounts, and the grounds for which they were given, has been reprinted, and will be published in a few days, with comments and suggestions bearing upon the neglect of literature, science, and art.

Messrs. Macmillan & Co. will shortly publish a new novel by Mrs. Oliphant, entitled *Neighbours on the Green*.

Messrs. Cassell & Company will publish early next week *The Metropolitan Year Book*, forming a guide to the municipal, commercial, ecclesiastical, educational, benevolent, and social institutions, of London. It will include particulars of the new County Council, together with a list of members.

Digitized by Google

Mr. J. M. Barrie, author of "Auld Licht Idylls," is engaged on a Life of the late Mr. Alexander Russel, for many years editor of the *Scotsman*. Mr. Barrie would be glad if any persons who are in possession either of letters from, or of anecdotes about, the late Mr. Russel would forward them to him, at 7 Furnival's Inn, E.C.

A one-volume edition of the late Sheridan Le Fanu's novel, *The Wyvern Mystery*, is being prepared by his son, Mr. Brinsley Le Fanu, who is also making some illustrations for the volume.

Mr. Arthur Symons has nearly ready for issue a volume of poems, entitled *Days and Nights*, which he has dedicated to Mr. Pater. Messrs. Macmillan & Co. are the publishers.

Mr. Hume Nisbet's new novel, for which he is supplying several illustrations, is entitled *Eight Bells:* a Tale of the Sea and of the Cannibals of New Guinea. The book will be published shortly by Messrs. Ward & Downey.

Mr. J. Stanley Little's new novel, *Doubt*, illustrated by Mr. Maurice Greiffenhagen, will be published immediately by Mr. Spencer Blackett.

Mr. Hugh L. Callendar, of Trinity College, will publish immediately, at the Cambridge University Press, *A Manual of Cursive Shorthand*; a Phonetic System adapted for general use. The introduction contains a discussion of the principles of shorthand, with illustrations from Pitman's system. An account is also given of an original series of experiments on shorthand writing, in which the time occupied by each movement was automatically recorded by means of an electric chronograph. The manual is accompanied by a system of phonetic spelling, analogous to Sweet's "Romic," which is used to indicate the pronunciation and accentuation of words.

Messrs. F. V. White & Co. will publish immediately—*Long Odds*, a three-volume novel, by Capt. Hawley Smart; a cheap edition of *The Cost of a Lie*, by Mrs. H. Lovett Cameron; and *A Real Good Thing*, by Mrs. Edward Kennard; also a shilling novel, by Mrs. Alexander, entitled *A False Scent*.

Messrs. Chapman & Hall are about to publish a short work, entitled *Galileo and his Judges*, by Mr. F. R. Wegg Prosser.

The same publishers will also issue next week the new edition of Mr. Wemyss Reid's *Life of the Right Honourable W. E. Forster*. It will be unabridged and contain additional matter and a new portrait, making a single volume of 650 demy pages.

An *édition de luxe* of Mr. F. C. Philips's novel, *As In a Looking Glass*, is now in the press. It will be profusely illustrated by Mr. du Maurier. Messrs. Ward & Downey expect to have it ready for publication early in March.

A new edition of Miss Florence Davenport Hill's *Children of the State*, edited by Miss Fanny Fowke, will be published by Messrs. Macmillan & Co. in the course of February.

A new edition of the *Handbook of Bible Difficulties* is announced by Mr. Elliot Stock.

At the meeting of the Elizabethan Society, to be held on Wednesday next, February 6, a paper on the "Plays of Thomas Dekker," by Mr. John Addington Symonds, will be read. The paper is based upon an article by Mr. Symonds printed in the Academy exactly fifteen years ago. Since that time he has altered many of his views upon this playwright's work; and he intends to take this opportunity of recasting what he then wrote. The meeting will be presided over by Mr. A. H. Bullen. There will also be a special meeting of the society on Wednesday, February 20, when Mr. Havelock Ellis will read a paper on "George Chapman." The chair on this occasion will be occupied by Mr. Sidney Lee. Those desirous of attending either of these meetings should communicate with the hon. sec., Mr. James Ernest Baker, 38 Wivenhoe Road, The Rye, Peckham.

The committee for erecting a memorial to Christopher Marlowe is now definitely constituted. The chairman is Lord Coleridge; the treasurer, Mr. Sidney L. Lee (26 Brondesbury Road, N.W.); while the list of members includes Lord Tennyson, Mr. Browning, and Mr. Swinburne. From America, there are Mr. J. R. Lowell and Mr. H. H. Furness; and from Canterbury—where it has been decided that the memorial shall be placed—the mayor, the master of the King's School (in which Marlowe was educated), and Canon Fremantle.

Miss Ward, principal of the Maria Grey Training College, will deliver a course of six lectures on "The History of Education"—dealing with Rousseau, Pestalozzi, Froebel, and Mr. Herbert Spencer—at the Datchelor school for girls, Camberwell, on the two first Fridays in February and the two first Fridays in March, at 4 p.m.

Messrs. Macmillan have now added *Two Years Ago* to their cheap edition of Kingsley's works, which they are issuing in monthly volumes. *Two Years Ago* was first published (as its title implies) in 1857, and a second edition was called for within two months. A one-volume edition was issued in 1859, and reprinted in 1866. But since 1871 a fresh reprint has been demanded in each successive year, so that the total number of editions now amounts to 22, as compared with 25 for *Westward Ho!*, 19 for *Hypatia*, and 15 for *Yeast*. We suspect that most of Kingsley's admirers would put *Hypatia* above *Two Years Ago*; but the large circulation of all of them, in comparatively expensive editions—the cheapest hitherto has been 6s.—is a gratifying fact. We do not know whether they are equally popular in America.

Correction. — Several correspondents have written to point out some manifest errors of date in Sir R. F. Burton's "Notes from Vevey," in the Academy of last week. In the Ludlow inscription, the date of his arrival at Vevey should clearly be "1662," and not 1642; and the passage—"Ludlow returned to England in 1689, before the accession of Charles II."—should apparently run—"Ludlow returned to England in 1688, before the accession of William and Mary."

UNIVERSITY JOTTINGS.

It is announced that the Wykeham chair of logic at Oxford, vacant by the resignation of Mr. T. Fowler, will be filled up before the end of the present term.

Mr. Holman Hunt has been in Oxford for some little time, engaged in painting a picture connected with Magdalen College.

The annual meeting of the Cambridge Philological Society was held on Thursday, January 31, when Dr. Peile, master of Christ's College, was re-elected president, and the new officers appointed were Dr. Jackson as vice-president, and Dr. Verrall as member of council. Dr. Fennell read a paper on "The Relation of Accent to the Division of Words into Syllables in Aryan Speech, and Accent as a Cause of Phonetic Change, with special reference to Verner's Law, Sanskrit Gutturals (*velars*), and the Greek Vowel System."

The candidates for the Laudian chair of Arabic at Oxford—which has been vacant since the death of Mr. Gandell about a year ago—include Mr. David Margoliouth, of New College; Mr. Habib Anthony Salmone, now lecturer in Arabic at University College, London; and Prof. Hermann Ethé, of Aberystwyth, an examiner in the Oriental School.

Messrs. Bodley and Garner have been appointed architects of the proposed new buildings at King's College, Cambridge. It is to them that Oxford owes the new buildings at Magdalen.

Mr. A. H. Bullen, the well-known editor of the dramatists and lyric poets of the Elizabethan age, has been invited to deliver a course of lectures at Oxford this term on "Michael Drayton and other Elizabethans."

Prof. Westlake announces lectures at Cambridge this term on "The Suez and Panama Canals," "Egypt, Suakim, Massowah," and "The Future of Naval War."

A work on *The Principles of Inductive or Empirical Logic*, by Dr. John Venn, is about to be issued by Messrs. Macmillan. It contains the substance of lectures delivered in Caius College, Cambridge, for a number of years past. The general treatment of the subject is somewhat more in accord with that adopted by J. S. Mill than with that of the majority of recent English works on logic.

Mr. Arthur J. Evans delivered two lectures this week in the new lecture-room of the Ashmolean Museum, on "Sign Language, Pictographs, and Symbols," and on "Sun and Star Symbols in their relation to some pre-Christian Forms of the Cross."

The Oxford University Dramatic Society will produce "Julius Caesar" at the new theatre on Wednesday, February 27. Mr. Alma Tadema has designed most of the scenes, and Prof. Herkomer has also given his assistance.

A letter from the War Office has been published, stating that, if the effective strength of the Oxford University Volunteer Battalion be not raised to 360 members by June 1, it will be necessary to consider the advisability of withdrawing the adjutant and permanent staff, and taking steps for the disbandment of the corps.

The *Oxford Magazine* for January 30 prints, in continuation of previous articles, a bibliography of Oxford books for the year 1888, compiled by Mr. F. Madan, of the Bodleian.

The veteran lexicographer, Dr. Georges, of Gotha, has sent the following reply to the address of congratulation, drawn up by Profs. Nettleship and Sonnenschein, and widely signed by a large number of British scholars, which was printed in the Academy of December 1, 1888:

"Den Herrn Gelehrten, welche mir am Tage meiner 60 jährigen Jubiläums als Lexigraph übersendete Adresse gütigst unterzeichnet haben, sage ich meinen tief gefühlten Dank. Ich bin stolz auf die mir erwiesene Ehre, um so stolzer, als die Theilnahme an meinem Jubiläum in Deutschland fast nur auf den Kries mir persönlich befreundeter Gelehrten beschränkt hat."

"Gotha, den 20ten Jan., 1889.

"K. E. Georges."

In connection with the London Society for the Extension of University Teaching, Mr. J. D. McClure will deliver a course of ten lectures on "Astronomy" in Marylebone. At the first lecture, to be given in the Steinway Hall on Tuesday next, February 5, at 8 p.m.—to which admission is free—the chair will be taken by Prof. G. J. Romanes.

OBITUARY.

KARL ELZE, PH.D., LL.D.

Friedrich Karl Elze—for such was the full name of the great German Shaksperian who has so quickly followed Halliwell-Phillipps to

Digitized by Google

the grave—was born at Dessau on May 22, 1821, and died, after a short illness, at Halle on January 21, 1889.

His name is probably better known in England than that of any German author on Shakspere since Gervinus; and several of his books have been translated into English. He was appointed professor of English philology at Halle in 1872, being the first occupant of the chair. He had previously studied at Leipzig and Berlin in classical philology; but he soon devoted himself to modern languages, and especially to English. A long bibliography of his writings is given in a recent number of the *Hallische Zeitung*. As early as 1857 he published a text of Hamlet, of which a new edition appeared in 1882. A collection of his *Essays on Shakspere* was translated into English in 1872 by Miss L. Dora Schmitz; and his well-known *Life of Shakspere* (first German edition, 1876) appeared from the hands of the same translator only last year (George Bell & Sons). He was also the editor of the *Jahrbuch* of the German Shakspere Society, which dates from 1865, being the result of the enthusiasm aroused in Germany by the celebration of the Shakspere tercentenary in the previous year. To the publications suggested by that celebration Elze himself contributed a work entitled *Die Englische Sprache und Litteratur in Deutschland* (1864). He further wrote biographies of *Walter Scott* (1864), and *Byron* (1870, second edition 1881), the latter of which was translated into English in the year following its first publication.

As compared with the late Halliwell-Phillipps, with whom it is natural to compare him, Karl Elze was a student and a critic, rather than an antiquary or collector. But in his own particular line—of erudition combined with sound sense—he has left no one, either in Germany or in England, who can exactly fill his place.

We also regret to record the death of Dr. P. A. Tiele, the Dutch librarian and bibliographer, which took place at Utrecht on January 22. Next week we shall print a notice of him by one of his university colleagues.

TRANSLATION.

HELEN AT TROY.

(*From Aeschylus's "Agamemnon," 681-716, 737-49.*)

Who named her? What weird tongue unknown forestalled
Their doom with deft surmise?
Helen! The spear-won wife,
The hell of towns and ships and men at strife,
From her rich canopies
She sailed with giant Zephyr, where he called;
And mâilèd huntsmen in the rowers' wake,
Though Simoïs' forest sighed
Above the beachèd galley, plied
The murderous quarrel for her sake.

Aye, Heaven's wrath, upon its purpose bent,
Sped her unkindly kin
To Ilium in time;
And her new brethren, whose loud bridal chime
Attainted them of sin
'Gainst hearth and home, abode their punishment.
So Priam's ancient burgh, in other strain
And dirgeful, last and first,
On Paris cries, the bridegroom curst,
For those her children's blood and bitter pain.

That presence softly brooding, for an hour,
Seemed to the town a trance
As of the waves at rest,
A jewel smiling there on Ilium's breast,
A gently darted glance
Of love, that bourgeoned into poignant flower.
But love with death consorting, joys with fears,
On Priam's house she trod,
To venge the hospitable God,
A Fury fed with widows' tears.

George C. Warr.

MAGAZINES AND REVIEWS.

The first number of *Le Livre* for 1889 contains a note by the editor specifying certain intended changes, such as the "boiling down" of a greater number of small detailed pieces of information and paragraphs into the general *compte-rendu*. The main articles are two—a paper on George Eliot, by M. du Pontavin de Heussey, which would be improved by a little more criticism properly so called; and a very pleasant notice, by the editor, of *Un Almanach des Muses*, a hundred years ago. M. Uzanne, who has had the valuable collaboration of M. Robida as illustrator, and has used it liberally, has made an interesting, agreeable *causerie*, and, indeed, something of a romance, of his subject.

CORRESPONDENCE.

DANTE'S REFERENCES TO ALEXANDER THE GREAT.

Stanhoe Grange, Norfolk: Jan. 26, 1889.

In his letter on this subject in the Academy of January 26 Dr. Moore quotes the comments of Boccaccio, Buti, and Benvenuto da Imola upon Dante's allusion to Alexander in India (*Inf.* xiv. 31-6), and at the same time asks for information as to several of the authorities mentioned by them. I think I can satisfactorily answer his queries so far as Buti and Benvenuto are concerned.

Benvenuto's "Gallicus ille qui describit [or, according to another reading, 'qui scribit'] Alexandreidam metrice" can hardly be other than Gaultier de Lille, or De Châtillon (commonly known as Gualtherus de Castellione), who was the author of an *Alexandreis*, an epic poem in Latin hexameters on Alexander the Great, based upon the history of Quintus Curtius, and written towards the end of the twelfth century (the murder of Becket, 1170, is referred to as a recent event). This *Alexandreis*, which is in ten books, was several times printed in the fifteenth century, and is, in fact, the identical work quoted from by Dr. Moore in the latter portion of his letter. The colophon of the Paris edition of 1659 mentioned by him gives the date (1278) probably of the execution of the MS. from which that edition is printed. It is certainly not the date of the composition of the original poem, which was written a hundred years earlier, as is proved not only by the allusion to Becket's murder, but also by the fact of its having been dedicated to William I., Archbishop of Rheims, 1176-1202 (see H. L. D. Ward: *Catalogue of Romances in British Museum*, pp. 94-6).

The "libro de' fatti d' Alessandro" spoken of by Buti, if not the same work as that alluded to by Benvenuto, is probably the Italian translation (entitled *I nobili Fatti d' Alessandro Magno*) of the abridged Latin version of Pseudo-Callisthenes, known as *Historia Alexandri Magni, regis Macedoniae, de praeliis*, or more commonly as *Historia de Praeliis*. The author of this Latin version was a certain "Leo archipresbyter," who, in the latter half of the tenth century, was sent on an embassy from Italy to Constantinople, where he found the Greek original from which he made his translation.

To identify Boccaccio's "Guglielmo d' Inghilterra" is not so easy. The only work by an Englishman on Alexander in existence at that date seems to have been a compilation in five books, entitled *De Gestis Macedonum*, written probably between 1146 and 1151, and attributed to a certain Galfridus Hemlingtonus (Geoffrey of Hemlington), a monk of St. Albans. It may be that Boccaccio had this book in mind and wrote "Guglielmo" by mistake; or possibly he wrote "*Galfrido* d'Inghilterra," and this was subsequently altered by a careless copyist into the more familiar "*Guglielmo* d'Inghilterra"—on this point the promised critical edition of Boccaccio's *Comento* may perhaps throw some light. It must be admitted, however, that the Compilation of St. Albans never seems to have been much known outside England (see Paul Meyer: *Alexandre le Grand dans la littérature française du Moyen Age*, tom. ii., pp. 52-63).

Regarding the more interesting question as to the source from which Dante derived his account of the episode alluded to in the *Inferno* (xiv. 31-36), I think there can hardly be a doubt that he took it, directly or indirectly, from the spurious *Epistola Alexandri Regis ad Aristotilem preceptorem suum de Mirabilibus Indie*. If taken *directly* from this source, Dante's description must, as Dr. Moore suggests, have been given from memory (we are apt to forget how largely

Digitized by Google

writers had to trust to their memories in the days before printing, when books were excessively scarce and inaccessible); but, though he has undoubtedly somewhat confused the details, Dante's account more nearly resembles the original than would appear from the quotations given by Dr. Moore. The two conspicuous features in Alexander's narrative are the snow and the falling flames. Both of these, though in a somewhat different connexion, reappear in the passage in the *Inferno*. A comparison of the following extracts will make this apparent. The Letter says (I have transcribed the passage from a thirteenth-century MS. in the Brit. Mus., Sloane, 1785, fol. 6, verso):

"... frigus ingens uespertino tempore seuiebat Cadere mox *in modum uellerum immense niues* cepere quarum aggregationes metuens cum in castra cumularentur niues calcari feci ut quam cito pedum iniuria tabescerent.... Vna tunc res saluti fuit quod cum momento temporis ymber nimius subsecutus est.... Quem e uestigio atra nubes subsecuta est *uiseque sunt tanquam faces ardentes descendere* · ita ut *incendio earum quasi totus campus ardere uideretur*.... Iussi tunc milites sacras* uestes ignibus opponere."

Dante says:

"Sovra tutto il sabbion d'un cader lento
Piovean di fuoco *dilatate falde*,
Come di neve in alpe senza vento.
Quali Alessandro in quelle parti calde
D'India vide sovra lo suo stuolo
Fiamme cadere infino a terra salde;
Perch'ei provvide a scalpitar lo suolo
Con le sue schiere...
Tale scendeva l'eternale ardore;
Onde l'arena s'accendea...."
(*Inf.* xiv. 28-38.)

It is possible, however, that Dante's description was only taken *indirectly* from this source, through the medium of the *Romans d'Alixandre*, a poem in *laisses monorimes* of twelve-syllable lines (hence called "alexandrines"), written in the twelfth century. In an analysis of this poem, given by M. Paul Meyer (*op. cit.*, tom. ii., p. 178), he speaks of Alexander's army being overtaken by "un tourbillon de vent, accompagné de *flammes ardentes qui tombent dru comme la neige*." How far this passage, which contains exactly the same simile as occurs in Dante, represents the original I am unable to say, as I have had no opportunity of referring to the latter. At any rate, the episode of the falling flames and the snow occurs in the *Romans*, which may well have been Dante's authority for his account.

As regards Alexander's relations with the Romans, the second point discussed in Dr. Moore's letter, I may mention that in this same poem Alexander is made to boast—"J'ai conquis Rome, Pouille, Calabre, Afrique"; this is prior to his Indian expedition (Paul Meyer, *loc. cit.*, p. 164). Also in a Durham MS. of the *Roman de toute Chevalerie* (containing an account of Alexander), by a certain Eustache, or Thomas of Kent, one of the rubrics is—"Coment Alix. conquist Lombardie," to which the rubric of a Paris MS. of the same romance adds—"et coment les Romains honnorerent Alisandre" (Paul Meyer, *op. cit.*, tom. i., p. 178).

It is evident, therefore, that the tradition alluded to by Dante in the *De Monarchia* was current in the Middle Ages; and it may have been derived by him from one or other of the French poems I have named. An examination of the passages in the Romances here indicated would probably do much towards the elucidation of the question.

Paget Toynbee.

Cambridge: Jan. 30, 1889.

Cf. the following: "Cepit enim intollerabile frigus oriri; cadebantque niues magne vt lana. Itaque timens Alexander ne cresceret, precepit militibus suis vt eam pedibus conculcarent." *Historia Alexandri de preliis*, ed. 1489, sign. d 6, col. 2. See also *The Wars of Alexander* (E. E. T. S.), ed. Skeat, p. 228, l. 4163, and the notes.

* So apparently the MS.; printed edd. read *suas* or *teissas*.

SHAKSPERE'S "BALLOW."

Nottingham: January 18, 1889.

In "Lear," IV. vi. 247, Edgar says "or ise try whether your costard or my ballow be the harder." The meaning of "ballow" seems to be quarter-staff; but as no other trace of the word has been found, it has been emended to "baton." This emendation differs from the vast majority of "improvements" of the poet's words in being reasonable and probable. Indeed, it has the approval of Dr. Murray, who says that "no such word [as 'ballow'] seems to exist, or to have any etymological justification." But, in spite of the strong case in favour of the emendation to "baton," that emendation is unnecessary, for "ballow" is no printer's error, but a genuine word. This will appear from the following quotation from the Nottingham Corporation records:

"And memorandum, there was paid to dyuers for kyddes and ballowe wood, and other services done then, xxxvjs. xd."

This passage occurs in an account of the expenditure incurred in preparing for the visit of James I. on August 13, 1621, which is entered in the Hall or Council Book for that year (3395, fo. 28). The passage is printed in vol. iv. of the *Records of the Borough of Nottingham*, p. 375 (now in the press). "Kyddes" are, of course, faggots, and "ballowe wood" would therefore appear to be wood of larger growth. It was not, I think, underwood, for that is invariably described in the Nottingham records of this time as "tinsil" or "trowse." The account does not, unfortunately, tell us for what purpose this "ballowe wood" was procured, but there was a payment of £3 15s. 10d. to labourers "for workinge in the highwaies." The roads, &c., were carefully surveyed and repaired prior to the arrival of the king, who visited Nottingham several times, so that it is probable that the "ballowe wood" was used in repairing gates or fences. This suggests that "ballowe wood" meant young trees or saplings.

Since I met with the above passage I have succeeded in finding an earlier example of the word, which agrees even more closely than the above with Shakspere's use of the word. In the Hall Book for 1503-4 (3353, p. 15) there is an entry of an action for assault brought by John Bult, one of the sheriffs' sergeants-at-mace, against Thomas Hewett, "cobler," in which he states that the defendant assaulted him "cum uno baculo cum ferro rostrato uocato '*a ballowe staffe*.'" If Edgar's "ballow" was similarly beaked with iron, we can understand how he succeeded in slaying a man armed with a sword, which would not be a very easy achievement with a baton. But the 1621 example proves that "ballow" has no reference to the iron of the staff, but to the wood of which it was formed. Still, the earlier passage is of interest as suggesting that Edgar's "ballowe" may have been beaked with iron like that of the Nottingham cobbler of 1503-4.

W. H. Stevenson.

THE OLD ENGLISH GLOSS "ELMAWES."

Cambridge: Jan. 22, 1889.

Some days ago Mr. Bradley asked me in the British Museum whether I could throw any light on the gloss *Lameres*, Anglice *Elmawes* in Wülcker's *Vocabularies*, col. 591. But it was a mystery to me. On my return to Cambridge I noticed that the gloss was one of those copied by Mr. Aldis Wright from a MS. in Trinity College Library, and that therefore no doubt as to its being correctly transcribed could be entertained. Still, as the treasures of the library of Trinity College are always easily accessible, I thought it worth my while to consult the MS., and found there "Lameres, id est lamia, vel anglice Elmawes; cetera feminea dicitur quod habet humanam speciem sed corpus bestiale." The gloss was now plain, namely, "*Lameres*(= Lemures, sometimes written Lemores and Laemures), Anglice *Helmawes*."

I thought it better to write a few lines to the Academy than to Mr. Bradley, as the solution of this difficulty, which took some time, will show to all future editors of Glossaries that, with respect to obscure and corrupt glosses, there is not much use in abridging works of this kind.

J. H. Hessels.

SUUM CUIQUE.

Oxford: Jan. 29, 1889.

The following paragraph appeared on January 24 in the *Pall Mall Gazette*:

"A rather good story is told of the late Bishop of St. Asaph. His lordship once delivered a short address to a village school on the subject of besetting sins. 'We all,' he said, 'have our besetting sins, myself like the rest. What do you suppose is mine?' Noticing the astonished look on the faces of his youthful hearers at the notion of a Bishop having a besetting sin, the right rev. prelate went on to say, 'Do not be afraid to answer.' At length one little fellow was courageous enough to hold up his hand by way of showing his willingness to respond to the episcopal questioner. 'Well, my boy,' said the Bishop, 'What do you say is my besetting sin?' 'Please, sir,' stammered the lad, 'droonkenness'! 'No,' rejoined his lordship, in the meekest of tones, 'not drunkenness, but vanity.' The Bishop's comment showed at all events that if he was vain he was also not destitute of a certain amount of humility."

On reading this "rather good story" I wrote a short letter to the editor, pointing out that it was well-known in the diocese of St. Asaph before the time of the late bishop—that, in fact, it was told of one of his predecessors. I added that nobody who new Bishop Hughes could believe it of him, as he was a man of sound commonsense and of no vanity, which, I went on to say, was not invariably the case with the English bishops whom the government sent from time to time to appropriate the spoils of St. Asaph, and snub the Welsh clergy of the diocese. I could not help observing also that it was somewhat doubtful whether the "tittle-tatler" had improved on the usual version of the story by the touch of dialect which he gave it in his "droonkenness," for that seemed to me to smack of the wrong side of Offa's Dyke. Be that as it may, the editor took no notice of my letter; and the calumny, published while the bishop's body was on its way to the grave, is now merrily making the round of the provincial press.

This must be my apology for troubling the readers of the Academy with my letter; but I will put myself in order, so to say, by finishing with a bit of philology. Many more stories about the "vanity" bishop are currrent in the diocese of St. Asaph. I will, however, only mention one. Among other gifts which he thought he possessed was that of lucid and edifying exposition of Scripture, so one day he spoke, greatly to his own satisfaction, on the words "in earing time and in harvest thou shalt rest"; and he explained how earing time and harvest were nearly synonymous terms, as "earing" referred to the work of cutting off the ears of the corn and gathering them together. When his instructive dis-

Digitized by Google

course was over he asked a Welsh clergyman what he thought of it. The latter was not acquainted with the Gothic or even the Anglo-Saxon cognate of the word "earing," but he ventured to suggest that if his lordship could read the words in the Welsh Bible—in the language which this learned prelate detested—he would find reasons to believe that "earing" meant "ploughing." I am sorry to say that I forget the rest of the story. It probably went on to relate what happened to the Welsh parson who was rash enough to teach the "vanity" bishop the meaning of a word in the latter's own language.

JOHN RHYS.

LEGENDS OF THE OLDEST ANIMALS AND THE SWIFTEST MESSENGERS.

London: Jan. 29, 1889.

The passage in Kilhwch and Olwen which Mr. Lethaby communicates to the ACADEMY of January 26, is, of course, perfectly well-known to all students.

Apropos of parallels, a very curious one has just come in my way, and I should be thankful for any light that could be thrown upon it. In Lessing's Faust fragment (Lachmann² vol. ii., p. 515) Faust calls up spirits, and claims the services of the swiftest among them. One is swift as is the arrow of pestilence, another swifter than the wind, another than the beam of light, another than the thought of man, another than the vengeance of the Almighty. All these are too slow for the impatient magician. The last spirit alone contents him: *he* is swift as is the transition from good to evil.

In a Highland tale, communicated by the Rev. Duncan M. Campbell of Appin, Michael Scott has to speed to Rome to obtain the knowledge of Shrovetide. He betakes himself to the fairy riding-fillies—the first is as swift as the wind, the second swifter, the third can outstrip the black blast of March. "Scarcely will you do," says Michael. The fourth alone answers his purpose, she is as swift as the thought of a maiden between her two lovers.

The parallelism is remarkable, especially when it is remembered that the story in each case attaches itself to the wizard *par excellence* of the race. Is there a German folk-tale kindred to the Scotch one from which Lessing may have derived the idea of his scene? The Scotch test of rapidity is proverbial in the Highlands. See Fionn's Questions (Campbell, vol iii.).

In the after part of the tale, the Pope is disinclined to impart his knowledge. But, on Michael Scott's pointing out to his Holiness, who has just risen from bed, and thrust his feet into the first pair of slippers that come to hand, that he is shod as a lady, *il s'humanise*; and henceforth there was never any necessity for Scotland to apply to Rome for guidance. This theme is a well-known one. Perhaps, Dr. Köhler, who reads the ACADEMY, will say if this variant is known to him.

ALFRED NUTT.

THE FIRST RUSSIAN IN ENGLAND.

London: Jan. 26, 1889.

I should have mentioned that I gave the inscription on R. Moses ben Isaac's tombstone in an amended form as well as I could from Thoms's reading, which is utter nonsense as it stands. Luckily the name is quite certain, and it was with that I was chiefly concerned. The letters חרבר before Isaac's name in Stow should be divided thus—/הרב ר. R. Moses in the Preface to his "Onyx Book," applies them to his father Isaac. They are merely honorary, and do not imply much more than that Isaac had some pretensions to Hebrew learning. The term רב, nowadays applied to a chief rabbi, was not so significant in the early Middle Ages. Certainly Isaac could not have had any claims to that title, as we know the names of the Presbyters of the Jews of Early England from Henry I.'s time onwards, and none of them was named Isaac. The title "Chacham" (usually spelt "Haham" and in Portuguese writers "Jaxam") is only current among the Spanish Jews, and was introduced among them after the expulsion from Spain in 1492.

I do not know of any dispute as to the time when the above designations became current in England. Perhaps Mr. Hall is thinking of the distinction between the titles "Episcopus" and "Presbyter" as applied to leading English Jews before the expulsion in 1290. I am of opinion that "Episcopus" means one of the three *dayanim* or judges who constitute the *Beth Din* or ecclesiastical tribunal which is to be found in every large Jewish community, while "Presbyter" applies to the *Ab-beth-din* or president of that tribunal. There is an interesting passage about "an Israelite bishop without guile" in Robertson's *Materials for the History of Thomas Becket* (Rolls Series, iv. 151-2).

JOSEPH JACOBS.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 4, 5 p.m. Royal Institution: General Monthly Meeting.
5 p.m. London Institution: "Caedmon: our First Poet in the Island of England," by the Rev. Stopford Brooke.
8 p.m. Royal Academy: "Roman Architecture," III., by Mr. G. Aitchison.
8 p.m. Victoria Institute: "The Factors of Evolution in Language," by Mr. J. J. Murphy; "Intelligence among the Aborigines of Australia," by Dr. Fraser.

TUESDAY, Feb. 5, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," III., by Prof. G. J. Romanes.
8 p.m. Society of Arts: "Manufacture of Sèvres Porcelain," by M. Edouard Garnier.
8 p.m. Biblical Archaeology: "Roumanian and other little-known Versions of the Apocrypha of Jeremiah," by Dr. Gaster.
8 p.m. Civil Engineers: Discussion, "The Working of Steep Inclines on Railways."
8.30 p.m. Zoological: "The Species of Batrachians of the Genus *Rhacophorus* confounded under the Name of *R. maculatus*," by Mr. G. A. Boulenger; "Characters of some New Species of Birds of the Family Dendrocolaptidae," by Mr. P. L. Sclater; "Some New Species and a New Genus of Araneidea," by the Rev. O. P. Cambridge.

WEDNESDAY, Feb. 6, 8 p.m. Society of Arts: "The Status of the County Council," by Mr. G. M. Gomme.
8 p.m. Geological: "The Occurrence of Palaeolithic Flint Implements in the Neighbourhood of Ightham, Kent, their Distribution and Probable Age," by Mr. Joseph Prestwich; "The Cotteswold, Midford, and Yeovil Sands, and the Division between Lias and Oolite," by Mr. S. S. Buckman.
8 p.m. Cymmrodorion: "The Early History of Bangor Monachorum, with an Account of the District, East of Offa's Dyke, reconquered by the Northern Welsh in the Eleventh Century," by Mr. A. N. Palmer.
8 p.m. Elizabethan: "The Plays of Thomas Dekker," by Mr. J. A. Symonds.

THURSDAY, Feb. 7, 3 p.m. Royal Institution: "The Metamorphoses of Minerals," III., by Prof. J. W. Judd.
4 p.m. Archaeological Institute: "Unusual Features in Old Churches," by Mr. Thackeray Turner; "Banbury Cross," by Mr. W. Lovell.
6 p.m. London Institution: "Men, Women, and Artists," by Mr. Harry Quilter.
8 p.m. Royal Academy: "Roman Architecture," IV., by Mr. G. Aitchison.
8 p.m. Linnean.
8 p.m. Chemical: "Researches on the Constitution of Azo- and Diazo-Derivatives, V., Compounds of the Naphthalene β Series," by Prof. Meldola and Mr. G. T. Morgan; "Researches on the Laws of Substitution in the Naphthalene Series," by Mr. H. E. Armstrong; "The Action of Nitric Acid on Anthracene," by Mr. A. G. Perkin; "Methyl Fluoride," by Mr. N. Collie.
8.30 p.m. Antiquaries.

FRIDAY, Feb. 8, 7.30 p.m. Civil Engineers: Students' Meeting; "Flexible Wheel-Bases of Railway Rolling-Stock," by Mr. J. D. Twinberrow.
8 p.m. New Shakspere: "Shakspere's Development in Comedy," II., by Miss Grace Latham.
9 p.m. Royal Institution: "Electrostatic Measurement," by Sir William Thomson.

SATURDAY, Feb. 9, 3 p.m. Royal Institution: "The Great Composers and their Works," with Illustrations on the Pianoforte, III., by Prof. Ernst Pauer.
3 p.m. Physical: Annual General Meeting, "Physico-Geometrial Models," by Prof. A. S. Herschel.
3.45 p.m. Botanic: General Meeting.

SCIENCE.

Physical Realism: being an Analytical Philosophy from the Physical Objects of Science to the Physical Data of Sense. By Thomas Case. (Longmans.)

THIS book is a courageous attempt to harmonise the theories of knowledge put forward by empiricist metaphysic with the current theory of molecular physics as held by the unmetaphysical student of natural science. Or it might be described as an attempt to restore mental philosophy to the standpoint of Bacon, and to undo the work done by modern philosophy generally, from Descartes to Hegel.

Physical science, Mr. Case points out, now compels us to believe in the existence of a world of molecules and aether, which, together with their motions, must always be both imperceptible and unimaginable, but which nevertheless the rules of logic require us to assume as the only possible explanation of the phenomena we perceive. Philosophy meanwhile has started from the percipient subject—not unfrequently, indeed, from the subject in its least known stage, the hypothetical infant—and has attempted (confusing, *e g.*, p. 35, object and operation) to construct the known world out of sensations and their association, assuming that these sensations, the immediate objects of perception, are purely mental. The two views are thus wholly divergent. For the imperceptible and unimaginable (Mr. Case calls it "inconceivable," but that word is ambiguous) can never be constructed out of sensations; and yet it is pre-eminently the known. We must then begin with this known world, the object as revealed to us by the best available knowledge of natural science, and proceed from it to the less known—the percipient subject and his perceptions. We must, in short, follow Aristotle rather than Descartes or Hume. When we do this we find that this external world cannot possibly be psychical, being imperceptible and unimaginable. As non-psychical we may call it physical. To explain this physical object we must assume physical data. The immediate objects of perception from which these physical realities are logically inferred must be physical as well. Now, science also teaches us that the immediate antecedent of a perception is some state of the nervous system. The inference, then, is that it is this state which is the immediate object in perception. The percipient subject—who is conscious of himself both as physical and as psychical—directly perceives a particular motion of the nervous system. It is true he does not perceive it as such, but that is only because the nervous system is not quite adequate. In the course of human evolution it may become more so, and we may perceive as motion what we now perceive as heat, or sound, or colour (a most disagreeable prospect). In perception, however, reasoning, of course (and, I suppose, association), co-operates, and the so-called "perceived object" is, in fact, largely composed of inferred elements. But these

Digitized by Google

elements, too, are physical. A physical world like that posited by molecular physics requires physical elements of perception as its ground (a notable inversion of the usual idealist argument, that the perceptions being mental their antecedents must be mental too). Rejecting, then, the intuitive realism of Reid and Stewart, because it holds that we directly perceive the external object, and the cosmothetic idealism (of, *e g*, Mr. Herbert Spencer), because it is irreconcilable with the results of the most perfect form of knowledge we possess, Mr. Case propounds this intermediate theory, which he proposes to call "physical realism." Next, like a good Aristotelian, having stated the truth, he proceeds to state the cause of the error of idealism; or, rather, to trace its history from the revolution introduced by Descartes to the "most uncritical philosophy" of Kant (p. 323), the vestibule of which he says he cannot be expected to enter, though he does enter it—not, perhaps, with entirely satisfactory results. But it is the historical part of the book that will be read with most interest, and that has, I think, most permanent value, both as a criticism and for his occasional remarks on logic and on Aristotle, which are only what might be expected in clearness and distinctness by those who, like the present writer, have had the good fortune to attend his lectures at Oxford. Descartes, he maintains, in his famous reconstruction of the known world, really began with a hypothetical premise. He found he could suppose he had no body; and he therefore argued that if he had no body his mind and its content would at any rate exist. As a fact, however, we are directly conscious that we have bodies. His premise is purely hypothetical, and the conclusion that mind perceives only mental elements, and not physical elements, is only hypothetical too. Locke simply removes Descartes' hypothesis from the premises to the conclusion (p. 141), and so maintains that all the immediate objects of the understanding are ideas. True, he has a realist theory as well, but the two are not successfully reconciled; and, though he admits reflection and reasoning, yet he further opens the way to a complete and consistent idealism by supposing that reflection and reasoning, as well as sensation, are concerned about "ideas." Berkeley made Locke's idealism logical and consistent, and (Mr. Case holds) wrote the *New Theory of Vision* to support his idealist theory. Mr. Case then traces the development of the theory in Hume and Kant, and winds up with a promise—which it is to be hoped may soon be fulfilled—of a second volume, part of which is already in type, on post-Kantian idealism and the logic of science.

Mr. Case's historical criticism is, I think, for reasons which will appear presently, very much the most valuable part of his work. But it is not all of equal value. A criticism on Berkeley's theory of vision should surely take into account—especially when attacking idealism—the mass of recent work on the subject in Germany and elsewhere. Mr. Case's main attack on Berkeley is directed against his neglect of retinal magnitude, and does not seem to deal at all with the physiological aspects of the question. Still more open to question is the treatment of Hume. Mr. Case regards the *Inquiry concerning Human Understanding*, Hume's later work, as the authorised expression of Hume's views; and the *Treatise*—though containing views by no means retracted in the later work—as of somewhat inferior authority (p. 257). Now, it is precisely these views in the *Treatise* which are the central difficulty of sceptical idealism; and it seems evident, on reading the two works, that Hume, finding no way out of his difficulties, dropped the attitude of the ancient sceptic and assumed that of the modern positive philosopher, attacking metaphysic as a mere device of theologians to enslave mankind, and making an incursion into its domain simply to combat the theologians on their own ground, and to obtain that minimum theory of things which is all that the philosophic agnostic can hope to possess, but which he requires for purposes of action and life. Mr. Case seems entirely to overlook this change of attitude; yet it seems obvious, from a comparison of the first book of the *Treatise*, with its much more elaborate division of ideas, its fuller treatment of mathematics, and especially its examination of space, time, and the soul, with the first chapter of the *Inquiry*. The former belongs to Hume's life as a recluse and inquirer, the latter to his life as a man of the world. Mr. Case seems to quote from them indiscriminately. With Kant, I think, Mr. Case is even less successful. Least of all philosophers can Kant be dealt with apart from his historical antecedents. His *Criticism of Pure Reason* is really a criticism of the metaphysical structure erected by his predecessors. It is an attempt to find a new basis for exact science in the categories and the unity of apperception. Mr. Case seems to treat it as an attempt to idealise further (in spite of Kant's so-called refutation of idealism). It surely should be regarded rather as an attempt to meet Hume's scepticism by a cosmothetic idealism which will admit of natural science rather than by a cosmothetic idealism which will not. Mr. Case seems to me to ignore much of the destructive element in Kant and to misconceive the constructive. I cannot but think that he treats Kant too much as if Kant were solely concerned with the individual mind; and that his misconception is most evident in his treatment of Kant's view of mathematical judgments. He maintains that the propositions of arithmetic are deducible from definitions of the numbers: the true definition of 12 is not 12 = 7 + 5, but 12 = 11 + 1, which is an analytical proposition. Doubtless it is when you know it; but you have to make the synthesis, you have to *count* 11 and 1 are 12, "as anyone may see," says Kant, "by trying large numbers." Yet once made it is made for ever. Kant himself gives an illustration of his meaning as regards geometry. You cannot, by meditating on the definition of a triangle, discover the relation of its interior angles to two right angles. You have to connect these angles in a particular case with two right angles, which you do by interposing certain properties of parallel straight lines. Mr. Case here ignores geometry, and with it Kant's best illustration, and deals with arithmetic, ignoring there Kant's other illustration. But the most surprising feature in Mr. Case's historical examination is the total absence of any criticism of theories of causation. In one place, indeed, he seems to admit both efficient and material causes (p. 30); and throughout the book he tacitly assumes, apparently as involved in the existence of logic, the law of causation. But he neither distinctly justifies his own assumption nor says anything about the various forms of the theory in Locke, Hume, and Kant. I gather, indeed, that he adopts Locke's inconsistent and eminently anthropomorphic theory (*Essay*, ii., c. 21). But he does not appear to mention it; and it is a pity he does not, because it is in the development of the theory of causation that the main strength of modern idealism lies. Once show that causation is reducible to constant sequence, and that "power" is only a name for a generalised expectation of sequences to be perceived by human minds, and all ground is removed for the supposition of unknowable causes of our sensations—"noumena" in Mill's sense—things *per se* behind phenomena. Mr. Case may reply that he has overthrown idealism at an earlier stage of its growth by destroying the relativity of the object of perception; but it is none the less a pity that he did not notice this part of the theory. And does Mr. Case, when he maintains that Kant's philosophy knows of other units than those of arithmetic—for instance, the unity of apperception (p. 368)—really believe that Kant thought that unities of apperception can be counted, or that the Divine Unity can be added to the unity of apperception and the result expressed by 1 + 1 = 2? Moreover, the Divine Unity (p. 368) is most emphatically outside the scope of the *Kritik*. And Mr. Case retains the simple faith in Bacon (pp. 94, 318) which one would expect Liebig's work to have overthrown.

Along with all this debateable matter there is, of course, a great deal of very great interest and value. Incidentally, in the chapter on Hume, we have a sketch of a new theory of inductive logic, amplifying the realistic side of Mill, and substituting the "axiom of generality" for the "law of causation" or "law of the uniformity of nature"—a theory which does not at present seem to me an improvement, but which ought to be developed in an independent work. And nothing can be better than Mr. Case's occasional remarks on Aristotle (*e.g.*, pp. 38, 88, *seq.*), on the procedure of ancient philosophy (p. 38), on the "over-schematising" of logic, and the consequent irrational separation of conception, judgment, and reasoning (p. 317)—though, by the way, the germs of a similar view are to be found in Kant, and the criticism has often been made, though less concisely—his rehabilitation of Lambert's dicta of the three figures (p. 294), his clear separation of Locke's two theories as to the external world, and a number of his incidental remarks on logic (*e.g.*, p. 69) and criticisms, especially on Descartes.

But the fundamental misapprehension of the book is in the very first page. It does not follow that, because the molecules of science have been posited as "imperceptible" or "unimaginable," they are therefore not phenomenal, but "physical" or "material" in Berkeley's sense—things which exist out of relation to our mind. To show this it is only necessary to refer to the history of the molecular hypothesis. Of course, here I share that complete ignorance of science, other than as presented in popular lectures, which besets

Digitized by Google

almost all students of the literary side of philosophy; but I believe it will be found that, imperceptible and unimaginable as molecules and aether are now held to be, the notions of them have arisen by gradual modification of sensuous images. This, at least, I gather from books like Lange's *History of Materialism* (*e.g.*, vol. ii., p. 350 *seq.*) and Wundt's *Logik*. The atomic theory, transferred bodily from ancient philosophy—not, as Mr. Case says, by Bacon (p. 94), who was probably little read, but by Bacon's contemporary Gassendi—seems to have been modified by the gradual removal of more and more of the content of the mental picture of the atoms or corpuscles—their rough surfaces and teeth, their differences of shape, even (with Boscovich) their materiality, until it has become the molecular hypothesis. They are now thought of symbolically by most imperfectly presented mental pictures; but they have not been directly discovered or invented by the physicist. The notion has arisen by a gradual whittling down of sensuous presentations. It may be said that we must assume a mind to effect this; but this, though valid as an objection to the scepticism of Hume, is eminently invalid against the modern idealist, who, admitting what Mr. Case says, would yet claim his right to interpret the term "physical" as he pleases, and in mental terms if moral or other phenomena seem to require it. From Prof. Tait let me appeal to his coadjutor Prof. Balfour Stewart, who (in the *Contemporary Review*, July, 1884) has put forward a modified form of the Berkleian theory, and supposes the physical atom to be "the result of an operation performed on itself by a Divine Mind." Or I might refer to the well-known tract of Prof. Dubois Reymond (*Grenzen d. Naturerkennens*), which asserts that our knowledge of nature is in truth no knowledge, but a substitute for an explanation; that a physical atom is occasionally a useful fiction" (p. 20); and that, in short, the dark, dumb world of the molecular physicist is merely a mode in which we represent the causal conjunction of phenomena. Now, these authorities approach the question from the purely scientific side. How, then, can it be held, as Mr. Case does, that idealism is incompatible with the molecular theory of scientific men?

All through the book, in short, the reader is constantly asking this question: What does Mr. Case mean by *physical*? Not (apparently) unperceived by the Divine Mind, but: not constructed out of our sensations. For Mr. Case holds that a Divine Mind can be inferred as a first cause from nature. But, as Mr. Case holds that the Divine Mind both perceives and sustains the physical, and the human mind infers it, is he not offending against the rule of Occam? May not "the physical" be, as Dubois Reymond seems to imply, an ideal construction; or as Berkeley and Prof. Balfour Stewart would say, some kind of mode or result of the Divine Mind? But to maintain this latter position would be to follow Mr. Case into a region where philosophy had best not penetrate. The future historian, finding that Mr. Case holds that certain axioms are the laws of the forms of logical processes, but not premises in the processes (p. 292), may point out that this is very like Kant's view of certain of his *a priori* principles, and may write a book on the "Apriorism of Case" as a companion to Dr. Webb's *Intellectualism of Locke*. A very moderate amount of interpretation indeed—assisted by the doctrine "Entia non sunt multiplicanda praeter necessitatem"—would convert the creed here put forward into idealism.

I must, however, most earnestly deprecate Mr. Case's appeals to Christians (p. 379), and, in particular, his introduction of a mystery of the Christian faith (p. 194). The experience of centuries has shown that philosophy, equally with natural science, is, as Bacon said, not to be sought in Scripture; and considering that the Christian creed has been successfully held with every form of philosophical theory, from "crass" materialism to the purest idealism, its interest is not very likely to be promoted by Mr. Case placing the only way of salvation in a new form of realism. It is true that this appeal may be regarded as a kind of *argumentum ad hominem*, mainly of local and temporary interest; but none the less is it to be deprecated. Mr. Case's natural theology, too (*e.g.* p. 211), is now, one would have thought, untenable except as matter of faith. Indeed, I have sometimes been tempted to regard his whole book as a kind of *argumentum ad hominem*—an appeal to the Oxford Greats man, who knows there is a science school, but has just been staggered by Mill's psychological theory of the belief in an external world—but not as an effective attack on the kind of idealism which is now current among more advanced students. Perhaps this view is too narrow; but it is to his next volume (with its chapters on Hegel, p. 380) that we must look for an attack which shall possess "actuality." However, whether we are idealists or realists, I cannot but think that the most effective argument for a true "physical realism" will be found in post-Kantian and not in pre-Cartesian philosophy. It is to will, to emotion, to morals (as Kant and Feuerbach indicated) that we must look for proof of external existence: not to an analysis of the theory of knowledge, which ends at last in an ambiguous term. But it ought to be possible to formulate the logic of science independently of metaphysical theory; and I can only hope that a future volume may fill up the sketch of induction, deduction, and analogy, which is a kind of parenthesis in his chapter on Hume.

James Saumarez Mann.

CORRESPONDENCE.

THE ALLEGED HITTITE TABLETS IN BERLIN.

London: Jan. 25, 1889.

With reference to a note in the Academy of January 19, I wrote to Prof. Eberhard Schrader, of Berlin, the distinguished Assyriologist; and I have been favoured with the following reply. It will be seen that the last announcement of the disappearance of the Hittite mystery resembles some which had preceded:

"It is not quite right that 'a large number of cuneiform tablets have reached Berlin, which are in the Hittite language, some of them being bilingual,' &c. There is here only *one* tablet in *cuneiform* characters, which is *not* written in the Assyrian or Babylonian language. The language *may be* Hittite. This is one of the Tell-el-Amarna tablets. A bilingual inscription *in the common sense* does not exist here."

Thomas Tyler.

SCIENCE NOTES.

Mr. Francis Galton has long been engaged upon certain problems that lie at the base of the science of heredity. The more important of his results, set forth in an orderly way, together with a large amount of new matter, will shortly be published by Messrs. Macmillan & Co. in a volume to be entitled *Natural Inheritance*.

The medals and funds to be given at the anniversary meeting of the Geological Society on February 15 have been awarded by the Council as follows: The Wollaston Medal to Prof. T. G. Bonney, the Murchison Medal to Prof. Prof. James Geikie, the Lyell Medal to Prof. W. Boyd Dawkins, and the Bigsby Medal to Mr. J. J. Harris Teall; the balance of the Wollaston Fund to Mr. A. Smith Woodward, of the British Museum; that of the Murchison Fund to Mr. Grenville A. J. Cole, of the Science Schools, South Kensington; and that of the Lyell Fund to M. L. Dollo, of the Royal Museum at Brussels.

The fifteenth general meeting of the Association for the Improvement of Geometrical Teaching was held on Saturday, January 19, at University College, London. After the reading of the report of the council, Mr. R. B. Hayward, who had been president for eleven years, resigned the presidency; and the post was conferred on Mr. G. M. Minchin, professor of applied mathematics in the Royal Indian Engineering College at Cooper's Hill. In the place of Mr. Moulton, Mr. Hayward was elected a vice-president; while the other vice-presidents—the Rev. G. Richardson, Mr. R. Levett, and Mr. R. Tucker—retain their posts. In the course of his valedictory address, the retiring president remarked that, though they had not quite attained the expectations of some of their more ardent reformers, still they had met with a fair measure of success. Their influence was rather indirect than direct; and it must be expected that their advance would be, while steady, yet comparatively slow. The new president (Prof. Minchin) read a paper on "The Vices of our Scientific Education."

Rumours have recently been rife in chemical circles to the effect that Prof. Krüss, of Munich, has effected the decomposition of nickel and cobalt. It appears from a communication published in the *Chemical News* that Dr. Krüss has actually split up each of these metals, regarded previously as elementary bodies, into two parts, and found that both metals contain a common constituent. He has succeeded in obtaining green so-called nickel salts from the red cobalt salts and the colourless salts of the common component; while he has, on the contrary, transformed green nickel salts into red cobalt salts and other constituents. The characters of the new body obtained from both nickel and cobalt are not yet fully known, but they indicate a metal hitherto unrecognised.

The Faculty of Natural Sciences of the Florence University have conferred on Mr E. H. Man, author of *The Aboriginal Inhabitants of the Andaman Isles* (Trübner), the Galileo medal for special merit in the cause of science, and for valuable collections sent to their museums. Mr. Man last year received a gold medal from the Emperor of Austria for a collection of Nicobarese objects presented to the Imperial Museum at Vienna.

PHILOLOGY NOTES.

Mr. James George Scott, of the Burmese Service, has found time, in spite of the arduous duties of his frontier post, to collect and send home to his brother, the bursar of St. John's College, Cambridge, a very valuable selection

Digitized by Google

of Pāli, Burmese, and Shan MSS. Among the former are the Pātika Vagga of the great Dīgha Nikāya, complete, with a commentary in Pāli; a complete copy of the Yamakas; a portion of Buddhaghosa's Sumangala Vilāsinī, and the whole of the Attha Sālinī, his first work; and a copy of the Sārattha Dīpani *Tīkā*, an important mediæval treatise on Buddhist Canon Law. Besides these well-known standard works, there is also the MS. of a considerable treatise on Buddhist ethics hitherto unknown, entitled the Mani Sāra Mañjūsā. Prof. Rhys Davids and Prof. Carpenter have issued the first volume of their edition of the Sumangala. With that exception, all the above works are unedited. Among the Burmese books is a translation of the celebrated "Questions of Milinda," in which the Greek king Menander discusses Buddhist ethics with the elder named Nāgasena.

Prof. Menayeff, of St. Petersburg, is editing, for the Pali Text Society, the Bodhicaryāvatāra, a Sanskrit work on the Buddha's attainment of the supreme insight, or Bodhi.

Mr. Bunyin Nanjio, formerly of Oxford, and the author of the excellent catalogue of Chinese Buddhist books published by the Clarendon Press, has nearly completed an edition of Saddharma-pundarīka, already translated by Prof. Kern for the series of "Sacred Books of the East."

A work on the Evolution of Hebrew by Dr. Edkins, of Peking, will be published immediately by Messrs. Trübner & Co. He represents the current Hebrew syntax as modern and the syntax revealed in many parts of the paradigms of verbs as ancient. He finds that in the oldest forms of the language there is proof that the nominative preceded the verb and the adjective the substantive. But if Semitic languages can be reduced to a form where Semitic peculiarities disappear, it becomes possible to derive Semitic speech from an old type which has, farther east, given origin to the Tartar (Ural Altaic) and Chinese families. Prof. Sayce, in his *Introduction to the Science of Language*, has recognised that Semitic tongues have borrowed some characteristics from old Egyptian. Before these borrowings, Dr. Edkins aims to prove that Semitic speech was monosyllabic, and had a natural syntax like the Chinese.

MEETINGS OF SOCIETIES.

Entomological Society, *Anniversary Meeting.*—(*Wednesday, Jan. 16.*)

Dr. D. Sharp, president, in the chair.—An abstract of the treasurer's accounts, showing a balance in the society's favour, was read by Mr. Osbert Salvin, one of the auditors; and Mr. H. Goss read the report of the council. It was announced that the following gentlemen had been elected as officers and council for 1889: president, Lord Walsingham; treasurer, Mr. E. Saunders; secretaries, Mr. H. Goss and Canon Fowler; librarian, Mr. F. Grut: council, Mr. H. W. Bates, Capt. H. J. Elwes, Mr. W. H. B. Fletcher, Mr. F. DuCane Godman, Prof. R. Meldola, Dr. P. B. Mason, Mr. Osbert Salvin, and Dr. D. Sharp.—Dr. Sharp, the outgoing president, then delivered an address, for which a vote of thanks to him was moved by Capt. Elwes, seconded by Mr. Salvin, and carried.—A vote of thanks to the treasurer, secretaries, and librarian was moved by Mr. J. W. Dunning, seconded by Lord Walsingham, and carried. Mr. Saunders, Mr. Goss, and Mr. Grut severally replied.

Meteorological Society.—(*Wednesday, Jan. 16.*)

Dr. W. Marcet, president, in the chair.—The report of the council showed that a large amount of work had been done during the past year, and that considerable progress had been made in the investigation of one of the most interesting and hitherto neglected branches of meteorology—viz., thunderstorms.—Forty-nine new fellows were elected last year, the total number on the books now being 525.—The president delivered an address on "Fogs," illustrated by a number of interesting lantern slides. Fogs and clouds are one and the same thing. A cloud is a fog when entered into; and a fog seen from a distance, suspended in the air, becomes a cloud. After describing the various kinds of fog—*e.g.*, river, sea, Newfoundland, radiation, town, &c., fogs—Dr. Marcet referred to London fogs. Dr. Tyndall has accounted for them by assuming each particle of condensed vapour to be covered by coal smoke. These fogs usually accompany a high barometer, and are frequently dry in their character. It is a well-known fact that cold air on the tops of hills, being heavier than the air below, slides down the slopes, so that the lower parts of the hill-sides are actually colder than the plains at some distance from the hills. Now London, in the Thames Valley, is surrounded by hills—to the north, Highgate, Hampstead, and Harrow; in a westerly direction, Putney and Wimbledon; and in a more southerly direction, Clapham and Sydenham. The air is colder on these hills than in London with its millions of inhabitants, its coal-fires and factories, hence it is heavier, and will have a great tendency to slide down the hills towards the town and river. Should the air in town be on the point of saturation, and the cold air from above saturated with vapour, it is obvious that the increased cold from above will produce a precipitation of moisture, and it will come to pass that a fog is produced. If the hill-tops be not only colder than the air below, but enveloped in a fog, it stands to reason that the fog below will be all the denser, and especially in the neighbourhood of water, such as the River Thames and the ornamental waters in the parks. The following were elected the officers and council for the ensuing year:—President: Dr W. Marcet. Vice-Presidents: F. C. Bayard, H. F. Blandford, W. Ellis, R. Inwards. Treasurer: H. Perigal. Trustees: Hon. F. A. R. Russell, S. W. Silver. Secretaries: G. J. Symons, Dr. J. W. Tripe Foreign Secretary: R. H. Scott. Council: E. D. Archibald, W. M. Beaufort, A. Brewin, G. Chatterton, W. H. Dines, F. B. Edmonds, C. Harding, B. Latham, Captain J. P. Maclear, E. Mawley, H. Southall, Dr. C. T. Williams.

Royal Asiatic Society.—(*Monday, Jan. 21.*)

Sir W. W. Hunter in the chair.—The secretary read an abstract of a paper by Prof. Terrien de Lacouperie, on "The Djurtchen of Manchuria." This interesting people occupied an important position in Central Asia during the Middle Ages. Their rulers, under the name of the Kin or "Golden" Dynasty, reigned over the northern half of China; and it was only the all-powerful Mongols who were able to oust them. But very little is known either of their language or of their literature; and even the correct spelling and pronunciation of their name has been open to doubt. All that we know of them is derived from Chinese sources; and the Chinese writing being uncertain in its reproduction of foreign words, European writers have spelt their name in very different ways. By a comparison of all the forms of it given by Chinese authors, the professor concludes that the name of the people, as used by themselves, must have been Djurtchen. Remains of their language have been discovered in vocabularies drawn up for the use of the Interpreters' College in Pekin, which were, probably, studied there as late as 1658. There is a copy of these vocabularies preserved in the Bibliothèque Nationale, and Dr. Hirth, of the German Consular Service, has lately discovered another. The Djurtchen had two forms of writing—a larger and a smaller. The former has been found used on the celebrated bilingual inscription of Lang Kinn Salikan, erected in 1134, and several times published in Europe. The smaller ones have been supposed to be those of one of the six used in another celebrated inscription—that of Kin-yung-kwan; but they are not really so. A sketch of the known history of the Djurtchen concluded the paper; and in the course of this it was shown that they were descended from the same stock, but were not the direct ancestors of the Mandchus, and that it was almost certainly the Djurtchen dynasty who originated the wearing of the pigtail, generally introduced into China, as a national fashion, since 1627.

Royal Society of Literature.—(*Wednesday, January 23.*)

Dr. W. Knighton in the chair.—A paper was read, on "Ariosto and the romance of Chivalry in Italy," by Mr. C. H. E. Carmichael, foreign secretary. Starting from the fact that Ariosto did not seek out a subject for his great poem, but found it ready to hand in the popular Italian version of the Carolingian cycle, the reader argued that this cycle must have been long established in Italy to be current among the people, as a folk-song, when Pulci wove it into his "Morgante Maggiore." It was certainly, therefore, a popular possession long before it was made a delight for men of letters. But in Italy, the reader believed the romance of chivalry never really took root, for it was never seriously accepted as in other lands. In Italy it was always matter for jest and merriment, and not for encouragement to the crusading spirit. In support of this view, the reader gave specimens alike of the Roland Legend, as it appears in the pseudo-Turpin, and of characteristic passages from the works of Pulci and Boiardo, as well as of Ariosto, showing the very different aspects of the legend in the hands of the authors of the original epic and of its Italian version. The crusading spirit the reader considered to have been dead in Italy and in Europe generally in the days of Ariosto as in those of Tasso, beyond possibility of revival. Ariosto was capable of almost Danteesque writing, as in his description of Suspicion; he was a powerful satirist, as in his description of Discord and Silence; he was a great Italian poet, but he was not the poet of Italy.—The chairman stated that he thought that the reader had scarcely placed Ariosto upon so high a pinnacle in Italian literature as he might have done. For his part, he believed in him as an earnest writer; and, though he might be satirical, yet he was quite as frequently serious.—Dr. Tacopo Arata, from Genoa, congratulated Mr. Carmichael upon his appreciation of Ariosto, and expressed general agreement with the views he had enunciated. — Mr. E. Gilbert Highton, the secretary, after intimating a doubt as to the possibility of foreign critics ever really comprehending the full force of a writer—a remarkable instance of which was visible even in German criticism upon Shakspere—went on to declare his opinion that an author leading the frugal and modest life which Ariosto did could hardly be other than earnest in composition.

The Society for Psychical Research.—(*Friday, Jan. 25.*)

Prof. Sidgwick, president, in the chair.—The president explained the attitude of the society, as represented by its most active investigators, in reference to the physical phenomena of spiritualism. They held now—as when the society was founded—that there were good grounds for treating the question of the genuineness of these phenomena as open, and as deserving of serious and systematic investigation; but as they had resolved to avoid paid mediums, and as no conclusion could be reasonably arrived at without repeated experiments under rigorous conditions, the difficulties of obtaining suitable opportunities for investigation were very great. He hoped, however, that these difficulties would be overcome.—Mr. T. Barkworth then read a paper on "The Analogy between Hypnotic Phenomena and certain Experiences of the Normal Consciousness," in which, after discussing the extent to which automatism can be carried in musical improvisation, &c., he distinguished two types of memory—the one operating by successive concatenated impressions, the second by a homogeneous pictorial impression—and brought evidence from hypnotic phenomena to show that this pictorial memory belongs especially to that state.

FINE ART.

THE GROSVENOR GALLERY.

I.

The second series of Examples of British Art from 1737 to 1837 proves no less attractive than its predecessor. As before, a good deal of its interest consists in lesser works by great men, and in examples of lesser men of whom

Digitized by Google

the ordinary public of these days knows little or nothing; but to the students of the English school, as a school, such pictures are very welcome in filling up gaps in existing knowledge and in testifying to the fact that, outside the few great names of English art, there are others whose works are worthy of study and admiration. No view of English art can be complete without taking into consideration the small as well as the great; and it is the special value of such exhibitions as this that the small and the great appear together in something like their proper proportion, as elements of the body of worthy pictorial effort in England during the century which produced them.

All the greater artists of the early part of the century are represented, and several of them by masterpieces, while of others the show is unusually fine. This is especially the case with the Norwich school, the Cromes being numerous and of very high quality. The same may be said of the Vincents; and of Cotman there is probably his masterpiece in oil, though unfortunately not in the best condition. By Morland there are a number of choice examples. Of less-known men the most fully represented is Edward Bristow, the painter of rustic scenes and animals. Excellently drawn is his "Old White Mare" (71). The state of landscape art before Gainsborough is illustrated by examples of George Barret, Sen., the artist who flourished while Wilson starved; and of Wootton, to whose works the early landscapes of Gainsborough show a likeness. Then, belonging more to the Morland group, we have works by Ibbetson and De Lontherbourg—scenic and rustic at the same time—and a bright and highly finished example of Richard Corbould, half Zuccarelli, half Gainsborough. As little known to the present generation are the names of H. D. Hamilton, John Russell, and Daniel Gardner, the pastellists; and even the example of George Knapton, who was a master in this art as then practised, will be a surprise to many. Those who know their Boydell *Shakspere* will be glad to meet the Rev. Matthew William Peters again; and the name of Henry Singleton will remind many others of the charmingly engraved book of illustrations published by Sharp and others. Henry Walton has a newer sound; and the two examples of his work, especially a lady on a sofa with a grey dress and a big muff, are charming in their broad treatment and well-selected colour. It will not be of so much advantage to the fame of other artists that their works should be seen here. Of the portraits by George Dawe and M. King, and of a dreadful pastel of William Chaworth, by one Stanley, the less said critically the better; but this last, like some other works, has an interest apart from its skill.

To begin with the great painters. There are fourteen examples of Sir Joshua Reynolds, and fourteen of Romney, nine Gainsboroughs, six Wilsons, thirteen Old Cromes, four Turners, six Hogarths, and three Wilkies; and many of them are of a high class. The Queen sends Wilkie's "Penny Wedding" (47) and "Blindman's Buff" (45). They look rather brown, and the former thin and faded; but both are still inimitable in spirit and character, and in that charming union of high spirits and fidelity to humble life with refinement and sense of beauty which mark his rendering of such subjects. The most important contribution to our knowledge of Sir Joshua are the portraits lent by the Earl of Aylesford. They include Henry, the fourth earl (23), somewhat surly, with his left hand in his breeches pocket; Frances, Countess of Dartmouth (46), an exquisite example of the master. Piquant but natural, with her pretty fingers interlaced, reminding us a little of Mrs. Abington, she sits in the open air with her left arm resting on the trunk of a tree. It is charming in colour and composition. Lord Dartmouth (95) is a worthy pendant to the countess, and the Marquis of Granby (76), with claymore and cuirass, is full of vigour and character. Of more ordinary quality are the second Earl of Aylesford (173) and the fourth Countess (91). Lord Burton sends one of the best preserved and most finely coloured of all Sir Joshua's works—the half-lengths of the Masters Gawler with their Newfoundland dog (50); a glowing portrait of Mrs. Morris, fine and meditative; and one of the most vigorous and pleasant of the artist's many portraits of Admiral Keppel (40). An early, rather green, but simple and agreeable portrait of Lady Elizabeth Keppel, with a rose at her breast, from the Albemarle collection is lent by Mr. E. L. Raphael. Of Sir Joshua's children it would be difficult to find a sweeter than Sir Robert Harvey's little Miss Harvey, with her sunny hair (83); and we are glad to see again the vigorous little maiden "crossing the brook with her struggling curly haired dog" (57). The Marquis of Lansdowne sends the celebrated portrait of Sterne (65), his head against his hand; and one of John Denis, the first Marquis of Sligo (127), is lent by the present possessor of the title.

Reynolds's rivals, Gainsborough and Romney, are also well represented—the former by the ever welcome "Mall in St. James's Park" (4), so charmingly described by Hazlitt as "all in a motion and flutter, like a lady's fan." Lord Howe sends a full-length portrait of his ancestor, the Admiral (70), grave and manly, and full of reserved thought and power, which worthily occupies the centre of the north wall of the great room. Sir Richard Garth is to be congratulated on the possession of the finely sketched head of Mrs. Lowndes Stone (84), in which for once the artist seems to have caught something of Romney's feeling; and Mr. E. L. Raphael's Hon. Mrs. Fane (86), though rather dirty in the shadows, is a sweet and desirable possession. Mr. Colquhoun's landscape (98) looks rich behind its glass, but it is difficult to get more than an impression of it; and Miss Ethel Mortlock's brilliant landscape, with cattle on a bridge, deserves a note, if only for its curious composition.

Romney is seen in all his moods. His fine feeling for beauty, and also something of his artificial fancy, is seen in the charming, if rather affected, portrait of Mrs. Jordan, belonging to Mr. Cuthbert Quilter (20); the arms are beautifully drawn. Lady Hamilton we have, of course, now as "Miranda" (8), and now as "Euphrosyne," two seraphic heads only, belonging to Mr. J. Whitehead. Of a more simple charm is the rapid and masterly sketch of Lady Sligo (125), lent by the present marquis. Of Romney's children there are also some delightful examples, "simplex munditiis" as only his children are. The Rev. E. Wickham's Miss F. Sage (99), though her flesh looks a little rough and red, as it sometimes does in Romney's work, is charmingly fresh and natural in her pretty white satin frock; and of the two boys it is difficult to choose between the little man in brown, lent by Mr. G. E. B. Eyre (138), and the younger John Fane, in white frock and red shoes, which Lord Burton sends. The young Lord Burghersh (146), on the other hand, is a failure. Two portraits, said to be of the artist, by himself, are also there. One, a head, pale and thoughtful (81), belongs to Mr. J. Whitehead; the other, a three-quarter length bending forward on a raised knee with a palette and brushes in his left hand, is vigorous and carefully modelled, but rather hard. It is lent by Mr. Humphrey Ward (151). Of the other portrait painters, Hudson is represented by a portrait of Anne, Countess of Devonshire—very stiff and stately, with a coronet on a gilded console table—a good example of the condition of English portrait painting between Kneller and Reynolds. There are also some portraits by Opie, Hoppner, Lawrence, Cotes, Sir W. Beechey, Raeburn, and Wright of Derby, which we must leave unnoticed, at least for the present.

As there is a query affixed in the catalogue to the name of the painter of the very characteristic and interesting little portrait of Samuel Richardson the novelist, which is lent by Sir John Neeld, and it is not on record that Hogarth ever painted the author of *Clarissa Harlowe*, we may be pardoned for not accepting the ascription; and we confess to have considerable doubt as to whether Hogarth had any hand in painting the lanky and ill-proportioned but spirited figures in that view of Spencer House, with the Green Park and its square pond, which is lent by Earl Spencer, and charms us by its pleasant primness and stiff fidelity. If it be by him, he has based his landscape on the clear, quaint, and, in its way, admirable art of Samuel Scott, his friend, whose delightful view of the Thames (172) forms such an excellent pendant to this "Spencer House." Not better drawn, but more characteristic of Hogarth in the incorrectness of its drawing, is Mrs. Wollaston's "conversation piece" of the Thornhill family (102) (How we wish that Mr. Armstrong had told us who the different members were! Is not even Mrs. Hogarth to be identified?); and the same sense of authenticity accompanies Mrs. Gough Nicholl's "Musical Study: Handel at the Organ, with Portraits of Farinelli, Mrs. Foxe Lane, and a Family of Distinction in Cheshire" (116). Doubt again creeps in when we look at Mr. C. Morrison's "The Punch Club" (103)—though not for the same reason—for this is evidently a version of one of Hogarth's best-known compositions—the "Midnight Modern Conversation." But of all the Hogarths, the only one which at all represents his maturer skill is Mr. John Murray's "The Beggars' Opera" (9). Other versions of this subject exist. Two were shown at the Grosvenor last year—one belonging to the Duke of Leeds and the other to Mr. Louis Huth; but there can be no doubt as to the genuineness of this.

COSMO MONKHOUSE.

CORRESPONDENCE.

THE TRINITY COLLEGE DIPTYCH IN THE STUART EXHIBITION.

London: Jan. 26, 1889.

In none of the notices of this fine picture (including the detailed and interesting one in the ACADEMY of January 19) is there any reference to the fact that fifteen years ago the commonly assigned date (1484), and the attribution of one of the portraits, that of James IV., were challenged by a very able critic—the late David Laing, LL.D., of the Signet Library, Edinburgh—on strong historical grounds.

Mr. Laing was chiefly instrumental in getting it restored to Edinburgh in 1857 by the Queen's command, and contributed a short paper to the *Proceedings* of the Scottish Antiquaries in that year (vol. iii.), principally to record the grounds on which Her Majesty had directed its restoration, after an absence of about three hundred years. He did not then question the date, first assigned by Pinkerton in his *Iconographia Scotica* (1797), or the description there of the personages represented. But sixteen years later he came to the conclusion that the painting must be twelve or fourteen years earlier than 1484, and that the young prince represented was not the future James IV.; and he contributed a supplementary paper to the Scottish Antiquaries' *Proceedings* in 1873 (vol. x., p. 310), giving full reasons for his opinion. I will briefly re-state these historical points, having

Digitized by Google

myself been obliged to study the period closely, as I think that the conclusions of such a man as David Laing—not only a historical antiquary of the first rank, but a good judge of art as well—should not be passed over lightly.

Mr. Laing said (1) such a painting must have had some definite object in its composition. Now, from 1478 or 1479 till his melancholy death at Sauchieburn in 1488, James III. was embroiled, first with his brothers Albany and Mar, and then with his nobles and people; and, during this era of ten years, there was no conceivable reason why such a painting should have been executed; (2) the youth of the two principal figures, the king and queen. Both are apparently under twenty, the queen considerably less, and both far too young to be the parents of the boy of fourteen or fifteen kneeling behind the king.

James III., the survivor of twin brothers, was born in the castle of St. Andrews between January 7 and 22, 1452-3, and was married to Margaret of Denmark in July, 1469, at the age of seventeen, the queen being four or five years younger. Their eldest son, afterwards James IV., was born on March 20, 1472-3. No one can look at the two figures, the king and young prince kneeling behind him, and believe that a difference of twenty years existed in their respective ages, or that the youthful queen was the young prince's mother. Mr. Laing, therefore, did not hesitate to suggest that the painting was intended to commemorate the marriage and coronation of the youthful queen in July, 1469, and possibly might have taken a twelvemonth or more before completion. It served the twofold purpose (1) of an altar piece for Trinity College Kirk, and (2) to connect the marriage ceremonial with its consecration. Sir Edward Boncle (not Boukil), the first provost, and confessor of the late queen mother, Mary of Gueldres, its foundress, who died in 1463, offers a soul-mass at the high altar, near which she was buried. The kneeling youth is probably Alexander, Duke of Albany, next brother of the king, who, having been born in 1454, was in 1469 fourteen or fifteen years old, just the age he appears to be in the painting.

I have confined myself strictly to historical points, not touching on the art question—for anyone with an eye, though not an artist, can judge of the respective ages of the figures; but I may say that Mr. Laing pronounced for Hugo van der Goes having been the painter, which he could not have been on the theory of its execution in 1484. I was much struck with Mr. Phillips's analysis and suggestion that the panel with Sir Edward Boncle's portrait, was of earlier date than the others, in a different and higher style of art, and undoubtedly by Van der Goes. It is certainly a noble portrait, and shows a master's hand. The other figures are much stiffer and not so freely or boldly handled, with, perhaps, the exception of St. Andrew. But I may remark that in all these panels, except that of the Trinity, portions of the architecture of the church are given, which are quite recognisable, clearly showing that all have relation to the same subject. One would scarcely think that Sir Edward Boncle would have his likeness painted at an earlier date than those of his royal master and mistress. Yet there is a difference in the work, however it arose.

JOSEPH BAIN.

NOTES ON ART AND ARCHAEOLOGY.

WE hear that Mr. F. G. Prangé—formerly a prominent member of the fine arts committee of the Liverpool town council, and one of the founders of the Arts Club of that city—will henceforward be associated with Sir Coutts Lindsay as manager of the art department of the Grosvenor Gallery.

THE election of Mr. W. L. Wyllie to the Associateship of the Academy has been something of a surprise. Mr. Wyllie's art is vivacious and generally interesting; but he has hardly shown himself a colourist. We understand that Mr. George Lawson, the sculptor, and Mr. Ernest Waterlow stood next to Mr. Wyllie as to the number of votes obtained, so that Mr. Sergent's claims do not seem to have been very seriously considered, and those of Mr. Albert Moore have long been accustomed to be passed by. Where was Mr. Alfred Hunt too? And where Sir James Linton? We do not speak of the quite young men—Mr. Solomon and Mr. J. J. Shannon. They can quite afford to wait, because it is a certainty, and not a chance, that they wait for.

THE exhibitions to open next week comprise: (1) the annual spring water-colour exhibition of the Dudley Gallery Art Society, at the Egyptian Hall, Piccadilly; (2) a series of sketches and drawings of "Sussex Scenery"—painted principally in the neighbourhood of Arundel, Amberley, Bury, Burpham, and Slindon—by Mr. E. M. Wimperis, at Messrs. Dowdeswell's, in New Bond Street; and (3) a collection of water-colour drawings of "North Wales Scenery," by Mr. E. P. Bucknall, at the Burlington Gallery, in Old Bond Street.

THE New English Art Club has made arrangements to hold a second exhibition of modern works of art, at the Egyptian Hall, Piccadilly. Among the successful candidates at the recent election to membership of the society were M. Maurice Lobse and M. Helleu, whose pictures attracted so much attention at the recent pastel exhibition.

MR. W. J. LINTON will deliver a course of Cantor Lectures before the Society of Arts, on "Wood Engraving," on Monday, February 11 and 18. In the first lecture he will trace the history of his subject from the times of the Babylonians and Egyptians to the making of playing-cards. The various forms of block books will be described, and the work of Albert Dürer and his influence on the art of engraving on wood will be discussed. In the second lecture he will deal with Holbein's "Dance of Death," the engravings of Lutzelburger, and other works, leading up to the English schools as represented by Clennell, Bewick, Thompson, and Harvey, and ending with the influence of photography upon the art of wood engraving.

IT is proposed to hold an exhibition of art decoration and art applied to manufactures, during the months of April, May, June, and July of this year, in the Walker Art Gallery, Liverpool. The exhibition will include tapestry, embroidery, wall-papers, ceramics, wood carving and turning, metal wares, bookbinding and art work generally. The object is to make known the many beautiful designs, processes, fabrics, and wares generally, that are now being produced in the United Kingdom; to encourage art workers; to arouse a spirit of emulation among art manufacturers; and to elevate the taste of the public.

MR. MORTIMER MENPES'S new plate—of which four different printings, all in the same proof "state," were exhibited at Messrs. Dowdeswell's on Saturday—is an extremely important dry-point, in which he has translated most delicately into all requisite gradations of "black and white" one of Frans Hals's great Haarlem pictures—the "Banquet of the Officers of Archers." The spiritedness of the translation is that which first of all strikes the observer of the print, so much of the vivacity of this seemingly most energetic and decisive of the Dutch masters being suggested, even at once, by Mr. Menpes's work. And, in truth, that is due to the fact that so very little of the mechanical has entered into any part of this young artist's labour. Instead of being the translation of a translator, this is the translation of an original practitioner of art, who has his own methods and sees things in his own way. Thus it remains brisk as well as faithful. The plate is not yet finished. Certain work at the side, which looks, in its present state, comparatively flat and dull, will before long be brought up, without doubt, to that standard of brilliancy and expressiveness reached in the centre of the composition. And that standard, as we have already indicated, is exceptionally high. But there is another point of view from which Mr. Menpes's new plate—in its character an unexpected successor of his charming etched visions of Japan—deserves to be regarded. The print is a triumphant vindication of the capacities of dry-point, an eloquent witness to the advantages of this "positive" method, as Mr. Humphry Ward calls it in his little pamphlet. It will surprise many who have seen it when we tell them that it is executed wholly without "biting." Nothing, therefore, of its effect has been left for the artist merely to guess at. He has gone through his performance with a line engraver's certainty, but with more than his spontaneity. Yet again, this dry-point has the advantage of being printed by the artist himself, Mr. Menpes, with his art feeling, being determined to carry out to the full—even to the one hundred and seventy-fifth impression—the principle long ago acted upon, we may be sure, by Rembrandt, and, since then, laid down, and acted upon too, by those distinguished masters, Mr. Whistler and Mr. Seymour Haden.

MR. FREDERICK WEDMORE will lecture on "Turner and his *Liber Studiorum*" at the Oldham Free Public Library on February 25.

THE STAGE.

"THE MERRY WIVES" AND "HAMLET."

"THE Merry Wives of Windsor"—which has been given lately at the Haymarket at several *matinées*—is now to be transferred, for a while, to "the evening bill." It is a comedy not frequently presented; and a certain curiosity to see it will no doubt be sufficient to fill the theatre during the very few weeks in which it can be played, for Mr Tree has arranged to produce at Easter the new piece by Mr. Henry A. Jones, to which we look forward with interest.

The present performance of "The Merry Wives" is smooth and discreet, rather than brilliant. Mr. Tree's own impersonation of Falstaff is undoubtedly a *tour de force*. The make-up is, as is usual with this actor, quite excellent; and no fault at all is to be found with Mr. Tree's bearing, and very little with his delivery. But of that which Coleridge—was it not?—described as Falstaff's "golden temper," there *is*, in the impersonation, insufficient evidence. Falstaff, it is true, was rather under a cloud throughout the greater part of the piece: it is elsewhere—it is not in "The Merry Wives"—that he is placed in the circumstances which best develop his natural charm. Yet the very proof of a "golden temper" is that it is charming under other skies than the blue skies of prosperity. Mr. Tree's Falstaff has, of course, to bear disaster and discomfiture reasonably well—or he would not be Shaksperian in the slightest degree. He does, indeed, suggest a pleasant person, and a person too entirely satisfied with himself to

Digitized by Google

be ever, for any length of time, profoundly dissatisfied with other people. But he is suave rather than genial, agreeable rather than sunny. And, the sunshine of the character being to some extent missed, it is inevitable that a greater emphasis should seem to be placed on all that is coarse and gross. The actor, we are sure, has no intentions of this sort. "The Merry Wives of Windsor"—Heaven knows!—is gross enough in dialogue in any case: so gross that, at the present time of day, no undue violence would be done to Shakspere by spending a careful five minutes in the moderate Bowdlerisation of the text. But, without any intention whatever of emphasising the coarseness of piece and part, such an impersonation as Mr. Tree is able to present of Falstaff does result in that direction—has unquestionably that tendency. His is a performance which we are glad to have had the opportunity of seeing. It is interesting, and even highly ingenious, though it is far from being ideal.

Three or four actors of position are associated with Mr. Tree in the performance of "The Merry Wives"; but one of them—Mr. Lionel Brough—cannot, it is said, because of other engagements, appear in the evening. There have been occasions when Mr. Brough has been overrated, and it is perfectly possible that his "Host of the Garter" is not very Shaksperian; but it is at least a performance of rollocking force, by an actor not only alive to the opportunities for stage effect, but capable of taking advantage of them. Mr. Kemble, who plays Dr. Caius, is an artist who never disappoints. His personality—his voice, for instance, as a part of it—sets limits, very likely, to his achievements; but never at the Haymarket has he made a failure, and he has made some brilliant successes. The cheery utterance and method of Mr. Righton are of service in the part of Sir Hugh Evans. Mr. Brookfield, as Master Slender, at all events suggests foolishness and emptiness. Mr. Macklin does not take the jealousy of Mr. Ford quite seriously enough. That worthy had, seemingly, good grounds for apprehensions, which were not, we may be certain, entertained in jest. Miss Alice Lingard, who knows her business, and Miss Rose Leclercq, who is wont to have a measure of distinction and of charm, are wanting a little in something that it is not quite easy to define—in "colour" I think I must call it—as the Merry Wives. Mrs. Beerbohm Tree—always intelligent and graceful, and with voice "softly freighted"—is seen to some advantage as Anne Page. The part demands, of course, no exhibition whatever of high dramatic qualities; nay, more, it may be rendered rather tepidly, and yet not rendered ill

The re-appearance of Mr. Wilson Barrett, and especially his re-appearance in "Hamlet," has been the sufficient justification for the withdrawal from the Princess's of a good melodrama, very well acted. The piece which is at once the most profound and the most popular of all Shaksperian tragedies, was played on Monday night, and will be repeated every night next week. This is not the moment for doing more than expressing, in a sentence or two, the satisfaction of the public at Mr. Barrett's return, and the continued excellence of a performance about which, as the actor reminded us on Monday, in his speech, about a mile of printed matter has been written. Mr. Barrett's view of Hamlet is original, shrewd, thoroughly reasonable; and on the stage he carries out his conception with completeness and skill. Of always dignified bearing, and impressive of speech, he is admirable in his suggestions of chivalry and of good fellowship. Nor does the meditative side of the character suffer at all in his hands—whatever may be the case with the purely poetic. But, indeed, the time has gone by for lengthy criticism of a performance so acceptable and so widely accepted. Now, as heretofore, the hand of the chief actor is discernible in the action of the whole play. The representation—albeit not precisely what it was when Mr. Barrett was sole tenant of the theatre—is wonderfully stirring, and, in a good sense, realistic. Miss Eastlake's Ophelia has lost nothing in tenderness, and has perhaps even gained in power. Her mad scenes are (what they have always been) very remarkable studies.

Frederick Wedmore.

STAGE NOTES.

Mr. Charles Pond's second recital at Prince's Hall, on Wednesday, January 23, proved very interesting. He disappointed his audience a little by restricting himself entirely to serious subjects. But the rugged force and pathos with which he delivered the third act of "Othello" fully compensated for the absence of lighter fare from the programme. The most interesting feature of the evening's performance was the recitation of two early scenes from "Macbeth," in which Mr. Pond, as the thane, was assisted by Miss Beatrice Lamb, as Lady Macbeth. Miss Lamb has already attracted some attention on the London stage, and we shall be surprised if a wider reputation is not in store for her. She spoke Lady Macbeth's lines with admirable emphasis, and infused into them so much fire and dignity and self control that we should like an opportunity of witnessing her rendering of the whole part. Miss Lamb will read a paper on "Lady Macbeth" at the New Shakspere Society's meeting on Friday, March 8. Mr. Pond announces two more recitals.

Miss Robins, the American actress, whose performance in London we favourably commented upon, was, by a clerical error, in last week's Academy described as "Miss Rivers."

MUSIC.

RECENT CONCERTS.

Mdlle. Janotha played Schumann's "Carneval" on Saturday last at the Popular Concert. Her fingers are agile and strong, and many of her intentions are excellent; but why does she hurry so many of the movements? The programme included Beethoven's Quintet in C (Op. 29) and his pianoforte and violin Sonata in G (Op. 30, No. 3). Mr. Brereton gave a successful rendering of Purcell's fine song, "Arise, ye subterranean winds" (from "The Tempest.")

On the following Monday Miss F. Davies played Schumann's three Fantaisiestücke (Op. 111). The first and second were novelties. No. 3 was given at these concerts eleven years ago. No. 1 is restless and passionate; No. 2, except for a short, vigorous episode, is quiet and melancholy; No. 3 opens with a stirring theme, but the middle section is soft and mysterious. Miss Davies played them exceedingly well. Signor Piatti's new Sonata in F for violoncello and pianoforte was performed by Miss Davies and the composer. Clearness of form, tuneful and flowing themes, and effective writing for the violoncello are the chief characteristics of this work. It is scarcely necessary to add that it was admirably interpreted by both artists. Miss Margeret Hall sang in place of Miss Liza Lehmann, who was unable to appear. Mdlle. Janotha on Saturday, and Miss Davies on the following Monday, responded to the demand for an encore. They are both favourites with the public, and could afford to set a better example.

Otto Hegner gave the first of three pianoforte recitals at St. James's Hall on Monday afternoon. After an excellent performance of Bach's Partita in B flat (not B major, as foolishly announced on the programme) he attempted Beethoven's so-called "Waldstein" Sonata. It needs the hands and the strength of a man to do full justice to such a work. At present it is beyond the powers of little Otto. The performance, however, in spite of shortcomings, was truly wonderful. In the last movement he played with aplomb and brilliancy, and with intelligence far beyond what one would expect from a boy in his teens. In some short pieces by Schumann and Chopin the effect was somewhat spoilt by slow *tempi* and by over-marking of chords with the left hand. He finished up with Liszt's second Rhapsodie Hongroise, and, of course, astonished the audience. But he might use his gifts to better purpose.

Mr. Jerome Hopkins, an American composer, gave a performance on Monday evening at the Prince's Hall of his Bible Opera "Samuel." Spoken declamation is a curious and by no means unsatisfactory feature of the work. The composer announces it as an "Opera," but in another part of the programme it is entitled a "Dialogue-Oratorio"; and the music is certainly of a hybrid character. The big drum plays a prominent part in the orchestra.

Mr. Henschel gave his seventh concert on Tuesday evening. Mr. Hamish MacCunn conducted his clever Overture, "The Land of the Mountain and the Flood," and was recalled. Mr. Hans Wesseley played, with fair success, Mr. Henschel's tasteful ballad for violin (Op. 39). Brahms' Symphony in D received a careful interpretation. The programme included Glinka's "Komarinskaya" and Wagner's "Huldigung's Marsch."

We are glad to see so many names of native artists on the programmes of the three Recitals announced by Miss Dora Bright, a student of the Royal Academy of Music, who is herself favourably known as a composer. At the first concert given at the Prince's Hall on Wednesday afternoon, Miss Bright played four of Mr. W. Macfarren's new studies, showing vigour and agility. She was likewise successful in two small pieces of her own, and in Grieg's "In der Heimath." But, until she can better control her fingers and her feelings, she ought not to attempt Schumann's Fantaisie in C (Op. 17). The programme commenced with Bach's Prelude and Fugue in A minor for organ, transcribed by Liszt. Pianists, led away by the interest of the music and the cleverness of the arrangement, seem to forget that the pianoforte is but a sorry substitute for the organ. Bach wrote fugues for both instruments.

J. S. Shedlock.

MUSIC NOTES.

Mr. F. H. Cowen's Cantata, "The Sleeping Beauty," was produced at the Melbourne Exhibition last December. The work and the composer were most favourably received. Mr. Cowen's "Song of Thanksgiving" was repeated at the same concert.

LITERATURE.

The House of the Wolfings. By William Morris. (Reeves & Turner.)

The form chosen for the new romance by the author of the "Earthly Paradise" will seem strange to many of his readers. The story of the Wolfings looks at first sight like the translation of some Northern saga, in the text of which are imbedded long passages from the mediaeval court-poems and fragments of more ancient lays. The likeness is increased by the use of Scandinavian names for the Gothic gods and warriors, by a constant use of those poetical metaphors and synonyms which formed the stock-in-trade of the later Skalds, and by the fact that many of the details of the life described in the story seem to belong more to the Icelanders of the Middle Ages than to any of the old German tribes. There are details of another kind relating to customs of exogamy and the use of the "totem-signs" which would seem to be inappropriate to Goths and Icelanders alike. On a closer examination it will be found that there is merely a superficial resemblance between a work like the Grettir saga and the new tale "written in prose and verse" about the fate of the House of the Wolfings and the other kindreds of the Mark.

Mr. Lang pointed out, in his notes on *Aucassin and Nicolete*, that the method of telling stories in mixed prose and verse was probably "an early artistic adaptation of a popular narrative method," though hardly any examples of it have come down to our times, except the graceful "song-story" of which he gave us a version in an English which is "elderly, with a memory of Malory." He cited a case of the same kind, first noticed by Mr. Motherwell, as existing in the literature of Scottish folklore: "Thus have I heard the ancient ballad of 'Young Beichan and Susy Pye' dilated by a story-teller into a tale of very remarkable dimensions, a paragraph of prose and then a screed of rhyme alternatively given." The verse, perhaps, in such a case was meant to be sung by the company while the bard or minstrel rested; or the practice may have begun in an imitation of the reciters of the "Arabian Nights," who filled up pauses in the story with reflective "tags" in couplets and quatrains. It is clear that the artificial methods of the "Cante-fable" must be sparingly used, if the reader's mind is not to be fatigued with constant changes of style; and it is very doubtful if it could be successfully applied to any but a direct and simple story, such as its readers will find the tale of the Wolfings to be, if they disregard the somewhat too minute details of its archaeological decoration.

The tale is cast in a historical form, though it is easily recognised as being a vision of Utopia or a dream from some golden age of the world. Several of the leading incidents would suit the third century of our era, while for others a much later date might be postulated. The Wolfings and Elkings and Laxings and other kindreds of the Mark are of a Gothic stock, still settled in agricultural communities not far from the banks of the Vistula; but other tribes of the same blood had already become "dastards," and, as subjects, or allies, had submitted to the Roman dominion. The Franks and Burgundians beyond the Elbe were engaged in the same imperial service, and the forest-tribes had already fought with Huns "who would sweep them away from the face of the earth." The Romans are represented by a poetical licence as still endeavouring to push forward the boundary of the empire into the remoter corners of Germany, and the interest of the plot turns on the defence of the Wolfings' home and the abject defeat of the "loathly folk." The story opens with a pleasant picture of a free agricultural republic. Three "islands in the woods" were inhabited by a kindred known as the Markmen, "though of many branches was that stem of folk, who bore divers signs in battle and at the council, whereby they might be known." The Wolfings, for instance, were marked on the breast with the image of a Wolf, "that they might be known for what they were, if they fell in battle, and were stripped." It was a custom of the folk that the men of one house might not wed the women of their own house. "The Wolfing men and the Wolfing women were as sisters; they must needs wed with the Hastings or the Elkings or the Bearings, or other such Houses of the Mark as were not so close akin to the blood of the Wolf." It may be noted that this system of exogamy is not, as we might expect, connected with the idea of female kinship, and that the sacredness of the "totem" or tattooed crest did not prevent some of the "fish-tribes" from breaking the ordinary rule by "eating their namesakes." The great hall or "Roof" of the Wolfings is very like the house described in the Grettir Saga.

"Two rows of pillars went down it endlong, fashioned of the mightiest trees that might be found, and each one fairly wrought with base and chapiter, and wreaths and knots, and fighting men and dragons; so that it was like a church of later days that has a nave and aisles; windows there were above the aisles and a passage underneath the said windows in their roofs. In the aisles were the sleeping places of the Folk, and down the nave under the crown of the roof were three hearths for the fires, and above each hearth a luffer or smoke-bearer to draw the smoke up when the fires were lighted. Forsooth, on a bright winter afternoon it was strange to see the three columns of smoke going wavering up to the dimness of the mighty roof, and one maybe smitten athwart by the sunbeams."

There is a fine description of the hall, when it was lit for the funeral of the war-dukes, whose corpses, "clad in precious glistering raiment," looked down on the kindreds from the high-seat:

"Fair cloths were hung on the walls, goodly broidered garments on the pillars; goodly brazen cauldrons and fair-carven chests were set down in nooks where men could see them well, and vessels of gold and silver were set all up and down the tables of the feast. . . . Sweet gums and spices were burning in fair-wrought censers of brass, and so many candles were alight under the roof, that scarce had it looked more ablaze when the Romans had litten the faggots therein for its burning amidst the hurry of the Morning Battle."

The peace of a summer evening, when "the nightingales on the borders of the wood sang ceaselessly from the scattered hazel-trees above the greensward," is suddenly disturbed by a blast from the great war-horn of the Elkings, and a messenger appears with a bode-stick "ragged and burnt and bloody" as a sign of the coming invasion:

"For great is the Folk, saith the tidings, that against the Markmen come,
In a far-off land is their dwelling, whenso they sit at home,
And Welsh is their tongue, and we wot not of the word that is in their mouth,
As they march a many together from the cities of the South."

The whole story of the war is well told, and the battle-songs especially are all extremely spirited. The warriors come like a storm-wind, "and drive the ruddy rain"; their dreaded foemen marched "brown-faced about the banners that their hands have borne afar"; the listening prophetess catches a sound "muffled by the tree-boles," and she hears the shielding-song "and warriors blithe and merry with the battle of the strong."

Two passages may be selected from the mythological portions of the story, in one of which the War-duke Thiodolf tells how he felt after being saved in battle by the wood-nymph, who was also one of the Choosers of the Slain.

"Far fairer the fields of the morning than I had known them erst,
And the acres where I wended, and the corn with its half-slaked thirst;
And the noble roof of the Wolfings, and the hawks that sat thereon,
And the bodies of my kindred whose deliverance I had won;
And the glimmering of the Hall-Sun in the dusky house of old;
And my name in the mouth of the maidens, and the praises of the bold,
As I sat in my battle-raiment, and the ruddy spear well steeled
Leaned 'gainst my side war-battered, and the wounds thine hand had healed."

The other passage contains his answer to the spirit or goddess, when she laments his refusal of her magical hauberk, and mourns over his approaching death. "A few bones, white in their war-gear, that have no help or thought, shall be Thiodolf the Mighty, so nigh, so dear—and nought." He has tried once to his cost the gift of the cowardly dwarfs, and will not again wear "this grey wall of the hammer in the tempest of the spear"; and, "as for the rede of the gods," he says, "'I know it not, nor may I know it, nor turn it this way nor that, and as for thy love, and that I would choose death sooner, I know not what thou meanest.'"

"I am Thiodolf the Mighty; but as wise as I may be,
No story of that grave-night mine eyes can ever see,
But rather the tale of the Wolfings through the coming days of earth,
And the young men in their triumph, and the maidens in their mirth;

Digitized by Google

And morn's promise every evening, and each day the promised morn,
And I amidst it ever reborn and yet reborn. . . .
What sayest thou of the grave-mound? Shall I be there at all
When they lift the Horn of Remembrance and the shout goes down the hall,
And they drink the mighty War-Duke and Thiodolf the old?
Nay rather: there where the youngling that longeth to be bold
Sits gazing through the hall-reek, and sees across the board
A vision of the reaping of the harvest of the sword,
There shall Thiodolf be sitting; e'en there shall the youngling be,
That once in the ring of the hazels gave up his life to thee."

The author bids the world of men to turn towards the reflection of the past "across the waste that hath no way":

"A while I bid it linger near,
And muse in wavering memories
The bitter-sweet of days that were."

But it is very difficult to sustain an interest in the conversation and adventures of fairies and demigods, and the effect desired by the author must be diminished to a great extent by the wealth of his mythological illustrations. The historical lesson, in such circumstances, takes the appearance of an allegory; and the poem loses its directness, and incurs the suspicion of being didactic, and of leading up to some conclusion of social or political economics. Many writers have endeavoured to find an origin for their favourite institutions in the customs of the old German tribes; but the task has never been hitherto undertaken by anyone possessing such a power over nervous prose and vigorous dashing verse as the author of the legend of the Wolfings; though, perhaps from the very nature of the case, it must still be confessed that there is something missing from the verse of the music of the "Earthly Paradise," and of ballads like "The Tune of Seven Towers" and "The Sailing of the Sword."

Charles Elton.

"The Expositor's Bible."—*The Book of Isaiah*. By George Adam Smith. Vol. I. Isaiah i.-xxxix. (Hodder & Stoughton.)

It is sad, but true, that there is a deep gulf between those who know the Scriptures (as distinguished from Scripture) and those who preach and listen in our churches. Theological prejudice and unstatesmanlike timidity in high quarters have, for a long time, almost stifled the voice of protest. But here is a well-trained critical scholar calmly, but with full consciousness of this gulf to which I have referred, coming forward to help preachers and ordinary readers to a truer comprehension of their Scriptures. He knows that if "they overdrive them one day, all the flocks may die" (Gen. xxxiii. 13), and has a reverent regard to the interests at stake, which are not merely those of historical truth. To succeed in being at once tender and veracious was, no doubt, easier in the case of a prophetical than of a narrative book; but it was not a prize within the reach of the ordinary church-scholar. In all essentials this new expositor has succeeded. His work is in every sense mature, and shows a thorough comprehension of the problem. Let me first say a little about the book itself.

Mr. Smith takes up the popularisation of Isaiah at the same end at which I took it up myself in 1870—in a far darker period than the present. He sees the hopelessness of making Isaiah intelligible without arranging the books of which it consists in some chronological order, and retranslating it. He does not, indeed, give a complete translation; but, whenever he does translate, it is in a scholarly and yet literary style. He is not hampered as I was in 1870 by a regard for King James's version. Sensible people have come to understand at last that no touch of inspiration belongs to those admirable men who represented the scholarship of the seventeenth century. Strong, nervous English lies close to his hand, so at least it seems; but his fellow-students will know that such a prize is not to be won without persistent toil. In one passage, however (the ode on the King of Babylon), he has surpassed himself. Whatever the original rhythm may have been, the "rough and swinging rhythm" of the English is well adapted to set off the satire of the "taunt-song." But the chief strength of the book lies in the exposition, which is presumably such as the author would offer from any town-pulpit. So far as it goes, it is free and fearless. For instance, Mr. Smith declines to believe that Isaiah saw in the ideal king of the future a God in the metaphysical sense of the word (p. 140). Or take this comment on "A Topheth is prepared of old," &c.

"So Isaiah saw life, and flashed it on his countrymen. At last the glass fell from their eyes also, and they cried aloud, 'Who among us shall dwell with the devouring fire? Who among us shall dwell with everlasting burnings?' Isaiah replied that there is one thing which can survive the universal flame, and that is character" (p. 337).

And then he continues:

"Have we done well to confine our horror of the consuming fires of righteousness to the next life?"

And as another thought to be harvested he gives the following:

"Isaiah's figure for life was a burning. Ours is a battle, and at first sight ours looks the truer. . . . [And yet] though our dull eyes see it only now and then strike into flame in the battle of life, and take for granted that it is but the flash of meeting wits or of steel on steel, God's justice is everywhere pervasive and pitiless, affecting the combatants far more than they have power to affect one another" (p. 341).

It is the subject matter, much more than the external history, which interests the author, at least, for his present purpose. But he rightly sees—and the perception is one in which even great preachers are wofully deficient — that, without a view of the historical circumstances of a prophecy, you cannot get more out of it than a few pale, vague, general truths of doubtful application. In his introduction (p. xiii.) he remarks—perhaps in opposition to the excessive claims of our rising Assyriologists — "Signs of a development [in Isaiah's teaching] like these may be fairly used to connect or support the evidence which Assyriology affords for determining the chronological order of the chapters." I should rather think so, indeed! I quite agree, too, with Mr. Smith, that "any chronological arrangement of Isaiah's prophecies must be largely provisional"; and also that "the religious problems are so much the same during the whole of Isaiah's career that uncertainties of date, *if they are confined to the limits of that career*, make little difference to the exposition of the book." The italics in this last sentence are noteworthy: they are the author's, and not mine. It is not surprising, therefore, that Book V. is headed "Prophecies not relating to Isaiah's time"; these prophecies are Isa. xii. 12—xiv. 23; Isa. xxiv.; Isa. xxv.—xxvii. and xxxiv., xxxv. We may be certain that in Vol. II. this hearty and undiluted concession to criticism will be more manifest than it is as yet in its full scope and bearing.

Meantime, one can but express thankfulness that Mr. Smith's critical conclusions have already had some theological results. Biblical theology—that most important part of Bible study, so generally neglected as yet in the curriculum of English theologians — is recognised, discreetly and tentatively recognised. Mr. Smith knows his public, perhaps, better than I do. I could wish that his exposition had absorbed somewhat more of the ideas and results of the historical study of doctrine. It seems to me that the applications of Isaiah's words to modern life are so excessively prominent that they will almost obscure their theological bearing. To my taste, the book is overweighted by its generally striking and beautiful but disproportionately extended practical exegesis. Yet there are passages as free as anyone could wish from academical severity, and yet honest and accurate, which cannot be too earnestly pondered by the student. Such, for example, is the whole chapter on the Messiah to which I have referred already, and from which I quote these words, bolder than any popular church-writer has yet ventured to utter, but expressing an axiom of historical criticism:

"Isaiah's forecast of Judah's fate was, therefore, falsified by events . . . This boldness to entrust to future ages a prophecy discredited by contemporary history argues a profound belief in its moral meaning and eternal significance; and it is this boldness, in face of disappointment continued from generation to generation in Israel, that constitutes the uniqueness of the Messianic hope among that people" (p. 141).

With this portion of the work may be compared a valuable essay on "The Messiah in Isaiah i.—xxxix.," by the same author, in the *Theological Review and Free Church College Quarterly*, June, 1887, which, though partly incorporated in this volume, contains some more directly critical matter. I am not prepared to criticise this here. The Immanuel prophecy, in particular, is one of those many details in the volume of the More than Two Isaiahs which demands deliberate re-examination.

It would be unfair to conclude without a few more references to notable passages in this book. The treatment of the subject of immortality is much to be commended. Mr. Smith has evidently grasped the historical as well as theological bearing of passages like Psalm xvi. 8-11 and xlix. 15 (see his note on p. 411). And most true is his remark (p. 394) that the Semitic race, including the Hebrew section of it, "was unable to develop any strong imagination of, or practical interest in, a future life, apart

Digitized by Google

from foreign influence or divine revelation" (the latter phrase is unavoidably theological). To me, however, the Hezekiah of the famous song is no more that royal saint than the David of Psalm vi. is the "darling of the songs of Israel." Nor could anything have induced me to say or to write the erroneous rendering of Psalm xvi. 10, "see corruption" (p. 395). But what a fine application of Isaiah xxxvii. 3 is this: "All life thrills with the pangs of inability to bring the children of faith to the birth of experience. The man who has lost his faith, or who takes his faith easily, never knows, of course, this anguish of Hezekiah" (p. 353). How well, too, Isaiah xxxvii. is illustrated by a passage in the life of Napoleon (p. 355)! Less satisfactory is the illustration of Isaiah vi. 6, 7 by the experience of Mazzini (pp. 84-86). This is more appropriate for the life of Jeremiah. Did Isaiah's followers desert him? We do not know that they did. But the mass of Jeremiah's and the Deuteronomist's probably did. Very touching is the comment upon Isaiah xxv. 9, xxvi. 8, and the illustration from the life of an Arctic explorer (p. 442). I like, too, the passage on Isaiah's "sacrament of fire" (pp. 73-74); that on the extermination of wild beasts, with its pretty picture of a warm spring day in Palestine (pp. 190-191); and that on forgiveness (p. 326); also the few (designedly few, I suppose) but suggestive pages on the disintegration of Isaiah (pp. 401-404).

Lastly, as to misprints, from which I have suffered only too much myself. On p. 172 (foot), is "Isaiah" an error for "Micah"? On p. 175 (foot), have some lines dropped out? On pp. 350, 351, I like not "Rénan" (twice); nor can I, on p. 394, tolerate "Mahommed."

T. K. Cheyne.

Personal Memoirs of P. H. Sheridan. (Chatto & Windus)

This is an autobiography of one of the four great soldiers who appeared in the Civil War of America. Lee was the master spirit of that gigantic contest. His operations around Richmond are specimens of admirable skill in war; and it is questionable whether Lee or Moltke is the better strategist of the school of Napoleon. Stonewall Jackson was a consummate officer in the field; and, though we see no genius in the campaigns of Grant, his tenacity, his energy, and his moral power mark him out as a distinguished chief, and he may be said to have combined in himself some of the qualities of Massena and Blücher. The most brilliant, however, of these eminent men was Sheridan, the son of an Irish peasant. Like Clive, he was a warrior as if by instinct, and in some respects one of the most remarkable of the generals of the nineteenth century. He was not tried in the highest parts of his art, and he was not perhaps a scientific soldier; but he possessed in the very highest degree some of the best gifts of a great commander—extraordinary resource in the conduct of war, the faculty of winning the hearts of men and making them capable of heroic deeds, above all, readiness and insight in the field; and he is one of the few chiefs who can point to a career of almost unbroken and striking success. These volumes describe his life and his exploits; and, though not marked by much literary skill, they form a valuable and most attractive narrative. The author has well worked out the idea which he has made, so to speak, the principle of his book. He has given us a full and clear account of his own experiences of the Civil War, and of the memorable deeds in which he took part; but he has not written a history of the war, and he has carefully abstained from dwelling on phases in the struggle not observed by himself. This is, therefore, an autobiography in the proper sense; and seldom, we should add, has an autobiography been composed in so candid and moderate a spirit, or is so full of keen and intelligent criticism.

Phil Sheridan—this was his name in the camp—was born in 1831, the son of an Irish farmer, who found the home of an emigrant in the wilds of Ohio. He had none of the advantages of book-learning, but he gave early promise of ready cleverness; and he tells us that, from his first youth, he had set his heart on becoming a soldier. He passed into the ranks of the United States Army, from Westpoint, without peculiar distinction; and many a cadet not to be named with him as a warrior had doubtless much more knowledge. He served for some years on the frontier of Texas, engaged in those "piping times of peace" in occasional skirmishes with the Comanches, and in the routine of outpost duties; and in 1855 he received a commission as lieutenant in a regiment of foot, stationed in the far west along the Pacific seaboard. The young officer distinguished himself in tracking and hunting down the savages of the Californian and Oregon tracts; and he displayed such skill in destroying a band of these marauders, and in saving a small outlying settlement of whites, that he was specially noticed by the veteran Scott. At the outbreak of the great Civil War he obtained the command of a regiment of volunteers; and from the first moment he gave signal proof of the high qualities which have made him famous. He quickly won the confidence of his men by attention to their wants and by the power of genius; and at a skirmish at Booneville, on the plains of Missouri, he routed an immensely superior force by one of those daring and brilliant movements which reveal the inspiration of a true chief. This feat of course secured him a brigade. "He is worth his weight in gold," was his superior's phrase; and this promotion was soon followed by his appointment to the command of a division in the army opposed to the Southern forces in the theatre between the Ohio and the Tennessee. The war here raged, with ever changing fortune, from 1862 to 1864; and Sheridan, ere long, made himself conspicuous for his admirable resource and power as a leader. He bore the brunt of the attack at Murfreesboro; and, but for his constancy and ready skill, the issue of that fiercely contested struggle must have been disastrous to the arms of the North. The same qualities were seen at Chickamauga. His attitude checked the efforts of Bragg, and, perhaps, saved Rosencrans's imperiled army, caught as it was in a false movement; and his tenacity and energy are proved by the fact that he lost a third of his troops, though successful. The most remarkable of his gifts, however—his vigour in pursuing a defeated enemy—was first displayed in the operations of Grant, ending in the battle of Missionary Ridge. Had Granger followed Sheridan's counsels, and seconded him as he ought to have done, the Southern Army of the West would have been utterly destroyed.

The great powers of Sheridan quickly brought him forward in a death struggle like the American War. He was placed at the head of the cavalry of the North, when Grant obtained the supreme command of the Federal Armies in the beginning of 1864. Nature had given him the faculties of a leader of horse; and, under his direction, that arm found its true sphere, and developed resources unknown hitherto to the Union chiefs. Up to this time, the Federal Cavalry had been mainly employed on outpost duties; and it had had no influence in deciding battles, and in determining the issues of campaigns, while the cavalry of the South had achieved great results. All this was changed by the new commander; and Sheridan played a conspicuous part in the memorable advance of Grant on Richmond. Slipping round the flank of Lee, and harassing his rear, he afforded considerable relief to Grant in the terrible engagements on the Virginian frontier; and he skilfully covered the movements of his chief, as, indomitable but reeling under the strokes of Lee, Grant crossed the James, and attained Petersburg. Sheridan, too, performed most important service by destroying the railways around Richmond, and thus isolating the Southern capital; and he acquired for his men the ascendancy of success—an ascendancy they never lost afterwards—by routing the main body of the Confederate horse in a pitched battle under the lines of Richmond. He was transferred, in the autumn of 1864, to the valley of the Shenandoah, to take the command of an army assembled to check a raid on Washington, skilfully planned by Lee, to weaken the grasp of the foe on Richmond; and his operations are of peculiar interest. Sheridan's force was about 26,000 strong, and he was opposed to Early—a capable chief, who, at the head of some 20,000 men, had marched up the valley and affrighted Washington by his rapid and unexpected advance. Bearing his adversary back, Sheridan caught Early and nearly overwhelmed him at the town of Winchester; and a few days afterwards he gained a victory at Fisher's Hill, which, but for the fault of a subordinate, would have destroyed his enemy. An incident soon occurred which shows how great was the personal influence of this most brilliant soldier. Sheridan had repaired to Washington by the President's command; and Early, in his absence, suddenly fell on his army, deprived of its master-spirit and in a position inviting attack. Victory seemed to smile on the Southern chief, and he had, in fact, compelled his foes to fall back; when the sudden appearance of Sheridan on the scene changed as if by magic the turn of events, and converted defeat into complete triumph. Sheridan closed an admirable and important campaign by turning the valley of the Shenandoah into a waste—a cruel expedient, but one which barred a sallyport through which Confederate armies had repeatedly menanced the chief seat of the Union.

Digitized by Google

Sheridan rejoiced Grant in March, 1865, having ravaged the country around Richmond in his march from the valley of the Shenandoah. The end of the Civil War was at hand. Grant and Sherman were approaching each other; and Lee, after a display of genius worthy of the campaign of 1814, was utterly overmatched by his converging foes. Yet the great chief of the South might have effected his escape, and outmanœuvered Grant for a time, but for the insight and decision of Sheridan, who really brought the struggle to a close. Grant, confident that he could overpower Lee, requested Sheridan to join Sherman, advancing towards Richmond from the Carolinas; but Sheridan properly objected to a move which would have weakened Grant at the decisive point, and Grant, fortunately for himself, yielded. Lee broke up from his lines at Petersburg, and, endeavouring to make his way to the South, fell on the extreme left of the Federal army, his object being to reach Johnston, and, if possible, to prolong the contest. He encountered Sheridan with some success; but Sheridan, skilfully holding his ground, and having been reinforced in time, defeated him with heavy loss at Five Forks; and Grant only spoke the truth when he described this victory as one of the most important of the whole war. The struggle was practically all but over. Lee made desperate efforts to escape, but Sheridan hung in force on his flank; and, in fact, but for the slowness of Meade, who did not co-operate at the fitting moment, his army would have succumbed at Amelia Court House. The catastrophe, however, was merely deferred. Sheridan closed on the line of his retreat, and, as the world knows, the war ended by the historic surrender near the Appomatox.

We have outrun our limits, and cannot dwell on the career of Sheridan after the war. He stood in the highest place in the esteem of his countrymen, and his premature death was widely mourned in the great republic which he had done much to save. He was one of the most distinguished soldiers of an age rich in military fame.

William O'Connor Morris.

Addresses on Educational Subjects. By S. S. Laurie. (Cambridge: University Press.)

The reports of the recent Royal Commission on education are, no doubt, as valuable as they are voluminous; but the critic of a happier and more philosophic future will probably be struck less by the immediate practical importance of the evidence collected and conclusions reached than by the absence of authoritative expert opinion on educational questions, as questions of education pure and simple rather than as questions of practical expediency in the presence of partisan difficulties. It is not, of course, that experts were not examined by the Commission: some of the most valuable opinions in England were asked and given. It is not, on the other hand, that the Commissioners were not most intimately acquainted with the subject in hand: many of them are indisputably the highest authorities in the kingdom on most of the practical questions of primary education. But they are also closely associated with the oversight of the working of the Education Acts, and have in nearly all cases taken active part in most of the inevitable controversies. It is just this last point which makes one regret the absence from the Commission of really philosophical experts, untainted by partisanship and accustomed to look on education as a whole reasonable system, as one of the conditions of right living necessary to all. With such an immense mass of evidence before him—evidence elicited by the most competent interrogators—the philosopher who was also a king (that is, a member of the Royal Commission) might have done a good deal to take away from many recommendations the unmistakeable flavour of partisanship which does so much to invalidate even what is not manifestly partisan.

Most of the papers in Prof. Laurie's book might serve as chapters to a philosophical introduction to the report. It has just what such documents in general chiefly lack—definite and orderly derivation of details from principles, based on an examination of the constitution of mankind in relation to a philosophy of life. No reasonable man asks that educational matters should be settled for us by expert opinion alone. Exclusively expert opinion can be valuable in dealing with morbid, or, at least, abnormal conditions alone; in health of body and affairs we require no consultation of physicians or lawyers, ordinary matters being sufficiently provided for by empirical practice. Moreover, the popular character of our educational habits, their growth independent of legislation, their democratic and local constitution, all require that for anything like successful remodelling we should have such due regard to lay opinion as to give it a preponderant—or at least an equal—voice in the settlement of educational questions. And yet, while exclusively expert opinion would be nearly valueless in practice, as subject to all sorts of professional bias, it is surely in the highest degree unreasonable to exclude from a law-suggesting or law-making body just those who have special qualifications for dealing with the matters in hand, as purely technical questions, abstractedly.

The two characteristic prejudices that beset the partisans do not, of course, weaken the force of anything that comes from Prof. Laurie. He cannot be supposed, on the one hand, to sympathise with those stunted and niggardly spirits who would deny all education to "our masters," except as much as would render them less likely to turn and strip us; nor, on the other hand, do we find him in accord with those amiable but dangerous lunatics who think that a child's brain is capable of infinite distension, and ought to be filled with detailed information on all things thinkable under the sun, while he can be taught, as well, before he leaves school, all things doable. Prof. Laurie is a theorist, too; but his theories are reasoned, and are not fads and panaceas.

Nothing could be clearer than the fruitful character of the "leading idea," which he suggests as guide and criterion through all educational stages—that is, nutrition: in the first stage, nutrition of feeling, training with a minimum of discipline; in the secondary stage, nutrition by the hard facts of life and concrete ideals with a maximum of discipline; in the third stage, nutrition through ideas, with self-discipline as a necessary condition. This is one striking result of the principle manifest in all our author's treatment of educational questions—that the end of education is the formation and liberalisation of character. No education can be good which aims at shovelling information or limited manual dexterities into a capacity which is supposed to be of endless proportions. Capacity must be developed, food supplied appropriate in character to each general stage, and intellectual suppleness and strength of moral fibre will follow in the natural order of things. What is true of the university professor is true, *mutatis mutandis*, of teachers in all grades, and even in technical and professional schools, that is, that

"no man is a fit professor who is not alive to the university idea in what he teaches, who does not make his students aware of the intimate relations of all knowledge, the philosophy which permeates and gives significance to every subject. If the student does not attain to this, he has fallen short of the academic aim."

A proper conviction of this truth is indispensable not alone to the teacher, but to all those also who wish to see any particular study or craft take a predominant place in the ordering of the pursuits of any school stage.

In chap. iv. the author addresses himself to the difficulties surrounding the "organization of the curriculum of secondary schools," the consideration of which in detail follows naturally on the subjects dealt with more generally in chap. i. We start again with that statement of the educational aim which has commended itself to all the most sagacious men—Plato, Aristotle, Melancthon, Sturm, Ascham, Montaigne, Milton, Comenius—who have considered the problem at all: the main educational aim is "the wise and capable conduct of life." It will be no real gain to substitute for what is universal what is narrowly practical, though as a means of education, the practical is valuable just in so far as it is universal. Clearly, given two alternative subjects, that is the more valuable which enables the child to deal hereafter with the greatest number of "practical" details. This leads us to place the study of language, as literature, as a synthetic and as an analytic study, at the head of all other studies, "because it is the sole universal in the intellectual education of every human being." This, of course, as Prof. Laurie points out, is nothing new. The most capable people in the world—the Athenians and the Romans—were well aware of it; and the Middle Ages feebly followed. But here is a double-edged caution:

"It was only analytically and with a view to *immediate use* as an organ of communication that language was taught in the episcopal and monastery schools. Down to the thirteenth century the mediæval studies were thus not only abstract and grammatical, but they were also, in truth, utilitarian. It was this utilitarianism, the subservience of language to merely ecclesiastical and other necessary uses, that emptied it of all general liberalising influence."

The curriculum which our author suggests as adequate for the secondary stage of education is not a very large one, but he holds that

Digitized by Google

it has claims to be universal; and it must be confessed that it is hard to gainsay him. It is, as he says, "practical, and fits for life, 'commercial' and other. There is no 'modern' side in education. Education rests on principles." The obvious criticism which will be made on his scheme is that it is too exclusive, and does not provide adequately for all types of intellect. Science, he thinks, is satisfactorily represented in secondary education in the nature-knowledge included under the head of geography. I cannot quite agree with him in all that seems implied by his opinion that "the theory of chemistry and the abstractions of physics are not more educative than the learning of a Greek verb." Mere "theory," strings of facts put together to be learnt by rote, whether they are set forth in the hand-books of chemistry and physics, or in Greek grammars, are nearly useless. But the real teacher does not think of teaching chemistry or physics without experiments, nor Greek verbs without philology. Much more depends on the teacher than Prof. Laurie here admits, though he does full justice to him elsewhere. But he will find many to agree with him heartily in holding that "with humanism will go moral ideals, spiritual life, art, and poetry." Chemistry and physics are certainly inadequate to keep these alive; and Greek verbs, it must be confessed, are little better.

We are favoured with a special chapter on "Liberal Education in the Primary School," which is quite excellent from beginning to end. It should be in the hands of every primary school manager. Its main burden is this: do not sacrifice the general to the particular; your scholars are to be citizens first and handicraftsmen after. He answers Prof. Huxley's invitation to Englishmen to make their blunder cheerfully because no one can quite define technical instruction, by defining it; and probably Prof. Huxley's unusual diffidence lay merely in the fact that he felt the practical objection was too much for him. Take our author's general definition:

"Technical instruction is instruction with a view to gaining a living in some department of industry, or to discharging some specific social function."

Exactly; but this instruction is to be provided in what? for whom? and why?

Technical instruction, *as it is usually understood*, is like the "rate in aid" of the bad old times. It is hard to see what it can do beyond helping the employers of labour. To some of the workmen, perhaps, it merely opens out opportunities for them to displace present employers. Thus, in a certain great town in the north, a working-man of considerable trades-union influence recently declared publicly that no system of technical training could be considered satisfactory to working men, unless the sons of employers of labour were strictly debarred from its benefits. Unless, therefore, very strict precautions are taken, local authorities may make technical schools usurp the place of the primary school, the right aim of which is to lay the foundation of a liberal and humanising education. Anyhow, there is no need to evade the Factory Acts by passing another bill. It would be simpler to repeal the said Acts.

In all that our author has to say the same mature sagacity rules. He makes a strong, indeed an unanswerable, appeal for the creation of lectureships on education, for the teaching of the science of education. The hearing of lectures on teaching, of course, cannot make a good teacher; but the ordinary workman is better for technical training, beyond all doubt, and nature has given no special charter to teachers, although sympathy and imagination are more necessary to their success than is the case with any other kind of craftsmen. Of examinations he has many a weighty word to say, and he rightly defines their limits and their proper methods. It is certainly a pity that it is not generally understood how

"if the subject is Aristotle, questions might be so framed as to pluck Aristotle himself, and a Chinaman could do it. If the subject be the interpretation of Robert Browning, anybody could pluck *him* on his own works."

I think the latter feat has been achieved.

Other subjects treated in this admirable book are free schooling, method in geography teaching, religious education of the young (in which last, however, I feel that Prof. Laurie does not quite rightly understand the immediate practical difficulties), practical hints on class management, and, in an appendix, a most valuable series of suggestions for a possible primary school code. It is a thoroughly practical work in the best sense. It is the work of a real expert.

P. A. Barnett.

New Zealand of To-Day (*1884-1887*). By John Bradshaw. (Sampson Low.)

Mr Bradshaw, having already written *New Zealand as It Is*, now publishes *New Zealand of To-Day* The former work appeared in 1883; and most of its pages, he tells us, have by this time become obsolete. If we were to judge by the sensation caused in New Zealand by the publication of *Oceana*, we should be inclined to suppose that one of the principal events in its recent history was the visit of Mr. Froude. Mr. Bradshaw devotes his first chapter to a refutation of Mr. Froude; but this is not enough, for in the latter part of his book he more than once returns to the charge and hurls various New Zealand newspapers at his head. Whence is it that Mr. Froude's criticisms have excited such a bitter feeling in New Zealand? We are strongly of opinion that it is because they contain a considerable amount of truth, which touches the *amour propre* of the colonists to the quick. What business, they argue, has a man who only spent three weeks in the colony to express any opinions at all? But a man of Mr. Froude's shrewdness and capacity may learn more in three weeks than some men in as many years. Then the source of his information is said to be evidently Sir George Grey. We may ask, would he have done better to have consulted Sir Robert Stout and Sir Julius Vogel, who were governing, or rather, to follow our author, misgoverning the colony at the time of Mr. Froude's visit? Mr. Froude is said to have been inspired by a malignant fairy, and to have libelled the colony. He had the temerity to question the excellence of the roads in New Zealand. A more recent traveller has described them in much more pungent language. Again, Mr. Froude speaks harshly of the specimens he saw of the younger generation of colonists. He may be too severe; but it is a common experience that they are inferior to their fathers, and conceited to such a degree that they can admire nothing outside their own island. But Mr. Froude's principal crime consists in his remarks on the state debt and general financial condition of New Zealand. Now Mr. Bradshaw himself admits that, in proportion to the population, the debt of New Zealand is six times greater than that of France; and we all know how the finances of the colony are regarded in the city.

The best justification of *Oceana* is Mr. Bradshaw's own book. He is an unsparing critic; but, probably, the colonists will accept from one of themselves what they would repudiate from a stranger. During the greater part of the period between the dates of his two works, New Zealand was governed by Sir R. Stout, Sir J. Vogel, and Mr. Ballance. This ministry fell, "none too soon," in the summer of 1887. Of the first of these gentlemen, Mr. Bradshaw says that "he is a hobby-rider, rather than a statesman; a theorist, rather than a political economist; a devoted disciple of Mr. Henry George." Mr. Ballance he describes as equally a disciple of Mr. George; and he concludes a full account of Sir J. Vogel in these words: "But the real drift of his every argument is invariably the same; and, however skilfully concealed, would, if accepted in its integrity, involve the legislature in the confusing mazes of protection." Mr. Bradshaw is as severe on many of their measures as on the ministers themselves; and he certainly justifies his censures by what he tells us of relief works, professional agitators, and state education.

In New Zealand, we see the system of state education pushed to its furthest extreme. With the usual "dog in the manger" policy, private schools have been shut up; but, notwithstanding a profligate expenditure, the state, so far as primary schools are concerned, has proved quite unable to keep pace with the requirements of the colony. The system of education is thoroughly faulty, and begins and ends with cram. Here is a specimen:

"The examiner in grammar, composition, &c. in a late scholarship examination, held at Timaru, felt constrained to inform the Board how greatly disappointed he had been with the way in which the candidates did their papers. He asked them to write essays on 'Printing' and 'Newspapers,' and they made a very bad hand of it altogether. One candidate—no doubt a girl—said the newspapers were very useful for announcing births, deaths, and marriages in; and what increased their usefulness was that they were very handy for rapping [*sic*] up parcels."

A somewhat utilitarian view, which will disgust the apostles of progress!

In his former work Mr. Bradshaw remarks that one great drawback to the system of government in New Zealand is that, as a rule, the colony gets too much law. If that were true in 1883, it has become still more true since; and what would he have said had the new protective tariff been passed before his book was printed? Still, the natural resources of New Zealand are so great that she must

Digitized by Google

become more and more prosperous and important, in spite of the schemers and pedants who have done so much to retard and injure her.

On all matters connected with agriculture and trade Mr. Bradshaw's work is valuable and interesting. New Zealand is *par excellence* the wheat-growing colony. The average yield of wheat almost equals that of this country, and far surpasses the ridiculous crops grown in Australia. He asserts that on the best lands in the South Island fifty, sixty, and even seventy bushels of that grain are frequently threshed out to the acre. Did this statement rest on less good authority we could hardly accept it. The climate, too, especially of the North Island, is far superior to ours; and yet we are by no means convinced that energy, knowledge, and capital may not be laid out to greater advantage on the land in England than in New Zealand It is extremely difficult to compare the prices of land in the two countries; but so far as we are able to judge, taking everything into consideration, we believe that farming land is no dearer here than there. With respect to emigration our author is cautious. He points out no doubt many advantages; but he gives as his opinion that no old colonist, if he be wise, will positively advise any man to emigrate. We gather from him what we have found from other writers on the subject, that the people to get on in the colonies are generally those who would get on at home. New Zealand is no place for the feeble, the lazy, or the unthrifty.

William Wickham.

NEW NOVELS.

A Lost Estate. By Mary E. Mann. In 3 vols. (Bentley.)

Violet Vyvian, M.F.H. By May Crommelin and J. Moray Brown. In 3 vols. (Hurst & Blackett.)

Faithful and Unfaithful. By Margaret Lee. (Macmillan.)

A Nine Men's Morrice: Stories Collected and Re-collected. By Walter Herries Pollock. (Longmans.)

The Grey Lady of Hardcastle. Edited by a Friend of the Family. (Burns & Oates.)

The Very Same Man. By Greville Gordon. (Burnet.)

The Blue Ribbon. By the Author of "St. Olave's." (Spencer Blackett)

Mrs. Mann is not a new writer, for on her title page are the names of no fewer than three previous novels; but as a critic who speaks in his own name and for himself alone is free to disclaim the omniscience of the editorial "we," I may frankly confess that until I read *A Lost Estate* she and her work were both unknown to me. The habitual reviewer of fiction is a man who has learned from sad experience not to cherish great expectations, and occasionally this stern repression of hopeful emotion has its reward in a shock of pleasant surprise. Such a surprise is in store for readers of this book, who will wonder, not at all unnaturally, at the comparative obscurity of a writer capable of such powerful and impressive work as is to be found in the three volumes of *A Lost Estate*. It is not too much to say that the character of Henry Barber, the vigorous, strong-willed, fiery-tempered profligate and misanthrope, whose gentle descent makes itself vaguely manifest through all his coarse brutality, is not unworthy of either Charlotte or Emily Brontë. There is, indeed, in Barber something of Rochester and something of Heathcliff; but he is originally conceived and strongly individualised. He stands on his own feet; and he is no more a duplicate of either Rochester or Heathcliff than they are duplicates of each other. The story of his strange friendship with Tom Merry, who wins his confidence by a total absence of the fear which it is one of the chief delights of his life to inspire, and maintains it by an altogether reckless frankness, is characterised by wonderful imaginative grip and dexterity of literary presentation; and it is not often that we find, in any contemporary novel, passages which in lurid, sombre power can be compared with the scene in which Barber turns Sally Pack out into the darkness, or that other scene in which Barber's guilty wife and the man she has ensnared see his dying face glaring upon them through the doorway. That *A Lost Estate* is a cheerful book is one of the few things which cannot be said in its favour; so it is hardly likely to be appreciated by those who accept Dr. Downward's dictum that "a novel should occasionally make us laugh and always make us comfortable." It will, however, be successful in appealing to that smaller but more select class of readers who are prepared to welcome any imaginative work which illustrates Aristotle's definition of the aim of true tragedy, and who have sufficient discrimination not to mistake for such tragedy the vulgar melodrama, which, instead of purifying the soul by pity and terror, simply revolts the taste, curdles the blood, and sickens the stomach. There is here none of the strain, spasm, and exaggeration which are often commended to us—though not under these names—as evidences of remarkable imaginative and literary power, they being really the surest, the most unmistakable indications of imaginative and literary weakness. To the competent reader the mere power of *A Lost Estate* is not more noticeable than the precision with which it is directed, and the sense of fitness by which it is restrained. It is natural that, on looking back upon the book, such movingly dramatic situations as those to which I have referred should be the first to strike the memory; but they are not forced into artificial prominence. They are not limelight effects in a dull play. They drop into the story quite naturally, just in the same way that great crises drop into very quiet lives; and in simple adequacy of imaginative realisation and presentation they are equalled by the portrait of the quite commonplace Mrs. Merry, and by the pleasant but entirely unexciting chapters devoted to the young days of Archie and Tom and the Waller children. *A Lost Estate*, in short, is an exceptionally strong novel all round—a novel which treats adequately themes the adequate treatment of which testifies to a writer's possession of very unusual ability.

In cases of literary collaboration, the attempt to assign to each collaborator his or her share in the joint work is generally hopeless. Beaumont and Fletcher, Erckmann and Chatrian, Besant and Rice, are Siamese twins of literature; and, though in our rashness we may easily confound the persons, it is impossible rightly to divide the substance. *Violet Vyvian, M.F.H.*, presents no such difficulties. Two-thirds, or perhaps three-fourths, of the book is devoted to incidents of very miscellaneous sport, and the remainder to a love-story, which is saved from monotony by the machinations of a certain Mrs. O'Brien, who would take a high place in a competition among the wicked beauties of fiction. One can have no hesitation in assigning the love-business to Miss May Crommelin, and the sport to Mr. Moray Brown; for, though a lady may have as intimate a knowledge of hunting as was possessed by that charming feminine M.F.H., Miss Violet Vyvian, she is hardly likely to be able to write like a book upon such diverse masculine amusements as horse-racing, boxing, badger-baiting, rough-shooting, pig-sticking, and tiger-killing, upon all of which Mr. Moray Brown—if I may judge from the titles of his previous works—seems to be an authority. Being in relation to all these fine arts what Mr. Hamerton calls an "atechnic" (I thank thee, scribe, for teaching me that word), I am compelled to accept the sport in unquestioning faith As I cannot criticise its quality, I can only hope that it is above criticism; and I may, perhaps, incur the contempt of connoisseurs by hinting that the quantity is somewhat excessive. As for Miss Crommelin, she gets on admirably with her love-making and her scheming, considering the narrow limits of the space left her by her badger-baiting and pig-sticking fellow-worker. Jack Ramsay is a chivalrous hero; Violet Vyvian, though fatuously credulous, is a charming heroine; and Mrs. O'Brien is a past mistress in the pleasing arts of lying and letter-suppression. *Violet Vyvian, M.F.H.*, is not a very substantial book, but it is vivacious and decidedly readable.

Faithful and Unfaithful is the reverse of vivacious; and though I cannot, without falling to the mendacious level of Mrs. O'Brien, call it unreadable, I myself having worked my way from the beginning to the end of it, I cannot honestly commend it to those by whom the quality of readableness in a novel is regarded as essential. It appears that the book has been published in the United States under the title of *Divorce*, which, we suppose, did not commend itself to the taste of the highly decorous firm who are its English sponsors. Its latest title is sufficiently meaningless to be appropriate to a very dreary series of pictures of the seamy side of married life, as exhibited among the rich vulgar of New York. If it has secured more readers in America than it seems likely to secure in England, it may possibly be effective as a protest against the utterly disgraceful divorce laws which prevail in some of the States, and which are, it seems, recognised and held valid throughout the Union; but the lighter ends of entertainment aimed at by the ordinary novel it certainly will not achieve. Even the patronage of Mr. Gladstone will, I think, fail to ensure popularity for *Faithful and Unfaithful*.

It is not easy to find an explanation for the title which Mr. Walter Herries Pollock has

Digitized by Google

given to his volume of stories, unless it be an admission that he is conscious of leading his readers through a strange dance. Not one of these tales could have been written save by an exceedingly clever man; and yet, with one exception, they are distinguished by a fantastic perversity, or, rather, a perverse fantasticality, which is in excess of the cleverness, and rather overpowers it. Mr. Pollock seems to aim at a grotesque treatment of supernatural *motifs*—at a combination of the creepy and the farcical; and the discordant elements refuse to combine for any other end than the spoiling of each other. "Mr. Morton's Butler," for example, is a nightmare without terrors, and such a nightmare has no reason of being. The four stories of which this is the second remind me forcibly of some similar literary experiments made by Edgar Poe, and Poe's failure might have warned Mr. Pollock of the very small chance of success. The best told story is that entitled "Edged Tools," written in collaboration with Mr. Brander Matthews; but there is something inexpressibly irritating in a mere recital of wonders detached from all antecedents and all consequents. "Lilith," the first and longest of the nine stories, is also the least faulty. The heroine somehow eludes the imagination; but the latter half of the tale has some picturesque effects, and the catastrophe is led up to very skilfully. On the whole, however, the book strikes me as being a brilliant failure.

In ultra-Protestant circles, I believe, "insidious" is the word generally used to describe a book in which a more or less attractive tale is made a vehicle for the inculcation of Romish doctrine; but the epithet cannot be applied with even a show of reason to *The Grey Lady of Hardcastle*. The powder of Catholic truth—I impartially vary my phrases—is not even concealed from sight by the jam of narrative, while the taste is quite as pungent as it would be were there no jam at all. The story is thin enough to appeal to nervous readers who are afraid of excitement; and the ghost, who turns out to be a sleep-walking servant girl, is the most ineffective spectre I have ever encountered.

The Very Same Man is a story of a criminal who escapes capture by taking a drug which produces the appearance of death. He is supposed to have been buried, but has actually got away to Sweden, reappearing upon the scene in the character of his own cousin. The opening chapters of the book are much the best part of it; as the plot thickens the working out of it becomes somewhat clumsy and confusing.

The Blue Ribbon is simply a new and cheap edition of an attractive novel by that always pleasant writer, the author of *St. Olave's* and *Janita's Cross*. It is a decidedly readable book.

James Ashcroft Noble.

SOME BOOKS ON ANCIENT HISTORY.

The History of the Roman Republic: abridged from the History by Prof. Mommsen. By C. Bryans and F. J. R. Hendy. (Bentley.) We have often wondered why an enterprise like this was not undertaken before. Dr. Mommsen's work has been on too large a scale for schoolboys to attack it with much of profit; but its salient points might well have been picked out and made accessible to the rising generation. The task has now been undertaken with excellent discretion by two editors, who bring to it knowledge and interest of their own. It is no easy work to reduce the scale of an important book; but in this case it seems that the scale has been reduced, and that the proportions have not suffered. The abridgment must have cost an amazing quantity of trouble; but the result is that everything is in its place, and that a reader familiar with the large history finds in the small one a survey which reminds him of views taken through the wrong end of a telescope. Everything is diminished, nothing is distorted. It is true that we miss the brilliant chapters on "Religion" and "Literature"; but, on the other hand, the editors have added an introductory chapter on the authorities for Roman history, and have placed throughout the work notes giving in more detail the evidence for particular subjects or views.

Imperium Romanum Tributim Discriptum. J. W. Kubitschek. (Prag: Tempsky; Leipzig: Freytag.) Drier than a gazetteer, nearly as dry as a table of statistics, this little work will yet be of great value to the historian. By slow degrees it is becoming possible to construct something like a full picture of the old Roman world. Information is flowing in on us on every hand; and what we want, perhaps, as much as anything just now is co-ordinators of that information—men who can sort it, arrange it, tabulate it. A hard head, a good memory, and a clear method are needful for this particular task; and all three Herr Kubitschek seems to possess. He names under each province every township in it of which we can say with confidence to what tribe its citizens belonged; gives his authorities, epigraphical or other, and adds some particulars of the administrative history of the town. This sort of work is indispensable for the minute or detailed study of any province, and we owe Herr Kubitschek thanks for undertaking it. It is interesting too to see how rarely, for obvious reasons, Roman tribes can be traced in the Greek East, and how often in the Romanised West. In Britain, however, "de tribu ne unius quidem oppidi constat." The tombstones of soldiers found in Britain naturally do not tell us what we seek. It is curious that the children born "in canabis," in the vicinity of a Roman camp, should, on receiving citizenship, have been drafted into the Pollian tribe, "utpote quae *pollentium* putaretur"; and we may hope that some military jokes were better than this. For the theoretical considerations which underlie and give a meaning to his collected facts, Herr Kubitschek appeals to his *De Romanarum Tribuum Origine ac Propagatione* (1882).

De Pontificum Romanorum inde ab Augusto usque ad Aurelianum Condicione Publica. Scripsit P. Habel. (Breslau: Koebner.) Although C. Bardt in 1871 dealt with *Die Priester der vier grossen Collegien aus römisch-republikanischer Zeit*, no one before Dr. Habel has specially examined their position in the early imperial period. Dr. Habel's present work is divided into two parts. He gives us the Fasti of the office, and then goes on to a number of interesting questions about the pontifices, as to their official position rather than their religious duties. How were they appointed? By whom? From whom? Was the office held for life? When and how did an emperor, who was not already a pontifex, attain at one step the *pontificatus maximus*? How far is it true that only that Caesar was admitted to the pontificate whom the reigning emperor wished to succeed him? In these and other matters Dr. Habel makes out a good case for the existence of fixed rules, more or less disguised by the inexact writing of Latin authors. But the more successful he is in doing this, the less willing are we to accept his explanation why the *pontificatus maximus* is often omitted among the titles on the coins of T. Antoninus Pius. "Pius," he says, "pro dignitate pontificis maximi videtur esse substitutus." But this is improbable among a people so wedded to set forms as the Romans; and it seems still less likely when we remember how uncertain Spartianus and Lampridius were as to why the emperor was ever called Pius. If the Life of Hadrianus (xxvii. 3) is consistent with (we will not say supports) Dr. Habel's view, cxxiv. 3, and the Life of Heliogabalus (vii. 10) give accounts inconsistent therewith. At page 87 Dr. Habel throws doubt on Marquardt's statement that pontifices were irremovable, but he can produce no evidence on his side. The essay, however, is a good specimen of careful and independent research.

De Q. Asconii Pediani Fontibus ac Fide. Scripsit Carolus Lichtenfeldt. (Breslau: Koebner.) Dr. Lichtenfeldt has written a good deal less about the *fides* than about the *fontes* of Asconius, probably because he felt that in one sense the *fides* was above suspicion. Asconius was a loyal and truthful writer, too interested in his matter for its own sake to wish to falsify it for any ulterior ends. But in another sense we feel our belief in his authority shaken by the careful and almost exhaustive survey of Dr. Lichtenfeldt. The remains of Asconius are few enough; and, when we have seen how much of them is certainly, and how much probably, due to recoverable authorities—to Cicero, Livy, Sallust, Fenestella, the Acta, and other sources—we begin to doubt whether a man who incorporated whole passages in such a way that they can be identified and traced (some passages which must have come originally from Livy or Sallust can be recognised even in the Greek version of Dion Cassius—"Qui quam saepe Livii scrinia compilaverit in dies magis patefit") can have properly assimilated them with his other reading, or worked them up in his own mind. Had he, in fact, made what he copied really his own? If not, his judgment is worth little to us, and he may even have misunderstood what he did copy. Dr. Lichtenfeldt has, of course, had the benefit of being preceded by Madvig (1828); he has not had to work up all the material for himself. But still, we are grateful to him for the care and skill with which he has set the material forth. His Latin is for the most part smooth and agreeable, though there are a few rather late, or rather early, words in it. *Compluries* seems to have no advantage over *pluries*. On p. 4, para. 3, *quae* is probably a misprint for *quas*.

Observationes in Cassium Dionem. Scripsit J. Maisel. (Berlin: Calvary.) Of the various and rather disconnected discussions about Dion which are contained in this pamphlet of twenty-four pages, the most interesting is, perhaps, Dr. Maisel's attempt to discover what MS. was used by Leonicenus (M. Nicolo Leoniceno), the first translator, in his Italian version of a large part of Dion. The work of Leonicenus appeared in 1526, two years after his death, but some years earlier than the *editio princeps* of the text was published by R. Stephanus. Dr. Maisel expresses himself with praiseworthy caution; but he makes it appear probable that, if Leonicenus and Stephanus did not use the same MS., their MSS. at least were very similar, and that Leonicenus may well have used the *Codex Venetus* 396, which differs but little from the readings of Stephanus. Beyond probabilities we cannot get at present, partly from the want of an adequate *apparatus criticus* for Dion's text, and partly from the free and even faulty character of Leonicenus's translation.

NOTES AND NEWS.

Owing to the recent rapid development of their business, Messrs. Griffith, Farran, Okeden and Welsh, are obliged to build larger premises. They have secured a prominent site in Charing Cross Road, close to Covent Garden, where building operations will begin at once. They hope that their new premises, which will bear the name of "Newbery House" in memory of the founder of the business, will be ready for their occupation in June or July next. Thus, after 150 years, the old business at the corner of Saint Paul's Churchyard will follow the example of so many others and migrate to the west of London, and another ancient landmark of the city will disappear.

Messrs. W. H. Allen & Co. will publish in a few days *Four Famous Soldiers*, by Mr. T. R. E. Holmes, author of "A History of the Indian Mutiny." The volume will consist of biographies of Sir Charles Napier, Hodson of Hodson's Horse, Sir William Napier, and Sir Herbert Edwardes, which, though short, are based upon independent research. It will be illustrated with a map and two plans.

Mr. Linley Sambourne has undertaken the illustration of a fresh volume of political squibs from the pen of Mr. C. L. Graves, which will shortly be issued by Messrs. Sonnenschein & Co., under the title of *More Blarney Ballads*. This series contains fewer travesties in dialect but, like its predecessor, is concerned exclusively with humorous phases of the Home Rule controversy. A fourth edition of the original collection is to be issued at once.

Messrs. Kerr & Richardson, of Glasgow, announce for publication by subscription a Concordance to the poems and songs of Burns, compiled by Mr. J. B. Reid. All the dialectal or unusual words will be explained; and full quotations are given of each use of the word, with references to the title of the poem and (in the case of long poems) to the number of the line. The text adopted is that published in the lifetime of the poet, or the earliest editions of the posthumous poems. The total number of words given exceeds 8000, with an average of five quotations to every word. The work, which will consist of about 600 pages, double columns, large octavo, will be handsomely printed and strongly bound.

Dr. William Leech has nearly completed an elaborate history of French literature, based entirely upon independent research. This gentleman, formerly resident in New York, was the author of the poetical satire, *The Obliviad*, which roused such a storm of critical wrath some ten years ago.

Miss E. H. Hickey will publish a new volume of poems in the spring, with Messrs. G. & A. Arnold, of Liverpool, under the title of *Verse-Tales, Lyrics, and Translations*.

Messrs. Swan Sonnenschein will have ready shortly a translation of Viktor Rydberg's *Teutonic Mythology*, edited from the Swedish, with notes, &c., by Rasmus B. Anderson, American Minister at Copenhagen. The book will be in two demy volumes.

Mr. Elliot Stock announces two volumes of verse for early publication—*Kaeso:* a Tragedy of the Early Church, and *Through Cloud and Sunshine:* a Collection of Original Hymns and Sacred Songs, by E. G. Sargeant.

The next volume in the series of "Canterbury Poets" will be Bayard Taylor's version of *Faust*, with some of Goethe's minor poems, translated by Miss Elizabeth Craigmyle.

Mr. W. P. W. Phillimore—who shares with Mr. Walter Rye the credit of both conceiving and carrying into execution the work left undone by our historical societies, and whose *Index Library* forms a marvellous monument of labour for a single man—has issued a proposal for a series of Gloucester and Bristol Records. Provided that only two hundred subscribers will guarantee half a guinea each a year, he proposes to publish in quarterly parts (1) the Calendars of Wills at Gloucester and Bristol, in similar form to those he has already printed for Northamptonshire and Rutlandshire; (2) the Marriage Licenses at Gloucester, from 1661 downwards; and (3) the Feet of Fines for the county, such as Mr. Walter Rye has given for Norfolk. Subscribers should address themselves to Mr. C. J. Clark, 4, Lincoln's Inn Fields, W.C.

Mr. J. Meadows Cowper, of Watling Street, Canterbury, wants a few more subscribers to his series of Canterbury Parish Registers, of which only 106 copies are printed privately. He is now engaged on those of St. Mary Magdalene, 1559-1800; and he has, since his return from Paris in 1880, issued those of St. Dunstan's, 1559-1880; St. Peter's, 1560-1880; and St. Alphage, 1558-1880. If he can get subscribers to pay his printer and binder, he proposes to issue a register a year for the next ten years, copying and editing the whole gratis. He has an Index of 40,000 references complete, but delays it for another volume or two. He has also printed his own parish-books, an abstract of the registers of Holy Cross, and the Churchwardens' Accounts of St. Dunstan's, 1483-1500; besides the *Memorials of Holy Cross* and a *Handbook to Canterbury*. Mr. Cowper still keeps up his extracting for the Philological Society's Dictionary, which he began five and twenty years ago.

The council of the Harleian Society have just completed the second volume of the Marriages at St. George, Hanover Square, from 1788 to 1809, edited by Mr. J. H. Chapman. It makes a portly book of nearly 600 pages. It contains the marriage of the late Duke of Sussex with the daughter of the fourth Earl of Dunmore, which was afterwards declared null and void; also the entry of the marriage of the twelfth Earl of Derby with the celebrated actress, Miss Farran, besides many other entries of note.

Another's Crime, a dramatic romance of real life, by Mr. Julian Hawthorne (from the diary of Inspector Byrnes, chief of the New York detective force), is to be commenced in No. 281 of *Cassell's Saturday Journal*, published on February 13.

We have received from Messrs. Dean & Son *Debrett* for 1889, which comes out with commendable promptitude after the opening of the year. We are glad to find that the editor has at last thought fit to omit his derivation (upon which we have more than once commented) of "sire" from the Greek! Only the other day we traced back this portentous etymology to an early issue of *Anglice Notitia*. An interesting feature of *Debrett* is the tabular statement of honours that have been conferred, and hereditary dignities that have become extinct, in the last twenty years. Many people will be surprised to learn that, during 1888, the net total of peers diminished by one, and the baronets by two. Nor was last year altogether exceptional in this respect, though jubilee creations and changes of ministry have, of course, produced a large total increase in a series of years.

UNIVERSITY JOTTINGS.

Great interest is felt at Cambridge in the election to the provostship of King's College, vacant by the death of Dr. Okes, which is to take place to-day. Prof. Henry Sidgwick is the candidate of those who, in the words of the college statutes, maintain that the head should be "distinguished for his attainments in theology, literature, or science."

We must be content this week briefly to record the death of our valued contributor, Dr. Gudbrand Vigfusson, university lecturer at Oxford in Icelandic literature and antiquities, and joint-editor with Mr. F. York Powell of the *Corpus Poeticaum Boreale*. An interesting "in memoriam" notice of the man and his work, signed C. P., appears in the *Oxford Magazine* for February 6.

Prof. Henry Nettleship has undertaken to edit Seyffert's *Dictionary of Classical Antiquities* for Messrs. Sonnenschein.

The annual address to the students of the London Society for the Extension of University Teaching will be delivered this year by Prof. Max Müller, at the Mansion House, on Saturday, February 23, at 3.30 p.m. The subject of the address will be "Some Lessons of Antiquity," and the Lord Mayor will preside.

We should have included Dr. R. E. Brünnow, son of the former Astronomer Royal for Ireland, among the candidates for the Laudian professorship of Arabic at Oxford. Dr. Brünnow was formerly of Trinity College, Dublin, and afterwards pursued his oriental studies under Profs. Nöldeke and Socin. He is the author of several works on Arabic literature.

It is understoed that Prof. A. H. Keane, Mr. J. Y. Buchanan, and Mr. J. T. Wills, are candidates for the lectureship in geography at Cambridge, vacant by the resignation of Dr. Guillemard. The appointment is vested jointly in the University and the Royal Geographical Society.

Sir F. A. Gore Ouseley, professor of music at Oxford, will deliver a public lecture in the Sheldonian Theatre, on Thursday, March 7, upon "The Ancient Forms of Dance Music in England," with illustrations on the pianoforte.

At a meeting of the Ashmolean Society at Oxford, on Monday next, February 11, the following papers will be read: "A Photometer for measuring Light radiated in different Directions," by Mr. A. Vernon-Harcourt; and "An Electric Chronograph" and "Some new Forms of High Resistance," by the Rev. F. J. Smith.

According to the *Oxford Magazine*, there have been forty-two elections to fellowships during the past four and a half years, showing an average of about nine a year. This compares with an average of about fifteen a year two decades ago. Of the total number of fellowships, fourteen, or just one-third, are stated to have been gained by members of New College, six by Balliol, and four by Magdalen.

TRANSLATION.

THE SEAFARER.

(*From Old English.*)

True, true is the tale I can tell of my voyaging over the sea,
Sore time of trouble and toil and of bitter heart-sorrow to me;
And keen was the care I endured in my keel when under me swept
The terrible surge of the sea, and all through the darkness I kept
My weary watch in the prow till my keel on a reef was tost,
And my feet were benumbed with cold and bound in fetters of frost.
But hot round my heart, 'mid the cold, rushed the sigh of the sorrows I bore,
And my soul sea-weary and worn a ravening hunger tore.
But never a man who joys in his home on the land can know,
In his home on the ice-cold sea, the depth of the exile's woe;

Digitized by Google

When far from the friend who could cheer the winter's wearīful hours,
The rime hath robed him in ice, and the hail is flying in showers.
And nought did I hear but the roar of the surge of the ice-cold sea,
And the song of the swan and the cry of the gannet gave solace to me.
The bark of the seal was a joy like the laughter of men that is true,
And a joy like the drinking of mead was the cry of the wild sea-mew.
When the roar of the hurricane swept round the cliffs that towered to the sky,
Though its wings were as wings of ice I could hear the sea-swallow reply;
And the eagle scream to the storm, though its wings were bedrenched with dew,
But to comfort my joyless soul O never a friend I knew.
And never a man believes, who has felt but the joy of life
In the joyous city, and knows but little of struggle and strife,
And never a man believes who is proud and flown with wine,
How oft on the paths of the sea alone I must linger and pine,
When the snowstorm blows from the north and the hailstones leap to the ground,
And the earth is fettered with rime and the shadows of night fall round.
But thoughts like the blast of a storm, the thoughts of my ocean home,
Swept over my heart and I o'er the heaving brine must roam.
And never an hour went by but the longing came over me
Far hence to voyage alone and the land of the stranger see.
There is never a man on earth though ever so proud of mood,
Though fired with the glow of youth and a merciful giver of good,
Though he glory in valorous deeds and his lord may bountiful be,
But sighs with a trust in God to traverse the paths of the sea.
His heart is not set on the sound of the harp nor on worldly things,
And he recks not a woman's love, and he scorneth a treasure of rings,
And nought else on the earth have I known save the surge of the billows be
A joy to the longing soul that pines for the heaving sea.
When the earth awakes in the spring and the bloesom is seen on the spray,
When the city and fields look fair and the cuckoo is singing his lay,
When the watchman of summer sings his sorrowful song, then he
Is wrung with a bitter grief who is eager to roam the sea.

GEORGE R. MERRY.

OBITUARY.

COUNT RIANT.

Moscow: Jan. 31, 1889.

THE death of this true scholar on December 17, 1888, at St. Maurice (Canton Valais), after long illness, at the early age of 52, should not pass without notice.

Although personally little known in England, the works which M. Riant published have won warm recognition among our students of history as the outcome of a spirit of untiring scientific inquiry and critical judgment, which has given to the world valuable texts hitherto unknown or little accessible. His wide learning and varied studies were persistently directed to one branch of history, to which he devoted his life—that of the crusades, and of Christian institutions in the East. To this object, the materials for which already lay thickly to hand in France, he procured the collaboration not only of eminent French, but of German, Italian, Swiss, and English scholars, scrutinising every detail with infinite care.

M. Riant's theses for the degree of Docteur ès Lettres in 1865—*Expéditions et pèlerinages des chrétiens en Terre Sainte au temps des Croisades*, and *Haymaro Monacho archiepiscopo Caesarienti* (the second, containing the text of a poem on the taking of Acre in 1191, was reprinted at Lyons in 1866)—showed his early bias; but it was not till some years had passed that he began to put forth the fruit of his continued labours. An edition of Thaddeus of Naples—*Magistri Thadei neapoletani hystoria de desolatione et conculatione civitatis Acconensis* (Geneva, 1873)—was followed two years later by his edition of Gunther's *Historia Constantinopolitana* (Geneva, 1875). In *Exuviae sacrae Constantinopolitanae* (Geneva, 1877-78) he pointed out a fresh source of documents as to the crusade of 1204. He also brought out a new edition of Comenius—*Alexii Commeni Romanorum imperatoris ad Robertum I. Flandriae comitem epistola spuria* (Geneva, 1879). To all these he prefixed introductions or essays (in French), enriched by his intimate acquaintance with the literature of the subject. During the same years he also published various articles in the *Mémoires* of the French Society of Antiquaries, and of the Académie des Inscriptions, and in other learned publications.

Perhaps, however, the chief monument to M. Riant's energy and catholic learning is the Société de l'Orient Latin, which he founded in 1875, and continued to direct in the intervals of illness till his death, contributing largely to its material support. Some notice of the publications of this society was given in the ACADEMY of February 16, 1884. Eight volumes have been printed up till now, three belonging to the geographical series, five to the historical, consisting of careful editions of the earliest itineraries of travellers and pilgrims to Palestine, descriptions of the Holy Land, and other large texts from early writers. M. Riant also carried on a publication involving enormous labour and research, the *Archives de l'Orient Latin*, of which two thick volumes (in 1881 and 1884) have as yet appeared; and which is, to use the words of his friend M. Paul Meyer, in the *Revue Critique* of January 6—"Un recueil de matériaux, de descriptions, de manuscrits, de dépouillements variés se rapportant à l'Orient chrétien," comparable to the *Archiv* of Peltz. These volumes, illustrated by plates, are a perfect mine of valuable and curious information, contributed by various specialists. The latest work of M. Riant seen by the present writer is the first part of a history of the bishops and the bishopric of Bethlehem—a thick volume issued last year; the second part, towards which he had collected much curious material, including what relates to the English bishops of that see, unhappily remains unfinished.

M. Riant filled a place in generous, worthy scholarship which will not easily be supplied.

L. T. S.

DR. P. A. TIELE.

Utrecht: January 29, 1889.

ON January 22, there died at Utrecht the well-known author and highly distinguished librarian, P. A. Tiele, doctor of literature *honoris causa*.

Dr. Tiele was born at Leiden in 1834, and received his early training in the Amsterdam Library under the archaeologist, Frederick Muller. From Amsterdam he went to Leiden, as keeper of printed books in the university library; and he catalogued the books in both these libraries in a masterly manner. In 1878 he was appointed to the university librarianship at Utrecht. And here, again, despite weak health, he not only compiled both alphabetical and classified catalogues of the printed books, but also revised, in accordance with modern principles, the very unsatisfactory catalogue of our numerous MSS. already in existence. Of his other publications I can only mention his "bibliothèque" of pamphlets on Dutch history; his *Mémoire bibliographique sur les journaux des navigateurs neerlandais*; his bibliography of geography and ethnology; his history of the voyages of discovery since the fifteenth century; and his history of the Europeans in the Malay archipelago. He was known, too, in England by his contributions to the new edition of the *Encyclopaedia Britannica*, and by his critical notes to the *Itineraria* of H. van Linschoten.

The death of Dr. Tiele is a great loss to Holland, for his equal as a bibliographer will not easily be found.

J. H. GALLÉE.

[The *Itineraria* of Van Linschoten referred to above was published by the Hakluyt Society, in two volumes, in 1885. The editing of the first volume was the last thing accomplished by the great Indian scholar, Arthur Coke Burnell; the second volume was edited by P. A. Tiele, who also contributed the introduction. Of Tiele's share in the work Sir R. F. Burton wrote, in the ACADEMY of March 27, 1886, "It may be said, with all-sufficient praise, that he has worthily finished a task worthily begun."—ED. ACADEMY.]

MAGAZINES AND REVIEWS.

THE February number of the *Expositor* (Hodder & Stoughton) is a well-varied one, but no article comes up to Prof. W. M. Ramsay's in general interest. His examination of two specimens of Phrygian hagiology is well worth reading. Dr. Davidson, of Edinburgh, replies to Dr. Bruce on a point of exegesis, wherein the two commentators differ (Heb. ii. 9). Dr. Bruce himself has only advanced in his exposition to Heb. ii. 11-18. Dr. E. G. King gives a study of the Hallel (Ps. cxiii.-cxviii.), tracing the connexion of the Psalms with the seven feasts in Lev. xxiii., characterised by much independence of view. Prof. Delitzsch explains his relations to Salkinson as a translator of the New Testament into Hebrew, and gives particulars as to his own work. Dean Chadwick begins a character-picture of the Apostles.

THE *Jewish Quarterly* (David Nutt) for January fully maintains its high opening. Among the most interesting articles is Dr. Neubauer's on the "Lost Tribes," with members of whom a certain supposed Eldad the Danite professed to have communicated; Archbishop Trench (see his poem on the River Sambation) would have appreciated this paper. Mr. Schechter's plea for dogma will find perhaps almost too much sympathy. Mr. Montefiore claims the right to speak of mystic passages in the Psalms, and makes a valuable contribution to Biblical theology. Prof. Sayce, in his clear, keen style, gives a historical study of the Book of Hosea. He suggests that "Jareb" was the original private name of Sargon, as Pul was of Tiglath-Pileser.

THE current number of the quarterly *Revue des Etudes Juives* contains a first article on Abu Zachariah ben Bilâm's glosses on Isaiah, for which a MS. in the Firkovitch collection in the Imperial Library at St. Petersburg has been used by M. Derenbourg. Ben Bilâm was born at Toledo about 1020, and maintained a constant rabbinical war with Moses Haccohen ibn Gikatila, one of whose "misleading and corrupting opinions" (arguing about Joshua's sun and moon) was: "It is, for me, impossible that continuous motion should ever intermit." An interesting paper on the folk-tale talismans that give notice of danger hanging over absent

Digitized by Google

friends is by the manager of the review, M. Israel Lévi. Among such magic alarums are the ring-stone that gets dim or else breaks; the krug of beer that foams over; the bottle of water or milk that gets muddy, or else black or red; the blood that comes on a bright knife-blade, or on a horse's legs; the three drops of fish's blood that boil up; or the laurel that withers and dies, which last, strangely enough becomes a "tree of life" in a Kalmûk tale. A striking Talmudic expression here turns up. Abisai, hastening to the aid of David, on seeing blood in the water, arrives at the same moment he sets out, "for the ground shrank up under him." Another rabbinical utterance, not always now borne out by heredity, is that "children resemble the brother of their mother." It is referable, no doubt, to a matriarchal past. An article on the Jews of Touraine gives one of the innumerable local records of the insane fourteenth-century phantasm of the Jews and Lepers poison-plot. M. Isidore Loeb completes his commentary on Joseph Haccohen, busying himself on this occasion chiefly, and minutely, with the various chronologies. And there are, as usual, several notes and miscellaneous communications, and some pages on the Tetragram under its title of *shem hamephorash*.

SLAVONIC PUBLICATIONS.

The third part of the second volume of the *Prace Filologiczne* ("Philological Studies"), edited by Baudoin de Courtenay, Karlowicz, Kryn'ski, and Malinowski, has appeared recently at Warsaw. It contains many valuable papers on Slavonic philology, especially the Polish branch of it. We may call special attention to that of A. Kalina on the history of Slavonic conjugation, which throws so much light on that of the Indo-European languages generally; A. Kryn'ski's publication of the Polish glosses in a work by Balthasar Opec'; and Prof. Malinowski, of Cracow, on the Polish suffixes—*-en'stwo*, *-arnia*, and the phonetics of some Polish dialects. A. Kryn'ski contributes an obituary notice of Jan Hanusz, who died in July 1887 at Paris, aged twenty-nine years. His brilliant talents and untiring industry gave promise that he would become one of the most eminent Slavists. This review appears in Polish.

An interesting work has just been published in Russian at Warsaw by M. Vinaver, being an essay which gained a gold medal at that university. It is on the old Polish law-book preserved in the public library of Elbing, which dates from the thirteenth century, and was first published by Helcel in 1868. Its contents were hardly known till that year, as its owner, Stadtrath Friedrich Neumann, like some persons among ourselves, refused to let anyone see the volume, which also contains an old Prussian vocabulary, explained in German. In the latter years of his life, however, he allowed the book to be copied; and, besides the law-book by Helcel, the vocabulary was also published by Nesselmann—*Ein Deutsch-preussisches Vocabularium* (Königsberg, 1868). At his death Neumann bequeathed the MS. to the public library of Elbing.

CORRESPONDENCE.

THE OLD ENGLISH GLOSS "ELMAWES," AND WÜLCKER'S VOCABULARY.

Cambridge: Feb. 2, 1889.

If Mr. Hessels, before writing the letter which appears in the Academy of to-day, had consulted me, I might have prevented him from making some mistakes both of omission and commission in transcribing a very plain piece of fifteenth-century MS. As I agree with him that there is a disadvantage in abridging extracts which contain obscure glosses, I give the gloss in question exactly as it stands in the MS. (O. 5. 4, Trinity College Library, Cambridge):

"Lameres riū hec ·i· lamia/ usl anᶜᵉ Elmawes."

That is all to which the gloss has reference. But the next article is "Lamia," which, being too long to be completed in one line, is continued in the line above, after the word "Elmawes" which ends the article "Lameres." From this it is clearly marked off by a coloured symbol, and to ensure against mistake the scribe bracketed the two lines together and placed an *a* against the lower and a *b* against the upper one. The article "Lamia" therefore reads thus:

"Lamia mie h*ec* cor pⁱ crudelior est suis fetib*us* aliis bestiis quia suos catulos laniat pedes h*abet* equinos ꝺ facīē homis cet'a feminea G'gᵒ [Gregorius] dicit qᵈ h*abet* huⁿnā spēm *sed* corpus bestiale."

It will be seen that Mr. Hessels has written "Helmawes" for "Elmawes," has attached to a complete sentence an imperfect part of another sentence, has omitted "Gregorius," which he apparently could not read, and has then changed "dicit" to "dicitur."

I am glad to have this opportunity of explaining what my connexion with these glosses has been. They were transcribed more than twenty years ago merely for my own use, and not for publication. Consequently, having the original at hand to refer to, I did not take such full notes as if I had intended to publish them. They were borrowed from me in 1873 by the late Thomas Wright, for use in the second edition of his *Volume of Vocabularies*, and were in his possession at the time of his death. Some years afterwards I ascertained that they had been handed over, together with the other materials which he had collected, to Prof. Wülcker. Although I was not consulted in regard to this arrangement, I had no objection to it, and only asked that I might see the proofs. These were sent me at the beginning of 1882, and I went through them carefully with the MS., making many corrections and additions; but, as I had no opportunity of seeing a revise, I cannot tell whether they were inserted. In these circumstances it is not satisfactory to me to be held responsible for the glosses as they now appear, especially as the editor says, "Our text is based on a copy made by Mr. W. Aldis Wright." What he has done to it I do not know.

One lesson I have learned by this, and that is to be more chary of lending my notes to others.

If I might venture a conjecture as to the word "Elmawes," which is plainly so written in the MS., I would suggest that it is possibly a corruption of "Eluawes," a form of "Elves." The stages would be *Eluawes*, *Elnawes*, *Elmawes*. In the *Promptorium Parvulorum* and other vocabularies we find—"Elfe, Spryte, *Lamia*."

W. Aldis Wright.

POPE AND ADDISON.

London: Feb. 5, 1889.

Until recent years, it was believed that the famous lines upon Addison which Pope afterwards incorporated in the *Epistle to Dr. Arbuthnot*, published in 1735, were first printed in the *Miscellanies* of 1727; but it is now known that the lines appeared in *Cythereia* (1723) as "Verses occasioned by Mr. Tickel's Translation of the First Iliad of Homer. By Mr. Pope." In the notes to the *Dunciad*, it is stated that the lines were "a friendly rebuke sent privately in our author's own hand to Mr. Addison himself, and never made public till after their own journals and Curll himself had printed the same." It was in reply to this charge that Curll declared in the *Curliad* (1729) that the libel "was first published by Mr. John Markland, of St. Peter's College, in Cambridge, with an answer thereto in a pamphlet entitled *Cythereia* . . . . 1723."

But Pope's lines were not, after all, first printed in *Cythereia*. Bibliographers appear to have overlooked the allusion to "journals" made by Scriblerus in the passage I have quoted from the *Dunciad*. One of the weekly periodicals of the time was the *St. James's Journal*, which contained "Memoirs of Literature and the freshest Advices, Foreign and Domestick," and which lasted from May 1722, to May 1723. The paper was largely concerned with questions of public trade and policy; and many of the numbers in the copy in the British Museum are attributed in a contemporary handwriting to William Wood, Esq., who may have been the William Wood who was Secretary of the Customs, and who published several books on trade.

On February 26, 1721-2, Atterbury wrote to Pope, asking for "a complete copy of these

Digitized by Google

verses on Mr. Addison," and urging Pope to publish them. From this it appears that versions of the lines were then passing from hand to hand in manuscript, or at least from mouth to mouth; but, so far as I know, they were not printed until December. In the *St. James's Journal* for December, 15, 1722, was a letter from "Dorimant" dated "Button's, December 12, 1722." "Dorimant," who, among other things, wrote reviews of Steele's *Conscious Lovers*, said that he "professed poetry," though it did not pay. In a postscript to his letter he wrote: "The following lines have been in good reputation here, and are now submitted to public censure," and then he gave this version of the lines, against which an annotator has written "Mr. Pope."

"If meaner *Gil-s* draws his venal Quill,
I wish the Man a Dinner, and sit still;
If *Den-s* rails and raves in furious Pet,
I'll answer *Den-s* when I am in Debt:
'Tis Hunger, and not Malice makes them print,
And who'd wage War with *Bedlam* or the *Mint*?
But was there one whom better Stars conspire,
To form a *Bard* or raise his Genius higher;
Blest with each Talent, and each Art to please,
And born to write, converse, and live with Ease;
Should such a Man, too fond to reign alone,
Bear, like the Turk, no Brother to the Throne;
View him with scornful, yet with jealous Eyes,
And hate for Arts which caus'd himself to rise,
Damn with faint Praise, assent with civil Leer,
And without sneering, teach the rest to sneer;
Willing to wound, and yet afraid to strike,
Just hint Affront, and hesitate Dislike;
Alike reserv'd to blame, or to commend,
A timrous Foe, and a suspicious Friend?
Fearing ev'n Fools, by Flatterers besieg'd,
And so obliging that he ne'er oblig'd;
Who, when two Wits on rival Themes contest,
Approves of each, but likes the worst the best;
Like *Cato* gives his little Senate Laws,
And sits attentive to his own Applause;
Whilst Wits and Templars every Sentence raise,
And wonder with a foolish Face of Praise:
Who but must grieve, if such a Man there be?
Who would not weep if *Ad-n* were he!"

This version differs in many points from those in *Cythereia* (1723), and in the MS. at Longleat, written before 1724 (see Appendix VI. to "Poems," vol. iii., in Elwin and Courthope's *Pope*). In *Cythereia*, we find "Addison" in the last line; in the MS. "A-n." The version in Curll's *Miscellany* (1727) ends

"Who would not laugh if such a man there be,
Who would not weep if Addison were he?"

but, in other respects, closely resembles the 1722 version. In the "Fragment of a Satire," published in Swift and Pope's *Miscellanies* (1727), there are several variations, and a long passage is interpolated. The word "Affront" is peculiar to the 1722 version, and was, doubtless, a mistake; in all the other cases we have "a fault."

G. A. Aitken.

THE FACSIMILE PAGES IN LORD SPENCER'S COPY OF MALORY'S "MORTE DARTHUR."

6 Upper Woburn Place, W.C.: Feb. 3, 1889.

When Southey's edition was prepared in 1817 from Lord Spencer's copy of Malory's "Morte Darthur," that copy was deficient by twenty-one pages, which were, as Sir Edward Strachey has proved, supplied from the later black-letter editions. Later on the missing pages were added, in facsimile, from the Osterley Park copy by the skilful hand of Mr. Whittaker. Though these facsimiles are so well done that at first sight one might easily mistake them for the original pages, one cannot help noticing on a closer examination many small, yet very characteristic, differences in the single letters. My aim was, therefore, to have these pages collated for my own forthcoming edition. Through the courtesy of Mr. B. F. Stevens, my copy was submitted to the present owner of the Osterley Park copy, Mrs. Ally E. Pope, of Brooklyn, U.S., who kindly had them collated for the purpose. The result of this collation has confirmed my expectations. Very few and insignificant errors are noticeable, as will be shown below. Having almost completed two-thirds of the text, however, I discovered that the statement given by Messrs. Longman,* as well as by Mr. Blades,† with regard to these facsimiles is not absolutely correct. Sig. e_2 is not a facsimile, but the original leaf; and Sig. N_2 and Sig. N_5 are, on the contrary, not original, but facsimiles. I had, therefore, to send these four pages to America for collation. The result of the collation of the first seventeen pages is this: four pages—leaf r_8 verso, ee_3 recto, ee_4 verso, and ee_6 recto—are faultless. On

Leaf l_1 recto read: line 5, for *doe*, doo; 8, *roffhynge*, raffhynge; 13, *befpeckled*, befperkled; 25, *leue*, lene; 29, *myzteft*, myztyeft; 35, *fore*, fayre; 35, *manayr*, manoyr.

,, l_1 verso: 12, *manore*, manoir; 23, *fays*, fayd.

,, r_7 recto: 28, *palfray*, palfroy; 34, *corne*, torne; and *xxj*, xxij.

,, r_7 verso: 8, *faunte*, faunce; 11, *reyentyd*, repentyd; 25, *fal wed*, falewed; 29, *fyonas*, lyonas.

,, r_8 recto: 26, *racreaunt*, recreaunt; 30, *worlde*, world.

,, T_1 recto: 10, *enchere*, encheue; 24, *bere*, bare.

,, T_4 verso: 8, *ye*, yo; 33, *efcared*, efcaped.

,, T_5 recto: 2, *Gatahad*, Galahad.

,, T_5 verso: 5, *departede*, departed.

,, ee_3 verso: 13, *Bleoheris*, Bleoberis; 14, *Gahuleaniyne*, Gahalantyne; 16, *laft*, luft; 18, *preefthod*, preefthode; 21, *bodoly*, lowly; 29, *then*, thou; 30, *parcuey*, puruey; 34, *oe*, or 37, *fore*, fote.

,, ee_4 verso: 3, *there*, their; 17, *welcye*, wekyes; 25, *houe*, haue; 26, *So*, Se; 33, *ther*, there; 37, *bedd*, bedde.

,, ee_5 recto: 10, *proue*, preue; 18, *togydere*, togyders; 20, *bernnyng*, brennyng.

,, ee_5 verso: 38, *ded*, dede.

H. Oskar Sommer.

GUILLAUME DE DEGUILLEVILLE.

Stanhoe Grange, Norfolk: Jan. 17, 1889.

Prof. Skeat, in his remarks upon Chaucer's "A. B. C." (*Chaucer's Minor Poems*, p. xlvii.), gives the name of the French author whom Chaucer has imitated in this poem as "Guillaume de Deguileville," on the authority of M. Paul Meyer. The correct form of the name is "G. de Deguilleville," for which there is the authority of Guillaume himself, as may be gathered from a statement of M. Paulin Paris in his *Manuscrits François* (vol. iii., p. 240):

"L'abbé Goujet . . . a eu parfaitement raison d'admettre avec les éditions imprimées, et de soutenir plus tard contre les réclamations du Mercure de France, que le nom de l'auteur étoit *G. de Deguilleville*; toutes les lettres de ce nom forment les initiales de deux chansons farcies, placées dans le corps de l'ouvrage."

This form is accepted by M. Gaston Paris in his *Littérature Française au Moyen Age*. The form "de Guileville," mentioned by Prof. Skeat as being adopted by Mr. Morley in his *English Writers*, occurs in the rubric of MS. Brit. Mus. Add. 22,937, at the commencement of the vision proper: "Cy après est la vision que Guillaume de Guileville moine vit en son dormant."

I do not know on what authority Prof. Skeat speaks of de Deguilleville's *Pèlérinage* [sic] *de la Vie humaine* as a *prose* piece. It is a poem, consisting of many thousands of lines, originally composed in 1330-31, and remodelled with considerable additions about 1358. Guillaume conceived the idea of writing his "Pilgrimage" while reading the *Roman de la Rose*, as he himself tells us:

"Une vision vueil noncier
Qui en dormant m'avint l'autrier.
Qu'en veillant avoie veu
Consideré et bien leu
Le très beau Roumant de la Rose.*
Bien je croi que ce fut la chose
Qui plus m'esmut ad ce songier
Que cy après vous vueil noncier."

A prose version of the *Pèlerinage* exists in French (according to M. Paulin Paris) as well as in English, but there seems no doubt about it having been a poem in its original form.

Apart from the fact that Chaucer made use of it, the work has a peculiar interest as having very probably (through a translation) suggested to Bunyan the idea of the *Pilgrim's Progress*.

Paget Toynbee.

P.S.—It may perhaps not be out of place here to point out that Prof. Skeat (or Mr. Brae) is quite mistaken in saying in the note on *Carrenare* ("Boke of the Duchesse," v. 1029) that Dante alludes to the Gulf of Quarnaro (*Inf.* ix. 113) "as being noted for its perils." Dante simply compares the tombs (*avelli*) in the Sixth Circle of Hell to the sepulchres at Arles and at Pola "presso del Quarnaro." It is implied in the note that the sepulchres have some connexion with "the perils" of the Gulf of Quarnaro. This may or may not be the fact—quite a different account of their origin is given by the old Dante commentators—but certainly no such inference can be drawn from Dante's words in the passage quoted.

In another note to the same poem (v. 435) Prof. Skeat corrects "monteplier" (Méon's reading) to "mouteplier." This correction is unnecessary, the former being common in Old French (*vide* Godefroy's Dictionary).

P. T.

THE MURDER OF SHANE O'NEIL.

Great Cressingham Rectory, Norfolk: Jan. 25, 1889.

Dr. Jessopp is one of the most fair-minded of men. I am sure, therefore, he will be glad for the readers of the *Dictionary of National Biography* to be set right about a statement in his exceedingly picturesque life of Elizabeth.

He speaks (*Dict. Nat. Biog.*, vol. xvii., p. 212) of "Shane O'Neil's savage murder *in a characteristic Irish brawl and massacre*." The fact is that Shane O'Neil was murdered by the Scots under young Alaster M'Donnell. He had long been their bitter enemy, hunting them down in the interests of England and by the advice of the deputy. Just before the war broke out which ended in his death Lord Chancellor Cusack praised his "dutifulness and [from the English point of view] most commendable dealing with the Scots." But when Shane found that almost every Irish chief, and even Desmond, had been gained over, in his extremity he set free his Scots prisoner

* A note by Messrs. Longman attached to the Althorp copy.

† W. Blades, *The Life and Typography of William Caxton*, London, 1861-63 fol. (vol. ii., p. 178).

* *Cf.* a similar passage in the "Boke of the Duchesse" (vv. 45-48) which seems to be imitated from this; the "romaunce" in Chaucer's case was the *Metamorphoses* of Ovid.

Digitized by Google

Sorley buidhe (Yellow Charles), and, with a very small following, threw himself on Alaster's generosity. He was hospitably received; but Sir W. Piers pointed out to the Scots how they might at once pay off old scores and propitiate the now all-powerful English by killing their former persecutor. Accordingly, at a feast, they picked a quarrel with some of Shane's men and murdered the whole party. Piers got a thousand marks for Shane's head. The Scots soon found they had little cause to congratulate themselves on their share in the business.

I cannot think that if Dr. Jessopp had had the facts before him he would have called this bit of cold-blooded treachery "an Irish brawl." Piers, who arranged it, was an Englishman; the M'Donnells, who were his instruments, were Scots. No doubt Dr. Jessopp will remind me of "the Irish of the Isles" and *Scotia major*. Yes, but (unhappily) to the everyday reader "Irish" connotes something very different from "Scotch."

It seems that Ireland under Elizabeth does not, in Dr. Jessopp's view, demand any minute statement of facts, else he could hardly have omitted the most characteristic feature of Elizabeth's dealings with the Irish, viz., the repeated seizures of chiefs at peaceful banquets, and the poisonings (one of them attempted against Shane himself), which I will not call English—God forbid that I should call them Italian—while to speak of them as Tudor would be to lay an unwarrantable stigma on a Welsh family. Dr. Richey says of Sussex (who sent Shane a butt of poisoned wine), "high-minded Christian gentleman as he was, he looked on the native Irish as colonists do on Australian aborigines."

Henry Stuart Fagan.

DANTE'S REFERENCE TO ALEXANDER THE GREAT.

Am Hof, Davos Platz: Jan. 30, 1889

Dr. Moore, in his letter about Dante's References to Alexander the Great, mentions a story which Boccaccio could not find in *William of England*, nor Benvenuto da Imola in "Gallicus ille qui describit Alexandreidem metrice." Dr. Moore asks who these two authors, William of England and the French poet of the Alexandreis, are. The latter is certainly Walter of Lille or Gualtherus de Insula, famous for his Latin epic on Alexander and also for his Goliardic poems. He has frequently been confounded with our English Walter Map, whose contemporary he was, since he visited England in 1166, and held a diplomatic post at the Court of Henry II. I venture to suggest that Boccaccio, when alluding to William of England—if indeed he did not write Walther instead of William, the contractions of Gualthero and Guglielmo being similar—was pointing to the same authority, Walther of the Island. Notices of Walter of Lille will be found in Giesebrecht's "Vaganten" (*Allg. Monatschrift für W. und K.*, 1853), and Hubatsch's *Lateinisiche Vagantenlieder* (Görlitz, 1870). John Addington Symonds.

BASQUE NAMES IN NOVA SCOTIA.

Sare, Basses Pyrénées: Jan. 28, 1889.

Mrs. Knight's letter in the Academy of January 26 calls attention to a fact more widely spread than perhaps she imagines. From their excellent qualities as mariners, emigrants, and missionaries, Basques both of France and Spain took part in nearly every expedition to the New World; and, consequently, some Basque names may be found in the topography and history of every part where these nations made settlements. The Basques are the oldest fishermen on the banks of Newfoundland; and in the last century, while Canada was under French dominion, Basque was spoken in parts of Lower Canada, just as it is now spoken in parts of Montevideo and Buenos Ayres. I myself met with Basques for the first time in Montevideo. The first Basque grammar was printed in Mexico in 1607, and some of the earliest Basque church hymns were also printed there. Basques names of estates are found in Venezuela, New Granada, and Ecuador. Ithurbide (fountain way), the Emperor of Mexico, has left numerous relatives who have never quitted the old home in the parish from which I write. Basque ball-players and Basque *bersorali* make tours in the countries of La Plata just the same as English cricketers and football players do in Australia and New Zealand. Therefore, nothing is inexplicable in the fact that an estate bearing a Basque name should be found in Louisiana; but the name "Iberia" may have been given as a fancy name to his estate by a Spaniard as well as by a Basque. Into the derivation of "Iberia" I do not enter. Wentworth Webster.

ARROWSMITH, THE FRIEND OF THOMAS POOLE.

London: Feb. 1, 1889.

The author of that excellent book, *Thomas Poole and his Friends*, will allow me, I trust, to correct a misapprehension on her part, which might mislead some of her readers.

At pp. 142-3 of vol. ii. she speaks of having met, at Sir Roderick Murchison's, some twenty years ago, Mr. Arrowsmith, "a very old man," whom she identifies with the Arrowsmith mentioned on p. 141, under the year 1805, and "whose name," Mrs. Sandford says, "was on the very oldest atlas that I ever remembered" (p. 143).

But the good old man whom she met at Sir Roderick's, *circa* 1868, was *John* Arrowsmith, nephew of *Aaron* Arrowsmith, the earlier friend of Thomas Poole. The names of both were attached to atlases of standard excellence, each in its day—Aaron Arrowsmith, born 1750, died in 1823; John, born 1790, died in 1873.

H. Yule.

APPOINTMENTS FOR NEXT WEEK.

Monday, Feb. 11, 5 p.m. London Institution: "Some Curiosities of Magnetism," by Mr. Shelford Bedwell.
8 p.m. Royal Academy: "Roman Architecture," V., by Mr. G. Aitchison.
8 p.m. Society of Arts: Cantor Lecture, "Wood Engraving," by Mr. W. J. Linton.
8 p.m. Aristotelian: "The Philosophy of Religion," by the Rev. Dr. J. Lightfoot.
8.30 p.m. Geographical: "Explorations in the Glacier Regions of the Selkirk Range, British Columbia, in 1888," by the Rev. W. S. Green.
Tuesday, Feb. 12, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," IV., by Prof. G. J. Romanes.
8 p.m. Civil Engineers: "Some Canal, River, and other Works in France, Belgium, and Germany," by Mr. L. F. Vernon-Harcourt.
8 p.m. Colonial Institute: "Western Australia—its Present and Future," by Mr. A. P. Hensman.
8 p.m. Metropolitan Scientific Association: "Recent Theories bearing on Glaciation in Britain," by Mr. J. W. Gregory.
8.30 p.m. Anthropological: "Human Remains discovered by Gen. Pitt-Rivers at Woodcuts, Rotherley," by Dr. John Beddoe; "A Demonstration of Centres of Ideation in the Brain," by Mr. Bernard Hollander.
Wednesday, Feb. 13, 8 p.m. Society of Arts: "Salt: its Production and Consumption at Home and Abroad," by Mr. P. L. Simmonds.
8 p.m. Geological.
8 p.m. Microscopical: Annual Meeting.
Thursday, Feb. 14, 3 p.m. Royal Institution: "The Metamorphoses of Minerals," IV., by Prof. J. W. Judd.
6 p.m. London Institution: "Darwin *versus* Lamarck," by Prof. Ray Lankester.
8 p.m. Royal Academy: "Roman Architecture," VI., by Mr. G. Aitchison.
8 p.m. Linnean.
8 p.m. Mathematical: "The Diophantine Relation $y^2 + y^2 =$ square," by Prof. Cayley; "Projective Cyclic Concomitants or Surface Differential Invariants," by Mr. E. B. Elliott; "Algebraical Symmetry, with particular reference to the Theory of Operations and the Theory of Distributions," by Major Macmahon; "Condition that a Line should be cut in Involution by a Cubic and its Hessians," by the President.
8 p.m. Electrical Engineers: "The Insulation Resistance of Electric Lighting Circuits," by Prof. A. Jamieson; "Certain Phenomena connected with Imperfect Earth in Telegraph Circuits," by Mr. A. E. Kennelly.
8.30 p.m. Antiquaries:
Friday, Feb. 15, 8 p.m. Society of Arts: "The Ruby Mines of Burma," by Mr. G. S. Streeter.
8 p.m. Philological: "The Anglo-Saxon Nouns of more than one Gender," by Dr. R. von Fleischhacker.
9 p.m. Royal Institution: "Electrical Stress," by Prof. A. W. Rücker.
Saturday, Feb. 16, 3 p.m. Royal Institution: "The Great Composers and their Works," with Illustrations on the Pianoforte, IV., by Prof. Ernst Pauer.

SCIENCE.

SOME MATHEMATICAL BOOKS.

Plotting or Graphic Mathematics. By R. Wormell. (Waterlow & Sons.)

A New Theory of Parallels. By Charles L. Dodgson. (Macmillan.)

A Text-Book of Euclid's Elements. By H. S. Hall and F. H. Stevens. (Macmillan.)

Dr. Wormell's book consists principally of exercises in the graphic methods of arithmetic, geometry, and kinematics, with illustrative examples carefully worked out. It begins by showing how with a page ruled into small squares decorative patterns may be designed, plans or drawings may be copied, and interesting results in the theory of numbers may be obtained. Then follow chapters on the determination of areas, proportion, equations, the paths of moving points and projectiles, the parabola, ellipse, and hyperbola, higher graphs, and curves of observation. While the importance of graphic methods is well-known to those who are preparing for technical work, it does not seem to be so well recognised that they are a valuable complement to a general mathematical training.

"The charm of the method," as Dr. Wormell says, "is inherent in its nature. It gives something to be done by the hand and followed by the eye—keeping pace with the course of thought and reasoning. The proof of a rule or law often lies entirely in the process by which the rule or law is graphically illustrated, and the consequence is that the pupil while following the course is constantly on a voyage of discovery, and has all the pleasure and stimulus of an original investigation."

No elaborate outfit of either mathematical instruments or knowledge is required for working through the book, the explanations are concise and clear, the exercises are well graduated and not too difficult, and any one may understand it who has mastered the elements of algebra and geometry.

Mr. Dodgson's work contains an attempt to found the theory of parallels on a new axiom, one that will not be open to his own objection to Euclid's axiom, that it

"is *not* axiomatic—the intellect has not yet occurred among that species of vertebrates which may be defined as 'bimanous bipeds' which accepts that axiom as *intuitive* truth."

It will be seen that objection might be taken to the meaning given to the word "axiom." The axiom actually selected is as follows. In every circle the inscribed equilateral hexagon is greater than any one of the segments which lie outside it. The author considers that the truth of this axiom "falls into the eyes," as the Germans say; but is its truth so very obvious when we remember that the axiom must hold good however large the figure may be? What the axiom practically assumes is the existence of similar figures. By means of this axiom the author works out the theory of parallels most ingeniously. The book should

Digitized by Google

prove of interest to all students of elementary geometry, both as giving a treatment of the subject from an unusual point of view and as containing a very interesting piece of geometrical reasoning. The author, however, does not seem to see the connexion of his method with the modern development of non-Euclidian geometry. The book contains several appendices, in one of which the question is discussed whether Euclid's axiom is absolutely true. Perhaps it would not be wrong to describe the contents of this appendix as "paradoxing." Nothing but confusion can result from giving an absolute meaning to the terms "infinite" and "infinitesimal."

Messrs. Hall and Stevens, in their edition of the first six books of *Euclid's Elements*, have adhered pretty closely, except in the case of the fifth book, to what may be called the *textus receptus*, namely the edition of Robert Simson. In a few instances they have made changes, sometimes on Euclid's proofs and sometimes on Simson's, all of which are improvements. The enunciations have been altered very little, even in those propositions where there is everything to gain and nothing to lose by studying brevity. Indeed, brevity at all hazards is not an object which they have striven to attain: and they very justly remark in the preface that the form of statement most suitable for the page of a text-book need not be that which is best adapted to examination purposes. Without departing from Euclid's mode of proof, a few changes of the most trifling character on some of the propositions would have enabled a reader to see that a connexion exists between the propositions. As examples of what is meant, the diagrams to propositions 9 and 11 of the first book, to propositions 5 and 6, 7 and 8, 11 and 12 of the third book, might have been lettered to correspond. Perhaps it may be thought too great a liberty to take with the second book to make evident the correspondence which exists between all the pairs of the propositions contained in it. In one case the authors have done so, and have changed not only Euclid's lettering but also his diagram. It is satisfactory to see that in two instances (iii. 35 and vi. 18) Euclid's text has been preferred to Simson's. The most valuable feature of this edition, however, is the additional matter that has been appended to the various books. This consists of classified deductions, italicised when they are important, and brought into connexion with typical examples worked out either partially or in full. The appendix to the first book treats of analysis and synthesis, the identical equality of triangles, inequalities, parallels, parallelograms, miscellaneous theorems, the concurrence of straight lines in a triangle, the construction of triangles with given parts, areas, loci, and intersection of loci. In the appendix to the sixth book are given the fundamental theorems on harmonic section, centres of similarity and similitude, pole and polar, radical axis and transversals. These and the other appendices contain a large and well-digested mass of useful geometrical information (the section on maxima and minima may be specially noted); and the book, as a whole, can be heartily recommended to students of geometry.

LATIN ETYMOLOGIES.

MOST of the following etymologies have been suggested during a recent perusal of C. O. Müller's edition of Festus' *De Verborum Significatione* (Leipzig, 1880).

1. *Andabata*, "a blindfolded gladiator." Probably a loan from the Gaulish **ando-batta*, where *ando-* is = Skr. *andha-s*, "blind," and *batta* is a masculine *a*-stem cognate with Welsh *bath* "coin," Corn. *bathor* "coiner," Lat. *battuere*, Fr. *battre*. So the Sanskrit word for "deaf"—*badhira*—has its reflex in the Celtic languages: Irish *bodar*, Welsh *byddar*, Breton *bouzar*.

2. *Caprunculum* "vas fictile," a diminutive of **caprúnco-*, cognate with Irish *crocan* (gl. olla), Welsh *crochan*, with regular loss of *p* and ejection of the pretonic vowel. For Welsh *ch* from *nc*, cf. *llech*, *trwch* with Latin *planca*, *truncus*.

3. *Cerritus*, *cerritulus*. Cognate with Ir. *cerr*, "askew, wrong, lefthanded"; *cerr-bél*, "wry-mouthed."

4. *Ferctum*† "genus libi dictum, quod crebrius ad sacra ferebatur, nec sine *strue*, altero genere libi; quae qui afferebant *stru-ferctarii* appellabantur." Here *ferctum* is from **ferg-to-m*, root *ferg* = Skr. *bhrj*, "to parch, to fry," and cognate with Lat. *frigo*, Gr. φρῦγω, φρυκτός; Ir. *bairgen*, "cake"; Welsh *bara*, "bread."

5. *Frivola* "sunt proprie vasa fictilia quassa." Cognate with Welsh *briw*, "broken," from **bhrîvo-s*.

6. *Mango*, "*mangones* qui colorem fuco mentiuntur," Quint. Cognate not only with Gr. μάγγανον, but also with Ir. *meng*, F. "guile," "deceit."

7. *Plēbes*, for **plēfes*, **plēθes*. Cognate not only with Gr. πλῆθος, but also with Old-Welsh *liti* for **liδi* (*Gr. Celt.* 140), in *liti-maur* (gl. frequens populis).

8. "*Subucula* et genus libi dicitur ex alica ("spelt") et oleo et melle, et genus vestimenti." Here are two different words, the common *sub-ūcula*, "shirt," and the rare *subūcula*, "bonne-bouche," where *su-* is identical with the Skr. and Irish laudatory prefix *su-*, Welsh *hy-*, Gr. εὖ-, and *būcula* is cognate with *bucca*, *buccea*, *buccella*, and *buccellatum*, "soldiers' biscuit."

9. *Superus*, compar. and superl. *superior*, *supremus*, with loss of the *no*-suffix, as in *mag-nu-s*, *major*. So in Irish *fern*, "good," from **u(p)erno-s* = *s-upernus*, and *ferr*, "better," from **u(p)eryos* = *s-uperior*. The Neo-Celtic cognate of *s-uprēmus* is Welsh *goreu*, "best."

10. *Sūra* from **svera*, cognate with Ir. *seir*, "heel" (from **sverit-*), acc. dual *di pherid*, LU. 69.[a]

11. *Uva* from **ogva*, cognate with Gaelic *ubh*, "egg"; *ubhall*, "apple," "ball."

12. "*Vallescit* [better *valessit*?] perierit." The root is (*g*)*val*, whence Old-Saxon *quelan*, Ir. *at-bail*, "perit"; Welsh *a-ballu*, "perire."

WHITLEY STOKES.

CORRESPONDENCE.

ETRUSCAN "TEN"-FORMS—"TEZAN."

Barton-on-Humber: Jan. 14, 1889.

I now proceed to a detailed examination of the numeral *tezan*, mentioned in my last letter (ACADEMY, December 1, 1888, p. 358). There is a widespread Turanian "10"-form in *t-s* and variants, as follows: Finnic *ksan*, *ksen*; Esthonian *ksa*; Mordvin *kso*, *kse*; Lapponic *tse*; Tcheremiss *chse*; Basque *tzi*; Circassian *txey*.

E.g.
- Finnic — *kahde-ksan* ("8") = *kaksi* ("2") from *ksan* ("10").
- Esth. — *kahhe-ksa* ("8") = *kaks* ("2") from *ksa* ("10").
- Mord. — *kav-kso* ("8") = *kavto* ("2") from *kso* ("10").
- Lap. — *kak-tse* ("8") = *kwekte* ("2") from *tse* ("10").
- Tche. — *kanda-chse* ("8") = *kandaks* ("2") from *chse* ("10").
- Basque — *zor-tzi* ("8") = *zort* ("2") from *tzi* ("10").
  bedera-tzi ("9") = *bedera* ("1") from *tzi* ("10").

P
- Circas. — *yi* ("8" = *oh* ("2") from [*tzey*] ("10").

† Müller prefers the corrupt form *firetum*.

As previously noticed, *ksan* = a prior *tsan*, = an earlier *tasan*, and we find:

- Finnic — *t-a-s-an*
- Etruscan — *t-e-s-an*, *t-e-z-an*
  } = "10."
- Magyar — *t-i-z*
- Turkic — *o-t-u-z*
- Yakute — *o-t-u-s*
  } = "3 × 10" = 30.
- Zyrianian
- Permian
- Votiak
- Five Non-Aryan dialects of India
  } *d-a-s* = "10."

Pauli has, I think, shown conclusively that the Etruscan goddess *Nurθ* (*Nursia*, Juvenal, x. 74; *Nortia*, Livy, vii. 3) became "the goddess Ten," Latin Decuma, Decima, as connected with the ten months of the Etruscan year; and that, hence [*nu*]*rθz* (*nurθzi*) = "10 times"; and that for *nupφzi* (Fab. 2339), we should read *nurθzi*; and, further, that *tezin* at times = "dedicatio." But it does not, therefore, follow, as he supposes, that *tezan* did not mean "10." Special circumstances having evolved a special "10"-word (*nurθ*), an ordinary "10"-word (*tezan*) receives in time another, and a secondary, sense, but yet one which makes its primary meaning remarkably clear. That which is dedicated is the Tenth, the tithe. So, after the defeat of Xerxes, the Greeks dedicated a tenth of the spoil (Diod. xi. 33). So the Athenians dedicated the tenth part of ransom obtained from Boiotians and others to Athena (Herod. v. 77). In like manner the Siphnians sent the Delphic Apollo the tithe of their gold mines (Paus. x. xi. 1). The tithe of Arês with respect to war-spoils is referred to by Lucian (*Peri Orchêseôs*, 21); and, lastly, to take an Italian instance, we read in Livy—"Tibi [sc. Pythico Apollini] hinc decumam partem praedae voveo." Hence, there is no difficulty in understanding, with Pauli, such an inscription as *Tezan te ta tular* (Fab. 1910) to mean "Eine dedicatio statuta [sc. est] hic cippus," *tezan* being "a pious offering," literally "tithe."

ROBERT BROWN, JUN.

THE DUAL IN SABEAN.

Cambridge: Feb. 1, 1889.

In the thirty-eight Yemen inscriptions transcribed by Prof. Derenbourg in the *Babylonian and Oriental Record* (September and October, 1887) we twice meet with the termination ניהן (xvi. and xxix.), which, so far as I know, occurs only three times in the 686 inscriptions of M. Halévy (261. 2; 374. 3; 535. 6). From the frequent use of ן as a demonstrative enclitic, it appears very doubtful whether it ever forms part of the dual termination, which, certainly in very many cases, consists only of י. I would suggest that we have in this י an attenuation of an *a* sound. The same may be seen in the suffix for the 3rd pers. dual המי as compared with the Arabic as well as in the terminations of the decads, which will thus agree with those in Assyrian and Ethiopic; and this dual was itself probably nothing but a shortened form of what was once the accusative plural. Again, the syllable הן, in some cases at all events, is not an "article défini très énergique," as M. Halévy thinks, but is a dual termination corresponding to the Arabic *ân* (*âni*), the ה being equivalent to א. Thus, we may have in the termination יהן a double dual, a form perhaps somewhat analogous to the termination ית for the Sabean fem. pl. const. With the use of י and הן to express the dual we may compare the use of *â* and *âni* in the perfect and imperfect of the Arabic verb. It is suggestive that the inscriptions referred to belong rather to the Minean than to the Sabean dialect.

THE KING OF ARZAPI'S LETTER.

Southampton: Feb. 2, 1889.

Should it prove that Prof. Sayce is correct as to the dialect of this despatch, it would seem that the Akkadian comparison of the Hittite language is likely to be confirmed sooner than I hoped in publishing this view in 1887.

Why Prof. Sayce regards *mi*, "my," and *ti*, "thy," as indicating an Indo-European connexion I do not understand, as these forms occur also in Turanian speech—*e.g.*, Zirianian *me* Ostiak *ma* (as well as in Akkadian), Zirianian *te* Magyar *te*. Nor do I understand why Prof. Sayce, who for some years has regarded the Hittite as an agglutinative speech, is inclined now to think it may be Aryan. He informs us, however, that the "verbal forms are Akkadian," which would confirm my published views as to the Hittite—if the tablet be Hittite.

Mr. Ball seems to me to have shown that some Aryan tribes were known to the later Assyrians. But this does not affect the question of Hittite nationality a thousand years earlier; and he has accepted my published comparison of certain Hittite names with Turkic and Etruscan words, which cannot be reconciled with any Aryan theory.

C. R. Conder.

SCIENCE NOTES.

Messrs. Swan Sonnenschein & Co. have in the press *Jenner and Vaccination*, a popular account of the history of vaccination, by Dr. Charles Creighton, author of the article "Vaccination" in the *Encyclopaedia Britannica*.

Mr. Swanzy has presented to the library of the Ophthalmological Society a copy of George Bartisch's *Augendienst* (1583), which is probably the oldest treatise on diseases of the eye in existence. It is in excellent preservation, and bound in a parchment cover, on which is some music. Besides a long preface, the volume contains over five hundred pages of closely printed matter, and a large number of interesting and curious plates.

The most important paper in the February number of the *Journal* of the Anthropological Institute is a contribution by Dr. E. B. Tylor on "A Method of Investigating the Development of Institutions, applied to Laws of Marriage and Descent." In order to show that anthropological problems admit of strictly scientific treatment, the author takes a subject upon the study of which he has been engaged for many years, and proceeds to its investigation on a basis of tabulation and classification. The rules of nearly 400 peoples have been scheduled out into tables so as to ascertain the "adhesions" of each custom, thus showing which peoples have the same custom and what other customs are associated with or dissociated from it. Dr. Tylor's paper is one of the most philosophical communications ever submitted to the institute.

PHILOLOGY NOTES.

The forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain the following articles: "The Assyrian Oracles concerning Esarhaddon," by P. A. Delattre; "The Geographical Situation of Saparda," by O. J. Hagen; "The Geography of Northern Syria and some Neighbouring Lands, viewed from the Assyrian Side," by the Rev. H. G. Tomkins; and "Sacred Trees of the Assyrian Monuments," by Dr. J. Bonavia.

The *Revue Archéologique* for November-December, 1888, contains an interesting article by M. Berthelot on the origin of the word "bronze," the etymology of which is admittedly obscure. Hitherto it has been supposed that the earliest examples of the word are those occurring in the Piacenza chronicle printed by Muratori, dated about the beginning of the fifteenth century. In this record the forms are *bronzium* and *bronzinum*. M. Berthelot, however, points out that a MS. of the eleventh century, preserved at Venice, mentions the metal under the name of *βρονττήσιον*. All doubt as to the meaning of the word is removed by the express statement that it denotes a mixture of copper and tin. M. Berthelot suggests that *βρονττήσιον* may be a corruption of (*aes*) *Brundusinum*, and refers to Pliny's statement that the best mirrors in use among the ancients were those made at Brundusium, which were composed of a mixture of copper and tin. The derivation of *βρονττήσιον* from *Brundusinum* is not quite free from difficulty; but, as the conjectures hitherto proposed respecting the etymology of the word are not entirely satisfactory, M. Berthelot's suggestion appears to deserve consideration.

MEETINGS OF SOCIETIES.

Manchester Goethe Society.—(*Wednesday, December 5.*)

The Rev. F. F. Cornish in the chair.—After the election of auditors to audit the society's accounts for the annual business meeting in January, a paper was read, by Mr. Spenser Wilkinson, on "Goethe as a War Correspondent." Mr Wilkinson first, with the help of two excellent maps, described in detail the actual course of the campaign of 1792, from the declaration of war by France, in April, to the entry of the allies into France, on August 19, followed, a few weeks later, by their disastrous retreat—a retreat of which a Prussian general, who was an eye-witness on both occasions, wrote: "The Prussian soldiers in 1792 offered, perhaps, a more pitiable spectacle than those of Napoleon, in the retreat from Russia." It was on August 27 that Goethe, then in his forty-third year, joined the Duke of Weimar, by the latter's strong wish, in the camp near Longwy, reluctantly tearing himself from his quiet home and peaceful researches into the theory of optics. He seems to have made himself as comfortable as circumstances would allow, with well-stocked travelling chaise, sleeping car, and attendant valet, and to have busied himself more even here with scientific investigations than with the events going on around him. Yet, that, even so, he saw and felt something of the realities of war is evident from the few vivid hints which his endeavour "not to avoid the fitting degree of euphemism" could not quite cut out from his account of that miserable time. This account, however, published in 1822, is by no means what its form implies—a personal diary, kept up from day to day at the time of the events recorded. It is, on the contrary, an attempt made nearly thirty years later to reconstruct from the scanty notes of his own diary, supplemented by a careful study of published accounts of the campaign (notably the Memoirs of Dumouriez and the Memoirs of Massenbach), a picture of the daily events such as might have been written at the time, but was not. Goethe, indeed, took with him a diary, in which before and during the campaign he made a number of entries; but the entries seem to have become briefer as the campaign proceeded and, apparently, ended altogether soon after the retreat began. He was parted from his chaise before October 6; and, though he rejoined it on the 9th, it was not until the 14th, when he was already at Luxembourg, that he reopened the trunk in which his diary was kept, and even then his distress and disgust were such that he would not touch the diary. As an inevitable result of this method of compilation, the campaign in France, while giving in the main a faithful and lifelike picture of the general character of life in camp and on the march, is not free from historical inaccuracies. The description of the day of the battle of Valmy is particularly weak. [Here Mr. Wilkinson, from his own knowledge of the country, showed how, in a number of cases, Goethe's memory was faulty.] Goethe's description of the moral effect on the Prussian army of not attacking is most instructive; but his celebrated saying—"From here and from to-day starts a new epoch in history"—can hardly date from the day of the battle—it could only have been written by the light of subsequent events. The whole work of Goethe on the campaign, indeed, is spoiled by the unfortunate attempt to compile a substitute for reminiscences. A work of Goethe's, written at the time of the events or immediately after them, would have been of priceless value to the military student. There are traces enough in the work we have to show that Goethe would have admirably analysed and depicted the moral element which is always the dominant factor in the conduct of war. Even if Goethe had merely written out his vague recollections, they would have been a valuable source; but to cast into the form of a personal diary what is after all largely a historical compilation was, surely, a mistake. The campaign is half art, half history—that is to say, it is neither the one nor the other. The general maxims which form part of the composition are mostly vague generalities of little value; only those few which are the result of his direct observation are valuable, as, *e.g.*, when Goethe remarks on the evils of unsystematic requisitions, the firstcomers always destroying more than they take. The descriptions which Goethe borrows directly from his own recollections are invariably vivid and faithful—his account, *e.g.*, of the camp of Prancourt, of the road from Verdun to Etain (October 11), and from Longuyon to Longwy the next day. In these we have fragments of Goethe himself—bits of his actual life. From these there is more to be learned than from all the rest, and to such passages alone is due whatever value belongs to the work of Goethe as a war correspondent.—The chairman then made a few remarks on the paper, and Mr. Schelling, from his own experience as a war correspondent in the same district, in 1870, bore witness to Goethe's fidelity to fact in the reminiscences written down at the time.—The hon. secretary called attention to Saphan's pamphlet, *Friedrich des Grossen; Schrift über die Deutsche Litteratur.*

Browning Society.—(*Friday, January 25.*)

Dr. Berdoe in the chair.—The Rev. W. Robertson read a paper on "La Saisiaz," in which he called attention to the fact that the poem is in no sense dramatic, but that in it Browning expresses his own opinions in his own person. Its introduction is lengthy, and is probably intended to prepare our minds for the severity with which the question at issue is treated. In it Browning gropes his way back to the ultimate grounds for his conviction of the truth of immortality. His soliloquy on the events which produced this train of thought is marked by the poet's characteristic simplicity, directness, observation of nature, and almost ruthless accuracy of description. This introduction occupies twenty-two pages, and ten still intervene between it and the main argument. They are occupied by the question, Does the soul survive the body? He can bear the answer, not God's answer, but man's, and accordingly weighs the conclusions of modern scepticism in the balance. But, leaving these suddenly, he shows the necessity for his belief that life is a training-school for the soul, and that only by granting a second life does our earthly experience become intelligible. Thus, Browning presents us with a working hypothesis of life. Life is to be judged by its utility either for the world or for the individual soul. If men are transient beings, their sufferings concern us as little as leaves that fade and fall, and sacrifice for such is unintelligible. Sacrifice is only a means to an end, not an end in itself. We die to live, otherwise altruism is suicide. Only in its influence on character is life intelligible, and if man is mortal that influence is futile. The Christian faith that there is progress in human life, and that the production of character is one constant result of circumstance, shows that the soul is worthy of training, and that all things are at work moulding into finer shape this soul of man. On this estimate of life Browning bases his surmise that it will continue. Reviewing the whole argument in the language of theological terminology, Mr. Robertson maintained that the poet's position was the Christian position. He then treated the poem as a work of art, maintaining that it might have

Digitized by Google

carried as much weight in prose.—The chairman proposed a vote of thanks to Mr. Robertson for his powerful and interesting paper; and then, pointing out an instance of Browning's conciseness in his rapid transition from describing the scenery around him to the death of his friend, "this dread way you had your death," he suggested that what seemed like lack of pathos was really reticence. He himself agreed with the poet that life viewed as probation is the real basis of belief in immortality. Browning speaks in different poems to different minds: in "La Saisiaz" he addresses the thoughtful of all creeds. The paper read that evening offered many points for discussion, and was distinguished by singular freshness of thought and expression.—Dr. Furnivall thanked Mr. Robertson for the fairness of his paper, which never forced the subject beyond the limits which Browning intended. He himself considered that the poet just touched on all the pathetic points of the situation, and then subdued them in view of the main point, and on this he spoke for himself. Dr. Furnivall continued: Belief in immortality at best is only a hope, so is the belief in the perfection of life only a hope, but one more logical than the first. Sacrifice for posterity is surely intelligible, and was at all events understood by Christ. For himself he was satisfied with ignorance about immortality, content to do without it, and do what little he could of useful here. The society would print Mr. Robertson's paper for the help of members.—Mr. Revell had greatly enjoyed the valuable paper. He thought Browning's optimism may have something to do with the rarity of pathos in his poems. He himself considered the question of immortality purely one of evidence. Belief without evidence is immoral, and to his thinking Browning offers no justifiable evidence of immortal life. He assumes that life is a probation, and on that assumption founds his belief.—Mr. Slater, Mr. Kingsland, and other members continued the discussion.

Clifton Shakspere Society.—(*Saturday, January 26.*)

W. C. H. Cross, Esq., president, in the chair.—Mr. J. W. Mills, in a paper on "'Julius Caesar' and 'Plutarch,'" said that no student of Shakspere who has been at pains to compare plays like "The Winter's Tale" with *Pandosto*, or "As You Like It" with *Rosalynde*, can escape a feeling of wonder at the smallness of the poet's obligation to the fashionable novelists of his own day. And if he extends the comparison over that entire group of plays which may conveniently be styled "romantic," this feeling will rather deepen than dissipate. Secure in the boundless wealth and resources of his own faculties, our poet gleans but little from imaginative mediæval prose. The meagre, undecorated outline of a moving story, a few names, with a stray collateral incident here and there, generally constitutes all that the dramatist condescends to use. The skilful development of the plot, the more striking episodes, the language, imagery, sentiment—in a word, all that has lifted his dramas into the serene empyrean of immortality is the production of Shakspere's individual genius. Now, if we quit the "romantic" and turn our attention to the "historical" group, we note at once a change. Here the poet comes before us in a new guise. Like a student preparing for examination, he "gets up" his subject with an exactitude and painstaking thoroughness which, had he lived in our own time, would have satisfied the most exacting of examiners. His obvious aim is to make the play as near an approach to the reality of historical truth as the exigencies of stage representation and of dramatic art will permit. As a natural corollary, the characters of "Julius Cæsar," for instance, are as truly Roman as the bold figures upon the Arch of Titus. Other modern dramatists have also chosen Roman themes; but not one can rival Shakspere in this admirable characteristic. How few English lovers of French literature can really enjoy Racine's Roman plays! The reason seems that in almost every case the characters have nothing Roman about them, save the name, and this incongruity startles the reader out of the spell of poetic illusion. The characters troop with imposing grandeur across the shifting scenes; they declaim magnificent sentiments in stately and sonorous language; but too quickly we perceive that our heroes are but the polished courtiers of "le grand monarque" indulging in a little harmless masquerade. The liveliest imagination is powerless to conceive, for instance, a semi-barbarous Asiatic prince dying with these words:—"Mais c'en est fait de moi, et j'ai vecu, Madame"; although hardly any sentiment could be more natural and appropriate in the mouth of a dying marshal of France in the gilded magnificence of the court of Louis Quatorze. "Julius Cæsar," on the other hand, is saturated through and through with the living spirit of antiquity. Mr. Mills then commented in detail upon many parallelisms between North's *Plutarch* and the play.—Mr. John Taylor read a paper on "Shakspere's Conservatism." Bulwer Lytton was right when, in *Ernest Maltravers*, he said that "Brutus the aristocrat stabs his patron that patricians might again trample on plebeians"; and Shakspere, by making Brutus the hero of "Julius Cæsar," shows his unchangeably conservative feelings. The desire to have Cæsar as a single master in place of the patriciate was the cry of plebeian Rome. Popular liberty was the last thought in connexion with the assassination. An unformed mass of populace, a confused, discordant multitude, whose sudden passions, falsely called reason, are their motive of action, who defy authority and distract society to spoil the law-abiding community, naturally meet with the poet's reprobation, whether they be Romans, as in "Julius Cæsar" and "Coriolanus," or English, under the leadership of Jack Cade. It cannot be that Shakspere held, as Browning, in his "Lost Leader," seems to intimate, like political views with Milton, Shelley, and Burns. It can be clearly gathered from the plays that Shakspere had no theories of government to advocate; but it can be shown that he was a high-minded and consistent patriot, upholding settled law and order, an opposer of political rabbles, a defender of the monarchy, and of military and civil ranks and gradations, without being a politician in the customary sense of the term. Had he lived now he would probably have said to both Tories and Radicals, "A plague o' both your houses!" while he clung to the constitution. With large love of freedom, he was essentially conservative, and has expressed at once his belief in cultured superiority and his disbelief in unenlightened demagogism. He thought, with Aristotle, that superiority should be vested in those who have power of deliberating, of judging, of foreseeing, of pre-arranging, and, above all, of commanding.—Mr. L. M. Griffiths read a paper on "Lepidus," who, although he speaks less than four lines in "Julius Cæsar," stands out strongly individualised. This is through Antony's marvellous description of him in IV. i. By this, Shakspere, in his inimitable manner, lets us see his view of Antony as well as of Lepidus. The former is disclosed as a mere time-server and user of other men; and the sincerity of his eulogy of Cæsar is largely discredited, as it was animated more by hatred of Brutus than by love of Cæsar. It is strange that Shakspere here, and in "Antony and Cleopatra," ii. 7, represents Lepidus in such a mean and ridiculous light. The reason of it is difficult to see, as he found no authority for it in Plutarch.—Mr. Walter Strachan, in a paper on "Brutus and Cassius," said that these two leaders of the conspiracy seem marked out for comparative reflexion. Their characters are widely different. The destruction of Cæsar is only undertaken by Brutus as necessary to the salvation of the state, and he will allow no other life to be sacrificed. Although Brutus had a cold phlegmatic exterior, yet his affection for, and appreciation of, Portia showed that he had a kind and sensitive heart. A grander man than Brutus is hardly possible. He appears without blemish, unless perhaps this crime of assassination darkens the glory of his character; and even that for public reasons, and with the unmistakable favour of public opinion, might be justified. Cassius, although proud and testy, was far-seeing and cautious. He knew that the secret of ruling is to hide the fact that you rule. If this astute diplomatist had directed the conspiracy instead of Brutus, success would have been certain throughout, and in the sequel.—The secretary read an anonymous paper on "Brutus as a Husband," in which it was stated that our estimate of Brutus has been unduly influenced by the panegyric passed upon him by Antony (V. v. 68-75), who, we know, from his dealings with Cleopatra, and his attitude towards his own wife Fulvia, was no competent judge of a man in his domestic relations. Brutus, in the scene with Portia, comes out not only as an impatient and irritable husband, but as a mean equivocator. Portia's anxiety was all thrown away upon him, for he wholly disregarded it; and when the news of her death, hastened by his neglect, comes to him, he receives it with a cold-blooded indifference that shocks even Cassius. Neither then, nor in his last hours, do we hear one word about his noble wife; but this loquacious "hero" talks grandiloquently about the moral wrong of suicide, and then commits it to avoid going bound to Rome.

Aristotelian Society.—(*Monday, January 28.*)

Bernard Bosanquet, Esq., V.P., in the chair.—Dr. A. Bain read a paper on "The Empiricist Position." Empiricism has been usually defined by experience, and is opposed to intuition. This is not sufficient at the present day. The contrast is made somewhat more precise by saying that while intuition may be admitted as suggestive, it has no validity without the confirmation of experience. Yet this does not cover all the points at issue. There are problems, the chief being perception, where validity does not enter: the question being how to express, without contradiction, what we all admit as true. Even as regards intuitive suggestion, there are still differences of view: the controversy as to innate ideas, although greatly altered in our time, is not finally adjusted. The term "Epistomology" is conveniently restricted to the first sources of our knowledge: for although usually covering validity, there are other titles better fitted to comprise that class of questions. As regards innate ideas, the empiricist position is that our knowledge is wholly obtained from sensation with the co-operation of our intellectual powers, heredity being also allowed for. To uphold this position, of course, requires us to give an account of our notions of space, time, cause, the soul or ego, without pre-supposing pure intuition. The relative priority of the universal and particular is empirically settled by maintaining that the two must proceed together. When from innate ideas we pass to innate truths, validity comes in. The testimony of consciousness has here to be appraised at its true worth. No single revelation of consciousness is admitted as final; there must be comparison to overcome illusions. Hence the final criterion of validity in general is consistency, or the absence of contradiction, through a sufficiently wide range of conscious experiences. The great question of cause, which has been long a bone of contention, is best approached under the form—uniformity of nature. Does the empiric hold that experience establishes the certainty that the future will resemble the past? Hobbes says no, and the modern advocate of empiricism agrees with him. Lewes and some others regard it as an identical proposition. Whether this be so or not, the intuitionist view can be shown to beg the question twice over. Experience teaches what has been in the past, but cannot avouch the future. That must be presumed, begged, or taken for granted, by everybody; there is no proof, but the absence of contradiction, in the past. Another question connected with cause, is whether we are to rest satisfied with mere physical sequence, or must postulate mind at every step. The principle of uniformity ranges wider than causation; it includes laws of co-existence, of which gravity is the chief, and laws of equality, or mathematics. It is impossible to exclude these from the experience test. The problem of external perception has a unique character among the controversies that divide the empiricists and the apriorists. The idealist view is what empiricism must adopt. It is a case of uncontradicted uniformity in the recurrence of certain appearances; and we are entitled, but only as an assumption, to postulate the same recurrence in the distant, and in the future. The point is how to express the appearances while they are unperceived. It is a marked contradiction to give them characters in themselves without any reference to their being perceived. If we must express what is permanent in other terms than how it appears to

Digitized by Google

our perceptions, we can do so only in the most abstract language that can be devised. The whole attempt is an accommodation to human weakness, which desiderates an assurance beyond the fact of regular recurrence. Most transcendent of all the questions is what is expressed by thought and equality, with their numerous synonyms When reduced to a distinct issue, this is found to imply that what we know has some co-relations in the unknown, expressible only in terms of the co-relation. The most typical case is design, as implying a designer. It is through this procedure that philosophy has relations with theism, which, however, cannot be exhausted by such approaches. The empiricist, like everybody else, would be bound to take the subject in all its bearings.

FINE ART.

REMBRANDT'S DRAWINGS.

Mr. A. W. Thibaudeau will publish immediately in London, and there will be issued simultaneously in Paris and in Berlin, the first of what are meant to be four, but may possibly in the fulness of time become five, parts of a work devoted to the reproduction of the authentic drawings of Rembrandt. Herr Lippmann, of Berlin, and Herr Bode, of the same place—and with them two or three English connoisseurs—direct the publication, which, it is well to understand, is not undertaken with any intention of pecuniary gain, but simply to enable connoisseur and student to have at hand what I may call a reference-library bearing upon the work—nay, being itself the work—of the greatest Dutch master. To finish, in a business-like form, the announcement of the bare facts, let it be further understood that there will be issued, in all, only a hundred and fifty copies of the publication, and that the price fixed upon is so moderate that almost faultless reproductions of fifty drawings of Rembrandt—the first part out of the four or five parts to be issued, that is—will be attainable, until the small edition is exhausted, for a sum less than that which is often charged for a gaudy Christmas volume of photogravures. It is needless to say, that this honourable enterprise could never have been undertaken if some of the best treasure-houses in Europe, both public and private, had not opened their doors to give it welcome. The collections of the Berlin Museum, of the British Museum, of the Albertina at Vienna, of Mr. Malcolm of Poltalloch, and of Mr. J. P. Heseltine, will be drawn upon. Nor do these exhaust the list.

Those reproductions which I have thus far seen are of drawings at Berlin and at Mr. Heseltine's. Of the really important Rembrandt collections these are among the most recently formed and in the catalogue of Rembrandt's drawings which Mr. Vosmaer gave in his great work on the master—a work now twelve years old—some of the sketches at this moment in Berlin are chronicled as at home in other places. Thus the *croquis* which Mr. Vosmaer describes as "Garçon Recalcitrant" and the extremely interesting washed drawing, "Homme agé," as he calls it—adding, for our edification, "nommé à tort Vondel"—were, at the time of his writing, in a great private collection. Unless his difficulties of belief have latterly been overcome, Mr. Vosmaer does not accept this masterly work—the "Homme agé"—as a Rembrandt. "Bien que ce dessin soit d'une grande beauté, je doute fort," he says, "qu'on puisse l'attribuer à Rembrandt." But other connoisseurs, at all events, remain of a different opinion. It is conceded, I hear, by some of those who have to do with the issue of these reproductions, that two drawings not finally to be attributed to Rembrandt's hand have slipped themselves into the collection. These, it seems, are a Berlin drawing with cows in the foreground and a little possession of Mr. Heseltine's, "View across a large Sheet of Water with a Town in the Background." The first is not remarkable in any degree, and the second yet more unmistakably suggests a hand less powerful than Rembrandt's, and less delicate. Two other drawings which, while I do not quite venture to impugn their authenticity, I must at all events decline to value highly, are the "Portrait of the Artist"—pen and brush, in indian ink—with which the work begins; and the drawing in red chalk, "A Philosopher," in which, while the head is no doubt clever enough, the lines are generally wanting in significance, in decisiveness, in that economy of means which was so completely a note of Rembrandt's art.

When these things have been mentioned, I do not know that the austerest, the least confiding, criticism can mention anything else in depreciation of the manner in which this enterprise has thus far been conducted, or can suggest any means by which it would have been possible to better the present issue. Great variety has been secured, and in some of these drawings the master has said *le dernier mot* of artistic refinement and of force. Contrast, for instance, such drawings as the "View of a Town with a Cathedral" and "Saskia van Ulenburgh." To have been capable of both is, if I may draw a simile from the art of the musician, to have performed with equal expressiveness the weightiest work of Beethoven and Schumann's *Träumerei*. The "View of a Town," though in some part executed with the pen, gains its character of unlimited potency by the wash of sepia—the swiftly disposed dab, the very splash, as it were, upon the paper. The "Saskia"—which depicts the *fiancée*, or, as Vosmaer has it, the wife of Rembrandt, gentle, intelligent, and quite pretty to boot; twenty-two years old upon June 8, 1633—is a silver-point, on white prepared vellum: a work of faultless vivacity and refinement. Both these great things, and many others, such as the "Descent from the Cross" and the "Elijah in the Desert"—with the great style in every line of it—and the "Pen-and-ink Study of Three Figures," belong to Berlin; while among Mr. Heseltine's finest treasures must be placed the lateish drawing of the "Town Hall of Amsterdam" after a fire had occurred there in 1552 (this is one of two known drawings of the same subject), and "An Old Man seated in an Armchair" (a washed drawing wonderful for its illumination), and, lastly perhaps, the "Group of Large Trees on the Edge of a Pond." Alike to the authorities of a museum and to a private collector it must be a pleasure to know that unique possessions, in themselves so desirable, are now, in a sense, to be accessible to the student, in many places, by means of this publication.

Frederick Wedmore.

THE WINTER EXHIBITION AT THE ROYAL ACADEMY.

III.

Of the two examples of Constable, both contributed by Mr. T. Horrocks Miller, the "Water Mill," which is apparently an early example, is hard and formal. The "View on the Stour, near Dedham," painted in 1822, would seem, at first sight, to challenge our admiration as one of the great series of which the type and the masterpiece is the famous "Haywain," now in the National Gallery. On closer examination, however, it appears by no means on a level with those great examples, being far less rich, less true, and less happily composed than the best of them; it is, indeed, rather a dull and uninspiring, though a perfectly sincere, piece of painted prose, which belongs to the second or third rank of the painter's productions. Bonington—English by origin, but French by artistic training and method—is represented by the most exquisite specimen of his landscape art with which we are acquainted: this is the "River Scene: Picardy" (60), which, like all the other oil paintings in the first, and not a few in the great gallery, forms part of the Horrocks Miller collection. It is sober in local tint as a water-colour by Cozens or Girtin, grey as a Van der Capelle; yet it is the most luminous picture in the room—not excepting perhaps Turner's great "Quillebœuf"—and seems to have absorbed and to give forth light. The "Study" (64), by the same artist, is a most brilliant combination of green and crimson tones. It is one of a class of which there are many examples in the Manchester House collection, and shows Bonington as one of the earliest disciples, and in one sense, as a precursor of the French romantic school in its full development. Etty's "Coral Finder" (29), though, as usual, unmeaning and purely decorative in intention, is as rich as, and much more transparent in colour than, most specimens of his work, the shadows not having acquired the trenchant blackness which mars so many of his paintings. Something in the rendering of the deep blue, vanishing coast-line recalls Delacroix, whose predecessor in point of date Etty was; probably the landscape backgrounds of Titian were to both painters the source of inspiration. The earlier and better phase of John Linnell's art is splendidly represented in four or five first-rate examples. If we choose to forget the tiresome and monotonous mannerism of his later time, he may with works such as these take his place not much below England's foremost masters of landscape. The "Windsor Forest" is a beautiful study of trees standing out sharply against the luminous background of an afternoon sky, the gold of which permeates the whole scene, accentuating the calm, English character of its beauty. Very remarkable for the pellucid quality of its atmosphere—verging almost upon a cristalline hardness—is "The Purchased Flock"; and still finer is the "Kensington Gravel-Pits," in which the foreground, showing men busily labouring among broken mounds of red soil, is drawn and modelled with a force and truth altogether admirable. The silvery blue of the sky, in itself beautiful, is here in somewhat stringent contrast with the reddish-orange of the gravel, the tone of which is neither very agreeable nor very true to nature. The sombre "Welsh Mountain Road" (5) is a conception which has much of the strength and pathos that we are wont to associate with the works of Théodore Rousseau. The sky already shows traces of the mannerism which was later to overwhelm the artist.

It is well to be brought occasionally face to face with the English art of forty years ago, though that period, being undoubtedly the one at which our school had reached its nadir, a collection of works distinctively representing it is inevitably a depressing spectacle. In the presence of the cheap, bourgeois romanticism, the leaden hues and hard wooden textures of a Newton, an Egg, a Maclise, a Ward, and, above all, in the presence of the uninspired and uninspiring Philistinism of their mode of conception, the rebellion of the P.R.B., their indignant repudiation of the formula of their day, is more than ever explicable: better than ever do we understand the excesses of naïve realism into which the youthful band were, as it were, stung. Though the specimens of the above-mentioned artists now shown at Burlington House are carefully chosen and of more than average quality, there is certainly no temptation to dwell on their characteristics, technical or other. They are, nevertheless, of interest as illustrating a well-defined phase in the art-history of our time, and one too

Digitized by Google

recent to have been as yet sufficiently described. It is for this reason, and no other, that we cannot deplore the exhibition, or rather re-exhibition, of such works on the walls of the Academy. On a not much higher level, from a technical point of view, stand the works of C. R. Leslie; but these are redeemed by a real vivacity of conception, a keen zest for a certain element of stage comedy, which is here well illustrated in the popular "Bourgeois Gentilhomme," as it is, too, in many works contained in the Sheepshanks collection. The vigorous execution of John Phillip, his strength, if not his unity or complete harmony, as a colourist, and his power of conceiving a subject, from his own point of view, with a certain dramatic life and power, take his work out of the category of the "Victorian" painters already named; while, on the other hand, the obviousness—nay the vulgarity—of the sentiment which informs even his most distinctive productions, the inability which he evinces to penetrate below the surface of the thing conceived or reproduced, render him, in some respects, mentally, if not technically, their brother. The picture awkwardly named "The Huff"—and yet not inappropriately, since there pierces through all its Spanish colour a certain unmistakeable British flavour—is a strong and characteristic, if not a very engaging, example of the painter's merits and demerits. The three remarkable specimens of the delicate art of John Fredk. Lewis, severally described as "The Bouquet," "An Armenian Lady, Cairo," and "The Coffee-bearer," have a peculiar charm of their own, wrought up by a loving finish and delicacy of execution, a refined feeling for colour, and a genuine skill in rendering the sheen and the very web of rich oriental stuffs, as in depicting the tender greens of early foliage illuminated by the brilliant light of a southern spring. Against this charm, and this rare mastery of detail, must be set, in execution, a certain hardness and want of flexibility in the rendering of flesh; in conception, a lack of life and individuality. Lewis's orientalism, too—like John Phillip's Spanish colour—is strongly flavoured with that same indefinable British ingredient, which has unconsciously forced its way to the surface in the works of both men. It is, perhaps, unfair to expect of any artist whose gifts stop short of genius, whose originality is not that of the pioneer or the combative innovator, that he should divest himself of the faults which colour the very atmosphere of his time. We had almost forgotten to mention the "Jacob and Rachel" of that precursor of the Pre-Raphaelites, William Dyce. It is a characteristic example, in which hardness and over-deliberation in the execution are redeemed by real pathos and a genuine dramatic instinct.

Seldom, if ever has the art of Turner, even in the galleries of the Academy, been more splendidly illustrated than on the present occasion; the oil paintings, though less numerous, are not less distinctive than the water-colours, though these are of unrivalled interest. The worshippers of each several period of the master's practice will be gratified, and will, no doubt, find additional fuel to feed the ardour of their individual preferences. The first work in order of date is the water-colour, "Conway Castle" (16), painted in 1796, and very suggestive of Girtin, both in conception and execution. Then come unsurpassable specimens of the first style in its maturity, and of the transition to the second: the exquisite "Cader Idris" (10), with its background of sun-tipped mountains melting into the sky, painted as Turner alone could have painted it; the splendidly true and noble "Edinburgh" (14), upon innumerable points of which great work it would be a pleasure to dwell; the "Falls of the Clyde" (12); and the powerful, if somewhat, hard "Pembroke Castle" (4), painted in 1806. Among the oil paintings, the well-known "Bonneville, Savoy" belongs to this time. It comprises a rendering of nobly-shaped mountains, abruptly descending on three sides to a smooth dark lake, which it would be difficult to excel for realism or for beauty; but the picture is marred by a hard and over-solid sky, forming an insufficient contrast to the rugged masses which it canopies. A contemplation of these glories of the first manner more than ever emboldens those who venture, in hushed tones, to suggest that it is in a sense the master's truest and noblest period. The not too highly idealised truth which he here expresses allows the poetry of nature herself to speak, shows without distortion the latent and mysterious affinities which exist below her many aspects, and the infinite shades of human passion. She is not here, as later on, used—and misused, though it may be splendidly misused—as a medium of expression in the hands of the poet-painter, audaciously striving to conquer the limits of his art, and to depict, to express the impossible. Fine specimens of the second manner are the "Van Tromp's Shallop at the Entrance of the Scheldt," exhibited in 1832, and the apparently much earlier "Wave" (181). To this style belongs, among the water-colours, the series engraved in *England and Wales*, and, no doubt, mainly produced for that purpose; of which some fine specimens are here shown, including the "Stamford," the "Chatham from Fort Pitt," the "Prudhoe Castle," and the "Barnard Castle." To the same style and period belongs the "Stirling Castle," painted in 1834, and engraved in Sir Walter Scott's *Prose Works*, and also the "Shoreham." All, or most of, these works, are exquisitely well preserved, and are wrought with the greatest delicacy and skill, showing, too, the developed resources of the painter as a colourist. Yet do they either convince, or very deeply move the beholder? These balanced and improved arrangements of nature lack the truth of the first period, and the lyrical element, the soaring temerity of the last. It is as if, in the careful preparation necessary to render the subjects suitable for engraving in accordance with the taste of the day, the subtle essence of truth and beauty of the higher order had evaporated. In striking contrast with these finished drawings are the singularly interesting "Rhine Sketches," now, for the first time, through the kindness of Mr. Ayscough Fawkes, temporarily framed and placed before the public. These are fifty-one in number, and were drawn by Turner during a tour of about fourteen days on the Rhine in 1819. The interpretation of nature is here truer, simpler, and more sympathetic. The rendering may be further amplified, and perhaps corrected, but for freshness and comprehensiveness of vision it cannot easily be improved. Where so much is remarkable it would be tedious to cite many examples; yet we may single out as exceptional for accuracy and beauty the dark moonlight scene, "Goarshausen," the "Peterhoff," with its stormy sky, against which stands out a rainbow, and the delicious grey-green "Marksburg," with its winding river and peaceful evening sky. Two oil paintings of great importance represent the transition from the second to the third period, if they do not actually belong to the latter. Of these, the "Quillebœuf" is almost unique for the perfect state of preservation in which its magnificent colouring now appears, for the richness and transparency of the shadows and the brilliancy of the light which alternate on the storm-tossed, subsiding waves. Yet the quiet French coast-scene, as it appears under the strange illumination of a lurid sky pierced by the rays of the setting sun, is presented in a fashion which altogether fails to convince: the splendid unreality of the painter's dream overwhelms and crushes the subject upon which it is superposed. A dream, too, is the beautiful "Venice" (141), but a dream more truly expressing the essence of the reality from which it is generated: the theme is here suited to its embellishments. As magnificent specimens of the third period, still in its saner phase, may be pointed out, among the water-colours, the "Oberwesel" (6), the "Lake of Nemi," and, above all, the dazzling, yet lurid, phantasy which the master has called "Heidelberg" (17).

It is a cruel kindness to have honoured the late Frank Holl, as he is here honoured, by arranging the very complete and representative show of his portraits and genre pictures in immediate juxtaposition with the unequalled series of Rembrandts; and the only fair way to utilise this unique opportunity for estimating the modern painter's artistic position is to pass straight into the two galleries which contain what is practically his life-work, deaf—or rather blind—to the enticements offered on either hand as we pass. It was as a painter of pathetic—too pathetic—genre that Holl first took the fancy of the English public; but it is not by this branch of his art that his reputation will be sustained. Already in these lugubrious scenes the execution has an ease and breadth not common among English artists at the time they were painted. The technique, and especially the mode of illumination, have points of contact with, and may have been suggested by, those of the modern Dutch school. But this pathos, if by no means insincere, is of an obvious and superficial order, such as is calculated to draw easy tears from the pit of the Adelphi or the Princess's Theatre. It is melodramatic and spectacular, rather than drawn naturally and truly from life. Not the catastrophes, not the blackest woes of existence alone should be the theme of the creative artist, whether poet or painter, who seeks to express the uncertainty, the indefinable sadness which weighs down those of to-day. The mystery of human life in its myriad aspects, chequered with sun and shade, is worthier of contemplation and of expression than the mystery of death; and the pathos extracted from the latter by itself can be but incomplete and ephemeral. As a portrait-painter Holl will take an important, though by no means the highest, position among English artists of his period. He possessed uncommon breadth and, within his own limits, certainty of draughtsmanship and technique generally, and especially a happy power of composing his subjects in attitudes at once natural and picturesque. He successfully expressed without constraint or affectation a measure of the individuality, both mental and physical, of his sitters, though giving neither aspect in the highest form of which it was capable—never attaining the sympathetic insight which marks the happiest works of a Watts, or the exuberance of life which distinguishes the finest portraits of a Millais. When at his best, he happily rendered what all the world perceives in a striking individuality, without adding to the impression any very personal interpretation of his own. Against these merits must be set the defects of a wearisome monotony in conception and arrangement, and of a very conventional system of illumination; above all, that of a system of colouring, striking, but harsh and unpleasant, particularly in the bluish tints of the painter's favourite black, and the clay-like textures, the leaden tones of much of the flesh-painting. Among the most vigorous and complete portraits here are the truculent "Duke of Cleveland," the urbane "Earl Spencer," and the manly and thoroughly English "Lord

Digitized by Google

Stalbridge." A finer intuition is, however, shown in the simple and pathetic portrait of the nonagenarian "Captain Sim"—a type of mentally resolute if decrepit old age. Consummately well-drawn and painted, and admirably lighted, if not in other respects very interesting, is the portrait of a young girl holding a sheathed sword, called "Did you ever kill anybody, father?" Nowhere, however, has the painter succeeded in simulating physical elasticity and vigour—akin in quality to that in which Frans Hals delighted—with such success as in the uncompromising presentment of "Pierpont Morgan, Esq., of New York." Here is frankly portrayed a true son of the new world, standing out in striking contrast to the old-world celebrities by whom he is surrounded. This is one of the three last portraits painted by Holl, whose art, it will be thus seen, was still in a sense progressing at the moment of his premature and altogether unexpected death.

Claude Phillips.

CORRESPONDENCE.

ANDREA DEL SARTO'S "CARITA."

Florence: Jan. 18, 1889.

The *Contemporary Review* of November, 1886, contained an interesting article by Prof. Max Müller about his discovery in an antiquary's den of this city of an *abozzo*, which he believes to be a first sketch by Andrea del Sarto for the celebrated "Carita" in the Chiostro del Scalzo (Via Cavour) a hundred yards distant from Savonarola's old monastery, San Marco. This *abozzo* may be what he thinks; but it is curious that another very beautiful and perfect copy—or original as the finder insists—has lately come into the possession of Prof. Angelo de Gubernatis. So what Prof. Max Müller doubted to be possible—viz., that "any other was extant"—has apparently been settled in the affirmative.

I have seen the Florentine professor's duplicate of "La Carita" now hanging on the walls of his villa, painted on canvas in *chiaroscuro*, or grey in grey, and a letter announcing his treasure-trove to the Oxford professor. Comparing a photograph of it with the group in the Chiostro, to my eyes it is even more delicate and refined in the expression of the central figure; but that difference may be attributed to the smoothness of the material, and, in part, to the effect of time and damp on the rough surface of the fresco.

Prof. Max Müller claims that this benignant woman, carrying and sheltering beneath her robe three lovely boys — who represents to ordinary beholders simply the greatest of all the Christian graces—portrays the features of Lucrezia, the wife too much idolised by the infatuated and unhappy painter. If such is still his persuasion let him revisit Florence, and the study of the angelic face of the fair and frail Lucrezia in other pictures will make all allusion to vanish. Lucrezia may be traced beyond dispute in the "Madonna del Sacco," and in the "Birth of the Virgin," to be seen in the cloister and *cortile* of the church of the Annunziata, also in the Madonna called "of the Harpies" in the Tribuna of the Uffizi Gallery. Most exquisite among all she appears in the girlish profile of the Madonna in the Pitti Palace in the painting of the "Holy Family," so-called for want of a better title, although San Giuseppe is absent. But there is no need to travel outside the cloister of the Scalzo; for in one of the scenes depicting the Life of St. John the Baptist, the soft, sweet face that haunted and pursued the painter even to the court of the French king, Francis, is ever present, and as Herodias glances across a table in seeming confidence of sure recognition. History records (and, if readers will abandon Vasari in order to refer to L. Biadi and Baldinucci, they may see for themselves) that Lucrezia had two sisters; but I fail to find, what some have thought to discover in Andrea's other pictures, any trace of them in the fresco of "La Carita"—not even a slight sisterly resemblance.

Prof. Max Müller laments the crumbling and decay of these frescoes in the Scalzo from exposure to wind and weather. They are now under lock and key, and have been roofed in for the last 120 years. But I could tell of many a church, monastery, and cloister in Italy where worse destruction has worked hand in hand with an iconoclastic government to hasten the slow steps of ruthless time. The condition of Ferrara, which I lately visited, calls aloud for rescue from the military destroyer, who cries havoc there within sacred walls, consecrated in other days to religion and art, as understood and practised by Garofolo, Dosso Dossi, and many others whose works, thus perishing, will soon become the shame, as once the glory, of the Italian nation.

William Mercer.

NOTES ON ART AND ARCHAEOLOGY.

Although, as stated in the Academy of last week, Mr. F. G. Prange will henceforward be associated with Sir Coutts Lindsay as manager of the art department of the Grosvenor Gallery, we are asked to state that Mr. Charles W. Deschamps will continue to give his services in the collection of works by deceased artists for the winter exhibitions.

The exhibitions to open next week include the seventeenth exhibition of the Nineteenth-Century Art Society, in Conduit Street; and a collection of water-colour drawings and sketches in Serk, North Wales, &c., by Mr. Paul Naftel, at the Fine Art Society's in New Bond Street.

Mr. Roscoe Mullins will, in all probability, send to the Royal Academy a life-size group of mother and child - suggested by no ordinary domestic incident, but by a passage in the second part of "Faust." The young woman kneels upon one knee, the maintenance of her pose being aided by pressure on the foot of the other leg. She is almost Greek in type, benign of expression, large of structure, and amply and finely developed. From many points of view the work offers lines of interest and charm. Its composition is, indeed, admirable. Mr. Mullins has likewise in a forward state a design that is destined for the New Gallery. It is the almost nude figure of a boy with a modelling tool in the right hand, and in the left a mask of comedy; the work—which is charged with vivacity and energy—having been suggested by the well-known phrase of Ben Jonson, "Life's a jest, and all things show it." The same sculptor has completed a striking bust of Mr. Ritchie, to whom, it will be remembered, we owe the scheme of County Councils.

Mr. Samuel Fry is far advanced with a statuette of fair size, at this moment in clay, but presently to be cast in bronze. It represents a muscular and largely-built young woman, nude and in the act of stretching. This bids fair to be one of the most original and successful of the artist's works; the lines of the composition being unquestionably fine, and the figure, although expressing by her action the fatigue of the hour, being in truth of energetic and powerful type.

The Burlington Fine Arts Club closed to the public last week its exhibition of the drawings of Cotman, which, by the amount of interest in the artist which they have aroused, cannot but be considered to have at least fulfilled the aim with which they were brought together. We hear that the club is preparing to open, during next month probably, an exhibition of precious miniatures, which will doubtless prove attractive.

The *Scottish Art Review* will publish in early issues reproductions of the series of Rossetti's drawings in the possession of Mr. William Morris. There will also appear in the March number reproductions of two of Mr. Whistler's etchings, one of them a quite recent plate. The editorship of the *Review* was recently assumed by Mr. James Mavor.

The Grolier Club has been holding in its rooms, at Madison Avenue, New York, a very representative exhibition of the etchings of M. Legros—an exhibition in which the prints shown were good as to "state" and good as to impression. About eighty subjects were got together—that is about half the number catalogued by M. Thibaudeau a few years ago, in his book upon this austere master. Of course, many of the etchings are more than rare—they are practically unattainable. We are glad to think that the latest good service which the Grolier Club has rendered to the cause of art should have taken the form of a tribute to this genuine and, as yet, too little appreciated etcher.

THE STAGE.

STAGE NOTES.

To what we shall venture to describe as the ill-advised interference of the London School Board must be attributed the somewhat premature withdrawal of Mr. Savile Clarke's version of "Alice in Wonderland" from the Globe, and of Miss Filippi's true children's pantomime from the Court Theatre. A contemporary has no doubt been right in asserting that the action of the School Board in these and in similar cases cannot be judged only from the theatrical point of view. But from the point of view of the best interests of the children engaged—many of them, it must be remembered, children of the gutter, washed and dressed and brought into relation with people of intelligence on the stage—it is probable that the interference of which we speak is a pedantic mistake.

Miss Kate Rorke gives on Tuesday next a special *matinée* at the Gaiety, when Mr. Sydney Grundy's new play, of somewhat sombre interest—but, we doubt not, of real literary merit—will be brought out for the first time in London.

On Thursday in this week—just as we were about to go to press—there was to be produced the new piece founded on *Pickwick*, the words by Mr. Burnand, the music by Mr. Solomon.

MUSIC

NIECKS'S "LIFE OF CHOPIN."

The Life of Chopin. By Frederick Niecks. In two volumes. (Novello.) In 1877 Moritz Karasowski, a native of Warsaw, published his *Friedrich Chopin*, and in 1882 appeared a Polish edition of that work. Why then another Life? Mr. Niecks, in his preface, tells us that the one by Karasowski is incomplete and inexact. Little information is given in it about the composer's early life in Paris, and fancy sometimes takes the place of fact. The letters, too, of Chopin to Fontana are said to lose much of their value, owing to Karasowski's inability to

Digitized by Google

assign approximately correct dates to them. Let one example suffice. Chopin writes from Nohant: "Mdme. Viardot spent a fortnight here." Karasowski thinks the letter in which this sentence occurs was written in 1839. But, Mr. Niecks reminds us that Pauline Garcia had not then become the wife of Louis Viardot. Again, Liszt's "Fred. Chopin" appeared in 1851 in *La France musicale*, and in book-form in 1852; but Liszt, says Mr. Niecks, was "a poet, not a chronicler."

One has only to read the preface to the new work to see that Mr. Niecks has tried to improve upon his predecessors. The author has laboured for more than ten years; and besides studying books, pamphlets, letters, &c., he has conversed and communicated with pupils, friends, and acquaintances of the master. Of the difficulties he had—nay, impossibility at times—in getting at the exact truth, here is an instance. Where did Chopin first meet George Sand? "At a ball given by the Marquis de C.," says L. Enault. "At a musical *matinée*," says Gutmann. "At his own house," says Liszt. Of course, in a case like this, Mr. Niecks can only give the several statements. Here is another. What did the Countess Potocka sing to Chopin when the latter was near death? "A Hymn by Stradella and a Psalm by Marcello," say Liszt and Karasowski; "a Psalm by Marcello and an air by Pergolesi," according to Gutmann; whereas Franchomme asserts that it was "an air from Bellini's 'Beatrice di Tenda,' and that only once, and nothing more."

Mr. Niecks appropriately begins his book with a description of Poland and the Poles—for Chopin's music is deeply rooted in the national soil. The various classes of the population are thus described by an eighteenth-century writer, "Polonia coelum nobilium, paradisus clericorum, infernus rusticorum." Chopin was, from early youth, the pet of the aristocracy of Warsaw, but the music of the people attracted him. We are told how he delighted to mix with the peasants and listen to the quaint and beautiful strains of the mazurkas, polonaises, and krakowiaks which they played and sang. In an instructive chapter our author briefly traces the history of music in Warsaw from the reign of Augustus of the house of Saxony. This was the sovereign to whom Sebastian Bach dedicated the Kyrie and Gloria, afterwards incorporated into his great B minor Mass.

Chopin's life at home, his musical studies under Elsner, his journeys to Berlin, Dresden, Vienna, and other places, his love for Constantia Gladowska—these and other matters are fully described, and in an interesting manner. But when we reach the Paris period there is not only interest but novelty. By various means already noticed our author is able to present to us much that is quite new. The letters written by Chopin to his friend, Fontana, appeared in the Polish edition of Karasowski's life; but they are now translated for the first time. Of interest—though often of a painful kind—there is no lack. "The loves of famous men and women, especially of those connected with literature and the fine arts, have always excited much curiosity," says Mr. Niecks. And the curiosity is all the greater when, as was the case with George Sand and Chopin, both were "distinguished practitioners of ideal crafts." Majorca, Nohant, Paris—these three words recall the romance of the novelist and of the poet composer. Soon after they had become acquainted they went to Majorca; and whether at Palma, where "the sky is like a turquoise, the sea like lazuli, and the mountains like emeralds," or at the old monastery of Valdemosa, "a really sublime place," the story is fascinating. Then there are the yearly visits to Mdme. Sand's *château* at Nohant—the dinner parties, the balls, the evenings devoted to music and the drama. And Paris—though connected with many festive days, with music-making and intercourse with celebrities in the worlds of art and literature—reminds us of the final rupture. The story of the *liaison* of George Sand and Chopin has proved a tempting one to the biographer. It is the prominent feature of the book; but then the story itself is a prominent feature of Chopin's life. The letters written by the composer after his settlement in Paris are, with rare exceptions, disappointing. "Their matter," says Mr. Niecks, "is suggestive of a commercial man writing to one of his agents." Here is a specimen—Chopin is communicating with Fontana from Nohant in 1841:

"I send you the Prelude, in large characters, for Schlesinger, and in small characters for Mechetti. Clip the MS. of the Polonaise to the same size, number the pages, and fold it like the Prelude, add to the whole my letter to Mechetti, and deliver it into Leo's own hands, praying him to send it by the first mail, as Mechetti is waiting for it."

But Chopin could be amusing. From Palma, where for two weeks he had been "as ill as a dog," he writes in reference to three doctors who had seen him:

"The first said that I would die, the second that I was dying, the third that I had died already; and in the meantime I live as I was living."

And the letters contain much which repays one for all the dry parts. How composers appreciate the titles given to works without their consent may be seen from the following:

"If he [Wessel, the publisher] sustained losses by my compositions, it is most likely owing to the foolish titles he gave them, in spite of my directions. Were I to listen to the voice of my soul, I would not send him anything more after these titles. Say as many sharp things to him as you can."

The Nocturnes (Op. 9) were called "Murmures de la Seine," the Valse (Op. 18), "Invitation à la Valse," the Scherzo (Op. 20), "Le Banquet infernal." One of the best letters is that addressed to his old teacher Elsner. It was written in 1831, soon after Chopin's arrival in Paris. In it he speaks of "my perhaps bold but noble resolve—*to create a new art-era.*"

Of course, Mr. Niecks has much to say about Chopin as a composer. It has been asserted that hardly any traces of development can be found in his works. His biographer, however, sees as much difference between his early and his latest productions as between Beethoven's First and Ninth Symphony. While not going quite so far, we fully agree with Mr. Niecks in the broad distinction which he makes between the early virtuosic and the later poetic style. Classifications of this sort, however, are, as our author is well aware, liable to be misunderstood. Broadly speaking, they are correct; yet there was poetry in the early, and virtuosity in the later period. In connexion with the early works, the Fantasia (Op. 13) and Krakowiak (Op. 14), Mr. Niecks cannot remember any virtuoso performing either in public until Mdlle. Janotha revived the former. However, in the catalogue of the works performed at the Crystal Palace we find that Mr. Dannreuther played the Krakowiak there in 1866. Mdlle. Janotha's performance of the Fantasia took place in 1880. Mr. Niecks agrees with Liszt and many musicians that in Chopin's works in the larger forms there is "plus de volonté que d'inspiration." He looks upon the Allegro de Concert (Op. 46) as "unsatisfactory, nay, almost indigestible." He reminds his readers that a critic, after listening to a performance of that work by M. de Pachmann, stated that what "seemed dry and involved became under his fingers instinct with beauty and feeling." This decided judgment caused Mr. Niecks to examine the piece once again, but without causing any change in his opinion. We gather from this remark that he has not heard Pachmann play it. Perhaps he will not mind our saying we think that would alter his opinion. Does he not himself tell us that Lenz *read* through Chopin's Barcarolle (Op. 60), and that it did not please him at all? When, however, he heard it played by Tausig, he confessed "that the virtuoso had infused into the nine pages of enervating music, of one and the same long-breathed rhythm, so much interest, so much motion, and so much action, that he regretted the long piece was not longer."

Mr. Niecks has gathered together some of Chopin's opinions on music and musicians. He worshipped Mozart, and was a zealous student of Bach. One day, Hallé played to him a Beethoven Sonata (one from Op. 31). Chopin found the last movement vulgar. From this Hallé concluded that he could not have made a deep study of the master's works. Lenz, indeed, has said: "Chopin did not take a very serious interest in Beethoven. He knew only his principal compositions, the last works not at all." Chopin cared little for Mendelssohn, and—if the statement of Schlesinger be true that he did not consider Schumann's "Carneval" to be music at all—still less for a composer who thoroughly appreciated and admired his own genius. He preferred Bellini to Berlioz.

Mr. Nieck's second volume is so attractive that one could fill many columns with pleasing extracts. We must, however, forbear. Chap. xxviii. will be read with special zest by pianists. Chopin as a teacher, and his method of teaching, are here described. The master could be sarcastic. A pupil once played carelessly the *arpeggios* of the A flat Etude (Op. 25). Chopin jumped from his chair exclaiming; "Qu'est-ce? Est-ce un chien qui vient d'aboyer?" He could also be angry; although Mr. Niecks doubts Karasowski's statement that he was sometimes known to throw the music from the desk, and, worse still, to break chairs.

The account of the visit to England and Scotland in 1848, as described in chap. xxxi., is most interesting. One critic spoke of his works as giving one "the idea of an enthusiastic school boy, whose parts are by no means on a par with his enthusiasm." When he played at the Grand Polish Ball and Concert at the Guildhall, November 1, 1848, the *Times* noticed the dancing, the costumes, and other matters, but said not a word about Chopin. Of course he met with many who better knew how to appreciate him. The Sterlings were very kind to him in Scotland; and it was Miss Sterling who, in the following year, hearing that Chopin was ill and in want of money, sent him anonymously 25,000 francs.

In conclusion, we have only to mention that there is a valuable list of the master's works, a capital index, and a portrait by Kwiatkowski—an etching after a charming pencil drawing in Mr. Nieck's possession. His Life of Chopin is, as the title-page asserts, *The* Life of Chopin. It is complete and exact, and is written in so attractive a manner that it must appeal to readers of all kinds.

J. S. Shedlock.

RECENT CONCERTS.

Schubert's Octet was played again at last Saturday's Popular Concert. This long but lovely work seems to be a never-failing attraction. Only one or two persons availed themselves of the short interval made after the third movement to leave the hall, and even their departure may have been dictated by necessity and not choice. The programme-book informed us that Mendelssohn used his powerful influence at Leipzig to make Schubert's instrumental

Digitized by Google

music known, and that Schumann, too, did much towards the same end "by his elegant writing and criticisms." Now that Mendelssohn laboured for the cause of Schubert is true; also that Schumann used his pen. But honour to whom honour is due. Schumann, in 1838, actually discovered Schubert's great Symphony in C at Vienna. It was sent to Leipzig by the composer's brother, and so it happened that this great work came under Mendelssohn's notice. The programme included Emanuel Bach's graceful Sonata in C minor for pianoforte and violin, interpreted in a pleasing manner by Sir C. Hallé and Mdme. Néruda. The former also gave two Chopin solos—the Impromptu (Op. 36), and the "Grande Polonaise" (Op. 44). The pianist was in unusually good form. He played as if he were thoroughly enjoying the music.

Mr. Max Pauer made his first appearance this season on the following Monday evening. He gave a vigorous reading of Schumann's Etudes Symphoniques; but, for a player generally so careful and correct, the second variation was certainly slovenly. He was well received. Mdlle. Fillunger sang some delightful songs by Schumann and Brahms, and interpreted the music with good taste and feeling. The concert commenced with Haydn's concise Quartett in D minor (Op. 42), and concluded with the Beethoven Septet.

Mr. Henschel gave his eighth Symphony Concert at St. James's Hall on Tuesday evening. Tschaikowsky's solemn Overture, "1812," was repeated "by desire." We see no reason to alter our opinion of this commonplace sensational piece. Mr. Max Pauer played Beethoven's Pianoforte Concerto in E flat. It will readily be understood that a performer so well trained, physically and mentally, did justice to the work. After this came Schubert's unfinished Symphony in B minor. It had evidently been carefully rehearsed. In an ideal work of this kind one desires to forget, as much as possible, the means by which the music is being produced; but we could not always do so. Mr. Henschel generally arranges his programme with considerable tact, so that we fail to see why he gave us three pieces of programme music on the same evening. The first was Tschaikowsky's Overture already noticed. The second was Saint-Saens's Danse Macabre. The French composer shows more skill and musicianship than his Russian contemporary, but it is a prostitution of musical art to attempt a representation of death dancing and fiddling on a tombstone. This, or the Overture, or even both, might have been omitted. The third, Liszt's Symphonic Poem, is, of its kind, extremely effective—indeed, one of the composer's best works. Next week there is a strong programme, to commemorate the sixth anniversary of the death of the Baireuth master—some important excerpts from his works, and the "Eroica" Symphony.

MUSIC NOTES.

Half a Century of Music in Liverpool, an interesting pamphlet by Mr. W. I. Argent, consists of a reprint of various articles contributed to the *Liverpool Mercury*, in connexion with the celebration of the jubilee of the Philharmonic Society in that city. Its history is given from the time of its formation in 1840, and also that of other societies which preceded it. The "Musical Society" was already established in 1820. Dr. Mackenzie wrote his "Dream of Jubal" specially for the Philharmonic jubilee concert, where it was produced last Tuesday evening, under the composer's direction. It will be heard in London on February 26, at the next Novello concert.

JOHN LOTHROP MOTLEY.

On WEDNESDAY, FEBRUARY 20th, with Portrait, 2 vols., 8vo, 30s.

LITERATURE.

Thomas Poole and his Friends. By Mrs. Henry Sandford. In 2 vols. (Macmillan.)

This book was well worth writing, and it has been written well. It was worth writing for Poole's sake, perhaps also for Wordsworth's sake, and certainly for the sake of Coleridge. Tom Poole is a man of no particular interest in himself. He wrote nothing of value, and he did nothing of much consequence. But he occupied the mind of Coleridge a good deal at one period; and if it is worth while knowing Coleridge, it may be worth while hearing about his friend. The friends of an interesting man need not be as interesting as himself, but yet more interesting than most men; and, certainly, Tom Poole was worthy of the friendship that is now his chief distinction. If one wished to measure his intellectual worth, it would not be necessary to go farther than to compare him with ninety-nine out of the hundred of men in his walk of life to-day.

Poole was a tanner, and was very fully immersed in his occupation at one time, employing his superfluous energies in writing or revising the article on tanning for the third edition of the *Encylopaedia Britannica*. His tastes were literary, and his learning was not contemptible. His early friends were a band of young and penniless men, who had nothing better than their brains to recommend them. This does not make a formidable muster of recommendations, but they ought to suffice; and the man of whom so much may be said has as much right to be glorified in two volumes of reminiscence as many a charlatan who has made a bigger splash.

The Coleridge interest in this book is strong, and many new letters seem to be printed; but I do not know that any material addition is made to the known facts of the poet's life. The Pantisocratic scheme is discussed in a letter of Poole's with more fullness and more temperance, but with hardly less sympathy, than in the documents we have hitherto possessed. A rather sad episode is added to that story of a day-dream in the occasional glimpses we get of the after-life of one of the youthful dreamers. It is but a feeble vision that does not leave some effects for good or bad; and the vision of communism on the Susquehanna, which only strengthened Coleridge's intellectual sinews, seems to have so shrunken those of poor George Burnett that he halted ever afterwards. His life, which was opening fairly enough when the wild dream came to him, appears to have been wrecked by it. It surprises me that Coleridge and Southey, who must have known of Burnett's bankrupt fortunes, and cannot have been blind to the chief causes of the poor weakling's failure, made few or no references to him after the Pantisocratic scheme had lapsed.

With many details of Coleridge's domestic life that are both old and of no value whatever in themselves, there are in these volumes just two facts of great importance brought out with even more painful clearness than before. The first is the fact of Coleridge's extreme poverty in the early days of his marriage. If there is one thing clearer than another it is that this poverty was not due to any want of industry. It seems that on the failure of the *Watchman* a number of Coleridge's friends subscribed five pounds apiece, and sent the money, together with an address, on the day of the last issue. The address is pitched in a high key; but, under many extravagant phrases, there is no mistaking the burden of its message, and it is this—Coleridge has worked hard against heavy odds, he has sacrificed much to his principles, and he is in a condition approaching to penury. I dare say it would be easy to exercise a little cheap wit on the address, and point to the clause wherein the poet is said to have "united himself to her he loved regardless of every other consideration"; but it matters very little whether a rich widow had made an open tender for the hand of Coleridge, or his Sara was a purchase made conditional upon the payment of an annuity of £20 a year to the mother from whom she was taken. Certainly, literary adventure to Coleridge in those days was "bread and cheese by chance." I doubt if there is anything more pitiful and at the same time amusing in all biography than that long letter written by Coleridge to Poole on the relative attractions of Stowey and Acton as places of residence. I hardly know whether one ought to laugh or to cry over it, and, perhaps, I may say that I have done a little of both. It seems that Coleridge was then living at Clevedon, and his household consisted of his wife and her mother, his child Hartley, and Charles Lloyd. His income appears to have been at the rate of two pound eight shillings a week, of which thirty-two shillings came from Lloyd for board and lodgings and three hours of tuition daily, and sixteen shillings a week from certain "magazines." This represented comfort and content to Coleridge; but Lloyd's father began to grumble, and talked of requiring his son to abandon learning and choose a profession. The uncertainty of the future led to various vain attempts to become tutor to young children, and Coleridge was willing to remove to Derby for so doubtful an appointment. Eventually, Poole proposed that the Coleridge family should remove to Stowey, and take a cottage there that contained three rooms and had an acre and a half of "ground" about it. This was so entrancing a prospect that Coleridge instantly set about a rearrangement of his household on the basis of such a future as Stowey held out. Probably Lloyd would not be there, and so his thirty-two shillings would be missing; but there was the ground, and it would bring them all they wanted except clothes and money for rent. Coleridge was to learn agriculture; Poole was to teach him. Every day from daylight to dark he was to toil on his plot and rear potatoes and cabbages and wheat, and in the evenings he was to earn his sixteen shillings a week from the magazines for the two necessities that even an acre and a half when tilled by the poet would not provide. Coleridge was all ardour for the venture, and Sara was enthusiastic; but Poole began to have misgivings, and urged the rival attractions of Acton. Then did Coleridge pour out his soul in a letter of remonstrance, appeal, and agony. Had Poole cooled in his friendship, or did his mother disapprove of their projected neighbourhood? In any case, it was a blow more terrible than words could describe that this fair future should be withheld from him. Poole's letter he kept back from his Sara; his own reply he would not read to her; to look into his babe's face he would not dare; to sleep at night he could not attempt. The loss of an acre and a half of ground, a cottage with two habitable rooms but no firegrate, sixteen shillings a week, and the society of Tom Poole, was an eventuality that called forth one of the very finest letters ever penned by any man. And that letter was written by the biggest, broadest genius of our century.

The other fact of Coleridge's life that is developed by this biography is the fact of his wretched health. Some of the letters describing his sufferings are among the brightest in these volumes—less sentimental, less whining, and more manly than certain of the letters on the same subject addressed to Cottle and Sir George Beaumont. It is abundantly clear that Poole did not suspect Coleridge's opium-eating until long after it had become a habit. In this regard he was no more than abreast of Cottle, who did not realise the truth until about 1814; and Southey, who cannot have known it, when Coleridge left England for Malta. This does not show that Coleridge practised any concealment. The simple and obvious truth is that he made no disguise whatever of his constant use of the Kendal Black Drug. I am quite satisfied that he need not have practised deceit in the moderate or even immoderate use of that nostrum. In a cottage not far from Greta Hall I recently came upon a magazine of the period, published, I think, in Kendal; and it contained in conspicuous type an article on the many virtues of the Lancaster Black Drop, with a full account of its ingredients and the best method of home manufacture. Clearly the pernicious drug held the place of linseed tea or Spanish juice in the homes of the Cumbrian peasantry. We know that Coleridge recommended it on every side and for nearly every ailment. No wonder if he were the first to realise how fatal was the habit which the constant use of it had fostered.

But the chief interest of this book for me is in the picture it presents of a friendship between two men. Mrs. Sandford says truly that Tom Poole had the gift and faculty of friendship. Coleridge had it in no less a degree; and I do not know where I would look in literature of any kind for a more beautiful and touching example of the affection of man for man. Certain of the letters here printed do indeed convey a suggestion of affectation; but making allowance for the manifest difference of the language of yesterday and to-day, I doubt if there was any conscious excess on either side. It is amusing to think what high sport some of these letters must afford to certain nimble little witlings

Digitized by Google

who mistake waggery for humour and think they are laughing when they are trying to grin.

"My Dearest Friend," writes Poole—"the friend held dearest by me—*I say it thinkingly*—and say it as a *full* answer to the first part of your interesting letter. By you, Coleridge, I will always stand, in sickness and health, in prosperity and misfortune; nay, in the worst of all misfortunes, in *vice* . . . if vice should ever taint thee—but it *cannot*."

Well, there is not much like it nowadays—more's the pity! Friendship is a gift that wants the temperament of genius; and, whenever you find a man of genius, you find the faculty of friendship developed beyond all the possibilities of mere friendliness. More than that, genius not only possesses the faculty of friendship, but inspires it; and the friends of a man of genius are often held to him with hooks of steel through all his fortunes, in spite of all his excesses, and notwithstanding his whims and weaknesses. And, when genius was not quite so rare as it is now, the deep affectionate friendship of man for man was so common a thing that it could be spoken of, written about, celebrated and sung, without the faintest fear either of the banter of the little wit or the sneer of the big sensualist. Hall Caine.

The Ministry of the Christian Church. By Charles Gore. (Rivingtons.)

In this work Mr. Gore states the case for the High Church view of the origin and functions of the Christian ministry, and does so with ability and learning, and with a moderation of tone that almost disarms hostile criticism; just as Dr. Hatch, in his Bampton Lectures of 1880, presented the other side with probably not less learning and ability, and with an equal degree of candour and sweet reasonableness. The question, of course, is whether the three-fold ministry was the creation of circumstances (providentially ordered, if you like), after the pattern furnished by the many secular associations of the early centuries, bishops, presbyters, and deacons becoming gradually differentiated from one another; or was *ab initio* of divine institution, the bishops or presbyter-bishops alone taking the place of the apostles, and possessing the exclusive power of transmitting to others the mysterious influence or gift by which the priest is enabled to perform his peculiar functions. The answer to this question is to be derived from documents, some of which are of doubtful or disputed authenticity; from inferences from what might be supposed to be the probabilities of the case or the intentions of the Founder of the Church; and from general statements and allusions occurring here and there in the works of the ecclesiastical writers of the first five centuries And the unprejudiced reader who shall consider the evidence laid before him in these two able works will be very apt, I think, to conclude that, while there is certainly a great deal to be said on both sides, there is a decided want of any solid grounds on which to build a firm and consistent opinion. It is certain, for instance, that Irenaeus taught that the bishops were the successors of the apostles, and wielded their authority; but when we look for any definition of their powers, or ask in what respect they differed from presbyters, we find ourselves very much in the dark. Dr. Hatch asserted (surely, rather rashly) that the view was actually later than the fifth century which maintains that "the bishops had also succeeded to the power of the apostles in the conferring of spiritual gifts," and that they alone could ordain; and now Mr. Gore challenges the production of a single case in which ordination by a presbyter was allowable. Such cases, indeed, have been alleged, that of Paphnutius being the most plausible; but Mr. Gore considers that this one will not bear examination, and on it he writes a special note, in which he shows that even laymen are often said to "ordain" in the sense of appoint or get ordained. The case of the Alexandrian presbyterate mentioned by Jerome is fully discussed in his text. On the other hand, the position of the Bampton lecturer seems quite untenable in the face of such a passage as Mr. Gore quotes from Epiphanius, and which he refers to as "his famous saying": "That while presbyters could beget children to the church—*i.e.*, by baptism; only bishops could beget fathers to the church—*i.e.*, by ordination."

Mr. Gore, having treated of the foundation of the church in an introductory chapter, and defined and expounded apostolic succession in another, proceeds in his third to set before us the witness of church history, beginning from Irenaeus, where the ground is tolerably firm under his feet, and tends to become firmer as he goes on. He then takes us back to the original institution of the apostolate, and from that passes on to discuss the ministry in the apostolic and the sub-apostolic ages, finishing off with a short chapter of "conclusions and applications." The plan of the work seems excellent. It is obviously all-important to understand, in the first place, what exactly is claimed in the doctrine of apostolic succession, and what are the powers ascribed to bishops and presbyters which ordinary Christians do not possess; and here, as an humble layman, I must wish that the author had been even more explicit than he is. He seems to me to be very moderate in his doctrine. He repudiates sacerdotalism in the sense of vicarious action. He says he agrees with Dr. Liddon in thinking that the difference between clergy and laity is not a difference in kind, but in function. Still, I suppose he holds that when the eucharist is administered by an episcopally ordained presbyter something takes place which does not take place when it is administered by anyone not so ordained. If so, it may be a question whether there is not here more than a mere difference in function. If not, the controversy seems a barren one, and the numerous ministers who now perform valid sacraments, though not standing, or claiming to stand, in the line of succession from the apostles, will scarcely feel called on to seek episcopal ordination merely to satisfy an uncertain tradition. Returning, however, to historical ground, it was well to be shown first what the church actually was at a time when its organisation might be supposed to be complete, and then to be taken back to the Gospels, in order to see that this organisation must have been designed and established by the Founder of the Church. On this *a priori* ground the High Church case is strong. The difficulty is to connect the powers conferred on the apostles, historically and scientifically, with those afterwards claimed by the bishops, to the exclusion of the presbyters and deacons. Where is the evidence in Scripture that no ordination was valid unless performed by an apostle or one commissioned to act in his place? On the other hand, is not the power of binding and loosing, *i.e.* of absolution, which was conferred on the apostles, claimed by every presbyter? That several links are wanting in the chain of historical evidence is, indeed, obvious enough. Still, granting the Incarnation, granting the authenticity of all the New Testament books, granting that the apostles actually possessed the powers ascribed to them, and that the church is a supernatural institution—and all these points are here assumed—there can be no doubt that there is a good case for the high Anglican view; and Mr. Gore has certainly put it in a very plausible and attractive form.

Robert B. Drummond.

The Career of Major George Broadfoot, C.B., in Afghanistan and the Punjab. By Major W. Broadfoot, R.E. (John Murray.)

The hero of this admirable and opportune biography distinguished himself in the first Afghan War, and, after holding an important political post during the troubles that led to our collision with the Sikhs, was killed at the battle of Firozshah. Shortly before the outbreak at Kabul he had been sent down to Jelalabad with a company of sappers. The murder of Alexander Burnes, with whom perished Broadfoot's brother James, the siege of the British cantonment, the negociations with Akbar Khan, the treacherous slaughter of Macnaghten, and General Elphinstone's ill-judged surrender, are matters of well-known history; but the letters and documents now published with the Life of George Broadfoot put a new colour on the current account of the heroic defence of Jelalabad. Brigadier Sale was for making terms with the enemy; but Broadfoot, now Garrison-Engineer, would not hear of it. He had foreseen that surrender at Kabul would mean disaster and disgrace.

"The General [Elphinstone]," he writes in December, 1841, "urges the Envoy [Macnaghten] to capitulate. It would be insanity to do so; they would inveigle our troops into the passes, and, on the horses dying of hunger and cold, would attack them, seize the guns, and starve or massacre the men."

This prophecy was fulfilled almost to a word, and only one man struggled into Jelalabad to tell the tale. But there and at Kandahar, thanks to the determination of Broadfoot at one place, and of General Nott and Major (now Sir Henry) Rawlinson, at the other, the English stubbornly held out. At Jelalabad the praise was due to Broadfoot, almost, if not entirely. "All I fear," he wrote, "is panic in our leaders, and consequently in our troops. We are strong if that be kept off—strong enough to do great deeds." But this feeling of confidence was not generally shared. Sir Robert Sale, brave soldier as he was, inclined to a policy of capitulation. He had all but resolved to negociate with the enemy for a safe retreat to the Punjab. Broadfoot said—and he put it forcibly: retreat if you like, but not in accordance with terms made

Digitized by Google

with the Afghans. The garrison, he maintained, could hold out till relieved; but if a retreat was still deemed necessary, let it fight its way back to India. There were hot debates in the council of war, and General Sale used strong language about Broadfoot's obstinacy. Nevertheless the engineer's views ultimately prevailed, though Sale still continued to think and say openly that capitulation would have been the wiser course. It is worth while quoting Broadfoot's views on the general aspect of our Afghan policy. He maintained that having advanced so far in Afghanistan we ought to stop there.

"Recede from the country," he wrote, "we never can, or the Afghan Government must cease to be in our interests or even neutral. We must regard Afghanistan as a fortress to be held for the security of India; a certain expense indeed, but an inevitable one."

Passive measures in India, he considered, would be as dangerous as they proved in Kabul, and for the same reason. Our army was weak in numbers, and it was only by moral strength we could hope to overcome our enemies. "Terror of our fortune and constant success, as well as of our daring, must unnerve and disunite them."

After the close of the Afghan war, Broadfoot was posted to civil duty in Lower Burma, being selected by Sir Henry Hardinge, the Governor-General, for the Commissionership of Tenasserim. But he was presently required for more arduous work on the Sikh frontier. In August, 1844, he was appointed Agent to the Governor-General there, in succession to Colonel Richmond. Things in the Punjab had been going from bad to worse. Maharaja Sher Singh, one of Ranjit's reputed sons, was murdered in September, 1843; and after one or two plots and counterplots and a succession of massacres Dhulip Singh, a boy of nine was proclaimed Maharaja. The new British Agent had not been many weeks at his post before the situation began to develop. The Sikh Minister Regent was striving to destroy the power and influence of the chiefs and to bring the army back to a proper sense of discipline. All his plans were frustrated, and a collision with the Indian government was precipitated by the caprice and daring of a young and beautiful woman, the mother of Dhulip Singh. Jind Kawar, daughter of a Sikh trooper, was a notable character. Hearing that she was well favoured, Ranjit had sent for her to be added to the list of his wives. The royal reprobate had sixteen wives and any number of slave girls in his harem; but he was never blessed with more than one son, legitimate or illegitimate, and this one perished after a brief but stormy reign of a few months. Ranjit Singh's court was an earthly hell of iniquity; and the young Sikh beauty, Dhulip's mother, soon eclipsed all the others in the open recklessness of her conduct. Before long she gave birth to a son, the Dhulip Singh who was recently an English squire, and is now posing in Paris as the implacable foe of England. Who his real father was is doubtful. Ranjit, as already stated, never had but one son; but he was quite ready to acknowledge as many children as his wives were pleased to present him with. At any new addition to his reputed family, the cynical monarch would calmly inquire, Whence this mysterious stroke of fortune? To return, however, to the state of things when Broadfoot was posted to the north-west frontier. The lad Dhulip Singh was titular Maharaja, but the government was in the hands of the Minister Regent. The still young and beautiful Rani Jind Kawar now allied herself with the army, and the Minister was slain. In describing the events that led immediately to the first Sikh war, writers have differed on one or two material points. It has been said on the one hand that Sir Henry Hardinge and his lieutenant, George Broadfoot, were eager to hasten on the struggle; and on the other hand that, when the Sikh army at last crossed the Sutlej, the government of India was found unprepared. Neither of these charges is well founded. Sir Henry Hardinge, the Governor-General, said plainly that forbearance would be carried to the utmost limit compatible with safety; but at the same time a large force was quietly and unostentatiously posted on the north-west frontier. Broadfoot, meanwhile, was particularly careful to deprecate anything that might be construed as provocation. There was no need, he said, for more precaution on our frontier than was necessary at all times with such neighbours. We could be perfectly vigilant without either showing or feeling fear. The difficulty was that there was no one who could control the Sikhs—no one with whom we could hope to come to an understanding. After the murder of the Minister Regent, the administration was carried on by a council composed of military chiefs and one or two old servants of the state. The council debated everything with the young Rani, who would scold them from behind her curtain. At length the crash came. The Rani had done all she could to maintain her influence over the soldiers. In spite of the scandal it caused, she would receive them unveiled. One of the brigades promised to confirm her in the government of the kingdom provided she would move into their camp and let them see her face whenever they wished. Yet they recommended her, if she disliked solitude, to marry again, instead of disgracing the Sikh name by her gallantries. She, on her side, abused them in the vilest terms. Then she took to reviewing the troops, unveiled and dressed as a dancing girl; and the soldiers would sometimes hold her horse's bridle and expostulate with her on her misconduct, bidding her behave more decently or they would no longer revere her as the mother of all the Sikhs. This state of things could not last. The young Rani saw that as long as the army was all-powerful she could only be a cypher herself; and she then conceived the desperate expedient of inducing the troops to cross the Sutlej, hoping they might be annihilated by the English. The army was ready to fall into the snare; and, at a solemn meeting held at Ranjit's tomb, its leaders pledged themselves to punish the British. By September 11, 1844, the bulk of the Sikh host had crossed the Sutlej; and the first battle was fought at Mudkhi on December 18. Broadfoot's energy in collecting supplies had enabled our forces to make a rapid march to the front from Meerut. The Governor-General had asked the Commissariat how long it would take to collect supplies for ten thousand men. The answer was that it might possibly be done in six weeks. "It must be done," Sir Henry cried, "in five days"; and, turning to Broadfoot, he said "You must do it." "It is rather sharp work," Broadfoot answered, "but it shall be done." The Governor-General had gone to the right man. It was Major George Broadfoot, Sir Robert Peel told the House of Commons, who was Commissary-General of the Army of the Sutlej. The battles of Mudkhi and Firozshah have been described, perhaps, often enough. In the second action Broadfoot lost his life. He had been hurled from his horse by a shot, but insisted on mounting again, only to fall mortally wounded a few minutes afterwards.

So perished in the field of battle the friend of Havelock and Colin Mackenzie. He had already given abundant proof of a capacity for high achievement. The defence of Jelalabad and the preparations made to repel the Sikh invasion, as well as the gallantry he was always displaying in action, form a record of which any soldier might be proud. It was a tradition with the Afghans that the offended ghosts of his two brothers—slain, the one at Peswandara, and the other, with Burnes, at Kabul—hovered over Broadfoot's sword and added might to every stroke. Neither endowed with unusual strength nor specially skilled as a swordsman, he was believed to be invulnerable. A brother officer asked him how it was he always came off best in single combat. It was quite simple, Broadfoot answered. "When two men fight one always funks before the other, and gets killed. I am never that one." Of Broadfoot's share in the defence of Jelalabad, Sir Henry Durand writes: "Thus, the firmness of one man, and he nearly the junior in the council of war, preserved his country's arms from suffering another deep and disgraceful blow." Nor is there the least doubt that, had Broadfoot lived, he would have added still more to his reputation. It was his death that opened the way to the rise of the Lawrences. Certain as we may feel that Henry and John Lawrence would have distinguished themselves in any capacity, it is equally certain that George Broadfoot would never have been outstripped.

Stephen Wheeler.

UMLAUFT ON THE ALPS.

Die Alpen. Handbuch der gesammten Alpenkunde. Von Prof. Dr. F. Umlauft. Mit 95 Illustrationen, 15 Karten im Texte, einer grossen physikalischen Karte der Alpen, einer geologischen Uebersichtskarte, einer Höhenschichtenkarte, einer Karte der Flussgebeite und einer Strassen- und Eisenbahnkarte der Alpen. (Wien: Hartleben, 1887. 11 Marks.)

The Alps. By Prof. Umlauft, Ph.D. Translated by Louisa Brough. With 110 Illustrations. (Kegan Paul, Trench & Co. 25s.)

It is hardly possible, except by direct and constant reference to Dr. Umlauft's original volume, to criticise the unfortunate and mutilated travesty of his work which has appeared in England, without doing great injustice to a laborious and methodical writer, who, if he is not altogether master of his

Digitized by Google

subject, has amassed and arranged a quantity of scattered materials and statistics, and produced a really valuable work of reference, fairly illustrated, and excellently provided with maps. We begin our comparison with those external features which first catch the purchaser's eye. The English volume has a gay snowfield on its back and cover, and large type. But here its advantage ends. The Vienna volume contains an excellent physical map of the Alps, constructed to illustrate their groups as described in the text. For this the English book substitutes a map constructed with no reference to the text, in which we are ashamed to see the exploded old fiction of Mont Iséran served up once more. Three other maps—those of river basins, means of communication, and a contoured physical map—are omitted. To allow of larger type, the most useful lists of authorities in the footnotes and almost all the statistics and more serious historical notices of scientific discussions have had to be left out. The translator, it is true, is good enough to assure us that "nothing of importance or of special interest has been omitted." We shall endeavour to show cause why her judgment should be received with reserve.

But first let us, in passing, point out certain errors for which Dr. Umlauft himself is responsible. The annexation of Mont Blanc to the Graian Alps is a bold step for which, however, there is much to be said. But what wicked climber has induced the professor to believe that it is possible to recognise from Mont Blanc the Mediterranean, the lakes of Garda and Constance, and the spire [the translator characteristically writes "spires"] of Strassburg? To call the inhabitants of Canton Freiburg "Deutschen und Franzosen" is surely a loose use of language. Is there no Prof. Freeman in Germany to look after Burgundian interests? The habitat of the *bouquetin* is wrongly given as the Valaisan Alps. In the list of waterfalls, the noble cascade of the Serio and the numerous falls of Val di Genova in the Adamello group are omitted. In the chapter on Alpine roads, the historically important Col de l'Argentière and the Col de Galibier, second in height only to the Stelvio among Alpine carriage roads, are left out, and the Little St. Bernard is called "beschwerlich." Dr. Umlauft derives his knowledge of the Caucasus from Dr. M. Wagner, which is pretty much as if he quoted Archdeacon Coxe on the Central Alps; and consequently the pains he has taken to compare the Alpine and Caucasian chains are for the most part thrown away.

We have picked these holes at random. We might find a few more of the some sort. But the German work, taken as a whole, is sound of its kind; careful, discriminating, positive when it is possible to be so, judicial when conflicting theories have to be balanced, and well stocked with statistics and references in their proper place. Whether, so far as the topographical chapters—about half the book—are concerned, it is of the right kind, may be left an open question. For English readers we believe this minute local detail to be unsuitable. It has the faults of a catalogue without the merits of an index. It is wearisome to read, and inconvenient to consult. But literary digestions differ strangely in different nations, and in Germany they have no fear of toughness.

The obvious course, it would seem, for a judicious translator and adaptor was to lighten the topographical chapters, especially as regards the less important portions of the Austrian Alps—to which, despite an obvious intention to be fair, Dr. Umlauft and his illustrators have been unable to resist giving an undue share of notice—and to make the most of the more general and scientific portion of the work. What has been done is to increase the proportion of the topography to the rest of the work from less to more than one half, to omit the valuable tables, footnotes, and references, and to curtail the physical discussions. The sins of commission are more difficult to deal with summarily. De Saussure never described the actual top of Mont Blanc as a "jagged ridge." The Flégère is not "a mountain" with "a ridge," nor is it "ten miles north" of Chamonix. The Col de la Seigne is not south, nor the "Mont Cramont." (Dr. Umlauft is responsible for the pleonasm), east of the Allée Blanche. The Mer de Glace is not "nearly twenty-five miles long," but nine; nor are the Grands Mulets "two miles long." The Rhone glacier is made "over twenty miles long." The Forno glacier, in the Orteler group is made "no less than fifteen and a half miles long and nearly fifteen broad." The following sentences are quaint: "On this peninsula [Sermio] the Roman poet Catullus retired to sing his elegies, and at a later period Charlemagne and the mighty race of Hohenstauffen held communion with nature in this lovely spot." "The breadth of the Eastern Alps is not quite 112 square miles." "Notwithstanding its enormous height the Œtzthaler Ferner has no central mass." "Alter Eisseen" is translated "old frozen lakes"; *Gipfel-grat*, really a "summit ridge," as a "ridge of peaks." The statement that from Mont Blanc to the coast at Nice tarns are wanting shows that large-scale maps of the Maritime Alps have not been referred to. Here is a sentence for the unfortunate student (p. 360):

"The characteristics and varieties of form in the longitudinal contour of the valley must now be considerered. These are the origin, or head of the valley, the fall of the valley, the height of the valley, and the direction of the valley. The head of the valley is the highest part and the furthest removed from its mouth. It lies at the foot of what Sonklar calls the back-slope (*Hintergehänge*) of the valley, which closes it at its upper end. The form of the back-slope is very varied; sometimes it is a narrow channel, which occurs where two defiles unite at a very sharp angle, and as it were cover the back-slope, and sometimes it is simply a trough."

A "back-slope" which occurs as a "narrow channel" and is "covered" by two defiles! Two pages on "Werden jedoch die Structurflächen des Gebirges von der Thalrichtung schief oder senkrecht geschnitten," is translated, "If the rocks on the surface are cut off either obliquely or vertically from the direction of the valley." Lakes are said to "disperse into damp, dirty meadows." There are touches here and there which make us doubt if the translator has ever seen the Alps at all: *e.g.*, the rosebushes, meaning Alpine rhododendrons on p. 471, and the subsequent sentences relating to the same plant on p. 474, the reference to a waterfall "in the Sixt Valley at Chamonix," the failure to give any hint that the glacier grotto figured on p. 464 is artificial, and the statement that Piz Bernina was first climbed "from Coaz"

Knowing by experience the labour of rendering scientific treatises from German into English, we should not have been disposed to be severe on Dr. Umlauft's translator had she shown care in simple matters, where there was no excuse for error. But we feel bound to protest, with what force we can, against the issue in a costly and pretentious form of letterpress which teems with blunders that could not have escaped any competent revision. The work in its present form is an outrage on the patience and the purses of English readers and students.

Douglas W. Freshfield.

"Epochs of Church History."—*The Popes and the Hohenstaufen.* By Ugo Balzani. (Longmans.)

The period of one hundred and thirty years (1138 1268) covered by M. Balzani's study is not only one of the most picturesque and dramatic pages of history, but is also one of the most important for the proper appreciation of what the empire and the papacy meant to each other and to the world at the close of the Middle Ages, when the power of the one was declining and the power of the other was in the ascendant. The house of Franconia had been worsted by the papacy, and its rebuff was made patent in Henry's submission at Canossa, and by the settlement of the disputes about investitures in the Concordat of Worms.

M. Balzani's book shows us how the next imperial House, the Hohenstaufen of Swabia, likewise spent their power and their ability in an endless struggle with the Popes; and how, after many vicissitudes of fortune, their lives were crushed and extinguished at Benevento and Tagliacozzo. The history of the house of Hohenstaufen is as dramatic a tale as can be found in the annals of a royal line; and the picturesqueness of the story is infinitely heightened by the character of the men who took part in the tragedy. We find a series of figures as striking, as admirable, as attractive, as those of Frederick Barbarossa, Henry VI., Frederick II., Manfred, and Conradin opposed to pontiffs as strong, as single minded, as determined as Hadrian IV., Alexander III., Innocent III., and Gregory IX. The prowess of Hohenstaufen showed itself in Frederick I., the indomitable warrior, who found a soldier's grave among the sands of Antioch. The statesmanship of the race was apparent in the short but fruitful reign of Henry VI., and even more so in the long and intricate reign of his great son Frederick II. The culture of the race was displayed at the court of Frederick in Sicily, where his son Enzo was bred a poet no less than a soldier. The tragedy and pathos of the race is summed up in the brilliant career and noble end of Manfred. "Dead is Manfred! dead is Manfred! O king Manfred! we did not know thee alive, and now we bewail thy death." The old chronicler, though hostile in politics, cannot resist the contagion of popular sympathy with the last bright scion of so grand a house, "fallen cold and dead."

Digitized by Google

Nor is the importance of the period inferior to its picturesqueness. Under the Hohenstaufen, the struggle between the empire and the papacy entered upon a new phase and became more complicated. Hitherto this struggle, it has been justly remarked, had presented more or less the characteristics of a family quarrel between the two heads of one household. But now some of the sons of this family, the communes of North Italy to wit, had grown up, become almost independent, ready to take their own line in the quarrel, solely guided by a desire for their own liberty, and ready to side now with the emperor, now with the pope, as one or the other menaced their freedom more nearly. Feudalism was in dissolution in Italy; and, though the system was still vigorous north of the Alps, it never was a system well suited for invasion, or for operations in a foreign country. The consequence was that the emperor seldom commanded a great force in Italy. He could not prevent his German army from dwindling away as this or that great feudatory left the imperial camp to attend to his private interests at home; nor could he raise a powerful Italian army among a people so infinitely subdivided in aim as the Italians, who cared not one jot for the emperor except as the embodiment of an idea which they would never permit to interfere with their actual interests. Hence the need for the emperor to hold some portion of Italy upon a tenure more personal and intimate than that of suzerain. This object appeared to be achieved when Henry married Constance, the heiress of the Hautevilles, and brought with her the kingdom of Sicily as dower into the private possession of the Hohenstaufen. But this possession of Sicily did not bring to the Hohenstaufen the strength they sought. It entailed three consequences fatal to their house. In the first place it brought the pope and the emperor into collision not over spiritualities but over temporalities; for the pope claimed to be suzerain of Sicily, he maintained that the kingdom was a fief whose investiture lay with him, that the Hohenstaufen, as kings of Sicily, were his vassals. Again, the emperor, holding that Sicily was his basis for the proper reduction of Italy, was often detained there to the injury of his interests in Germany. And, finally, Sicily was the immediate reason which made the pope summon Charles of Anjou to his aid to deal the deathblow to the house of Hohenstaufen, and to inaugurate that fatal policy of inviting foreign interference in the affairs of Italy.

We hear little or nothing about the fourth Crusade in M. Balzani's book; but he, perhaps, fairly considered that this episode lay outside his subject. The account of the great Peace of Venice is very well condensed, following Romualdus for the most part. On p. 37 the author, speaking of the coronation of Frederick I. in St. Peter's, says "under the domed roof the cheers of the Germans echoed like thunder." We do not believe that old St. Peter's had any domes.

It is to be regretted that the author has not added to his close-packed and valuable little book a chapter containing an estimate of what the empire and the papacy gained and lost respectively during the reign of the Hohenstaufens, what changes had taken place in their relative positions, and how each stood to the world at large at the close of that period. Some such estimate appears to us essential in an essay which is in reality one of a series of studies in Church history.

We are glad to see that M. Balzani promises us a larger and more detailed work on the same subject.

Horatio F. Brown.

NEW NOVELS.

Reuben Sachs. By Amy Levy. (Macmillan.)

A Stiff-necked Generation. By L. B. Walford. In 3 vols. (Blackwood.)

A Dangerous Catspaw. By D. Christie Murray and Henry Murray. (Longmans.)

Cyril. By Geoffrey Drage. (W. H. Allen.)

Restitution. By Anne Beale. In 3 vols. (Hurst & Blackett.)

Queen Anne's Hospital. By A. T. Schofield, M.D. (Sonnenschein.)

The Queen's Token. By Mrs. Cashel Hoey. (Spencer Blackett.)

Sir John's Ward. By Jane H. Jamieson. (Edinburgh: Oliphant, Anderson & Ferrier.)

Reuben Sachs is a novel exclusively descriptive of Jewish life, written by a lady who, at least by birth, is a member of that community. In this respect the book is, as a novel, perhaps unique; for the occasional portraiture of Hebrew personalities or customs that occurs in the works of Disraeli, George Eliot, and other writers of fiction, may have successfully illustrated prominent types of character or notable tribal peculiarities, but is in no way an exposition of the day-to-day life of a people of whom the outside world is permitted to know but little. It must be confessed that the glimpse of the social *régime* peculiar to the children of Israel which is here unveiled to us is far from prepossessing. Miss Levy gives one the impression of having laid bare the failings of her people with a rather merciless hand, assuming, perhaps, by right of kinship a freedom of description which might be resented as "flat perjury" if indulged in by an unprivileged Gentile. The novel, appears, however, to have a purpose quite distinct from the mere gratification of alien curiosity. Reuben Sachs, the hero, is a man who, after enjoying all the opportunities of culture afforded by English institutions, as embodied in Oxford, the Inns of Court, and the House of Commons, nevertheless remains the slave of inherited instincts, and deliberately breaks away from the grand passion of his life from mercenary or ambitious motives. Herein seems to be intended a moral and a warning. Miss Levy is apparently conscious of a certain soullessness and absence of ennobling ideals in the national character, and deplores her kinsmen's sordid devotion to material interests and lack of any yearning for a higher life. The book, though crude in parts, is, on the whole, cleverly written; and we shall be glad to see further revelations from the same pen.

A Stiff-necked Generation represents, in its early part, a struggle between Lady Caroline Liscard, a woman of masterful and strong-willed nature, and her eldest daughter Rosamond, a young woman of eighteen, equally strong-willed and somewhat *émancipée*. The family entertain a design of marrying the latter to her cousin, Lord Hartland; but injudicious tactics on the part of the mother drive her, in mere spirit of opposition, into an engagement, of which she afterwards bitterly repents, with Major Gilbert, a brave officer, but a man of rather plebeian manners. If this were a first venture in fiction the manifold excellences of the book would call for some words of commendation, which are scarcely necessary in the case of so well approved a writer as Mrs. Walford. Compared with some of that lady's previous performances, the present novel is, to say the truth, a little disappointing. With Major Gilbert, a *preux chevalier* and noble-minded fellow, one can scarcely associate the free-and-easy, thick-skinned vulgarity with which the writer accredits him; and Lord Hartland, who ultimately marries Rosamond, is rather uninteresting, and just a little bit of a prig.

Mr. David Christie Murray's productive powers in the way of fiction writing seem inexhaustible. We can call to mind some half-score of works that have issued from his pen during the past two or three years, and now he appears in the character of joint-author with Mr. Henry Murray. *A Dangerous Catspaw*, which is the result of their united labours, is, in regard to descriptive power and dramatic effectiveness at least, equal to Mr. Christie Murray's best known writings; but, in point of mere quantity, the book is so short that one can hardly understand how the aid of a collaborateur could have been needed. It is a tale of a burglary, committed, not by any professional cracksman, but by Mr. Wyncott Esden, a gentleman of good birth, education, and abilities, and holding an assured position at the bar, but dissolute in habits, shaky as regards moral principle, and deeply involved in debt. He appropriates a case of jewels, the property of a Scotch heiress who is staying in the same house as himself, and to whom he has been paying his addresses. It is not his intention to sell these jewels, but merely to utilise the reward that will, probably, be offered for their recovery for the purpose of meeting a bill for £150 just falling due. The balance of the reward he will, he tells himself, return at once anonymously, and the £150 also in course of time. Viewed in the light of these equitable intentions, his proceeding appears to him to be raised above the level of a vulgar theft, and to assume the comparatively harmless complexion of a mere borrowing transaction. The picture presented by the authors of this man's various mental attitudes, from the first commission of the crime until the terrible moment of final exposure, is an attractive feature of the book and saves it from ranking as a mere Scotland-Yard episode.

Cyril, written by a scholar and intelligent thinker, is a work in one volume of nearly 800 closely printed pages, ends tragically, and bristles from cover to cover with political speculations. The principal characters are Evelyn Grey, a young English barrister, and Viera Galitzine, a Russian princess of revolutionary tendencies. Evelyn's brother, Cyril, from whom the story takes its name, plays only a minor part in its pages. The writer appears to be a vigorous armchair

Digitized by Google

politician, and possesses views of a pronounced kind as to the proper conduct of national affairs. In default of space and inclination to pass judgment on these views, or to run the risk of offending the author by erroneously "dubbing him Whig or damning him Tory," the book may be dismissed with a brief intimation that readers who foresee in the near distance the disintegration of the British Empire, or who regard the Russian Bear as the future tyrant of Christendom, will find much in the pessimism of these pages with which their disturbed souls can sympathise. It may be well, perhaps, to remind Mr. Drage, in case he should be contemplating another work of the same kind, that an eclectic system of politics is the easiest thing in the world to manufacture.

Restitution is a book that recalls to memory the old-fashioned religious novel of fifty years ago. The sectarian and controversial matter, however, which was usually characteristic of this class of fiction, is happily excluded in the present case. It would scarcely be possible to describe the story as being a particularly lively one; but to the healthy and earnest sentiment which pervades it no sort of exception can be taken. It may safely be recommended as an excellent book for Sunday reading.

The man who writes a "novel with a purpose" has at least this much in his favour, that, if the purpose be a good one, it will *pro tanto* disarm hostile criticism. On the other hand, it is confessedly difficult for any but a man of exceptional genius to write successfully in this line. The artist is too apt to become lost in the lecturer or the partisan; and when, as in the present instance, a moral is not only intended to be conveyed by the work as a whole, but is industriously thrust upon one in the course of every five or six pages, the most patient reader not unfrequently becomes restive under the infliction. *Queen Anne's Hospital* is a temperance lecture disguised as a work of fiction. The intention is an admirable one, but not altogether original. It was the prize tale entitled *Danebury House* that first brought the late Mrs. Henry Wood's talents as a writer into notice some thirty or forty years ago. The lady novelist, however, if we remember rightly, avoided debatable ground, and employed all her powers upon highly realistic descriptions of *delirium tremens* and other maladies incidental to alcoholism. Dr. Schofield, on the other hand, entering the field as an avowed advocate of the total abstinence propaganda, is himself open to an imputation of intemperance—of another kind—in maintaining a theory which has certainly not as yet met with universal acceptance, and provokes a contest where all should be harmony. It would have been well also, in other questions besides this, if the writer had expressed himself with greater moderation. Considering the gravity of the questions relative to the distribution of the national wealth, there is a sort of smug pharisaism in speaking of a young man as "degrading himself" (p. 92) by attending a Socialist meeting. The view maintained throughout that brewers are morally guilty of the misery and crime resulting from intemperance would be offensive if it were not puerile. Puerile also is the suggested remedy—though an isolated instance in fact, and another in fiction, may be quoted in its support—that brewers should acknowledge, as a body, their evil ways, and forthwith turn the public houses owned by them into coffee palaces *en masse*. As regards the characters and plot of the story, little need be said. The *dénouement* is certainly an unexpected one, and of a nature to jar disagreeably on the nerves of some people. There are several slips of grammar and spelling, *e.g.*, "Why do you listen like that to old Bones for?" (p. 15), "squallor" (p. 354), "practise" for "practice" (p. 338), &c.

Mr. Spencer Blackett's select shilling series is announced as being restricted to works by popular authors; and, as it includes such names as those of Miss Braddon, Bret Harte, F. W. Robinson, &c., the purchaser of one of these volumes may feel assured of obtaining his money's worth, at all events in regard to quality. Mrs. Cashel Hoey is excellently qualified by her linguistic and antiquarian attainments for the task of writing a historical novel; and in *The Queen's Token*, a short but interesting tale of treasure trove, founded on a romantic tradition connected with Mary Queen of Scots, we have a thoroughly enjoyable book. The story is a rather sombre and pathetic one, pervaded throughout the earlier chapters by all the reverential solemnity that attaches to scenes of cloister life, and saddened by a tale of disappointed love at the close.

Those who have read *The Laird's Secret*—an earlier work by the same hand—will find in *Sir John's Ward* all the freshness and graphic power which distinguished the writer's first effort; the scenery and characters, moreover, which form the subject of description, are of a precisely similar kind. It is the autobiography, from infancy to marriage, of Alicia, heiress of Gladdiswoode, who, on the death of her father, a convert to the Roman Catholic faith, had been carried away secretly by her Protestant mother and placed in charge of a trustworthy Scotch peasant woman, in order to evade the provisions of a will which would have placed the child under the care of Catholic priests until her eighteenth birthday. The book modestly claims to be merely "a quiet chronicle of country life"; but the incidents, if homely, are told with a lightness and liveliness that are wanting in many more pretentious works.

John Barrow Allen.

CURRENT LITERATURE.

Poole's Index to Periodical Literature. The first supplement from January 1, 1882, to January 1, 1887. By William Frederick Poole and William I. Fletcher. (Trübner.) The appearance of this portly volume is doubly welcome. It not only adds another useful book of reference to the shelves; but it shows that co-operative bibliography is a continuous possibility, and that the patient drudgery for the public good which produced Poole's Index can be counted upon for its systematic continuance. For that reason it marks a new era, and opens out even greater possibilities in the future. When Dr. Poole, still a student at Yale College, first began to make an index of the subjects dealt with in the handful of magazines belonging to an academic society, he had probably no expectation that the seed would grow to such a great tree even in his own life-time. The third edition, issued in 1882, was the first in which the plan of co-operative indexing was tried, and the joint labours of Dr. Poole and his friends resulted in a volume of 2882 columns. Now comes the first supplement, extending to 966 columns more, containing about 48,000 references to articles in magazines and reviews. If to this we add 141,000 as the number of references in the main edition, it will be seen that Poole's index gives precise information as to the exact place of 189,000 articles upon all sorts of subjects in the periodical literature of England and America. The information thus made available would otherwise be completely buried, for few and rare are the men or women who have either the patience or the leisure to hunt through long sets of magazines. Doing so is the literary parallel to the proverbial hunt for the needle in the bundle of hay. The difficulty has now been smoothed over; and the excellent article in the *Edinburgh*, or the suggestive paper in the *Spectator*, can be unearthed without loss of time. The bulk of the work has fallen upon the editors, and to them is due hearty recognition and gratitude. That the labour has been one of love is evident, and "the labour we delight in physics pain." An "Index to General Literature" is mentioned as a matter of hope. May that anticipation be speedily realised!

The career of *John Francis, Publisher of the "Athenaeum"* (Bentley), was worth telling for the zeal with which for more than thirty years he pursued the definite purpose of obtaining the abolition of the paper duty. His attention was arrested in 1830 by the advertisement of the *Examiner*, which justified its publishing price of 7d. by the details, "paper and print, 3d., taxes on knowledge 4d."; and from that time until 1861 he never relaxed his endeavours to secure the removal of the obnoxious impost. How great a drawback to the spread of knowledge this tax was may be realised from the fact that the amount of duty paid on the seventh and eighth editions of the *Encyclopaedia Britannica* was £8573. With equal ardour did Mr. Francis labour for half a century in publishing the weekly issues of the *Athenaeum*; and these two volumes, which describe its progress from its birth in January, 1828, to the full perfection of its powers in 1882 are a fitting record of the literary history of that period. It was founded by Silk Buckingham, a man of the greatest literary enterprise; but his pecuniary necessities did not allow him to witness, as its proprietor, the successful fulfilment of his undertaking. The first review was written by Dr. Stebbing, who remained with us until a very recent period; and after a few numbers he found himself bound to its office from morning until evening as the working editor. John Sterling and Frederick Denison Maurice were his principal coadjutors, and before long the paper passed into the possession of some half-dozen friends with Maurice as its editor. In divided counsels and under "highly uncommercial management" it went from bad to worse, and prosperity did not mark its course until it became the property of the ancestor of the present proprietor. The chief of its contributors in 1832 were Carlyle, Hood, the Howitts, Leigh Hunt, Lamb, and the Roscoes; and one of the most striking reproductions from its columns is the short poem by Thomas Carlyle on "Faust's Curse [from Goethe]," which appeared on January 7, 1832. These two volumes contain an immense mass of information on the literary history of the oldest weekly review published in London.

American Literature, 1607-1885. By Charles F. Richardson. Vol. II. (G. P. Putnam's Sons.) We noticed the first volume of Mr.

Digitized by Google

Richardson's work in the ACADEMY, July 30, 1887, p. 69. On that occasion we found it necessary to remark that the author had attempted a task beyond his powers, or, indeed, beyond the powers of any man at the time. Our complaint against Mr. Richardson was that he had not understood his limitations. There were, however, indications that he was capable of better things; and we ventured to predict that, if he would put forth his efforts "within the realms of the possible," he would produce something worthy. He has taken the advice, and we are happy to find that we were true prophets. The truth is, he was then riding a very high horse, and has since stepped down, to the gain of himself and of his readers. In this second (and concluding) volume Mr. Richardson treats of American poetry and American fiction in a spirit of calm and judicious criticism. Hitherto, American criticism of American literature has not reached a particularly high level. There is usually too much spread-eagleism about it. The ordinary American is not sufficiently assured of the value of his country's literature to be quite able to judge it fairly. Censure, when called for, is not forthcoming. Praise when possible is made extravagant. The men of to-day are too readily ranked among the men of all time. Mr. Richardson proves himself able to weigh and balance better than most of his fellow-countrymen. He contrasts and compares his authors with judgment. It is true he is only setting one American author against another. If he was called to settle the relative claims of American and foreign authors—of Channing and Milton, or Howells and Shakspere, for example—the result might be different. We dare not guess at it. Meanwhile, Mr. Richardson has done the task he undertook. We do not pretend that we agree with all he says. By no means. We might, for example, estimate Walt Whitman somewhat higher than he does, and Bayard Taylor, as a poet, somewhat lower. The merit we see in Mr. Richardson is not that his views coincide with ours (which might be no merit at all), but that he has thought out his ideas, has not jumped to conclusions, and is generally free from prejudice. Mr. Richardson's task—although a considerable one—has proved to be well within his powers; and future critics who may have occasion to estimate American poetry and American fiction will find much in this volume that is suggestive and helpful.

French Literature. By Gustave Masson. (S. P. C. K.) In this little book, which forms part of the Christian Knowledge Society's series on the "Dawn of European Literature," we have probably the last and, from certain misprints, we should say the not fully revised work of a man who did a very great deal of useful work in his time, with far less assumption than many men who have done much less. It contains a full and useful collection of examples of the earliest documents in French literature, together with a good deal of information on the formation and the dialects of the language. Perhaps the merely linguistic part might with advantage have been severed more distinctly from the literary; and in the literary part proper, it might be possible to desire a clearer and closer classification by literary kinds instead of a rather adventurous and theoretical attempt to trace "Latin elements" and "Teutonic elements" not merely in the safe field of language, but in the very unsafe one of literature. Almost everyone, however, has his own way of dealing with such matters, and M. Masson was quite entitled to have his. Indeed, he can hardly be accused of self-will in choosing it, as he has for the most part very faithfully followed, and wherever he has followed has clearly acknowledged and specified his following of, the best French authorities.

Stray Chapters in Literature, Folklore, and Archaeology. By William E. A. Axon. (Manchester: Heywood.) Mr. Axon, as we gather from his preface, found it by no means an easy matter to select a title for a volume of essays of a character so purely miscellaneous. We have enjoyed reading the book, for the author is never dull; but we cannot help feeling that the time we have spent over it would have been more profitably employed had the writer taken more pains. Two or three of the papers are well worked out, and contain all that a reader should require. "The Cost of Theatrical Amusements" is excellent. We do not know any other place where we could find so much knowledge of the kind packed away in so little room. The article headed "English the Dominant Language of the Future" contains much that is useful. The figures, if trustworthy, as we believe them to be, will be of much service to future investigators. We cannot, however, follow Mr. Axon in the speculative or prophetic parts of the article. As things stand at present, it seems by no means unlikely that, at some time or other in the not very far-off future, English may be the language of civilised man; but there are many possible impediments in the way. That factor which we ignorantly call chance has, during historic time, played so many strange pranks with languages that to endeavour to forecast the future with any approach to accuracy is little better than an idle pastime. The paper on "The Manchester Rebels" is very good—so good that we cannot but wish Mr. Axon had made it still better, by leaving out certain political reflections which, whether true or false, have been made so often as to have become insipid. If there were a Stuart pretender still across the water, it might even now be useful to tell very young persons all about the good we have gained by "the Glorious Revolution"; and that, though Jacobitism was picturesque, the final cause for which it was ordained to come into being and to linger was that it might be the fountain whence flowed certain sweet fragments of verse which are charming when sung by gentle female voices. As things are, however, any protest against the lost cause is mere verbiage—not quite innocent, however, as it distorts our view of past history. Mr. Axon evidently sees that there was something unselfish in the conduct of the Jacobites of '45. His affections go with them; and yet he finds it needful to tell us, as if there were some present danger still ahead, that if George II. and that which he represented had been sent back to the fabled kail garden,

"the tide of civilisation would have rolled back a century, and the freedom bought with such lavish expenditure of blood, the liberties for which Russell and Sydney died would have been lost, and Britain again have sunk to the disgraceful position of a pensioned minion of France."

Accent and Rhythm. Explained by the Law of Monopressures. Part I. (Blackwood.) This is an attempt, at once scientific and literary, to rectify the current ideas of scansion. It is scientific in its treatment, literary in its object. For instance (p. 3) we are told that

"the voice-vibrations necessary to produce the vowels *a*, *e*, *i*, *o*, *u*, &c, are very much modified in passing forward as a vocal current, by the varying channels formed in the mouth, and by the position of the tongue. There is no great hindrance to the vocal current when vowel-sounds are uttered; but consonant-sounds are produced by attempts to obstruct the clearness of the vocal current."

Highly technical as this sounds, it is easily verified. As to the term "monopressures," it is thus explained (pp. 4-5).

"Speech is possible only in monopressures; a speaker's . . . . continuity and subtle successive utterance is [are?] due to his power to separate pressure from pressure, jet from jet, and volume from volume, while, at the same time, he avoids unnecessary roughness in the distinct pronunciation of his consonants."

The literary object emerges somewhat later. The writer "thinks nobly" of human speech, and still more of human thought. The chapter called "Language" (pp. 75-81) is a curious mixture of penetrating remarks with palpable platitudes, *e.g.*

"It is the force of thought that results in language." "The utter dependence of man on the Creator is as significantly displayed in the capacity for speech as in any of the Creator's gifts. It is intended that man should use the gift."

Something of the same simplicity (or is it really archness?) appears on p. 62, where, in analysing the rhythm of Gray's lines—

"While some on earnest business bent
Their murmuring labours ply
'Gainst graver hours that bring constraint
To sweeten liberty."

The writer gravely proclaims that by his system of vocalisation "murmuring labours" is significant of "repetitions of Latin, Greek, and other task-work diligently gone over by the studious lads of Eton College." But what else did it ever suggest to anyone? The notation, however, whereby the writer formulates his law of monopressures and applies it to the varying scansion of Shakspere and Milton, is of high interest and value. The "Explanatory Notes" (pp. 47-64) give a new sense of the irregular melodies of blank verse. We do not think, however, that lovers of Shakspere will allow their "Julius Cæsar," to be carved as on p. 60. We infer from the last page that a continuation of the work is contemplated; a certain want of balance in this instalment of it may be thus accounted for.

Elizabeth Gilbert and her Work for the Blind. By Frances Martin. (Macmillan.) The beautiful and sublime life of Elizabeth Gilbert is well told in this biography. To the blind daughter of Bishop Gilbert of Chichester is mainly due the immense improvement which late years have witnessed in the condition and treatment of the blind, not only in England, but over the whole of Europe. When Miss Gilbert began her work "even good and merciful people looked upon it as rebellion to endeavour to mitigate and alleviate the lot of those who live in the dark." Her endeavours have not only put an end to to this cruel superstition, but have proved that, with a little help and sympathy from those who can see, the blind may be enabled to live lives and do work pleasant to themselves and useful to their fellows. Miss Gilbert's blindness, following upon scarlet fever in infancy, was accompanied by ill-health, which made her a constant sufferer. It is, therefore, specially striking that she should have so nobly persisted in preaching the doctrine that the blind can help themselves. Her life, as told in these pages, is full of interest. We long for a companion sketch of W. Hanks Levy, the blind manager, whose extraordinary energy and courage made him Miss Gilbert's right hand. There is a fine story of Wordsworth on page 13, and a characteristic letter from Mr. Ruskin (p. 256) refusing a subscription to the Association for the Blind on the ground that his work was "with a much lower race of sufferers . . . those who have eyes and see not."

Memoir of William Ellis. By Ethel E. Ellis. (Longmans.) William Ellis is mentioned in Mill's *Autobiography* as "an original thinker in the field of political economy, now honourably known by his apostolic exertions for the improvement of education." It is chiefly in the latter aspect that William Ellis is here portrayed by his granddaughter. Her very interesting

Digitized by Google

account of his "conduct-teaching" is enhanced by her own judicious reflections upon education. Ellis's method may be described as Socratic. He knew how to instil virtue into the youthful mind by a series of well-directed questions. Thus, at a reformatory school he asked: "Will it be possible occasionally for you to shirk some portion of the work which he [your future master] will be expecting from you?" Answer: "Yes." "What would you do were such an opportunity to present itself." It is rather refreshing that one boy had the audacity to cry out—"Shirk my work." This youthful Thrasymachus was gently shut up by the modern Socrates. The reader must not expect a Platonic element in Ellis's philosophical dialogues. He himself has well characterised his own powers and limitations in the following contrast between himself and Mill:

"He was for inquiring into every thing, going to the bottom of everybody's theories and ideas. I cared only for the practical value of political economy, and did not want to think deeply on points which would have no bearing on social affairs and human conduct."

The Life and Letters of Mrs. Sewell. By Mrs. Bayley. (Nisbet.) The seventy-six pages which comprise Mrs Sewell's autobiography form the most interesting portion of Mrs. Bayley's book. At the advanced age of eighty-four Mrs. Sewell tells the story of her life, and gives us a pleasant insight into a Quaker country home at the beginning of the present century. The following is her description of the school at Acworth, where Mr. John Bright was educated:

"The discipline was exceedingly strict, not to say severe. The law and the word of command ignored all the little peccant places and infirmities of the flesh to which the young as well as the old are subject. Little things unused to water had no time given to stand and plead at the water's edge, but were heroically seized and plunged in, and sent off to make way for others. Stone chairs, stone floors,—nothing to comfort the desires of the flesh in dress, food, or affection. The awful superior of the school was named Don Bavon."

Mrs. Bayley has written her own part with much sympathy, but at too great length.

NOTES AND NEWS.

Some years ago there was published at Calcutta an *Oriental Biographical Dictionary*, founded on materials collected by Thomas Beale, which is now difficult to obtain. A revised and amplified edition of this, with the more appropriate title of "A Dictionary of Hindu and Muslim Biography," is now in preparation, under the general editorship of Mr. H. G. Keene, the popular historian of Mohammedan India. It will consist of short articles on the lives and writings of the most eminent kings and soldiers, poets and philosophers, of nearer Asia; and it will be published by Messrs. W. H. Allen & Co., in a single volume, similar to Hughes's *Dictionary of Islam*.

Messrs. Swan Sonnenschein & Co. have in the press a volume of *Essays and Addresses* by Mr. Bernard Bosanquet, formerly fellow of University College, Oxford. The subjects discussed are chiefly of a social, religious, or philosophical character. Mr. Bosanquet has also edited for the same publishers a translation of Dr. Schäffle's "Quintessence of Socialism"—a summary of socialist doctrine which has been translated into every European language.

Mr. George Redway will publish, within the next fortnight, a new book by Mr. C. Staniland Wake, entitled *The Development of Kinship and Marriage*; which treats, in full detail, with those subjects connected with the relations between the sexes and the rules of descent that have lately been so much discussed among anthropologists. It will form a volume of nearly 500 pages, with two folding plates and an index.

Mr. Lewis Sergeant has thoroughly recast and revised *The Government Year-Book*, which, with important enlargements and additions to the articles, will be published as the 1889 edition, in a few days, by Mr. T. Fisher Unwin.

In his forthcoming book, *Darwinism and Politics*, Mr. David G. Ritchie, fellow and tutor of Jesus College, Oxford, discusses the manner in which the evolution theory affects politics, and in particular its application to the position of women and the questions of labour and population. Messrs. Sonnenschein will be the publishers.

Messrs. Blackwood announce the publication, beginning in March, of another series of "Tales from *Blackwood*," uniform with the two former series under the same title, which now number twenty-four volumes; and also, beginning in April, an entirely new series, to be called "Travel, Sport, and Adventure, from *Blackwood*." As the prospectus states, some of the most distinguished travellers and explorers, from Sir Richard Burton downwards, have first communicated their adventures to the public through the pages of *Blackwood*. And we may add that the succession is maintained in the current number by two notable articles—in one of which we have the fullest and most authentic account of the circumstances preceding the death of Major Barttelot, and in the other a charming picture of the little known island of Minicoy, in the Indian Ocean.

Mr. Charles Marvin—who, at the request of the government, delivered some lectures on petroleum before the Royal Engineers at Chatham a fortnight ago—has in the press a new pamphlet, entitled *The Coming Oil Age*, which will contain the latest results in regard to the development of the petroleum industry. Among the topics touched upon will be the government oil borings near Quetta, the discovery in Canada of the largest oil deposits in the world, the rise of the oil tank steamer fleet (now consisting of nearly 150 vessels) the adoption by Chicago of liquid fuel, the development of large power oil lamps, and the heavy oil problem—to solve which premiums have been offered by the Russian Government. The pamphlet will contain maps of the Canadian, Burmese, and other petroleum regions.

The Brotherhood of Letters is the title of a new book by Mr. J. Rogers Rees, author of "The Pleasures of a Bookworm," announced by Mr. Elliot Stock for immediate publication.

A Play upon People is the title of a volume, half play, half satire, on certain aspects of modern life, by an anonymous author, which will be published next week by Mr. T. Fisher Unwin.

Under the title of "The Victoria Library" a new series of monthly shilling volumes, in all departments of literature, will shortly be commenced by Messrs. L. Reeve & Co. The first of the series will be a volume of British Oratory; the second, a volume of Old English Dramas.

The Secret of the Lamas: a Tale of Thibet, is the title of a new book of adventure which will be shortly published by Messrs. Cassell & Co.

Messrs. Houghton, Mifflin & Co., of Boston, U.S., announce *Profit Sharing between Employer and Employee:* a Study in the Evolution of the Wages System, by Mr. Nicholas P. Gilman, editor of the *Literary World*.

Mr. Fergus Hume's forthcoming work, *The Girl from Malta*, will shortly be issued by the Hansom Cab Publishing Company.

Mr. Spencer Blackett will publish in the course of a few days a popular edition of Mr. J. Freeman Bell's fantastic romance, *The Premier and the Painter*.

A special meeting of the trustees of Shakspere's birthplace was held on Wednesday at Stratford-on-Avon. It appears that, in 1872, the late Mr. Halliwell Phillipps handed to the trustees 186 bound volumes, the condition being that none of the books should be consulted during his lifetime, but that after his death the collection would become the absolute property of the trustees without any condition whatever. The works were deposited in a carved oak bookcase, made specially out of wood which formed part of Shakspere's house, and Mr. Halliwell Phillipps kept the keys. On Wednesday one of the executors attended the meeting and produced the keys of the case, which was then opened. In it were found 128 volumes, consisting of Mr. Halliwell Phillipps's MS. notes and extracts from ancient black letter, all intended to illustrate the works of the poet. There were also volumes described as "The Folio Shakspere Papers," and Malone's edition of the plays in thirty-five volumes. The collection forms a valuable addition to the library at the poet's house.

The Barlow Lecturer on Dante (the Rev. Dr. E. Moore) proposes to give a course of three lectures at University College, Gower Street, on "The Early Biographers of Dante." The lectures will be at 3 p.m.; and on the following days and subjects: (Wednesday, February 27) "The Lives attributed to Boccaccio"; (Thursday, February 28) "The Lives by Villani, Lionardo Aretino, Manetti, and Filelfo"; (Wednesday, March 6) "Personal Traits and Characteristics of Dante, as gathered from the Early Biographies, and illustrated by Passages in his own Writings."

Dr. Sidney Martin will, on Thursday next, February 21, begin a course of four lectures at the Royal Institution, on "The Venom of Serpents and Allied Poisons, including those used in the Middle Ages"; and Lord Rayleigh will, on Saturday, February 23, begin a course of eight lectures on "Experimental Optics, including Polarisation, Fluorescence, Wave Theory," &c. Mr. Harold Crichton-Browne will give a discourse on Friday evening, February 22, the title of the subject being "In the Heart of the Atlas."

Messrs. Griffith, Farran, Okeden & Welsh, of St. Paul's Churchyard, have received the first award for their exhibit at the Melbourne Exhibition, consisting of specimens of their publications, books in leather bindings, &c.

THE FORTHCOMING MAGAZINES.

Miss F. Mabel Robinson will contribute to the March number of *Atalanta* an article on "The Children of the Italian Sculptors." The text will be illustrated by reproductions of the work of the brothers Della Robbia, Donatello, Mino da Fiesole, &c.

Mr. Karl Blind will have an essay in a forthcoming number of the *Archaeological Review* on "A Fresh Scottish Ashpitel and Glass Shoe Tale." It contains comparisons with Hellenic myths and with a Finnish folk-tale, and goes to show that amber ("gless,") glass, gold, and the sun are mythically well-nigh identical, and that there is a likelihood of Cinderella's glass shoes having originally been conceived to be of golden-hued amber.

London Society for March will contain a paper, by Mr. Alexandar Gordon, on "The Silver Pits; or, The Work of the Mission to Deep Sea Fishermen." The same writer also

Digitized by Google

contributes an article to the *Argosy* on "Fish Catching on the Dogger."

A critical paper on the career and writings of Mr. Robert Browning, by Dr. A. H. Japp, will be the leading feature of the next number of Mr. Eyles's *Popular Poets of the Period*, to be published by Messrs. Griffith, Farran & Co. towards the end of this month. Included also in the same number will be brief biographies and selections from the poems of the Rev. E. C. Lefroy, Mr. F. B. Doveton, Mrs. Edmonds, Mr. W. J. Robertson, and Dr. Westland Marston.

The first number of a new comic illustrated weekly, entitled the *Jester*; or, The New Dunciad, will be published on February 19.

Shakesperiana, the monthly magazine exclusively devoted to Shaksperian matters and criticism which has reached the threshold of its sixth volume, will hereafter be conducted under the auspices of the New York Shakspere Society, and published by the Leonard Scott Publication Company, of New York.

ORIGINAL VERSE.

ON THE EAST COAST.

"We are in God's hand,
How strange, now, looks the life he makes us lead."—R. Browning (*Andrea del Sarto*).

The boat went out with the ebb to sea,
That June-tide in the morning.
My bonny boys waved their hands to me,
That June-tide in the morning.
I stood and watched them from the door,
My bonny, brave boys came back no more,
That June-tide in the morning.

The sun shone bright and the wind was low,
That June-tide in the morning;
And I kissed them ere I bade them go,
That June-tide in the morning.
The leaves were young upon the vine
When my boy's warm lips were pressed to mine,
That June-tide in the morning.

I watched the boat as it left the bay,
That June-tide in the morning;
And ever until my latest day
That June-tide in the morning
Comes back to me when the skies are clear
And the roses bloom—yet I felt no fear,
That June-tide in the morning.

A mist came up and it hid the sea,
That June-tide in the morning.
Little I thought what awaited me,
That June-tide in the morning.
How those lips had been pressed to mine,
Here on earth for the very last time,
That June-tide in the morning.

The rising tide brought them home no more,
That June-tide in the morning.
Ere noon the boat drifted safe ashore,
That June-tide in the morning.
The mist had hidden the Dead Man's rock,
And never a boat could withstand its shock,
No matter how fair the morning.

They found their grave in the great North Sea,
That June-tide in the morning—
My boys who came never back to me,
That June-tide in the morning.
Yet the waves were stilled, and the wind was low,
Thank God, I kissed them ere they did go,
That June-tide in the morning!

F. P.

MAGAZINES AND REVIEWS.

The February number of the *Archaeological Review* concludes the second volume and the first year of the magazine. From the editorial announcement prefixed it would appear that a larger proportion of space will henceforth be devoted to archaeology proper. A series of papers is promised on the present condition of archaeological research, with reference to the Bible, Greece and Rome, America, India, &c.; and also a subject index to the local antiquarian publications of the United Kingdom—a work, undoubtedly, of immense value. In the current number, the only archaeological article is an excellent analysis, by Mr. Sidney Hartland, of Gen. Pitt-Rivers's excavations in Cranborne Chase, which we commend to those who are not fortunate enough to possess the general's privately printed volumes. Mr. Joseph Jacobs has compiled, with great industry—partly from printed books and partly from the original records—a list of the references to Jews in the Pipe Rolls of the thirteenth century; and Mr. Hubert Hall writes, no less competently, about the site of the ancient Exchequer at Westminster.

The numbers of the *Altpreussische Monatsschrift* for 1888 (vol. xxv.) are of more than usual interest and variety. To the history of the sixteenth century belongs (in part ii.) a long catalogue, with summary and specimens, of letters and other documents, now in the possession of the Kneiphof gymnasium at Königsberg. One of these is a news-letter dated from the coronation of Queen Elizabeth. To the same period refer two papers of literary history: one giving some account of the quaint verses of Christian Wernigke, the other a poem on an incident in the struggle between Dantzig and Poland. The student of economics will find much that is valuable in a well-edited publication of the chamberlain's accounts and statements of salaries at Königsberg in 1724, the year in which the city first saw a common municipal organisation for its several parts at work. Archaeologists will find a discussion of the probable use of certain old turrets which recur in almost all the fortresses once belonging to the Teutonic Order in East Prussia. The philosophy of Kant has been always a specialty of this magazine, and the present year is no exception. In the first and second quarterly parts we have from Dr. E. Arnoldt a careful examination (*apropos* of Stern's publication) of the alleged differences between Garve's original draft of his review of Kant's *Kritik*, and the review which actually appeared in the Göttingen journal after it had been subjected to Feder's redaction. The general result is to minimise these differences, and to put a low estimate on Garve's capacity to interpret or criticise Kant. The editor, Dr. Reicke, continues his publication (in the second and fourth quarterly parts) of the "Loose Leaves" from the philosopher's remains in the Königsberg Library. Among many points they contain of importance in the history of Kant's thought may be specially noted the passages (from the years 1783-7) which seek to guard and explain his idealism, and those (from the year 1793 onward) which defend his moral doctrine against Schiller's charge of "rigorism." We are glad to learn that Dr. Reicke has issued these *Lose Blätter* in a separate form.

The longest article in the *Boletin* of the Real Academia de la Historia for December is a memoir and vindication, by F. Danvila, of a Valencian lady, Na Carroça de Vilaragut, the favourite of Juan I. of Aragon and of his queen, who was impeached and driven from the court by the Cortes of Monzon in 1389. F. Codera writes of the Christian embassies to the court of Alhaquem II. of Cordova in 970-5, mainly from a MS. of Cidi Hamuda preserved at Constantine in Algeria. Dr. Hübner treats of the epigraphy of the Balearic Isles, supplementing the *Corpus*. A plan and engraving are given of a fine mosaic found in the Isleta del Rey, Minorca. Padre Fita reports on a Greek inscription to Clio from Almeria.

The chief works now running, or lately concluded, in the *Revista Contemporanea* are a study of "Parliamentary Government and Universal Suffrage," by J. Sanchez de Torre, written in a conservative sense. It is concluded on January 30. "The Rôle that Poland has played in Europe," by J. Perez y Oliva came to an end on December 15. The works being still continued, either regularly or at intervals, are "Ginés Pérez de Hita," by N. Acero y Abad; "Los Males de la Patria," by Lucas Mallada; "Felipe II. and the Conclave of 1559," by R. de Hinojosa; and the "Critical Observations on the Dictionary of the Academy," by Fernández Merino. The two first numbers of this year—January 15 and 30—are especially valuable: they contain general indices to all the numbers from January 1880 to December 1888 inclusive.

GERMAN PILGRIMS TO THE HOLY LAND.

Dr. Reinhold Röhricht, the well-known historian of the Crusades, has done a great service to this branch of history by publishing an epitome of the great book which he wrote together with Dr. Heinrich Meissner, under the title of *Deutches Pilgerreisen nach dem heiligen Lande*, I. (Berlin). He rightly says that the original is too voluminous for most readers, on the one hand; while, on the other, it contains texts, in Middle High German, which are not readily accessible to students. As these texts deal with matters concerning ecclesiastical and social life in the middle ages, and the history of countries, towns, families, and eminent persons—not to speak of contributions to the political economy of the time, in the record of prices and means of communication by land and sea to and from the Holy Land—he considered himself justified in presenting this useful information in a more popular form, at least the historical part, which forms the first chapter of his epitome. The notes, which are, unfortunately, given at the end instead of at the foot of the page, are so abundant and so full of information as to make the work a bibliography of German pilgrims. Many additions have been made to the original, which was published in 1880—*e.g.*, pilgrims of Swiss nationality, so far as the author could obtain information, are included. The second part of the epitome treats of the pilgrim songs, with musical notation. The third part gives the names and the writings of German pilgrims from 1300 to 1697. This is followed by an elaborate index, which greatly enhances the value of the work. It would be important for the history of the Crusades to possess a similar record of the pilgrims of other nations. The late Count Paul Riant, the instigator of the publications of the Orient Latin, to which he contributed so much, is known to have collected materials for a history and bibliography of French pilgrims. We hope that his MSS. will be published, even though in an incomplete form. The new English "Palestine Pilgrims' Text Society" would do well to direct its attention to the bibliography of the writings of the pilgrims of the United Kingdom. Only with such kind of publications may we expect a complete bibliography of travels in the Holy Land, so ably begun by the late Titus Tobler. It is gratifying to learn from Dr. Röhricht's preface that he is carrying through the press such a bibliography up to 1888, which is to appear next year.

CORRESPONDENCE.

A LETTER OF THE POET OF THE "SEASONS."

Springwood Park, Kelso: Jan. 21, 1889.

In the issue of the *Kelso Mail* for April 13, 1797, was printed a letter which purports to have been written by Thomson, and which (if it be, as it seems to be, genuine) deserves—as the production of a man about whom too little is known, written at an interesting period of his career and containing a very characteristic passage—to be accorded a wider publicity.

Thomson's connexion with this country is well known. The letter, which is addressed to a certain Dr. Cranston (who appears to have been the companion of the poet's early youth, and who was the son of the then minister of Ancrum), on the death of the recipient, fell into the hands of a brother, and subsequently into those of the brother's family. It then lay unnoticed among lumber until it happened to be taken up by a servant for the purpose of packing some candlesticks which were sent to Kelso to be exchanged. The person into whose hands it next fell fortunately discovered its value—which led to its being printed in the *Mail*.

Of course, this story, unless backed by strong internal evidence of the authenticity of the letter, would be worth little; but I think it will be conceded that such evidence is forthcoming. The letter is without date, and is signed only with the initials J. T. It appears to have been written soon after the arrival of the poet that was to be in England—whither he went after the death of his mother. It opens with a somewhat diffuse statement of the writer's pecuniary position, followed, after some circumlocution, by an application for a loan—to be promptly repaid. It then proceeds as follows—the original spelling is retained:

Now, I imagine you seized wt. a fine, romantic kind of a melancholy, on the fading of the year. now I figure you wandering philosophical, and pensive, amidst the brown wither'd groves: while the leaves rustle under your feet, the sun gives a farewell parting gleam and the birds

"Stir the faint note, and but attempt to sing."

then again, when the heavens wear a more gloomy aspect, the winds whistle, and the waters spout, I see you in the well-known Cleugh, beneath the solemn arch of tall, thick, embowering trees, listening to the amusing lull of the many steep, moss-grown cascades; while deep divine contemplation, the genius of the place, prompts each swelling awfull thought; I'm sure, you would not resign your part in that scene att an easy rate. none e'er enjoy'd it to the height you do, and you're worthy of it. ther I walk in spirit, and disport in its beloved gloom. this country, I am in, is not so very entertaining. no variety but that of woods, and them we have in abundance. but where is the living stream? the airy mountain? and the hanging rock? with twenty other things that elegantly please the lover of nature? Nature delights me in every form, I am just now painting her, in her most lugubrious dress; for my own amusement, describing winter as it presents itself. after my first proposal of the subject,

"I sing of winter, and his gelid reign;
Nor let a ryming insect of the spring,
Deem it a barren theme, to me 'tis full
Of manly charms; to me, who court the shade,
Whom, the gay seasons suit not, and who shun
The glare of summer. Welcome! kindred glooms!
Drear, awfull wintry horrors, Welcome all, &c."*

After this introduction, I say, which insists for a few lines further I prosecute the purport of the following ones

"Nor can I o departing Summer! choose
But consecrate one pitying line to you;
Sing your last temper'd days, and sunny calms,
That chear the spirits, and serene the soul."

Then terrible floods, and high winds, that usually happen about this time of year, and have already happen'd here† (I wish you have not felt them too dreadfully) the first produced the enclosed lines; the last are not completed. Mr. Rickleton's poem on Winter, which I still have, first put the design into my head. in it are some masterly strokes that awaken'd me. being only a present amusement, 'tis ten to one but I drop it in when e'er another fancy comes cross.

The remainder of the letter, which is a somewhat lengthy one, is occupied with matters of less interest. I am indebted to Mr. John Smith, the present editor of the *Kelso Mail*, who has recently reprinted the letter in his columns, for permission to make this communication.

George Douglas.

BECKFORD'S "VATHEK" FROM AN ORIENTAL ORIGINAL?

Wadham College, Oxford: Feb. 7, 1889.

Lord Byron, in his notes to the "Giaour," says of *Vathek*:

"For correctness of costume, beauty of description, and power of imagination, this most eastern and sublime tale far surpasses all European imitations; and bears such marks of originality that those who have visited the East will find some difficulty in believing it to be more than a translation."

In a recent discovery of mine at the Bodleian this view met with strong corroboration. In examining the copy of *Vathek* which belonged to the Douce collection—a beautiful little octavo volume bound in morocco, the first English edition, published in 1786 at the price of 15s.—I observed several notes which Mr. Douce had inserted. Among them, on the second page, are the following particulars relating to the origin of the tale:

"One of Wortley Montague's MSS. fell into Mr. Beckford's hands. A Turk who was on a visit to him translated into very bad English the story of *Vathek*, which was in this MS. Mr. Beckford translated the Turk's version into French, with great alterations and additions. Mr. (now Dr) H. procured Mr. Beckford's translation, which he rendered into English with notes and illustrations, in which form it was printed, as in the present copy. Dr. H. thought Mr. B. could have added but little, as the text afforded such genuine matter for the illustration of Oriental manners; but he felt himself at liberty to make some slight alterations in Mr. Beckford's translation."

This note is signed, "F. D." (Francis Douce)—"From Dr. H.'s own information: February 14, 1802"; and close beneath it comes the following:

"Mr. Clarke has since informed me that Mr. B. wrote the English version himself, which Dr. H. published in his absence without authority. This is obscurely alluded to in Mr. B.'s preface to his own French edition republished in—"[date illegible].

The Dr. H. of there notes is easily identified with the Rev. S. Henley, rector of Rendlesham; and the passage in "Mr. B.'s preface" referred to is probably that in the third French edition, where the author says:

"La traduction, comme on sçait, a paru avant l'original; il est fort aisé de croire que ce n'étoit pas mon intention—des circonstances, peu intéressantes pour le public, en ont été la cause."

If we accept this evidence, Dr. Henley would appear, on his own confession, to have been guilty of a gross act of literary piracy; but his statement as to the Arabic MS. would be none the less valuable—there being no apparent motive for falsehood on this point. If its existence be regarded as established, we are at once supplied with a much needed explanation of the deep-seated Oriental characteristics of the tale—for some of which, it must have occurred to many readers besides Lord Byron, it is almost incredible that a European, and a European of the eighteenth century, can have been responsible. At the same time, the crude material, wherever procured, has been so fused in the crucible of genius that in its present form it is unmistakeably stamped in every line with Beckford's *bizarre* and cynical personality—with his audacious licentiousness, and what the *Quarterly Review* called "the diabolical levity" of his contempt for mankind.

Again, if Mr. Clarke's information is correct, we are to believe it was Beckford himself and not Dr. Henley who wrote the English version, which is of such merit that, as the *Dictionary of National Biography* puts it, "it eclipsed the original, and is sometimes taken for it."

In any case, it is curious that recent editors have consistently overlooked these notes of Mr. Douce's, and it would be interesting to have further light thrown upon the question.

Harold G. Parsons.

THE LATIN ARISTOTLE OF 1482.

C.C.C., Oxford: Feb. 11, 1889.

In an examination of the bindings of books in the library of this college, we have, among

* These lines appear to have been cancelled in the sequel; but, in the address to the Earl of Wilmington at the opening of *Winter*, the poet speaks of filling his ear

"With bold description and with *manly* thought."

† The editor of the *Mail* supposes the letter to have been written at Barnet.

Digitized by Google

numerous other fragments, found some 250 leaves, entire or fragmentary, belonging to the 1482 Latin edition of Aristotle's works on natural philosophy, with Averroes's "De Substantia Orbis," printed at Venice "per magistrum Philipum Venetum." As we have not yet been through one half of the library, we have good hopes of finding most of the remainder. The whole work consists of 360 leaves, according to Hain, who describes the volume (*Rep. Bibl.*, vol. i., No, 1682); but his list of contents omits two works found in our register—the "De Respiratione" and "De Morte et Vita." Panzer (*Ann. Typogr.*, iii., No. 593) has a very imperfect description of the work. This appears to be the first edition of any but single treatises of Aristotle; and no copy exists either in the Bodleian, or (apparently) in the British Museum. Hain, however, mentions a copy in the Royal Library at Munich. Do any other copies exist? and, if so, where? Lastly, is the discrepancy between Hain's description and the register of our book due to his having consulted an imperfect copy, or to some other cause?

J. G. Milne.
R. G. C. Proctor.

P.S.—Further examination shows that our copy consisted originally of 364 leaves, or four more than that described by Hain.

THE ONLY KNOWN MS. OF COMMODIANUS.

Bowdon, Cheshire: Jan. 31, 1889.

I hope it may not be too late to remind collectors and librarians that the only known MS. of Commodianus is among the treasures of the Middlehill Library. Of this Oehler wrote in 1847, after stating that the MS. used by Baluzius had been hopelessly lost:

"Alter Commodiani codex MS., qui quidem mihi innotuit, olim Meermannianus, extat hodie in locupletissima et splendidissima Bibliotheca Thomae Phillips, Baronis in Middlehill, saeculi xi membranaceus . . . Sed neque hujus libri copiam mihi facere licuit, nec cui nostratium aditus illius bibliothecae pateret comperire potui."

Ought it not to be secured for the British Museum? J. Edwin Odgers.

THE OLD ENGLISH GLOSS "ELMAWES."

Cambridge: Feb. 9, 1889.

Mr. Aldis Wright has misunderstood my position with regard to the gloss "Lameres= Elmawes," about which I wrote a few lines in the Academy of February 2.

It was not my intention to reproduce, palaeographically, the two entries with which I was concerned. My sole object was to call attention to the omission of the word "lamia," without which "lameres" was unintelligible, and to the disadvantage, in general, of abridging obscure and corrupt glosses. For this purpose my extract from the Trinity MS. ought simply to have run: "Lameres, id est lamia, vel Anglice Elmawes." But as "Lamia" followed in the MS. immediately after "Lameres," I wished to give this in an abridged form. By some accidents, which I do not think it worth my while to explain, an error crept into this latter gloss, but it was not due, as Mr. Wright suggests, to a misreading of the MS.

It is true that I did not know at once what "Gg" in the MS. meant. But, as my time was pressing and the point immaterial to my purpose, I deferred it to some other occasion. Experienced readers of MSS. know how impossible it is to feel at home at the spur of the moment in such a huge and complicated MS. as the one in question. Therefore, my very difficulty induced me to ask future editors of glosses not to abridge them, as glossaries are most difficult, and can only be mastered by those who work steadily at them.

I admit that I should not have abridged a gloss, at the very moment that I protested against the publication of abridged glosses. But I did not want to point out that glosses should not be curtailed at all, but that words (in this case "lamia"), which helped to make glosses intelligible, were omitted, and consequently trouble and loss of time caused to those who had to deal with them.

I would gladly stop here if Mr. Wright had not fallen into a curious error. "It will be seen," he says, "that Mr. Hessels has written *Helmawes* for *Elmawes*." Surely I have done nothing of the kind! It will be seen in the Academy of February 2 that I plainly state that "Elmawes" is the reading of the MS., but that I suggest "Helmawes" as a conjectural reading.

It would have been desirable, for Mr. Wright's own sake, if he had explained more clearly who was responsible for the abridgement of the glosses, he or Prof. Wülcker.

Mr. Wright's conjecture as to the word "Elmawes" seems unacceptable, at least in its entirety. The word Elf had suggested itself to me likewise; but I gave it up on account of the ending "-mawes," and I still prefer to read *Helmawes* (helmaidens or helmen?). But Prof. Skeat tells me that in such a case the word would probably be "hellemawes." He inclines to think that the word stands for "Elf-mawes," like *elfquen* in Stratmann, *f* first assimulating to *m* (Elm-mawes), and then one *m* dropping out, leaving us "Elmawes"; for loss of *f* before *m*, compare *woman*, *Lammas*. Still, we find "helgodes" twice over in Wülcker's Vocabularies.

Here I leave the matter.

J. H. Hessels.

THE ORIGINAL OF CHAUCER'S "A B C."

Cambridge: Feb. 12, 1889.

I am obliged to Mr. Paget Toynbee for pointing out my errors. I feel bound to account for them.

I must claim indulgence for occasional nods. When saying that "De Deguileville wrote a prose piece," the words "prose piece" slipped in by a clerical error; for I said that I was quoting from Morley's *English Writers*, to which I give the reference; and Morley says "devotional poem." In fact, I *knew perfectly well* that it was a poem; but I suppose I was thinking of the version (to which I refer in the same line) in the Cambridge MS. Ff. 6.30; and, I think, I am right in saying that that particular MS. gives the *prose* form.

I find, too, to my sorrow, that I have done M. Paul Meyer a great injustice in saying that he writes the name "De Deguileville"; for I now find that, in Furnivall's "Trial Forewords," he corrects that spelling by saying "De Deguilleville (that's the proper form of the name)." I was misled by the heading of his edition of the poem, at p. 84 of "A One-text Print of Chaucer's Minor Poems," published for the Chaucer Society, which runs thus:

"From Guillaume De Deguilleville's *Pélérinage* [sic] *de l'Ame*, Part I., *Le Pélérinage* [sic] *de la Vie Humaine*. Edited from the MS. 1646 . . . by Paul Meyer."

I suppose, now, that this heading was really written by Dr. Furnivall; but I followed it in all humility, even in the peculiar accenuation of *pèlerinage*, as I thought something was meant by it. For it not only occurs there, but *four times* more in M. Paul Meyer's letter, as printed in the "Trial-Forewords" aforesaid, pp. 101, 102. This error arose, it will now be seen, from trying to copy accurately what was before me in print. These things can be verified by reference.

I meekly accept the correction as to Dante, ix. 113. A reference to my note (*Chaucer's Minor Poems*, p. 264) will at once show whence I got the notion of "perils"—viz., from the passages (which I quote) in Palladio Negro and Sebastian Munster.

I am sorry my book gives so little satisfaction. I really took a great deal of pains about it, and to find that I have nevertheless blundered is most distressing to me.

Walter W. Skeat.

POPE AND ADDISON.

London: Feb. 12, 1889.

Mr. Aitken's discovery of the character of Atticus in the *St. James's Journal* of December 15, 1722, is extremely interesting; and it is not the first time that his researches have produced important results. But to prove that the lines appeared in the *St. James's Journal* before the publication of *Cythereia*, the exact date must be ascertained when that volume was issued. It was then very common to post-date a book which appeared late in the year; as, for instance, the first edition of the *Conduct of the Allies*, which, though published in November 1711, is dated 1712. It is quite possible, therefore, that *Cythereia* may, after all, contain the first printed copy of the famous satire.

F. G.

APPOINTMENTS FOR NEXT WEEK.

Monday, Feb. 18, 4 p.m. Asiatic: "The Northern and Western Kshatrapas," from Notes by the late Pandit Bhagvánlál Indraji, illustrated by Coins from the Pandit's Collection recently bequeathed to the British Museum, by Mr. E. J. Rapson.
5 p.m. London Institution: "Ants," by the Rev. J. G. Wood.
8 p.m. Society of Arts: Cantor Lecture, "Wood Engraving," II., by Mr. W. J. Linton.
8 p.m. Victoria Institute: "Scientific Research and Revelation," by Mr. C. S. Wilkinson.

Tuesday, Feb. 19, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," V., by Prof. G. J. Romanes.
7.45 p.m. Statistical: "The Coal Question," by Mr. R. Price-Williams.
8 p.m. Society of Arts: "Slavery in Relation to Trade in Tropical Africa," by Commander V. Lovett Cameron.
8 p.m. Civil Engineers: "Alternate-Current Machinery," by Mr. Gisbert Kapp.
8.30 p.m. Zoological: "A Skull of the Chelonian Genus *Lytoloma*," and "An apparently new Species of *Hyracodontitherium*," by Mr. R. Lydekker; "Some Fishes from the Kilima-njaro District," by Dr. A. Günther; "Certain Points in the Structure of *Polyboroides*, with Remarks on its Systematic Position," by Mr. F. E. Beddard.

Wednesday, Feb. 20, 8 p.m. Society of Arts: "The Forth Bridge," by Mr. B. Baker.
8 p.m. Geological: "The Cotteswold, Midford, and Yeovil Sands, and the Division between Lias and Oolite," by Mr. S. S. Buckman; "Some Nodular Felstones of the Lleyn Peninsula," by Miss C. A. Raisin; "The Action of Pure Water, and Water saturated with Carbonic-Acid Gas, on the Minerals of the Mica Family," by Mr. A. Johnstone.
8 p.m. Elizabethan: "George Chapman," by Mr. Havelock Ellis.
8 p.m. Shakspere Reading Society: "Twelfth Night," rehearsed under the direction of Mr. W. Poel.

Thursday, Feb. 21, 3 p.m. Royal Institution: "The Venom of Serpents, and Allied Poisons," I., by Dr. S. Martin.
6 p.m. London Institution: "The Legend of Beauty; or, Art as representing the Passion of our Lives," by Mr. Wyke Bayliss.
8 p.m. Chemical: Election of Fellows.
8 p.m. Linnean: "Euphrasia," by Mr. F. Townsend; "Sexual Apospory in *Polystichum angulare*," by Mr. C. T. Druery; "The Retina of the Blowfly," by Mr. B. T. Lowne.
8 p.m. Electrical Engineers.
8.30 p.m. Antiquaries.

Friday, Feb. 22, 7.30 p.m. Civil Engineers: Students' Meeting: "Furnaces," by Mr. T. A. Guyatt.
9 p.m. Royal Institution: "In the Heart of the Atlas," by Mr. Harold Crichton-Browne.

Saturday, Feb. 23, 3 p.m. Royal Institution: "Experimental Optics—Polarisation, Wave Theory," I., by Lord Rayleigh.
3 p.m. Physical: "The Measurement of Electrical Resistance," by Dr. J. W. Waghorn; "Polarised Light—(1) a New Polarimeter, and (2) the Formation of a Cross in certain Crystal Structures," by Prof. S. P. Thompson; "Electrical Measurements," by Prof. Ayrton and Prof. J. Perry.
3.45 p.m. Botanic: General Meeting.

SCIENCE.

Catalogue of the Turkish Manuscripts in the British Museum. By Charles Rieu. (Printed by Order of the Trustees.)

The compilation of a catalogue of Oriental manuscripts is a work which requires a thorough knowledge of the literature of the language, as well as a full acquaintance with the writings of European scholars, without mentioning besides skill and practice in deciphering the different sorts of Oriental handwriting—a proficiency founded not only upon good eyesight, but also upon an intimate knowledge of the languages concerned. In the list of catalogues of Oriental MSS. that of the Imperial Library of Vienna, made by Prof. Dr. Gustav Flügel (3 vols., 1865), occupies a prominent place, owing partly to the large amount of material, partly also to the variety of the branches of literature it deals with. But, although Prof. Flügel had several helpers in his task and himself possessed extraordinary learning, there are nevertheless shortcomings and mistakes, due to the want of encyclopaedic knowledge. Prof. Flügel's own speciality was Arabic; in Persian and Turkish he was a secondhand authority, and we must, therefore, not wonder that in consequence of his defective acquaintance with Chagatai, or Eastern Turkish, he ignored the author of the *Sheibani Nameh*, and was entirely in the dark about the contents of that epic, afterwards edited and translated by the present writer.

With Dr. Charles Rieu, the keeper of Oriental MSS. at the British Museum, the case is entirely different. He is equally versed in Arabic, Persian, Turkish, and Chagatai literature; and his Turkish catalogue is a work which does him great credit. On almost every page he shows an astonishing amount of information and a vast memory, which enables him to compare the texts before him with those quoted by other catalogue writers. In most cases his headings supply a critical description of the contents of the MSS.; where, however, the MSS. are themselves defective, the author, being prevented from collating the copy at his disposal with others, could hardly be expected to determine either the date or the full contents of the work. Thus, I find quoted (p. 224-225) the collection of tales called "El feredj baad-esh Shiddet," as containing originally forty-two tales. But a similar MS., in possession of the Hungarian Academy contains a much larger number, and furnishes also one of the oldest linguistic monuments of Ottoman Turkish, being dated A.H. 742, while the Vienna copy, quoted by Flügel, bears no date, and that at Munich (No. 204) shows the date of A.H. 914.

With reference to the quantity and quality of the Turkish MSS. in the British Museum, I am sorry to say that that institution, which has accumulated so many valuable treasures, is comparatively poor in literary monuments derived from Turkey, standing not only behind the Imperial Library of Vienna, but also behind the libraries of some minor countries. This is the more to be wondered at, as England centuries ago maintained diplomatic relations with the East, and Englishmen have always been conspicuous for their passion for travel. The most valuable portion of the collection of Turkish MSS. consists of the Turki, or Eastern Turkish, where the British Museum can boast of works which have remained hitherto unknown, even to specialists. Such is Egerton 1021, Or. 1712, Or. 1912, Or. 404, and particularly Or. 3222, on the description of which Dr. Rieu dwells at some length, for which we are greatly indebted to him. If the statement of the author could be verified that he "used records written in the Mongol (Uigus) character by Mongol Bakhshis"—*i.e.*, troubadours—this MS. would certainly deserve to be translated into some European language. But I am afraid that this is simply a mode of talking, in imitation of Rashid-ed-din Tabibi, who likewise mentions Mogol records, the existence of which I greatly doubt, as I ventured to explain in the preface to my ethnographical work—*Das Türkenvolk* (Leipzig, 1885). Somewhat unintelligible to me is the statement of Dr. Rieu, that the most important part of the work is the last, which has all the value of a contemporary and official record of the life of Sheibani Khan; while a few lines later he says that Berezin's *Sheibani Nameh* was partly textually transcribed, partly abridged from it. If this be the case, then the work of the anonymous transcriber must be a very meagre one, for Berezin's *Sheibani Nameh* consists of only a few pages, and ought by no means to be compared with Prince Mohammed Salih's epic, which numbers nearly 10,000 verses, and is full of interesting details (not destitute of dates) regarding the life and deeds of the great victor of the Timurides. I cannot omit to mention that, since the publication of my *Sheibani Nameh*, I have found a fragment (alas, but a fragment!) of another versified account of Sheibani, which I am inclined to consider an entirely independent composition, inferior to the work of Prince Mohammed Salih so far as regards its practical value, but of a greater historical importance, as the incidents are described with accurate dates, not only of the year but also of the day. If I am not mistaken, the *temsils* (parables), mentioned by Dr. Rieu on folios 147-8, have been extracted from the MS. in question.

If there is any objection to be brought against Dr Rieu's catalogue it might possibly relate to his spelling of Turkish words, and particularly of those which, having been borrowed from Arabic or Persian, have become the property of the Ottomans, and have adopted the phonetic rules of the Osmanli language. "Gul u Bulbul" is certainly much more correct than "Gül ü Bülbül"; but the Osmanli uses the latter and not the former spelling. And since the author has adopted the Hungarian vowel ö when writing "Tököli" and not "Tokoli," he might have as well used "Hüsein" instead of "Husein," which is a Persian or Arabic, not an Osmanli name.

For the rest, I repeat that this Catalogue of the Turkish MSS. in the British Museum belongs to those marvellous accomplishments in Oriental learning which are becoming in our days rarer and rarer, since Oriental studies show a tendency towards philology instead of towards literature, which must be greatly regretted, for there are copious mines which still await their explorer.

A. Vambéry.

CORRESPONDENCE.

THE DERIVATION OF σαθρός.

Cambridge: Feb. 9, 1889.

In the last edition of Liddell and Scott the origin of the word σαθρός is said to be "uncertain." Does it not come from σήθω (σάω) "I sift," like σαυρός from σήτω? The word is repeatedly used in Greek literature as a metaphor for "unsound." I believe the original idea was "full of holes," the opposite of στεγανός. In Plato's *Gorgias*, 493B, the Σικελὸς τις quoted by Plato compares the soul of the incontinent man to a sieve: τὴν δὲ ψυχὴν κοσκίνῳ ἀπείκασε τὴν τῶν ἀνοήτων ὡς τετρημένην, ἅτε οὐ δυναμένην στέγειν. Presently, enlarging the metaphor, as is his wont, Plato supposes that both the temperate and the incontinent man have many πίθοι—sound in the case of the first, but in the other's case perforated; the incontinent man's ἀγγεῖα are (says Plato) τετρημένα καὶ σαθρά. The conjunction of τετρημένα with σαθρά seems to show that Plato accepted this derivation (see my note on the words τῷ ἐπιστάτῃ in *Crito*, 47B), and it can hardly be doubted that he was right.

J. Adam.

SCIENCE NOTES.

We are glad to hear that the First Lord of the Treasury—in reply to an influential memorial—has consented to grant a pension on the civil list of £100 to the widow of the late R. A. Proctor, who is now living in Florida.

Messrs. Swan Sonnenschein & Co. have in preparation a book on Vital Statistics by Dr. Arthur Newsholme.

From Mr. Barrington Brown's official report on the ruby mines of Burma we glean some interesting particulars with reference to the geological conditions under which the gemstones occur. The principal mines are in the valleys of Mogok, Kathay, and Kyatpyen, where the rocks consist of gneiss and granular limestone. Deposits of calc-spar occur in the limestone, and constitute the primitive matrix of the ruby. Although the gems were formerly worked in the solid rock, most of them are now obtained from recent deposits of sand and gravel, which have resulted from the disintegration of the gneiss, and contain the rubies left on the natural decomposition of the limestone. With the introduction of improved methods of mining Mr. Streeter expects that the solid rock may be advantageously worked, and the rubies thus obtained from their original matrix.

PHILOLOGY NOTES.

Karl J. Trübner, of Strassburg, announces a companion volume to Gröber's *Grundriss der romanischen Philologie*, of which the first volume is now completed, for the Teutonic languages. The editor is Prof. Hermann Paul, of Freiburg, who has been promised the assistance of many of the leading scholars of Germany. Thus, while he will himself treat the general principles and history of the subject, Prof. E. Sievers will undertake phonetics, Gothic language and literature, Old German and Scandinavian metres, and runes. To enumerate the English departments: to Prof. F. Kluge has been assigned the history of the English language and Anglo-Saxon literature; to Dr. J. Wright—the only English name in the list—English dialects; to Prof. Alois Brandl, Middle English literature and ballad poetry; and to Prof. J. Schipper, English metre. It is anticipated that the work will be completed in five or six parts, at the low price of 4s. a part. The English agent is Mr. David Nutt.

Zu Aristoteles' Poetik. Theodor Gomperz. (Vienna.) In this little tractate of forty-two pages a very competent scholar reviews a good many of the difficulties that occur in the first six chapters of the *Poetics*, sometimes upholding this or that view which has already been put forward, sometimes broaching a new view of his own. He is always worth reading, even when we cannot agree with him; and we must confess that this is the case with regard to the majority of the passages in question. A few of them may be mentioned here. Though acquainted at the time of writing with Mr. Margoliouth's *Analecta Orientalia*, he seems hardly to allow it due weight. Perhaps we should not be wrong if we supposed that his opinions on certain passages in the *Poetics* had been very definitely formed before he saw Mr. Margoliouth's book, and that he was loth to have them upset; or perhaps he had hardly had time to weigh the new evidence. We can hardly account otherwise for his refusal to insert τοιαῦται, or something like it, in 1447 a 25, when it not only much improves the sense and construction of the sentence, but is attested by the Arabic version. His proposals to read οἱ χαριέστεροι τῶν ὀρχηστῶν just afterwards, and ἐν δ' αὖ τῇδε τῇ διαφορᾷ in 1448 a 16 seem also to be made in defiance of the Arabic; and the latter of the two is surely very infelicitous. In none of these places does he even mention the new evidence afforded by the Arabic version. In the case of 1450 a 29 he does, indeed, mention the new support given to Vahlen's λέξει καὶ διανοίᾳ for λέξεις καὶ διανοίας; but he is not convinced by it. In 1448 b 30 he seems to us right in dropping ἰαμβεῖον, and reading καὶ for κατὰ, so that the passage runs ἐν οἷς καὶ τὸ ἁρμοττον ἦλθε μέτρον; but Stahr suggested both these changes. The suggestion to put πέφυκεν . . . ἦθος in 1450 a 1 before (and not after) διὰ γὰρ . . . τινας appears to be original and plausible. We are glad to find him taking for granted that the second of the two causes which gave rise to poetry, according to Aristotle, was man's natural propensity to harmony and rhythm; but we are not with him in thinking, as he appears to think, that Aristotle failed to say so in a clearer way than our text shows. Nor can we think that he makes out a good case for chap. v. standing substantially as the author wrote it, instead of being a collection of fragments. His explanation of καθ' ὃ ποιά τις ἐστὶν ἡ τραγῳδία in 1450 a 8, as meaning that a tragedy may be good or bad in respect of its six parts or any of them, may possibly be right; but from his remarks we should gather that he has overlooked the supposed antithesis of the parts κατὰ τὸ πόσον in chap. xii., by which other critics have been led to a quite different explanation. His theory that Aristotle had but a poor opinion of lyric poetry seems to rest on insufficient grounds. In any case it is curious in this connexion to remember the ode in honour of Hermias.

MEETINGS OF SOCIETIES.

Cambridge Philological Society.—(*Annual Meeting, Thursday, January 31.*)

Dr. Verrall, vice-president, in the chair.—It was agreed that a letter of condolence be addressed in the name of the society to the widow of the late Dr. F. A. Paley. A paper was read by Dr. Fennel on "The relation of Accent to the Division of Words into Syllables in Aryan Speech and on Accent as a Cause of Phonetic Change, with special reference to Verner's Law, Sanscrit gutturals (*velars*), and the Greek Vowel System." Dr. Fennell suggested that it should be inferred from the change of Aryan *tenues* to Teutonic spirants at the beginning of words that a similar change took place at the beginning of syllables, while at the end of syllables the Aryan *tenues* changed to Teutonic *mediae*. Accordingly, Verner's Law was to be explained by a syllabism represented by *brā-thar*, *mod-ár*. This involves the assumption *that as little consonantal sound as possible went to an accented syllable in Old Teutonic*. There are some indications that this assumption might be applied to Greek and Sanskrit, in fact to Aryan speech generally, with the result of explaining sundry phonetic phenomena, the explanation of which goes to prove the validity of the assumption as applied to Aryan speech. The theory of syllabism in connexion with accent, which is proposed, seems to suggest the following system: (1) Root syllables beginning and ending with a consonant may be divided if followed by a vowel. (2) Root syllables beginning with a vowel were not divided in syllabism. Thus, ἄγ-ω, Skt. *ój-as*, *ark-á*, *arsh-is*, *áh-is*. (3) A nasal held a preceding vowel and a following consonant together. Thus, ἄγκ-υρα, Skt. *ank-ás*. Moreover, the influence of accent on syllabism may be modified by analogy, *e.g.*, μακρός, μῆκ-ιστος—κρατ-ύς, κράτ-ιστος (Epic κάρ-τιστος —βραχ-ύς, βράχ-ιστος. These assumptions as to accentuation and syllabism involve the consequence that, if the accented syllable of a word be not the first syllable, the syllable preceding the accented vowel must end in a consonant, unless analogy or some other modifying influence intervene. There are sundry indications in Greek and Sanskrit that it is actually the case that the syllable preceding the accent does end in a consonant, viz. in Greek (1) the change of unaccented ε (α before μ, ν, ρ) to ο, and ᾱ (η) to ω, *e.g.* ποδός for πεδός, γονϝός for γανϝός, αὐονή by αὐαίνω, χαρμονή by χάρμα, φλεγμονή by φλέγμα, στελμονίαι by στέλμα, εὔφρονος by εὐφραίνω, εἰκοσί*, πολίς*, κονίς*, ὀλίγος, πολύς; also many instances of the change of ᾱ to ω are in unaccented syllables which would be closed in accordance with the suggested hypothesis. (2) The change of αρ to ρα. That the Greeks were averse to heavy consonantal endings to syllables may be inferred from their terminations of words, accordingly we find θρασ-ύς by θάρ-σος, κρατ-ύς by κάρ-τιστος. (3) The change of aspirates in Greek after a nasal to *mediae* (or *tenues*) is more easily explained if it takes place at the end of a syllable, and, therefore, supports the suggestion that a nasal held a preceding vowel and a following consonant together. Many instances of epenthesis and prothesis, as τελαμών and ὀφρύς, seem to support the hypothesis suggested. The same may be said of a few instances of the change of *a* to *i* which takes place in closed syllables in cases where it cannot be disputed. Hence it may be inferred that *a* is changed to *i* in Sanskrit in closed syllables as in *pit-ár-*, *shtit-á-*, *dit-á-*, *tishtir-ē*. The change of *ar* to *ri* in Sanskrit seems analogous to the change of αρ to ρα in Greek. The change of *velar* gutturals to palatals in Sanskrit may be due to the tendency of accented syllables to lighten their consonantal part. This view explains several important exceptions to the explanation of this change which ascribes it to the influence of vowels, while most cases, if not all, which seem at first sight to bear against the new explanation may be explained by the modification of the normal syllabism proposed owing to the influence of analogy. This last application of the general theory would, if established, destroy most of the evidence for an original Aryan *e*, so that it is necessary to say something as to the relation of the Greek ο to the Greek ε. It may be briefly stated that the discrepancies between the Sanskrit system of Ablaut and that of other kindred languages may be explained by supposing that at an early period the various branches of the Aryan family took a dislike to having more than two *morae* of vowel-sound or of vowel-and-semi-vowel-sound before a consonant. The Greeks solved the difficulty by changing ᾱ to ο; and the influence of οι, ου, ον, ορ, ολ, added to that of ο springing from ε as suggested above, led to the general association of ο (instead of ᾱ or η) with ε.

Philological Society.—(*Friday, February 1*)

Dr. R. Morris, president, in the chair.—Mr. Theodore G. Pinches read a paper on "The Names *Jah* and *Javeh*." The paper was a discussion of certain proper names (found in the inscriptions from Assyria and Babylonia) containing elements which, the author contended, represented the Hebrew *Jah* and *Javeh*. As examples of the former, the name *Yâhâlu* and its variant *Aahâlu*, *Yâ-da'u* and its variant *Aa'u-da'u*, *Yâbibi* or *Yâbibu* (*cf.* Hebrew יָבִב), and *Yâhabi* (*cf.* Hebrew חֲבִיחָ), "son of *Abi-nadib*" (=Abinadab), were mentioned. As *Yâ* at the beginning of a name could become *Aa* or *Â*, seemingly in consequence of the Assyrians and Babylonians being reluctant to pronounce the sound of *i* or *y* before another vowel (see the first two examples quoted above), the author contended that this could occur at the end of a name also; and it might be regarded, therefore, as a very possible explanation that *Aa* or *Â* in the words *Abi-Aa*, *Assur-Aa*, *Nergal-Aa*, *Samas-Aa*, *Bêli-Aa*, &c., represented also the same particle, and that these names meant "My father is Jah" (Abijah), "Assur is Jah," "Nergal is Jah," "Samas is Jah," "My lord is Jah" (*Bealiah*), &c. It was noteworthy that by far the greater part of the divine names of the Assyrian or Babylonian pantheon was non-Semitic. It seemed probable, therefore, that polytheism with these people was very largely due to foreign (Sumerian and Akkadian) influence; and the question naturally arose, whether the Assyrians and Babylonians did not, at first, calm their consciences by identifying all their new deities with Jah, making them, in fact, his manifestations. After quoting some other names, the reader spoke of the curious late forms—*Natanu-Yâwa*, *Gamar-Yâwa* (treated of in the Academy by the Rev. C. J. Ball), and *Bandwa*—which were all, apparently, names of Jews, "children of the captivity." These names were undoubtedly to be identified with the Hebrew Nethaniah, Gemariah, and Beniah, with this exception, that the last element, *-yâwa* or *-âwa*, was the Babylonian scribe's way of representing the Hebrew "Yaweh," which, apparently, was pronounced in full, instead of the more usual "Ya," at the period when the tablets giving the above names were written. It was noteworthy that—whereas the form of the Hamathite name, *Yaubi'di* and *Ilûbi'di*, with the occasional presence of the divine prefix before "Ya" in certain names, showed that the Assyrians were well acquainted with the sacred significance of the word—the rarity of the form "Yâwa," and the absence of the divine prefix, implied that it was not altogether familiar to them. The probability was, therefore, that the former had been used by them from the earliest times, and was a word common to them and the nation nearest akin to them—the Israelites; while the latter was only known to them from its occurrence in Jewish names—a fact which indicated that it was peculiar to the latter.

Cambridge Antiquarian Society.—(*Monday, February 4*)

Prof. A. Macalister, president, in the chair.—Miss Jodrell, of Aylsham, exhibited (through Mrs. Hopkins) a silver medal by Croker, commemorating the restoration to the Church of first-fruits and tenths by letters patent dated November 3, 1703.

obv. Bust of Queen Anne laureated.

ANNA . D . G . MAG . BRI . FR . ET . HIB . REG.

rev. Queen Anne enthroned, holding in the left hand a sceptre, with the right hand offering a sealed scroll to seven kneeling prelates:

above, PIETAS AVGVSTÆ;

in the exergue, PRIMITIIS . ET . DECIMIS . ECCLESIÆ . CONCESSIS . MDCCIV.

—Prof. J. H. Middleton made the following remarks upon some sixteenth-century vestments, exhibited by Dr. Chr. Scott: The two chasubles from the chapel of Sawston Hall, which are exhibited this evening through the kindness of Canon Scott, though themselves of modern materials and shape, are decorated with very elaborate orphreys dating probably from the early part of the reign of Henry VIII., of extremely beautiful and magnificent work with the needle. (A.) The White Chasuble: on this have been sewn parts of the two orphreys of a cope, the subjects being as follows: (1) St. Matthew, with an angel holding an open book; (2) St. Philip, holding a tall cross; (3) St. Jude, holding a long, curved oar. On the back: (1) Some secular saint in hat and gown of Henry VII.'s time; (2) and (3) the B. V. Mary and St. John looking upwards to a

Digitized by Google

crucifixion-scene, which is now missing. These figures were probably at the top of each orphrey of the cope, the crucifixion being on the hood; (4) St. Peter holding one key; (5) another secular saint, in similar dress to No. 1., probably intended for St. Alban, as Mr. Montague James has suggested. The technique of this needlework is the same as that of the Lyng altar-cloth, exhibited last term [*See* Academy, December 8, 1888]. The colours of the silks are very rich; and great variety of effect is produced by different arrangements of the stitches used for the gold thread, especially for the diapers of backgrounds and other decorative details. Each figure is represented under a pillared canopy, standing on a floor of marble squares, shown in perspective in a very un-mediæval way. The canopy details and other points show that the date of this needlework is probably not earlier than the reign of Henry VIII. (B.) The Red Chasuble, also, is ornamented with pieces cut from the orphreys of one or more copes of the same date and workmanship as the previously described orphreys. The subjects are taken from the legend of the martyrdom of St. George of Cappadocia, the patron saint of England during the latter part of the mediæval period. Some scenes are evidently missing, such as his death by decapitation. Those here represented are: (1) St. George in silver armour, with a red cross on his breast, represented as a youth, nimbed; he is brought before a king or emperor under the charge of having pulled down the edicts against the Christians which Diocletian had ordered to be published in Jerusalem, and other parts of the Roman world, about the year 296. According to the usual form of the story, St. George was brought before Dacianus the pro-consul of Judæa; but here the enthroned figure is represented as a royal or imperial person, with crown and sceptre; (2) the king consults with his councillors; (3) St. George, stripped of his armour, is brought before the king, who orders him to sacrifice to Apollo; (4) St. George is again brought up for judgment: this subject is very badly restored. The intermediate one of the fall of the temple of Apollo is missing; (5) St. George is hung up, nude, to a *furca*, and is tortured with a whip and pincers in the presence of the king and his attendants; (6) St. George is raised from the tomb by Christ: in the background is a view of Jerusalem, represented as a mediæval fortified city. Over each subject is a canopy on pillars, with two angels holding the *rutilans rosa*, the favourite badge of Edward IV., as used on his "rose-nobles." The whole work is *appliqué* on linen; and great splendour of effect is given by stuffing parts of the gold canopies with wool, so as to make them stand out in high relief—a not unusual method at this late period, but more common in Germany than in England. The whole history of the cult of St. George is a very curious one. He has been from a very early period, and still is, one of the most popular saints of the various eastern Churches—Greek, Coptic, Maronite, and the like. A church at Thessalonica was dedicated to him as early as Constantine's reign, only about thirty years after his death. In 494, Pope Gelasius, when reforming the calendar, decided that his legend was doubtful, and placed St. George among those "saints whose names are rightly reverenced by men, but whose deeds are known only to God." In all the eastern forms of his legend, there is no mention of the fight with the dragon. That story is simply a Christian version of the old Perseus and Andromeda myth, which was taken up and added to the existing legends about St. George by the crusaders in the twelfth century. All the details of the myth are similar in the pagan and Christian legends; and varieties of both legends give two different places as the site of the exposure of the Princess Andromeda or Cleodolinda—namely, Joppa on the Phœnician coast, and the shore of the Egyptian Delta. Again, as, in classical art, Perseus holds the head of Medusa, so, in the Christian legend, St. George is sometimes represented holding a head, which is taken to be a symbol of his death by decapitation. Henry I. of England first made St. George the patron saint of his army. In 1222 a public feast in his honour was decreed in England; and in 1330 he was made the patron of the new Order of the Garter. In this way he gradually became regarded as the special patron saint of England. In other countries he was especially the patron of the armourers' guilds; for whom, *e.g.* at Florence, Donatello carved his wonderful statue of St. George, which stands in a niche of Or San Michele. The finest series of paintings of his life and sufferings is at Padua, in the chapel of St. George, executed by Altichiero and Jacopo degli Avanzi, pupils of Giotto. Carpaccio's at Venice deal only with the dragon-story, and the subsequent baptism of the princess and her father.—Prof. Hughes exhibited a half figure in gilt bronze, 1¼ inches in height, which was described by Prof. Middleton as follows: It appears to have formed part of the ornaments of a large altar candlestick or some such object of ecclesiastical use. The figure is that of a king wearing a crown, and worshipping, with folded hands; its base is surrounded with a garland of trefoil leaves, which, together with the stiff treatment of the beard, and the conventionally wavy hair, seem to show that the figure is of the fourteenth century. It appears to be a *cire perdue* casting, and is thickly gilt, evidently by the old mercury process. It is said to have been found in a grave, near Kirkwall, in the Orkney Isles, and had been lent to Prof. Hughes by the Rev. Dr. Omand, of Monzie.—Mr. J. W. Clark exhibited, and made remarks on, one of the sheets of John Hamond's plan of Cambridge, published in 1592. He prefaced his remarks by an exhibition of the plan by Richard Lyne (1574) drawn to illustrate the *Historia Cantabrigiensis Academiæ* of Dr. Caius. This, the earliest plan of the town, is a bird's-eye view, drawn without any regard to scale or proportion. It was succeeded by that which appears in George Braunius's *Civitates Orbis Terrarum*, which has all the appearance of a new plan, but is in reality only Lyne's plan turned round, so that the spectator is supposed to view the town from the west instead of from the south. A copy of this plan appeared shortly afterwards, with the omission of the figures in the foreground; and the plan preserved in the British Museum, by William Smith, dated 1588, which has lately been printed in *Shakspere's England*, is only a part of Lyne's plan. Hamond's plan is drawn to scale, with considerable accuracy; and, being about 4 feet long by 3 feet deep, it is of sufficiently large size to admit of the buildings being laid down with clearness of detail. It consists of nine sheets, engraved on copper, to the scale of 120 feet to the inch. Hitherto a copy in the Bodleian Library, presented by Baker to Hearne, was believed to be unique. A few weeks ago, a copy of the central sheet was found by Mr. John Foster in a portfolio belonging to his late father, and entrusted to Mr. Clark for description. By a fortunate accident it happens that this sheet is the one which in the Bodleian copy has been seriously damaged by damp. The larger part of it is occupied by Trinity College, as its buildings were arranged before Dr. Richard Neville became master; and several details which were hitherto obscure can now be cleared up. The small plan of Cambridge which appears in a corner of Speed's map of Cambridgeshire (1610) is a copy of part of Hamond's plan; as is also the rare plan attributed to Hollar, of which a fine example, preserved in the Fitzwilliam Museum, was exhibited by the director. It is hoped that this discovery may direct the attention of collectors to the possibility of recovering some of the other sheets.—Mr. W. M. Fawcett brought before the meeting the recent discovery of a clerestory in Linton Church. He mentioned that the plan of the church was not unusual, in that it had a west tower, nave and aisles, and chancel with chapels beyond; but the construction of the nave showed five arches and a half of early character on the south side, and only three of later date on the north. The clerestory on each side had four windows and was of still later date. Some repairs had lately been effected in the church; though it was not proposed at first to touch the plaster on the walls, it was ultimately found necessary to do so, and in removing this plaster three circular windows were found below the present clerestory. They now opened under the roof of the present aisles, and so were simply opened out and left. The roof of the original aisle evidently finished at a string below these windows, and there is a weather-moulding showing the pitch of the old nave-roof. Only three of these windows were found over the three western piers; and if more ever existed they were taken away when a large arch the size of those on the north side was introduced in the place of the two eastern arches. This arch was only removed a few years ago, and the arcade made symmetrical to please the taste of a somewhat fanciful parishioner.

New Shakspere Society.—(*Friday, February 8*) Dr. F. J. Furnivall in the chair.—Miss Grace Latham read the second part of her paper on "Shakspere's Development in Comedy." In the "Comedy of Errors" we found a change in the method of construction, which was that of four central figures, instead of a central group. Behind these central figures was a common-place background, with what we might call a "middle distance" of tragedy. The advance was great in this comedy, which, though simple, was of perfect construction; the five acts all filled with the plot, and the climax well led up to. It was an advance in characterisation, in reflexion, and in power of construction. It was worth noting that Shakspere's first finished portrait of a woman was that of a jealous wife. In the "Two Gentlemen of Verona" we next find Shakspere first essaying a complicated plot, with six threads; his real interest, however, being less in the plot than in the development of the principal characters. For construction, we had here a central group of six figures, with a background more connected with the central figures than was the case in the "Comedy of Errors." The climax, however, was reached too soon—in Act III.—and the end was weak in consequence. The new departures consisted in the use of a new species of comedy—the use of romance—and the appearance of Shakspere's first "great lady." Miss Latham then gave her reasons for considering the "Midsummer Night's Dream" to be the second comedy in point of date. The characters existed for the plot, and not the plot for the characters. The play was padded out with songs and dances, and a play within a play. It was full of country references, with no town references; and it was more a poem than a play. In addition, there was its coldness, its want of strong characterisation, ignorance of women, lack of thought and philosophy, and lengthiness and prolixity. In the "Merchant of Venice," constructed, like the "Two Gentlemen," with a central group and a complicated plot, we found the "great lady" character, and woman's high comedy, fully developed; and tragedy and comedy combined, this time on the same plane.—The chairman could not accept the place given to the "Midsummer Night's Dream" by Miss Latham. A want of characterisation was claimed for it; but one had only to compare its characters with those in the "Errors" and the "Two Gentlemen," and ask oneself which characters one remembered best? He thought that sufficient justice had not been done to the immense advance in the "Merchant of Venice."—Mr. G. B. Shaw also differed as to the date of the "Dream." The advance from the "Two Gentlemen" straight on to the "Merchant of Venice," without the intervening step of the "Dream," would be incredible.—Mr. Floyd Wilson thought that Shakspere's advance in the "Merchant of Venice" was similar to that of all artists, whose gradual progress we do not perceive, but are suddenly conscious of something brilliant. In this case it was the outburst of the successful man, at last sure of his own powers.

FINE ART.

THE GROSVENOR GALLERY.

II.

The Wilsons are not so numerous or important as last year; but in the same place as then was occupied by Mr. Rankin's superb and poetical "View between Dolgelly and Barmouth" there hangs another which is an exceptionally fine example of the master, especially in colour. This brilliant picture (75) belongs to Mr. J. Orrock, and is called "Lake Nemi," with a doubtful query after; but its name matters little. It is a masterpiece which need not fear comparison with the work of any master of any school—one of those works which enable us to understand how an artist

Digitized by Google

contemporary with Wilson, and of no mean ability as a landscape painter—Edward Dayes—should write of him and Gainsborough.

"His [Gainsborough's] excellence lay in his colouring; the silvery tones are fine, with a deal of air, and the figures and animals often spirited; yet to compare him (as a landscape-painter) with Wilson, as Reynolds did, is to put the strength of an infant in comparison with Goliath."

Of fine sweet quality is also Mr. S. S. Joseph's little "Lake Scene" (33); and Mr. Hollingsworth's "Sion House" charms in spite of its mannerism.

The Cromes are both important and fine. The most striking and original is a rather dark and dull picture of "Gibraltar Watering Place, Back River, Norwich" (51), with a stormy sky, and a ragged paling inclining over the water and reflected in it, forming the chief light and centre of the composition. It is impossible to account in words for the impressiveness of this fine work, formed of such simple elements so simply painted; but it reminds us of the artist's injunction to his son—to dignify everything he painted, if it were only a pigstye. Of Crome's seapieces there probably does not exist a finer one than Lord Wantage's view of the Norfolk coast (145), with its low yellow cliffs, and the cutter with its broad brown sail against the slatey sky; but Mr. Quilter's little "Yarmouth Pier," with its sunny clouds and clear evening air, has charms which its larger rival misses. Of Crome's small landscapes there are a few of the finest quality, as Mr. Orrock's "Glade Cottage" (68), Mr. Joseph's "Woody Landscape" (80), and Mr. Lockwood's "Woody Landscape with Sheep" (113). We wish that we were sure that Mr. Gray Hill's large "Woodland Scene" (163) were a Crome, or at least that we knew the name of the painter, for it is a fine picture. The oil paintings of Cotman are so comparatively rare that we are glad to see again Mr. Benson's "Scene on the East Coast" (141), the large, ill-composed, but broad and richly coloured picture that was at Burlington House a winter or so ago. Of fresher interest and greater power and poetry is the noble "Homeward Bound" (35), belonging to Mr. Thomas Glen Arthur, with its great ship seen against a cloud-barred evening sky, and ploughing slowly through the cool dark green waves. We wish it were in better condition, for it shows the artist in a moment of rare inspiration. A very good and characteristic little seapiece by Cotman is sent by Mr. Humphry Ward (100). Nor does this end the examples of the Norwich school. Both of Crome's pupils, Vincent and Stark, are represented—the former by probably the largest number of works ever brought together in one room since his unexplained disappearance at the age of 25. Mr. Cuthbert Quilter's "Greenwich Hospital" (16) and Mr. Hollingsworth's "On the Yare" (24) represent this gifted young artist at his highest; and Mr. Louis Huth's "Harbour Scene" (92), and Mr. Orrock's "Homestead" (135) are bright and good examples. The Starks lent by the last-named owner and Mr. Crush (22 and 150) are of fine quality; and Mr. Jeffrey Whitehead's small seapiece by Stannard (13) completes a representation of the Norwich school which misses none of the most important members of it, and none of the second rank except Ladbrooke and Thirtle.

By Turner are four pictures, none of them of the greatest importance; but Mr. C. Morrison's "Pope's Villa" is a beautiful picture of his middle time, very elegant in composition. It appears in a bad state, but judicious cleaning would probably reveal all its original loveliness. Lord Wantage's "High Street, Oxford" (34) and "Landscape with Bridge" (38) are both probably a few years earlier. The former is possibly that exhibited in 1812; and Lord Wharncliffe's "Avalanche in the Val d'Aosta" (27) was at the Royal Academy in 1837 under the fuller title of "Snowstorm, Avalanche, and Inundation: a Scene in the Upper Part of Val d'Aouste [*sic*], Piedmont." It is one of Turner's most daring attempts to depict confused and terrific phenomena.

Constable is, on the whole, much better represented, notwithstanding the large number of fine examples of the master which Sir Coutts Lindsay gathered together last winter. First of all there is the famous "Lock" (85), lent by Mr. C. Morrison, one of the most characteristic and strongest of his pictures, fine in foreground as in distances, in water as in sky, finely drawn and finely painted throughout—a landscape to which, for truth and vigour, it would be difficult to find a rival in the world, except among Constable's own works. Even among these it would not be easy to match, in its silveriness and lightness, the delightful little "Yarmouth Jetty" (37), of which Mr. C. F. Cundy is the fortunate possessor. It is suggested in the catalogue that this most delicate and luminous of Constables was one of the pictures sent to France with the "Haywain" in 1824, which created such a furore at the Salon, and that the other was the "Bridge," now at Burlington House. If this be so, the present is an opportunity which may never occur again for studying the three pictures which had such a potent influence on French art. Two hundred and fifty pounds was the price, the small picture of Yarmouth being "thrown in." Mr. Orrock sends another little seapiece of Constable's (132) of a somewhat similar quality. Besides these are Mr. Lewis Fry's "Gillingham Mill" and Mr. Thomas Ashton's "Valley Farm," both of which have been exhibited within recent years. We would, however, rather see these again than a good many of the studies and sketches of the painter, most of which are exhibited by the executors of the late Miss Isabel Constable. To those, however, who wish to study the manner in which Constable used to record his impressions, or blot out his first conception of a composition, the fifth room will be very full of interest. Here he will find first studies for the "Salisbury from the Meadows" and "Dedham Vale" and "The White Horse"; and, among others, the "Opening of Waterloo Bridge"—the last a wonderful arrangement of little dabs of paint, showing his conception of the scene as a brilliant arrangement of variegated points of colour, the civic barges with their brightly dressed rowers dotting the river down from Whitehall Stairs. As we know, he spent many years over this picture, and failed in the end to satisfy himself or the public. Here also are tender studies of clouds and brilliant splashes of sunsets, and bits from Suffolk and Hampstead, one fine warm moonlight sketch, rapid summaries of trees, and others like "The Study of an Elder Tree" (272), carefully finished. On the whole, an interesting collection of the odds and ends of a painter's life; but, even in the case of so celebrated a painter as Constable (more, perhaps, on that account), the public exhibition of such hasty and insignificant work as much of this is is an example which we hope will not be followed.

The reputation of Morland, which has had so lively a revival of late years, is likely to be still further increased by the many choice examples of his best work at this exhibition. Nothing can be better of its class than Mr. Hollingsworth's "Carrier's Stables" (63), or, in another way, than his gemlike little "Surprise" (55). A brilliant little landscape is Mr. Crush's "Poachers" (59), and Mrs. Thwaites's "Lost Kite" (1) and "Happy Family" (87) are examples of his skill when most accomplished and refined.

Except Sir John Neeld's "Scene from *Quentin Durward*," by Bonington (18)—fine as usual, in colour and unusually vigorous in design—there is little else that deserves special mention among the oil paintings, though Etty and Landseer, Stothard, Ward, Cotes, Chambers, and other celebrated artists, are represented by interesting examples. Of the pastels the showy works of John Russell will be useful chiefly in showing modern pastellists the dangers of the material. The only artist who seems to have understood it thoroughly is George Knapton, by whom Mr. Humphry Ward sends a delightful portrait of Mrs. Brocas (221). Hugh Douglas Hamilton's portrait of George, sixth Duke of Argyle, belonging to Sir George Russell (223), is also excellent, but it is all elaborately worked with the point. Pleasant is Sara, Countess of Essex (224), lent by Mrs. Frederick Fane, but it resembles the work of Daniel Gardner rather than Russell, to whom it is ascribed. There is much grace and quiet colour in three pastels by Gardner, which belong to Mr. A. Anderdon Weston (200, 201, 202). The other pastellists of the century (1737-1837) here represented are Romney, Francis Cotes, Stanley, M. King, John Raphael Smith, and J. F. Rigaud.

Cosmo Monkhouse.

THE GLASGOW INSTITUTE.

The twenty-eighth exhibition of the Glasgow Institute is probably one of average—certainly not of more than average—excellence; but the appearance of the rooms, and the impression produced by their contents, have suffered considerably from the frequently unintelligent arrangements of the hanging committee. Seldom, indeed, have we seen an exhibition in which a greater number of indifferent pictures occupied prominent positions, or in which the various works have been combined with so little regard for mutual helpfulness of tone and colour. A particularly flagrant example of the last-named error is the hanging of Mr. W. E. Lockhart's "Glaucus and Nydia" side by side with Mr. Burne Jones's "Tower of Brass," whose potent tones are quite fatal to the more delicate colour-scheme of the Scottish painter's work.

As usual in the exhibitions of the Glasgow Institute, the examples of current Scottish art have been supplemented by a few selected works by important London artists, and even by deceased masters, drawn for the most part from the cabinets of wealthy West of Scotland collectors. Among these the most striking is the fine example of Mr. Burne Jones's work to which we have referred; and another excellent subject from his brush is the large water-colour of "The Bath of Venus"—a subject rich in colouring and learned in its expression of the nude, but missing, we cannot but think, something of the exquisite facial expression which characterised one of the attendant maidens (that immediately to our right, above the head of Venus) in the published pencil sketch that was executed for the picture. The examples of Constable are numerous, but small in size, and hardly expressive of the master at his best—of his vivid sense of the glitter and motion of nature. They can hardly be other than disappointing to any visitor who may have fresh in his recollection the admirable series of the master's oil sketches now visible at the Grosvenor Gallery. Neither can the examples of Patrick Nasmyth's landscape—the "Carisbrooke Castle" is the finer of the two—be held as representative of the high-water mark of his art; while the little "View on the Arno," by Richard Wilson, is too minute and trivial to be regarded as a fitting example of the great modern master of classical landscape. By Mr. G. F. Watts is a noble "Diana and Endymion"—a finished oil sketch for the

Digitized by Google

larger picture; and on a screen in the Great Room hang Mr. Whistler's deeply pathetic portrait of his mother, alike in feeling and expression the greatest of his works; Sir John Millais's powerful half-length of Lord Salisbury; a richly coloured example of Millet—"La Laveuse"; and a delicate and transparent French coast scene by Bonington.

Among the landscapes by living Scottish painters are two fresh and vivid coast scenes, full of air and sunlight, by Mr. W. M'Taggart; and Mr. J. Lawton Wingate's "Winter Twilight"—a small picture, but in quality and in composition (usually this painter's weak point) one of the most perfect and complete things that he has given to the public. Mr. W. D. McKay shows his carefully painted "Noonday Rest" of tired haymakers; Mr. Colin Hunter's vigorous wave-painting is seen in his "Fishers of the North Sea"; Mr. T. F. Goodall sends his impressive "Last of the Ebb, Great Yarmouth"; and from Mr. P. Macgregor Wilson comes a warmly tinted picture of "A Summer Day" by the shore, with pleasantly introduced figures of children at play among the white, sun-lit sands. Mr. W. Logsdail is represented by his "St. Martin's-in-the-Fields"—a Chantrey Bequest picture, lent by the Royal Academy, grey and harmonious in its treatment of the architecture and background, but rather spotty and wanting in relation in the patches of vivid colouring appearing in the foreground figures.

Among the figure-pictures is a remarkable and individual subject by Mr. A. Roche from the legend of the "Good King Wenceslas"—a work uniting the aims and methods of the modern French school of landscape with an attractive mediaeval quaintness in the figures. Mr. William Kennedy paints with some dramatic power, but with little beauty of form, handling, or colour, "The Deserter" proceeding handcuffed along a country road lighted by a wan and dreary sunset, under guard of a couple of mounted hussars, watched by a party of sympathising and indignant field-workers. Mr. James Guthrie, one of the most recently elected Associates of the Royal Scottish Academy, shows a full-length of "Mrs. Fergus," strongly suggestive of foreign art-methods. There is some excellent colour in the mingling tones of the background, with the green light streaming from the window to the right; but the purple and ruddy hues of the drapery are ill-chosen and ill-combined, the brush-work is characterised by an unsightly spottiness which destroys all quietude and harmony of effect, the drawing of the right arm is markedly defective, and the flesh-tones are unpleasantly muddy and wanting in purity. It is an unsuccessful effort of a really capable painter, who is seen to far greater advantage in a pastel portrait of a child which he exhibits—a work full of refinement, concentration, and transparency. Mr. George Reid sends his portrait of "John Ure, Esq.," firm in touch, luminous in its flesh-painting, full of individuality and character, like all that issues from the studio of this thoroughly accomplished painter; and Mr. C. E. Stewart shows a pleasing and carefully handled half-length of a lady. In the water-colour room are Mr. Arthur Melville's richly coloured, cleverly touched, "Snake Charmer," and Mr. E. A. Walton's striking pastel of a peasant girl's head.

In the department of sculpture the exhibition is decidedly stronger and more interesting than usual. Mr. E. Onslow Ford shows a most graceful little bronze statuette of a naked girl, a fine study of a female head, and another of the picturesque time-worn head of an aged woman. Mr. Homo Thornycroft is represented by his basrelief of "Charity and Justice," one of the decorations of the Gordon Memorial in Trafalgar Square. Mr. J. Massey Rhind is seen to advantage in the large lines and well-chosen poses of his group of mother and child, while we have a glimpse of some of the most powerful French sculpture of the earlier part of our century in the two figures of "Tigers" by Barye.

CORRESPONDENCE.

ANDREA DEL SARTO'S "CARITA."

Oxford: Feb. 9, 1889.

Thanks to the kindness of my friend, Count Angelo de Gubernatis, I have long been in possession of a photograph of his cartoon of Andrea del Sarto's "Carita," to which Mr. William Mercer calls attention in the ACADEMY for February 9. There can be little doubt that his cartoon, likewise executed in *grisaille*, stands half-way between the original portrait in my possession and the idealised symbolical figure executed *in fresco* in the Collegio dello Scalzo. I should have brought this important discovery to the knowledge of the public long ago, if I had not waited the result of some important inquiries in which Count Angelo de Gubernatis is engaged as to the history of these cartoons. Doubts were expressed at first by some very competent critics as to the genuineness of my cartoon. These will now be completely removed, I believe, by the picture in the collection of Count Angelo de Gubernatis at Florence.

F. MAX MÜLLER.

NOTES ON ART AND ARCHAEOLOGY.

THE Council of the Royal Institute of British Architects have awarded their royal gold medal for the current year to Sir Charles T. Newton, formerly keeper of the Greek and Roman antiquities at the British Museum, in consideration of his works as a man of science and letters.

ON the advice of Mr. Penrose, the dean and chapter of St. Paul's have given a commission to Messrs. Salviati to execute another mosaic for one of the spandrels under the great dome. The subject is "The Evangelist St. John," designed by Mr. G. F. Watts, and enlarged to the full size by Mr. Breeton. It is now more than twenty years since the mosaic of "The Prophet Isaiah" was executed by the same firm.

AT the request of Sir Coutts Lindsay the following artists have consented to act as a hanging committee for the summer exhibition of the Grosvenor Gallery: Messrs. W. Q. Orchardson, Luke Fildes, E. J. Gregory, A. Stuart Wortley, G. P. Jacomb-Hood, and E. A. Waterlow.

MESSRS. WILLIAM B. HALE and Robert McGregor have been elected full members of the Royal Scottish Academy, in place of the late Robert Herdman and Norman Macbeth.

DURING April and May Messrs. Dowdeswell, in conjunction with Messrs. Buck & Reid, will hold a loan exhibition of works by French and Dutch painters of this century. There will be included four or five famous Millets, and several good examples of Corot and Rousseau. Among Frenchmen, are Diaz, Daubigny, Dupré, Delacroix, Decamp, Troyon, Monticelli, Breton, and Courbet; and among Dutchmen, Israels, the three Marises, Bosboom, Mesdag, and Mauve. It is intended, moreover, to include works by Meissonier, Gérôme, Jacque, and Van Marcke; and a special interest will be given to the exhibition by a selection from the works of Georges Michel and Adolphe Hervier—two French landscape painters, long neglected, whose reputation has greatly risen of recent years.

IT is understood that the French have abandoned their intention of excavating at Delphi, in view of the large sum of money demanded as compensation for the village of Castri, which now occupies the site. The opportunity has now been offered to the Americans; and Prof. C. E. Norton, of Harvard, has issued an appeal for a subscription of 80,000 dollars (£16,000), to enable the American Archaeological Institute to undertake the work. American activity in Greece has hitherto been chiefly devoted to identifying the sites of some of the demes in Attica. Only last month, Mr. Washington, of Yale, succeeded in proving by inscriptions that old Stammata was the chief centre of the deme Plotheia, one of the original members of the Ionic confederation.

A VALUABLE and beautiful work has recently been issued by the firm of P. Kaeser, of Munich (London agent, E. G. Cundall, Henrietta Street, Covent Garden), on the Royal Bavarian collection of paintings in the Old Pinakothek, Munich. It is a large folio, containing fifty etchings by Prof. J. L. Raab, with letterpress by Prof. Fr. von Reber, Director of the Bavarian State Galleries. Among the pictures which have been etched by Prof. Raab in his usual masterly style are three Raphaels, five Murillos, seven Van Dycks, six Rubenses (including the "Battle of the Amazons" and the "Lion Hunt"), Titian's portrait of Charles V., Holbein's of Sir Bryan Tuke, and Albert Dürer's of himself.

MISS AMELIA B. EDWARDS lectured at the Town Hall, Manchester, last Wednesday, upon "Ancient Egyptian Portraiture in Sculpture and Painting," giving upwards of fifty illustrations of Egyptian portrait-statues and painted portraits, which were shown by the oxyhydrogen lantern. Miss Edwards showed how all portraiture was in its origin funerary, but not memorial; the portraiture of ancient Egypt being designed to provide an artificial body for the "Ka," about which she has recently been writing in the ACADEMY. The lecturer conducted her audience through all the leading schools of Egyptian art, beginning with the Great Sphinx of Ghizeh, the oldest specimen of sculpture in the world, which she ascribed to prehistoric artists, and for which she claimed an antiquity so remote that it might even extend to a period of 10,000 years. The latter part of the lecture was devoted to an account of the portrait-mummies discovered last year by Mr. Petrie in the Fayûm. Having described the processes and pigments employed by the artists of this period, Miss Edwards exhibited a series of eighteen very beautiful examples of these extraordinary panel portraits, which date from about 200 B.C. to A.D. 100.

THE STAGE.

THE PRINCESS'S MELODRAMA AND "THE SCHOOL FOR SCANDAL."

IT is understood that, in the last piece produced by Mr. Wilson Barrett at the Princess's, the stalls were considered rather more carefully than the pit and the gallery. If that was a mistake it is one with which it is perfectly possible to sympathise; but Mr. Caine and Mr. Barrett, on the present occasion, have fallen into no such error. The acting of the play may well appeal, indeed, still to the higher class of audiences, or to audiences in their higher moods; but the piece itself, by subject, structure, and treatment, is addressed, in the first instance, to lovers of the sensational and to lovers of that peculiar mingling of the familiar and the novel which a melodrama alone affords. Mr. Irving is

Digitized by Google

reported to have expressed himself with a measure of contemptuousness on the drama that is not meant for acting. He would have something more than tolerance, perhaps, for "The Good Old Times," for this drama certainly is not meant for reading. No, no; it is not, and it does not aim to be, very literary in form. It is not very philosophical: it is not very poetic; it does not abound in proofs of the penetrating observation of life; but it gives us characters to detest and characters to like, and a story in which it is impossible not to take an interest.

It is very likely that, by the time the piece is seen by any large portion of the public, the story will have been compressed in certain places. Thus, the earlier grotesqueness of Mr. Pateman as an aboriginal may well find itself abbreviated; and even Mr. George Barrett—ever humorous and genial—has a little too much opportunity as long as that with which he is concerned is not the necessary business of the play. Of course, we should prune him nowhere else, since in himself he is most pleasant and refreshing. Again, the scenery—a great aid in some respects, since much of it is exquisitely painted—is, at a certain point, rather an encumbrance. The panorama makes us acquainted with the landscape of the Bush; introduces us to Australian vegetation and to a being whom the aboriginal describes as the last woman of his tribe—a being with whom we should "desire to be better strangers." But while the panorama goes its length the real story flags a little. Pulled together, by this means and that, it would be found, we think, to gain in interest and to gain in strength. And, meanwhile, it is at all events healthy; it is interesting in its presentation of many of the facts of convict life some thirty years ago; it is occupied a little with social problems *à la* Charles Reade; and it contains an abundance of scenes which steadily and inevitably hold the attention.

Much, of course, is due to the acting, writers and performers having played into each other's hands with good effect. The stage has no better representative than Mr. Wilson Barrett of a manly person, accused of things of which he is innocent, and subjected to poignant suffering. Both in his chivalry and in his disasters it is possible, nay easy, to believe, so dramatic is Mr. Barrett in his intenser moments, and so natural in his quieter. Mr. Barrett is at the same time romantic and reasonable, impressive and judicious. To Mr. George Barrett's quaint humour we have already paid tribute. The two arch-villians of the piece are skilfully represented by Mr. Austin Melford and that very rising actor Mr. Lewis Waller, whom we saw lately in "Brantinghame Hall." Several quite unimportant men's parts are capitally played. The cast therefore, in all particulars, has been well looked to. Miss Eastlake's part, *larmoyante* and womanly, sympathetic and tender, is of the kind that she has played before, very satisfactorily; and she plays it now with ripeness of method and with undiminished sincerity. An admirable reality is bestowed upon the mental tortures of a scoundrel's wife by Miss Webster—a young actress agreeably devoid of mannerisms and of the conventional. The humours, the sunshine and warm-heartedness, of a typical Irish servant are well expressed by Miss Belmore. With such a cast the drama's prospects of popularity—considerable no doubt in any case—are sensibly increased.

Though the Globe performance of "The School for Scandal" is far from an ideal one, it is, by reason of certain of its features, quite worth seeing. Several of the performers are unmistakeably American; and that, though it is scarcely of itself a merit, does give a fresh source of interest to the show. I cannot honestly say that the player who enacts Joseph Surface—or who speaks his words—has anything of the large graciousness of eighteenth-century manner. Snake wants malice and meanness. Lady Sneerwell is too good looking—too fresh and blooming—for a "qualified old maid": the term by which Sir Peter knew her. And Maria, suitably simple in gesture and expression, should, however much of a *débutante*, be more practised in the minuet. One or two better known English performers, to whom the traditions have in a sense descended, are fitted more thoroughly to their parts. Miss Vaughan—whose dance still gives the pleasure that the dance of Mdlle. Sallé gave to Voltaire—has made herself an efficient actress of comedy. Her intelligence goes a long way, and a gentle vivacity of nature helps her still further on her road. Miss Carlotta Leclerq's Mrs. Candour has little of the grand manner, but the spirit of the part is somehow felt in it. Mr. Burrows plays the sympathetic little part of Rowley as well as I have seen it done for many a year; and not only stage knowledge, but a welcome discretion to boot, is shown by Mr. Lionel Brough as Moses, the money lender. This financier is sometimes represented much as one might represent an old clothes man. It was not, however, to a Jew from Houndsditch that so gay and modish a youth as Charles Surface would have resorted when he was in need of cash. Mr. Fernandez, a greatly esteemed actor, who may be relied upon for being "judicious," and who is not seldom forcible as well, represents Sir Peter. He plays like a practised artist, and understands every line of his part. Never once is the emphasis misplaced; and that alone, as times go, is a great achievement. But I find fault with him for several matters of detail. He makes Sir Peter a little too robust, and a little too young. And though his Sir Peter is not actually modern—though he may belong, indeed, conceivably to the eighteenth-century—he is not fine gentleman enough. *Grand seigneur* Sir Peter was, to the tips of his fingers. He was proud of having made almost a *mésalliance*—since the girl was so clever and so fascinating. To the end of the chapter, as long as he kept his temper, his air towards her would be one of good-humoured and elderly patronage. But, though details may be wrong here and there, there is life and reasonableness in the performance. A last complaint shall be of the amount of "gag"—of the far too frequent additions which do but detract from the perfection of the work. Sheridan was not only a severe literary artist—he was a manager who studied his public. Is there then the very faintest of reasons for supposing that his dialogue can be improved by being added to? It can only be weakened and spoilt. No doubt the average actor, like the average painter, thinks himself quite capable of assuming a writer's functions, and of improving, at very short notice, the work of an accepted master of comedy. But at the superfluity and disastrousness of his labour—the labour of one who does not understand the very first conditions of the practice of the art he meddles with—the judicious can but grieve. Sheridan, amended by the average actor, is rather more than we can believe in.

Frederick Wedmore.

STAGE NOTES.

Mr. and Mrs. Kendal will re-appear in London before the middle of March. The run of "Mamma" at the Court Theatre will be stopped for their arrival, and Mr. Pinero's "The Weaker Sex"—which has been already produced in the provinces—will be put on instead. A new play by Mr. Sydney Grundy, in which Mr. and Mrs. Kendal appeared at Nottingham the other night, may possibly also be performed before the close of their London season.

We hear that an engagement has been made with Miss Rose Norreys to play an attractive comedy character in Mr. Henry Arthur Jones's new piece, which will be produced at the Haymarket at Easter.

The so-called "Théâtre Libre" was quite a failure, it is understood, during its short sojourn at the Royalty under the management of M. Mayer. The company played only two pieces, both of which were accounted unmistakeably proper as well as prodigiously dull. Recourse has since been had, at the same little house, to "Denise"—which, however, has not this time had the advantage of Mdlle. Jane Hading's presence as the interpreter of its principal character.

We are glad to note that Mr. Charrington's short series of *matinées* of "The Love Story"—which is written by Mr. P. Leclercq, a brother of Miss Carlotta and of Miss Rose Leclercq—begin on Monday at the Vaudeville, when Miss Janet Achurch will be seen in London for the first time for several months, and in a part, moreover, which, it is said, gives scope for the exercise of her art.

The annual public meeting of the Shakspere Reading Society will take place on Wednesday next, February 20, at the London Institution, when "Twelfth Night" will be rehearsed under the direction of Mr. W. Poel.

MUSIC.

RECENT CONCERTS.

The Saturday concerts were resumed at the Crystal Palace on February 9. The programme included a novelty—Lalo's Overture to the opera, "Le Roi d'Ys." This French composer is best known in England by his Symphonie Espagnole, produced at the Crystal Palace in 1878. However, four years earlier Señor Sarasate introduced, at a Philharmonic concert, an interesting concerto by Lalo, which, we believe, has never been repeated. "Le Roi d'Ys," brought out last year at the French Opéra Comique, achieved considerable success there. The Overture contains clever writing and skilful orchestration, but it is literally a Vorspiel, *à la* Gluck, or Wagner; and, therefore, loses meaning in a concert-room. The programme-book gave no explanation whatever. A brief account of the persons or events with which the various themes are associated might have proved, to a certain degree, helpful. Again, the date of M. Lalo's birth is given as 1823, but 1831 is, we believe, more correct. The performance of Beethoven's Piano-

Digitized by Google

forte Concerto in C minor, by Otto Hegner, was, of course, the chief event of the afternoon. His playing was wonderful for its neatness, crispness, and *brio*. It is impossible not to feel, in certain passages, that he requires bigger hands and stronger fingers to give expression to all that he understands and feels; but this is a failing which time will soon cure. In a showy cadenza, written specially for him, he showed extraordinary command of the key-board. Later in the afternoon he played some Liszt solos in a manner which astonished the audience. The programme included Beethoven's Symphony in F. Mr. Manns conducted with his usual care and energy. Miss E. Spada was the vocalist.

M. J. Kruse, a native of Adelaide, and a pupil of Joachim, was the violinist at Monday's Popular Concert. He has a good tone, good execution, and, as the name of his teacher would lead one to expect, good style. There is, however, a certain roughness about his playing; and in several passages of the first and last movements of Beethoven's Quartet in E flat (Op. 74) his intonation was faulty. The Adagio, however, was interpreted with much taste and feeling. M. Kruse also played as solo a Sonata by Tartini, and took the lead in Brahms' Pianoforte Trio in C minor. He was well received, and, though recalled three times, gave no encore. For this he, as a newcomer, deserves praise. Mr. Max Pauer played with great dexterity Chopin's difficult Scherzo in B minor (Op. 20), but he was scarcely satisfactory in his rendering of the Nocturne in E; the *tempo* was hurried and the tone cold. Miss L. Lehmann sang her favourite French air, "La Charmante Marguerite," and two songs by Mr. Hamish MacCunn.

The Ninth "Symphony" Concert on Tuesday evening was devoted principally to Wagner. As a commemoration of the sixth anniversary of the master's death, Beethoven's "Eroica" was suitably included in the programme. Mr. Henschel's programme contained excerpts from "Lohengrin," "Meistersinger," "Tristan," and "Parsifal"—four works which testify not only to the greatness, but also to the versatility, of Wagner's genius. With regard to the performance of the Wagner pieces, little need by said. Some were successful, but the prelude to "Parsifal" left much to desire. The first movement of the "Eroica" was given with more fire than refinement; the Marcia Funebre was much more satisfactory. Mr. Henschel sang Sachs's monologue from the third act of "Die Meistersinger," with the orchestra under the direction of Mr. Hamish MacCunn. There was a very good attendance.

Fräulein C. Geisler-Schubert, grand-niece of the composer, Franz Schubert, and a pupil of Mdme. Schumann, gave a concert at Prince's Hall on Wednesday afternoon. The programme was devoted entirely to the works of Schubert, commencing with the delightful Trio in B flat (Op. 99), charmingly interpreted by the concert giver and Messrs. Straus and Howell. For her first solo, Mdlle. Geisler played the Sonata in G (Op. 78). Her technique is excellent, and her touch light and pleasing. Moreover, she plays with rare intelligence and feeling, and without any trace of affectation. The slow movement was, perhaps, taken a shade too fast. Her rendering of the minuet and trio was clear and crisp, and the finale was given with great spirit. She afterwards played two of the Impromptus and one of the Momens Musicals. A pleasing feature of the programme was the artistic rendering of some of Schubert's attractive songs by Fräulein Fullinger. Owing to the very bad weather there was but a moderate attendance. We shall be glad to hear Mdlle. Geisler again, and as interpreter of Beethoven, Schumann, and Chopin.

J. S. Shedlock.

III. **HER LAST RUN.** By the Hon. Mrs. WALTER R. D. FORBES (Eveline M. Farwell), Author of "Fingers and Fortune," "The Man in Cords," &c. 2 vols.

"Many people will be well pleased with 'Her Last Run.' There is plenty of sport in it, and there is nearly as much of love."—*Athenæum.*

"....Is one of the most sporting novels that even a feminine pen has ever produced. The hunting scenes are extremely vivid."—*St. James's Gazette.*

"There is a breezy, go-ahead style about these volumes which commends itself to the depressed fog-bound readers of the present day"
Whitehall Review.

"There can be no question as to the ability wherewith Mrs. Forbes writes about horses and hunting, and the word picture of the opening meet in the first chapter of this breezy, fresh-air story is decidedly vivid and accurate. ....Throughout both volumes we have a series of well-painted scenes of sporting life in good society, including a first-rate description of a military tournament at Hurlingham."—*Public Opinion.*

IV. **A CROWN OF SHAME.** By FLORENCE MARRYAT, Author of "My Sister the Actress," "Facing the Footlights," "The Heart of Jane Warner," &c. 3 vols.

"Miss Florence Marryat has put some very good work into this new book of hers, and it is undoubtedly the best thing she has written for a long time."—*Whitehall Review.*

"....is undeniably interesting, and is far above the ordinary novel."
Morning Post.

"Florence Marryat, like Miss Braddon, has the power and the art to weave endless romances, full of interest and excitement so thoroughly *en rapport* with the tastes of the lovers of fiction, that their names upon the title-page are an unfading password to the circulating library. In this, Miss Marryat's latest work, there is no sign of fading power or resource. It occupies new ground, and its interests are fresh and original.....Is a clever, highly-wrought, and interesting novel."—*Life.*

V. **A CRACK COUNTY.** By Mrs. EDWARD KENNARD, Author of "The Girl in the Brown Habit," "Killed in the Open," &c. 3 vols.

"The three volumes which contain an account of the inhabitants of 'a crack county' are written as easily and pleasantly as Mrs. Kennard's books always are....Mrs. Kennard confines herself in her novels to subjects she thoroughly understands... Her stories are one and all worth reading if only for the breezy good humour which pervades the pages."
Whitehall Review.

VI. **A DISTRACTING GUEST.** By Mrs. ROBERT JOCELYN, Author of £100,000 *versus* Ghosts," &c. 2 vols. [*Immediately.*

ENGLISH WAYFARING LIFE IN THE MIDDLE AGES.

(FOURTEENTH CENTURY.)

By J. J. JUSSERAND.

Translated by LUCY TOULMIN SMITH.

Edition de Luxe, consisting of 65 copies (50 only being for sale), printed on Japan paper, bound in vellum, and numbered and signed. Terms on application.

"Have you seen a book just published by M. Jusserand, of the French Embassy, entitled 'English Wayfaring Life in the Middle Ages'? If not, let me assure you that the sooner you get it the better for yourself and your friends, for you are certain to talk about it and talk *out* of it, and in proportion as you do so will the liveliness of your conversation be remarked upon! The book is a translation and an amplification of one of those enchanting volumes which only Frenchmen seem able to flash out upon literature. 'La Vie Nomade' was published in 1884. It was a gem, written in a style that provokes and worries some of us, because it is so lucid, so simple, so vigorous, that we island folk feel in despair of attaining to such graceful precision of language as we read. Now the book appears in an English form and with its English title, very much increased in bulk, and one of the best illustrated volumes of the season—dressed, in fact, in purple and fine linen—a pleasure to handle, a joy to read, and bearing with it, when one gets to the end of it, a conviction that one has become a much more learned man than one was a week ago, for that somehow one has absorbed a great deal that the outer world knows little about. Pray do not order this volume at the library. Buy it if you are wise, and keep it as a joy for ever."—Dr. Jessopp, in the *Nineteenth Century*, February.

INDIAN LIFE: Religious and Social. By JOHN CAMPBELL OMAN, Professor of Natural Science in the Government College, Lahore. Crown 8vo, cloth, 6s.

"Full of interest and instruction.... The literary and scholarly qualities of the book are of a high order. It is a valuable contribution to the class of popular and yet solid works calculated to increase our knowledge of our Indian fellow-subjects."—*Scotsman.*

Now ready.

A PLAY UPON PEOPLE. Crown 8vo, cloth, 5s.

In 2 vols., demy 8vo, cloth, 32s.

THE LIFE and TIMES of SAVONAROLA. By Prof. PASQUALE VILLARI. Translated by LINDA VILLARI. Many Portraits and Illustrations.

"Thus to the advantages in the mode of presentation are added the author's learning, research, unfailing enthusiasm restrained by scholarly feeling, and an easy style.....A book which is not likely to be forgotten."
Athenæum.

VOLUME XVIII. OF "THE STORY OF THE NATIONS."

PHŒNICIA. By Rev. Canon RAWLINSON. With Maps and Illustrations. Large crown 8vo, cloth, 6s.; gilt edges, 7s. 6d.

"A valuable accession to the series....The work brings within the reach of everybody a most interesting account of the worshippers of Moloch and Astarte."—*Scotsman.*

LITERATURE.

"Great Writers" Series.—*Life of John Stuart Mill.* By W. L. Courtney. (Walter Scott.)

In the present day it is a natural and an excellent thing that the lives of great writers should be written in shilling volumes. They have indeed usually been already written on a larger scale; but then they make big and costly books, which we have not always either money to purchase or time to read. There is room for the shorter and cheaper style. But this style is not equally suitable to the lives of all authors. Though few great writers have, like Bacon, Burke, or Macaulay, been also men of affairs, many of them have yet led interesting lives, and have made themselves felt in their own time as something else than authors. In such cases the short sketch of a skilful biographer can give us an animated picture of real life, and interest us still further in a man who has already a hold upon us by his books. But, where action has been absent from a life, a biography to be interesting must be tolerably full. It must turn on the character, the opinions, the mental history of the man it deals with; and these cannot be duly set forth and rendered interesting without considerable minuteness of detail. Three volumes are not too much for the analytic novelist, and the analytic biographer requires room also.

This applies with great force to John Stuart Mill. His life was very unvaried, and what he did seems to require or permit but little record. His work at the India House was probably not of a kind that it would be worth while to examine in detail, though we should be glad to know something more of it than has yet been published. His time in Parliament was short. He shunned society, and for a large part of his life lived mainly in the loneliness of an elevated mind. It is therefore with his mental history and his published writings that a biographer must chiefly deal; and the difficulty of doing this in small compass is greatly increased by the abstruseness and obscurity of the subjects on which his mind preferred to dwell.

Mr. Courtney has performed his difficult task with considerable literary skill, and perhaps with as much success as was within reach. He has not always stated as clearly as he might have done the facts that we look for in any biography, however slight. The book does not seem to contain, except in an appendix which the reader may easily overlook, any statement of the day or year of Mill's birth. It does not tell us explicitly where in London he resided at different times (though perhaps this may be found out by an attentive reader); nor does it give the date at which he went to live at Avignon. In speaking of Mill's writings Mr. Courtney might perhaps with advantage have given a little more space to their contents and a little less to his own very competent criticisms on them. Even in a popular sketch, perhaps particularly in a popular sketch, it might have been worth while to explain more fully, and with the attractive lucidity which Mr. Courtney certainly possesses, such things as the characteristics of Mill's logic and the nature of his utilitarianism. Many of the people who may be expected to read a little biography like this will be unacquainted with Mill's own philosophical writings or will have forgotten them, and therefore will be unable to take in criticism which is not preceded by full exposition. Mr. Courtney could have made the matter much plainer to them, and that is the first duty of a popular writer. Criticism is a minor matter. Tell the story or state the case first; give your own judgment afterwards, if you have room. But it is of little use to put criticisms which are meant for the student into a Life which is meant for the general reader. The general reader would like to be told more plainly what the whole thing is about.

In his first chapter Mr. Courtney gives an able and rather unfavourable account of the formidable father who had such an influence on Mill's mind. He then traces Mill's own life and speaks in turn of his various writings, giving the greater part of two chapters, for instance, to the *Logic* and the *Political Economy*. One chapter deals with his public life as a member of Parliament from 1865 to 1868. Mr. Courtney's conception of Mill's mind and character seems to be summed up in the following paragraph:

"In truth Mill's character was eminently receptive of all the influences to which it was subjected. In his youth the prevailing influence is Bentham and James Mill. Then comes the time when Sterling and Carlyle gain a large share of his sympathies; to that succeeds the influence of Mrs. Taylor; and after his wife's death his views (as in the essay on Theism, which was composed after his bereavement) seem to swing back on some of the older lines from which her ascendency over his mind had diverted them. It is his mental receptivity which constitutes, perhaps, his chief charm; it is that which explains his aims of reconciliation and mediatorship. But it is this also which gives that vacillation which here and there we have noticed in his grasp of doctrines, and leaves us with the final verdict that he belongs to a transitional period of thought. No one but a 'transitional' thinker could, for instance, have written the following sentence in his essay on Theism. 'It is perfectly conceivable that religion may be morally useful without being intellectually sustainable.' . . . It belongs to the middle period between two eras, when men's thoughts are swaying ἐν μεταιχμίᾳ σκότου, in the battle ground of darkness."

In other places also Mr. Courtney seems to think that "transitional" is a specially fit epithet for Mill's writings and opinions on various subjects. Now in one sense of the word every thinker is transitional. No one ever was or will be in possession of all truth. Every body of knowledge or body of thought is transitional between what has come before and what will come after. Euclid himself was a transitional thinker, for earlier geometricians knew less than he did and later ones have known more. But this is not what Mr. Courtney means. He seems to mean partly that there have always been two entirely divergent tendencies or schools of thought, between which Mill, in a way, mediated, so that some of his opinions contained a compromise; partly that there are tendencies, now coming into ascendency or at least prominence, such as in economical matters Socialism, and in psychology Evolution, by which Mill was sometimes influenced a little and sometimes hardly touched at all. As to the first of these "transitional" characters, it may be doubted whether "transitional" is a very good word to call it by. A desire "to combine antagonistic positions" is rather eclectic than transitional. Mr. Courtney surely also overrates Mill's tendency in this direction. Some of the instances he gives are open to a good deal of question. I think, for example, that his criticism on Mill's theory of causation is entirely beside the mark. There is nothing inconsistent in holding at one and the same time that an effect is an unconditional consequent, and that in some region or other "events may follow without being caused." Mr. Courtney asks, "What then becomes of the invariable and unconditional sequence?" The answer, from Mill's point of view, is that it belongs to the other regions of the universe. Where there are such things as effects, they are unconditional consequents. Mill is explaining what causation is when it exists, and that surely leaves him at liberty to think that it does not exist everywhere. But, in any case, Mr. Courtney contends for more compromise and halting between two opinions on the part of Mill than some of Mill's readers will be ready to admit.

He connects this supposed tendency on Mill's part with a doctrine which he attributes to him and conceives to have greatly influenced his mind—the doctrine that truth lies halfway between two antithetical theories. Although Prof. Bain, in speaking of the *Liberty*, uses almost the same language as Mr. Courtney, is it not a considerable overstatement? In the *Liberty* Mill is, from the nature of the case, speaking of popular theories about such subjects as religion, morality, and politics; and it is with special reference to these that he urges the possibility that some element, at least, of truth is contained in the contrary opinions. Did he ever commit himself to such a proposition as that truth in general lies midway between two theories?

There is one transcendent merit of Mill's writings to which Mr. Courtney does no justice. This is their remarkable clearness. He argues abstruse questions in a way which makes them, if not actually easy, at any rate intelligible to anyone who has average brains and will give moderate attention. Hard subjects cannot be made easy by any human skill; but a writer can do a great deal to simplify them and put them lucidly before his readers. How great are Mill's merits in this respect can only be known by those who are familiar with other writers, sometimes later writers, on the same subjects. Both in this country and in others, philosophers of the contrary school to Mill have frequently failed to give their opinions a fair chance. They have been at so little pains to present them with any literary skill and in a way which

Digitized by Google

the ordinary man can understand, that, whatever the impression they may make on superior minds, they must always leave their adversaries in possession of the popular field. If a man thoroughly understands his subject, if he has a clear head and will take proper trouble, there is nothing that he may not make fairly intelligible to others. But writers may be sure that, if they omit to take the necessary pains, discussions which render obscure subjects more obscure than ever will find few readers and make fewer converts. Mill maintained the excellent tradition of the school to which he belonged by taking care to express his thoughts in clear language, and by never overlooking the need of those concrete illustrations which are often as much a safeguard to the writer as they are a help to his readers. On some very fundamental point as to the principles of reasoning or of morals he may have sometimes failed to be thoroughly clear in his own mind and consistent with himself. Few thinkers have attained perfect clearness and consistency; fewer still will be allowed by their critics to have done so. But the difficulty of reconciling two utterances or of seeing what were the grounds for a given opinion is one thing; the difficulty of finding any meaning for a sentence and any connexion for two consecutive sentences is another. The latter difficulty Mill never presents; and there is too much philosophical writing which presents it throughout.

As to Mill's three years in the House of Commons, Mr. Courtney appears not quite to have made up his mind. In one place he seems to think that what he rather oddly calls the "maxim" of Tacitus, "Omnium consensu capax imperii nisi imperasset," might be applied to him. But he speaks with just approval of the attitude taken up by Mill on the occasion when some of the English in Jamaica so completely lost their heads and their humanity. An interesting addition to this chapter is an extract from a letter written by Mr. Gladstone, in which he says:

"We well knew Mr. Mill's intellectual eminence before he entered Parliament. What his conduct there principally disclosed, at least to me, was his singular moral elevation. I remember now that at the time, more than twenty years back, I used familiarly to call him the Saint of Rationalism—a phrase roughly and partially expressing what I now mean. Of all the motives, stings, and stimulants that reach men through their egoism in Parliament, no part could move or even touch him. . . . He did us all good."

But, to the manner of Mill's oratory Mr. Gladstone is not complimentary. "Physically, it came as from a statue."

A useful bibliography of Mill's own writings and of writings concerning him has been added to the Life as an appendix. In the Life itself two or three things may be pointed out to Mr. Courtney for possible correction in another edition. When he says (p. 114) "Mrs. Taylor died in 1858," it should be "Mrs. Mill." P. 100 would certainly give the impression that Mill "gave up the wage-fund theory" in his *Political Economy*, though it was in reality some twenty years later. In reference to Mill's famous "If such a being can sentence me to hell, to hell I will go," and the curious idea of Grote (quoted by Prof. Bain), that the phrase "was an echo of something in Ben Jonson, where a military captain's implicit obedience is crowned by the illustration —'Tell him to go to hell, to hell he will go.'" Mr. Courtney rightly points out that the line Grote must have been thinking of—"And bid him go to hell, to hell he goes"—comes in Dr. Johnson's Imitations of Juvenal. But he is wrong in referring it to the "Vanity of Human Wishes"; it is in the "London." Mr. Courtney just mentions Mill's pamphlet, *England and Ireland*. Under present circumstances he might have been expected to say that it contains, on the one hand, a most powerful and passionate plea for a complete change in the then existing land system; and, on the other hand, a very decided expression of opinion, supported by forcible reasoning, against any plan of "federation" between the two countries. Mr. Morley has not, I think, ever contended that Mill would now have been a Home Ruler.

Mill is understood to have been an excellent and voluminous letter-writer. Whether any portion of his correspondence is likely at present to see the light we have no means of knowing, nor whether there are any other unpublished writings or fragments, such as the end of the *Autobiography* suggests. It is strange that there has been as yet no uniform and complete edition of his works. When such a one is taken in hand, it ought, perhaps, to include some of his speeches and some of the large number of articles from the *Westminster* and other reviews which he did not himself republish. I hope it is not impertinent to suggest that, for more reasons than one, Mr. Morley is eminently the right man to undertake the task. Will not the editor of Wordsworth give us an edition of the philosopher for whom Wordsworth did so much?

HERBERT RICHARDS.

Concordance of the Divina Commedia. By E. A. Fay. Published for the Dante Society, Cambridge, Massachusetts. (Boston: Little, Brown, & Co.; London: Trübner.)

THIS substantial volume affords satisfactory evidence of the continued vitality of the American Dante Society, which has now entered upon its eighth year. The society has already justified its existence by the issue of annual reports (1882-1888) containing matter of more or less interest and value to Dante students; an important feature in the last two numbers being an elaborate bibliography, compiled by a member of the society, of all books, pamphlets, and articles on Dante published during the year. More important still is the formation, under the auspices of the society (which in this and several other aspects is deeply indebted to Mr. J. R. Lowell and Mr. C. E. Norton, its president and vice-president) of a collection of Dantesque literature. Already, in the report for 1887, the council was able to state that the society was possessed of "nearly everything that has been printed that is essential to the study of the life and works of the poet"; and in the report for the present year the addition of over one hundred fresh articles is announced. The advantage to the American Dante student of such a collection, situated in the library at Harvard College, can hardly be overestimated; and we trust it may result in the production of works worthy to rank with the valuable contributions to Dante literature which have already come to us from America.

The issue of the present volume is the most important undertaking as yet entered upon by the society, and it has assumed a heavy responsibility in connexion with it. Numbering, as it does, less than fifty members, it would have been impossible for it to defray the cost of the publication had it not been for the liberality of a lady member, who undertook to meet any deficit in the expense of printing not covered by the contributions of those who subscribed for the work.

The book in itself is an admirable specimen of typography, such as we are accustomed to look for from America. The print is clear and not too small, while increased facility of reference has been attained by the judicious employment of different kinds of type. Prof. Fay appears to have performed his task with fidelity, so far as may be judged from the application of several searching tests. To form an accurate estimate of the trustworthiness of a Concordance from a limited number of trials is manifestly impossible. Constant use alone can decide what its value is in this respect. Actual omissions, so far, we have been able to discover none; but there are numerous instances where variants mentioned at the foot of the page have not been inserted in their places in the body of the work; *e.g.*, under *plenitudine* the variant *moltitudine* is given, but this word does not appear, as it should do, among the reference words. Again, *aguglia* is recorded as a variant for *aquila* in several passages, but it is not to be found in its place, although it is the reading of the first four printed editions, as well as of the Crusca, and Aldus. Sometimes, on the other hand, a word is inserted without any indication that it is a variant; *e.g.*, Witte's reading *Nasuto* ("Purg." vii. 103), which is almost certainly wrong—for the weight of evidence, including that of a statue, is against him (he himself translates *stumpf Benas'te*)—is given without mention of the generally accepted reading *Nasetto*, under which word, however, this same passage is again quoted, but without remark. Variations of spelling also, which are important when they affect the commencement of a word, have sometimes escaped notice, thus *Giacob*, *Giosafat*, *Giosuè*, *Giulia* (for *Jacob*, *Josaffat*, &c.) are omitted, though they all occur in Fraticelli, one of the most widely-used editions of the *Divina Commedia*. On the other hand, there are instances of too strict an observance of minute differences of spelling —*e.g.*, the name *Guglielmo* occurs, in one form or another, five times in the poem; in the Concordance it is given thrice under *Guglielmo*, and twice on a different page under *Guiglielmo*. It is true that these differences exist in the edition of Witte, whose text has been followed; but for the purposes of a Concordance such distinctions are not only useless, but they are mischievous, especially where, as in this instance, no cross-references are given. Again, under *Sanese* we find four quotations, but only two of them are given under the variant form *Senese*. In such cases it would have been

Digitized by Google

quite sufficient and far more convenient to enter all the quotations under a single head, inserting the variant in its place with a cross reference.

The necessary introduction of variants has greatly increased and complicated the work, and it is not surprising that there are many omissions in this respect, for to register them all would be well-nigh impossible. Prof. Fay, however, seems to have recorded most of the important ones. It is curious that among the omissions should be the eight variants of *pileggio* given by Witte, not one of which is mentioned. This is also the case with the five variants of *coreggior*, the four of *monrenti*, the three each of *Penestrino*, *pesol*, and *Simifonti*, and numerous others. In this connexion we may observe that "Costatin" occurs twice on p. 157 as an obvious misprint for "Costantin."*

While drawing attention to these minor sins of omission and commission, some of which are almost inseparable from such an undertaking, we ought to acknowledge that, though they are undoubted blemishes, they do not to any great extent detract from the general usefulness of the work. More serious objection must be taken to the order in which the quotations are arranged. This is explained in the Preface to be "the alphabetical order of the words of the context most closely connected with the reference word"—an artificial arrangement which must have cost the compiler a considerable amount of extra time and trouble, and which has no obvious merits to recommend it. A much simpler and more convenient plan surely would have been to give the quotations in their natural sequence, as they occur in the poem itself; by which arrangement it would have been evident at a glance in what division of the poem, and in what canto of it, any given word is to be found. For instance, to verify a quotation, say from the "Inferno," in which *virtù* occurs, under Prof. Fay's arrangement eighty lines would have to be examined, as against seven by the other; again, in order to arrive at the fact that Beatrice is mentioned by name only twice in the "Inferno," it is necessary to examine sixty-three references; while in the case of a word of very frequent occurrence, like *occhi*, no less than four pages of the Concordance would have to be looked through. Search, too, by the existing method is not only less rapid than by the other, but it is also less certain, for it is easy to overlook a single reference among such a large number. Further, by the present arrangement, the reader is apt to miss such significant facts as the absence of all mention by name of Christ or of the Virgin Mary in the "Inferno"; the threefold repetition of *Cristo* whenever it occurs in rime, as though Dante thought no other word worthy to be so closely associated with it; the ending of each division of the poem with the word *stelle*; and so forth—facts which it is interesting to note, though they may be unimportant in themselves. Though not immediately connected with this question, we may mention here that Dante names himself but once in the poem (a second instance given in the Concordance is not authentic, the word occurring merely as a variant for *Da te*); and that is when he is addressed by Beatrice for the first time, "Dante" being the first word she says to him.

Prof. Fay claims to have registered every word in the *Divina Commedia*, the most common and unimportant being merely inserted in their places with the indication *sovente* (why not the more usual *spesso*?) affixed to them. This is reasonable enough; but exceptions might very well have been made in favour of *Colei*, *Colui*, *Quei*, *Quello*, and the like, since Dante very frequently introduces persons by a periphrasis beginning with one of these words—*e.g.*, Ruth is spoken of as *Colei che fu bisava al cantor che . . . diesse: miserere mei*, Elisha as *Colui che si vengiò con gli orsi*, Philip the Fair as *Quei che morrà di colpo di cotenna*, Eve as *Quella che al serpente cresse*, and so on.

One specially interesting feature of the Concordance, which adds greatly to its value from a linguistic point of view, is the marking of all words which occur only in the *Divina Commedia*, and of all unusual words and word-forms which occur only in the rime. Of the former Prof. Fay has noted as many as 93, of which 75 are found only in the verse ending; of the latter no less than 402. The exigencies of rime are no doubt responsible for the employment of a large proportion of these last; but it is entirely erroneous to assume, as has been the fashion with commmentators, that Dante invented them "for the sake of the rime," since most, if not all, of them are used by other authors as well, not only in verse but also in prose. With regard to the the rime Dante seems to have anticipated some such accusation as was formulated by the *Quarterly* against Keats, for he is reported by the author of the *Ottimo Comento* to have boasted in his hearing that he had never been led by the rime to say anything he did not intend—

"Io scrittore udii dire a Dante, che mai rima nol trasse a dire altro che quello ch'avea in suo proponimento; ma ch'elli molte e spesse volte facea li vocaboli dire nelle sue rime altro che quello, ch'erano appo gli altri dicitori usati di sprimere."

Although we have felt bound to express our dissatisfaction with the unnecessarily complicated arrangement of quotations—in the adoption of which Prof. Fay seems to us to have been decidedly ill-advised—we have no hesitation in saying that, considering the difficulties inherent in the task, the defects are otherwise surprisingly few. It must be borne in mind that the work of compiling the Concordance (which occupies more than eight hundred octavo pages) has been very greatly complicated by the introduction of at least four thousand variants, so that Prof. Fay deserves no small credit for the patience and perseverance which have enabled him to bring his "labour of love" to a successful termination; and we may thank both him and the Dante Society for having given us a work which cannot fail to be of great value to every student of Dante. It is to be hoped that this first venture may be sufficiently successful to encourage the society to further efforts in the same direction. A fitting successor to the present volume would be a Concordance to all the remaining works of Dante, Latin as well as Italian.* Such a work, which might be contained probably in a volume of not much more than half the bulk of the one before us, would undoubtedly do more for the elucidation of Dante than half-a-dozen isolated commentaries; for, as Giuliani pointed out long ago, there is no method of studying his writings so profitable as that of "spiegare Dante con Dante," making Dante his own interpreter. Also translations are needed of the prose works, none of them, except the *Vita Nuova*, having yet been satisfactorily rendered in English.†

If the American Dante Society (which, so far as we are aware, is the only society of the kind now in existence since the dissolution of the Dresden Dante-Gesellschaft) could see its way to the furtherance of these undertakings, it would earn the gratitude, and, we may venture to hope, in many instances also the support, of the rapidly increasing number of Dante students in this country, as well as of those on its own side of the Atlantic.

PAGET TOYNBEE.

The Unknown Horn of Africa: an Exploration from Berbera to the Leopard River. By F. L. James. (Philip & Son.)

AMONG the "free lances" of African exploration few names stand higher than that of Mr. James, whose work, though generally limited to comparatively small areas, has already thrown considerable light on some of the darkest corners of the Dark Continent. His earlier expeditions to Eastern Sudan, North Abyssinia, and even the "Unknown Horn," were perhaps planned primarily with a view to sport. But this object, though still kept in view, seems to have occupied a distinctly subordinate position during this last and most important of his excursions into the interior of East Africa. The main purpose of the expedition was in fact essentially geographical, having been very carefully organised with a view to traversing the whole of Somaliland in a southerly direction from Berbera on the Gulf of Aden to Magdosho or some neighbouring port on the Indian Ocean. But although it carried out only about half of this ambitious scheme, it still remains by far the most successful attempt yet made to fill up the blank spaces on the map of the ancient but still almost unknown land of Pûnt.‡

Mr. James was accompanied by rather a numerous English party, including his brother, W. D. James, Mr. G. P. Aylmer, Mr. E.

* Other misprints are *Pomo* for *Pome* (pp. 532, 791), and *Semmo* for *Seme* (p. 646), and wherever the quotation occurs. There are not a few instances, also, where Prof. Fay has omitted to distinguish between words identical in form but different in meaning—e.g., *Potei*, *Protesi*, *Preciso*, *Punti*, *Profferta*, should each have appeared under two headings.

* Since this was written we have learned that a portion of this work has already been undertaken in America, a Concordance of the *Vita Nuova* and of the Canzoni of the *Convito* being in preparation under the auspices of Prof. C. E Norton.

† An English version of the *Convito*, it is true, has lately appeared, but it can hardly be considered adequate.

‡ There seem to be solid reasons for identifying the Somali peninsula with the aromatic region already known to the Egyptians by the name of Pûnt. In the wall paintings of a temple at Thebes, representing the payment of tribute in gums, frankincense, and myrrh by the people of Pûnt to an Egyptian queen, the figures wear the same dress and present much the same appearance as the more typical of the present Somali tribes.

Digitized by Google

Lort-Phillips, Mr. J. G. Thrupp, besides English and other European servants, the indispensable headman Dualla Idrees with "a good character from Stanley," and a more or less disciplined escort of some sixteen natives selected in Aden. He was undoubtedly well advised not to venture into the interior with a weaker party—which was strong enough for defence, not too formidable for defiance; and it was due probably to this judicious preliminary arrangement that he is one of the very few travellers who have penetrated to any distance into Somaliland and returned to tell the tale.

Equally wise was his selection of Berbera as the starting-point—a place which had recently passed from the miseries of Khedivial misrule to the blessings of orderly government under the British flag. Here the expedition gathered in the November of the year 1884; and hither it returned in the following April, having in the intervening five months marched southwards to the banks of the Webbe Shebeyli ("Leopard River") by a somewhat easterly route and marched back by a more westerly route, covering altogether a distance of about 700 miles as the crow flies, and certainly over 1000 miles allowing for the windings of the caravan tracks. Most of the journey was through a region never before visited by a white man, and inhabited by primitive tribes, to whom smoking, matches, and even firearms were novelties. The smoking

"established beyond doubt our heavenly descent. The pipe was part of ourselves, for how else could our mouths blow forth clouds, which would of course bring down rain? As succeeding curls of smoke ascended, succeeding groups of natives approached and followed with straining eyes the mystery of tobacco melting into space. We explained that these clouds were not water-bearers, but only due to plants lighted by harmless 'fire-makers,' and to prove this one of us struck a match and lit up a fresh cigarette. Further bewilderment succeeded, an illustration I hoped would have ensured applause. The match had produced lightning, and of course the clouds could produce thunder, so we were 'storm-makers.' Not at all; but we all carried with us what could produce thunder and lightning, and deal death against those against whom it was directed. . . Lort-Phillips thereupon rose up with his 'thunder and lightning and death-dealing machine,' and gravely inviting the nearest gaping group to follow, advanced slowly towards a dove-laden branch. Flash went the lightning, bang went the thunder, down fell the birds, and away flew the audience."

Such ignorance is certainly remarkable considering the proximity of Aden, which for the last half century has been constantly visited by *hajis*, traders, and others from all parts of the interior. We have seen that the escort for this very expedition consisted of Somalis engaged in Aden; and some years ago tobacco-smoking was so prevalent in the Juba country that the Bardera fanatics—a kind of Somali Wahhabites—proscribed the practice.

After leaving the Berbera coastlands and ascending the escarpments of the great inland plateau, the convoy followed the valley of the Tug Dayr as far as Burao, capital of a powerful but friendly Habr Gerhaji sultan. This Tug Dayr, that is "Long River," Mr. James rightly agrees with Sir R. F. Burton in identifying with the "Wady Nogal" figuring on our maps. The term "Wady" is not current in Somaliland; and "Nogal" is the name not of a river, but of a district through which the river flows during the rainy season. But Mr. James is himself wrong in stating that after leaving the Habr Gerhaji (properly Habr Ghar Haji) country the Tug Dayr "extends in a westerly direction through the Habr Tdjaleh (Jaleh) tribe and on through the Dolbohanti country," &c.; for these tribes lie to the east or south-east, and this is also the general trend of the Dayr, as it is of all the other large water systems.

At Burao the party turned due south to cross the vast steppe-land of the Haud, which occupies the whole region between the Dayr and the Faf fluvial valleys, and which in the dry season—that is, in winter—is absolutely waterless. At this season the journey could not in fact be made at all but for the amazing endurance of the Somali camels, which, as, Mr. James discovered, are able to hold out for fully a fortnight without water. They traversed the space between Burao and the perennial wells at Gerloguby, a distance of 215 miles, in thirteen days "without drinking a drop of water."

Journeying through the dreary Haud wilderness in the dry season is compared to walking about

"in a kitchen-garden of dead gooseberry and currant bushes for a week or ten days. The soil was red instead of brown, and the vegetation larger and more thorny; but in other respects the greater part of the Haud was a dried-up African kitchen-garden, instead of an English one."

The Gerloguby wells, sunk in the solid rock at a time and by a people of whom the present inhabitants have no knowledge, lay already within the limits of the Ogadayn country, the "earthly paradise of Somaliland." Beyond that point the route traversed a more hilly, but better watered and permanently peopled region; and after crossing the Tug Faf at Gobli, the caravan struck the Webbe Shebeyli at Barri on February 18, 1885, just two months after leaving Berbera. From the edge of the stony plateau skirting the river on the north

"we overlooked an immense valley some 800 feet below us, lightly wooded and dotted with flocks and herds and native huts. Through this, like a bright silver streak, wound the Webbe Shebeyli, with either bank shaded by magnificent trees of vivid green with mast-like trunks. To our extreme left the river flowed through a dead flat as far as the eye could reach, while to our right it was often concealed by low hills, which gradually rose into lofty mountains."

On its arrival in the Shebeyli country the expedition soon became aware that it was the involuntary centre of a political crisis, about half the territory of the legitimate sultan having lately broken into open revolt. But, by the display of some skilful diplomacy, it avoided being entangled in the conflict; and before its departure it had the satisfaction of seeing peace restored by the submission of the rebel sultan. Mr. James was surprised to find that here the ruling classes alone were Somali (Hawiyah branch); and that the Adoné—as all the rest are called—are a negroid people allied in speech to the Wa-Swahili Bantus of the Zanzibar coast.

"I never saw uglier countenances than many of the men had, some being almost diabolical. These negroes are the original inhabitants of the country; they were conquered by the Hawiyah Somals, who in turn were driven out by them, leaving a handful of people behind, who appear to be the sultans and governing class generally. They are easily distinguished from the bulk of the population by their features. It is extraordinary that they should have driven away the majority of their conquerors, and yet that some of these very conquerors should remain and rule the country; but I was assured this was the case."

Elsewhere he remarks that

"these natives are different in every way from the Somals. Most of them presented strongly-marked negroid features; and, though some spoke a Somal dialect, it was not their own language, which is the same as that spoken on the coast between Merka and Zanzibar."

Here, therefore, is placed beyond all doubt the remarkable fact that the very heart of the country, its richest river valley, the natural political and commercial centre of a region which from Egyptian times has been the presumed exclusive domain of the Somali race, is mainly inhabited not by Somalis, but by a negroid people speaking the Swahili language, and declared to be the "original inhabitants of the country." The explanation of this curious ethnological problem is probably to be sought in the former existence of the vast Zang (Zenj) empire, which for hundreds of years before the arrival of the Portuguese dominated the East African seaboard from Cape Guardafui to the Zambesi estuary. These Zang people are described by Arab historians as "negroes." Their name still survives in the former Zanguebar, present Zanzibar, coast and island, where the dominant people are still their Wa-Swahili descendants. One of their most flourishing marts was Magdosho, which Ibn-Batuta calls "an immense city," trading widely with the interior. The Shebeyli, although it fails to break through the range of dunes and rocks fringing the coast and barring its passage to the Indian Ocean, comes within twelve miles of Magdosho, and is in any case the main—at this point the only—artery giving access to the inland regions. Mr. James was himself anxious to continue his journey by this artery from Barri to Magdosho or the neighbouring port of Merka, and was thwarted only by the obstinacy of his men, who had stipulated to go to Ogadayn, and whom no bribe or argument could induce to advance a step further. But up this artery the Zang people must undoubtedly have penetrated in former times; and the fertile Barri district, where *durrah* grows fifteen feet high, is just the place they would have chosen for their permanent settlements. The Ki-Swahili speaking Adonés are, therefore, in all probability their present representatives in Somaliland, and must be regarded not as "the original race," but as an intruding element dating from the flourishing period of the Zang empire, say some 600 or 700 years ago. This is a good instance of philology proving itself a useful handmaiden to ethnology; for it is, of course, the Ki-Swahili language that offers the clue to the solution of the problem. It would not, however, do to push this argument too far, and to compare, for instance, the names Shebeyli and Swaheli; as the former is Somali, meaning

Digitized by Google

"leopard," the latter Arabic, meaning "Coastlanders."

Mr. James gives us a useful map of the region between Berbera and Barri, and also, as usual, some delightful illustrations, especially of the indigenous mammals, birds, and butterflies brought home by the expedition. These rich zoological materials are carefully dealt with by specialists in lengthy monographs, which add greatly to the permanent value of the volume.

A. H. Keane.

November Boughs. By Walt Whitman. (Alexander Gardner.)

To persons who are not already well-disposed toward Walt Whitman and his work, this collection of *November Boughs* offers little to attract and at the same time little to repel. It seems to be hardly intended for such persons at all. Those who have not discovered what may be termed the secret of Whitman in *Leaves of Grass* and in *Democratic Vistas* are not likely to discover it in the pages of this new volume; and impartial students, who wish to judge for themselves, must still be referred to the author's earlier writings.

Yet to persons—and they are many now—who are already well-disposed toward Walt Whitman and his work, the volume will be welcome. It will please and interest them as the later expression of a man whom they admire. It consists for the most part of fugitive pieces in prose and in verse, some gathered from magazines, others printed now for the first time. Readers in England have seen several of them in the convenient "Camelot" volume published last year, and reviewed at the time in the Academy. Two prose pieces which appeared there under the titles "My Book and I" and "How I made a Book," are now brought together and newly entitled—"A Backward Glance o'er Travell'd Roads." The papers on Shakspere, on Burns as Poet and Person, and on Tennyson, also reappear; but most of the other contents of the book are not so familiar. There is an interesting reminiscence of Father Taylor, who, though "an orthodox minister of no particular celebrity, who, during a long life, preached especially to Yankee sailors in an old fourth-class church down by the wharves of Boston," was, in the opinion of Walt Whitman, the only "essentially perfect orator" he ever heard. Interesting, also, are the somewhat fuller notes on another famous preacher—Elias Hicks. Whitman's parents were "Hicksite" Quakers; and Whitman himself, in his early days, saw something of the great Quaker heretic, and derived therefrom deep and lasting impressions. He traces a resemblance between Elias Hicks and Father Taylor:

"Years afterward, in Boston, I heard Father Taylor, the sailor's preacher, and found in his passionate, unstudied oratory the resemblance to Elias Hicks's—not argumentative or intellectual, but so penetrating—so different from anything in the books (different as the fresh air of a May morning, or seashore breeze, from the atmosphere of a perfumer's shop)" (p. 128).

Of Elias Hicks himself, Walt Whitman writes:

"The true Christian religion (such was the teaching of Elias Hicks) consists neither in rights, or Bibles, or sermons, or Sundays—but in noiseless secret ecstacy and unremitted aspiration, in purity, in a good practical life, in charity to the poor and toleration to all. He said, 'A man may keep the Sabbath, may belong to a church and attend all the observances, have regular family prayer, keep a well-bound copy of the Hebrew Scriptures in a conspicuous place in his house, and yet not be a truly religious person at all.' E. believ'd little in a church as organiz'd—even his own—with houses, ministers, or with salaries, creeds, Sundays, saints, Bibles, holy festivals, &c. But he believ'd always in the universal Church, in the soul of man, invisibly rapt, ever waiting, ever responding to universal truths. He was fond of pithy proverbs. He said, 'It matters not where you live, but how you live.' He said once to my father, 'They talk of the devil—I tell thee, Walter, there is no worse devil than man'" (pp. 128-9).

A man like this was a man after Walt Whitman's own heart.

The poetical pieces—in the old familiar form—are of varying merit. There is a vivid descriptive touch in that on "Broadway":

"What hurrying human tides, or day or night!
What passions, winnings, losses, ardors, swim thy waters!
What whirls of evil, bliss and sorrow, stem thee!
What curious questioning glances—glints of love!
Leer, envy, scorn, contempt, hope, aspiration!
Thou portal—thou arena—thou of the myriad long drawn lines and groups!
(Could but thy flagstones, curbs, façades tell their inimitable tales;
Thy windows rich, and huge hotels—thy sidewalks wide):
Thou of the endless sliding, mincing, shuffling feet!
Thou, like the parti-coloured world itself—like infinite, teeming, mocking life!
Thou visor'd, vast, unspeakable show and lesson!" (p. 28.)

Two lines called "The Bravest Soldiers" are characteristic:

"Brave, brave were the soldiers (high named to-day) who lived through the fight;
But the bravest pressed to the front and fell, unnamed, unknown" (p. 20).

Yet, after all, that is only partly true; even some who pressed to the front may not have fallen. I think few persons—however they may object to some of his methods—would deny the bravery of "the good grey poet" himself, yet happily he has not fallen, but has lived to celebrate his triumph. His purpose has been achieved. I do not mean that he has converted the world, or that he has vanquished all ill-will; but he has compelled attention and has won regard. He is no longer scorned or laughed at. He has even achieved such respectability that in some newspapers he is called "Mr." Whitman—a form of respect which, I fear, he does not duly appreciate. Nay, more! Mr. Swinburne, who has a genius for saying things out of due season, has abused him. And all this has been secured without compromise on Whitman's part. He has abandoned nothing, and may therefore enjoy his triumph without regret of any kind. Old age has come upon him, it is true, and with it increasing bodily infirmities. An occasional undertone of sadness in the present volume points to this. But, for the most part, we see in these pages the same hopeful, cheery, affectionate, and great-souled man and poet, whom we have known so long. Old age has not touched his heart, and it is impossible to believe that it ever will.

Walter Lewin.

NEW NOVELS.

For Faith and Freedom. By Walter Besant. In 3 vols. (Chatto & Windus.)

Cressy. By Bret Harte. In 2 vols. (Macmillan.)

The Great War Syndicate. By Frank R. Stockton. (Longmans.)

A Mexican Mystery. By W. Grove. (Digby & Long.)

One for the Other. By Esmé Stuart. In 3 vols. (Ward & Downey.)

A Modern Martyr. By Sophie Kappey. (Chapman & Hall.)

Childhood, Boyhood, and Youth. By Count Tolstoi. (Vizetelly.)

The Invaders, and other Stories. By Count Tolstoi. (Walter Scott.)

André Cornelis. By Paul Bourget. (Spencer Blackett.)

Quite apart from any merely personal tastes for this or that kind of fiction, few will contend that Mr. Walter Besant has of late maintained the high level of his best early work. *Herr Paulus* was, from the author's own standpoint, a failure; and the more recent, and in scope more ambitious, *Inner House*, afforded further proof of how relatively slight is his faculty for the treatment of abstruse themes or esoteric problems. He is invariably at his best in direct and unaffected narrative, and particularly in the reconstruction of a bygone period, whether recent or remote. He has, indeed, in exceptional degree, the charming gift of fictitious rehabilitation of the life and sentiment, the manners and speech, of the past; and, therefore, one might naturally expect that *For Faith and Freedom*—a story of the Monmouth rising—would compensate for recent disappointments. Both as an individual reader and as critic I feel sure that any such pleasant anticipation will be gratified; for even the most exigent consumer of fiction could not expect to encounter a healthier and more stirring tale, at once absorbing in the interest of plot and in the sustained and skilful ordering of the narrative. In point of style I doubt if Mr. Besant has ever written anything to surpass this delightful romance. The story opens with "Black Bartholomew" or Farewell Sunday (August 23, 1662), the day when some two thousand Puritan clergy preached their last sermon, and "left their churches and their houses, and laid down their worldly wealth for conscience' sake." It was a stirring, an eventful period; and much of its suggestiveness, of its poetry and romance, of its heroism and its folly, of its great episodes and its vain incidents, has been crystallised in this Somersetshire tale of the exile and trials of the Puritan minister, Comfort Eykin, and of those in any way related to him or his. The narrative is mainly told by Comfort Eykin's daughter, the heroine of the tale; and in its quaint simplicity, narrow yet clear-eyed serenity, and vivid directness, is of singular charm. In the delineation of Eykin, the ascetic Puritan, and Boscorel, the artist-souled Episcopalian rector (a kind of Herrick, without his joviality); of Sir Christopher Challis, the good squire; and, indeed, of all the leading personages who take part in the

Digitized by Google

tragi-comedy that was enacted in or near "Bradford Oreas, in the hundred of Horethorne, Somerset," the author has succeeded beyond his wont. Every figure humanly lives and acts, and is no writer's puppet endowed only with phantasmal existence. The love episodes are romantic; and the fact that history has been concentrated in the Monmouth chapters is not allowed to detract from, but greatly adds to, the interest and the excitement of the story. Indeed, so far as the stimulus of excitement is concerned, Mr. Besant has never written more enthralling chapters than those which deal with the fortunes of Alice Eykin and her lover Robin, of Barnaby, and Benjamin Boscorel, and of unselfish Humphrey Challis, on board ship, in the Barbadoes, and in the island where they sheltered and whence they escaped. The narrative of the self-sacrifice, of the stern unconventional morality of Humphrey in the episode of the death of Benjamin Boscorel (the wreaker of evil throughout the tale), reaches a high level of fiction. As the romance will speedily be in another edition, it may be as well to note one or two anachronisms. Thus, "jolly" is scarcely a word we should expect from the lips of a seventeenth-century Englishman, although in a biblical "Commentary" of the period a learned and sedate student does in all seriousness remark that "all was jolly quiet at Ephesus before St. Paul came thither"; and, again, Humphrey Challis could not have been left "without a guinea" in 1665, as the memorial coins, so called, were not issued till after Sir H. Holmes's return from Cape Coast Castle in 1666. *For Faith and Freedom* has a further attraction in the reproduction of several of the best illustrations that accompanied its serial issue in the *Illustrated London News*.

That *Cressy* is not quite in Mr. Bret Harte's most familiar vein need be no drawback to the enjoyment of those who watch with pleasurable expectancy for everything from the pen of the author of *The Luck of Roaring Camp*. I am unaware whether the majority of Mr. Bret Harte's readers incline to the opinion that he is as successful with the romance as with the episode; but it certainly seems to me that his special idiosyncrasy as a writer loses, if it does not altogether disappear, with anything beyond episodical length. The *Cruise of the Excelsior* was too long by exactly one-half, and even *The Argonauts of North Liberty* could have been further condensed. The author's grasp of his subject-matter is so masterful in the short tale that when he indulges in the novel his personages are apt to become a little shadowy, the outlines a little blurred. Yet, with or without any such opinion of Mr. Bret Harte's capacities in fiction, *Cressy* may be thoroughly enjoyed. It is fresh, unconventional, and interesting as a story; the characters, from the impish Filgee and the quaint "Paw" to Uncle Ben, the kindly simpleton, and Ford, the nominal hero, are vividly portrayed. Cressy herself is a wayward damsel; but in her folly and "flirtatiousness," as well as in her strange caprices and sensuous alertness a true child of nature. The opening school-scene amid the pine-scented uplands is delightful, and every here and there occur passages of description and humour worthy of the author at his best. The pathos is none the less real because it is always subtle, and sometimes so thin as scarcely to come within the definition; and the tragic note, if not intense, is of sufficient import to leaven the later chapters effectively.

The central idea of *The Great War Syndicate* is excellent; and, quite apart from the humour that enlivens it, the syndical suggestion might—in a modified form—easily come within the range of practical politics, when once the world has taken that "immense stride" towards true humanitarianism which Mr. Laurence Oliphant and Mr. John Fiske, among optimist philosophers, regard as imminent. Mr. Stockton's clever skit—though it deserves a better term than this—deals with a naval war between the States and the mother country. Nothing occurs that is outside of reasonable possibility; and from the first page to the last the air of verisimilitude is skilfully maintained. Finally, the two nations (Great Britain, however, is first completely outwitted by the syndicate which has undertaken the management of the war) agree to a peace and the formation of an offensive and defensive league that shall control the destinies of the civilised world. Everyone, but naval men in particular, will enjoy the spirited and humorous account of the adventures of the huge British ironclad "Adamant" and "Crab C."

The creator of a new sensation is worthy of a statue or a memorial drinking-fountain, or something of the kind. Having to a considerable extent been anticipated by *Frankenstein*, Mr. W. Grove's startling romance is handicapped by the inevitable comparison; yet it can afford to stand beside Mrs. Shelley's famous tale, or Comte de Villiers de l'Isle-Adam's *L'Eve Future*, which recently attracted so much comment in France. In some respects it is more awesome than the former, and more ingenious than the latter; but even the extraordinary development of physics and the vaguely apprehended possibilities of created "force" or "energy" do not warrant such wild fantasy as that which renders the pages of *A Mexican Mystery* so enthralling. A machine of the steam-engine kind develops certain faculties, followed by consciousness, and finally by reasoning power; passions animate it, and desires torture it; and ultimately, after adventures that eclipse in dubiety those of Munchausen and Tartarin of Tarascon, and the monster of *Frankenstein* itself, it disappears from our ken to work out a career of destruction, and perhaps to develop also the reproductive faculty, and so bequeath to the world a terrific spawn. A "shilling dreadful" of this kind, however, compensates for reams of the usual stuff.

The new book by the author of *Muriel's Marriage* consists of several stories of French life collectively entitled by the name belonging to the first of them. The vein which "Esmé Stuart" works in these tales is one wherein she has to reckon with a predecessor and rival whose reputation for *petits contes français* is almost unique. Even in "The Curé of Saindol," however, she has failed to wholly catch the peculiar charm of Mrs. Macquoid's delicate style; and in several of the stories there is a heaviness of touch which detracts from the otherwise pleasing impression they are calculated to make. The most dramatic and the best constructed is "Borrowed Plumes"—a tale of the Reign of Terror; but, on the whole, the author was right to place "One for the Other" at the beginning, for it is the most satisfying, the most artistic of the collection. It is an episode of the Commune; and never did truer hero perish unjustly than the unselfish lover of Zoé Rébaut, Baptiste Vicourt. The story is worth all the rest of the series: in its dramatic concision, its artistic succinctness, it more resembles the work of a good American or French *romancier*—for, it can hardly be gainsaid, the short story is among us in a somewhat parlous state.

Why is it that there is such a run upon "martyr" for title or part-title of works of fiction? By some strange irony of circumstance, moreover, it is nearly always coupled with books whose authors have as little real conception of what constitutes martyrdom as they have desire for immediate practical demonstration. Miss Kappey's *Modern Martyr* is a capital story of its kind, though occasionally amateurish in style and more frequently in sentiment. It is occupied with the old story of "I loved her, but she loved me not, and when I loved another then she loved me." The tragic close does not seem to be necessary, and the reader will be apt to be less sympathetic than the author evidently anticipates. There are too many such trite reflections as "Oh! what blasphemies there are upon the word friendship. Does anyone ever understand its real signification? But a few, I think." When the author has acquired more literary experience, and has learned that the novelist should be as inconspicuous in his story as the ventriloquist in his Punch and Judy box, she will, probably, write an excellent tale.

Translations of Count Lyof Tolstoi's books seem to appear almost weekly. That there should be a widespread demand for the writings of the Russian novelist is a healthy sign, though it will be interesting to note the reception given to such a strange book as *My Religion* when it comes within reach of those who have been fascinated by the Cossack and South Russian tales. The chief interest of *Childhood, Boyhood, and Youth* lies in its avowedly autobiographical character. Much of it arrests the attention, and all is worth reading, though in parts the narrative seems uselessly elaborate in minor details. Still, the book is so suggestive, is so fine an example of the *journal intime*, without the formal periodicity of the latter, and is so important a contribution, not to Russian only, but to literature in general, that its perusal should be somehow managed. Though necessarily fragmentary, these memoirs of a strange life, and of still stranger spiritual vicissitudes, need not be considered as the author's last word of himself; for even if he never publish the record of his maturer development, there can be no doubt that we have much that is essentially Count Tolstoi in Constantine Levine, the hero of *Anna Karenina*.

In the volume that Mr. Scott has issued, "The Invaders" is the first of six tales, three of which have already been published in this country. It is a nervous and strongly-felt narrative of a military adventure. "Lost on the Steppe" is a powerfully written

Digitized by Google

account of what has befallen many a snow-bound traveller; "Polikushka" is a serf story, of interest rather to the student of Russian peasant and semi-feudal life than to the ordinary reader of fiction; and "Kholstomír" is the well-known "realistic fantasy"—the Story of a Horse—one of the most pathetic animal stories in existence, though a thread of human interest is curiously interwoven with it. Although Mr. N. Haskell Dole's Americanisms have been sedulously corrected in this volume, the style is not, so far as the English is concerned, so good as that of *Childhood, Boyhood, and Youth*.

It is no easy task to translate a book by so dainty, and often exquisite, a writer as M. Paul Bourget, but Mrs Cashel Hoey has achieved unusual success. Her version of what is one of the most powerful and, certainly, the least reprehensible of the romances of the popular young French novelist is particularly acceptable at a time when execrable translations abound. *André Cornelis* is a story of the passion of revenge in the breast of a Parisian Hamlet; and, though there is but little feminine by-play and incident is meagre, the interest is continuous, and even absorbing. The story bears favourable comparison with its predecessor and successor, for it has nothing of the self-sophistication of *Le Crime d'Amour* or of the somewhat too frank cynicism of *Mensonges*.

WILLIAM SHARP.

SOME HISTORICAL BOOKS.

"TWELVE ENGLISH STATESMEN."—*Henry II.* By Mrs. J. R. Green. (Macmillan.) The life of Henry II. is in some respects peculiarly well suited to be the subject of a monograph like those of Messrs. Macmillan's series. For one thing, the very remarkable personality of the man, and his influence on the development of events, can scarcely be adequately appreciated by the readers of ordinary histories; for another thing, the reign of Henry is one of those periods of history which may gain as well as lose by being separated from those immediately preceding and following. The state of things introduced by Henry II., so far as it was not a new beginning, was the resumption of a course of development which had been violently interrupted; and the results of his work did not become fully evident until long after his death. If the great king, who died overwhelmed with the shame of utter failure, could have foreseen the events which took place in the reigns of his youngest son and his grandson, he would assuredly have seen nothing in them to lessen the bitterness of his self-humiliation. Yet we now know that in an important sense he was successful in every struggle in which he engaged. The institutions which he founded have, indeed, worked in directions which he would not have approved; but they have worked nothing but good, and England still owes much to the love of justice and the genius for order of her first Angevin king. Mrs. Green has told the story of Henry's life with evident mastery of the facts, and with remarkable power of expression, doing justice both to the biographical interest of the subject and to its historical importance. The account of the contest with Becket is characterised by that best kind of impartiality which consists in a keen sympathy with both sides. There is very little in this brilliant sketch with which we are disposed to find fault, except perhaps with regard to certain questions of personal nomenclature. A good deal might be said in favour of the designation "Henry Plantagenet," but Mrs. Green is rather bold to make it the heading of her first chapter. The delatinising of proper names is a very good practice; but when it can only be carried out either by an insecure guess or by using such a hybrid form as "Ralph of Diceto," it would be better to leave the Latin name as one finds it.

"EPOCHS OF CHURCH HISTORY."—*The English Church in the Middle Ages.* By William Hunt. (Longmans.) Mr. Hunt has undertaken no easy task in attempting to give, in little more than two hundred small pages, an outline of the history of the English Church from its foundation in 597 down to the last quarter of the fourteenth century. The attempt, however, has been fully justified by its success. The book is an excellent example of what can be done within narrow limits of space by judicious selection of material. Mr. Hunt has chosen as his principal subject the relations of the Church of England to the papacy on the one hand, and to the state on the other; but he has not neglected other important matters, such as the moral and social influence of the church, and the development of its internal constitution. The book is in style thoroughly popular; but it is based on first-hand knowledge of the original sources. The author's soundness and impartiality of judgment are conspicuous throughout, though he has naturally preferred to dwell chiefly on the worthier side of the church's activity; and, perhaps, some of his readers might be led into the error of thinking that the mediaeval English clergy were, as a rule, men of the type of the Grossetestes and Langtons. Of Thomas Becket, Mr. Hunt says:

"He fell a martyr to the privileges or 'liberty' of the Church. That these privileges were not really beneficial to her is not to the purpose. Men and causes are to be judged by the standard of their own age, and neither then nor for centuries later did anyone doubt that he laid down his life for the cause of God and His Church."

There is an important truth in this, but it does not express the whole truth. The heroic death of Thomas deserves admiration; but the cause for which he died, and which seemed to him the cause of God, was only that of the interests of his own order. The title of "martyr" must be reserved for men who, even though equally mistaken in judgment, were actuated by wider and loftier aims than his. Compared with Grosseteste, or with his own contemporary, Hugh of Lincoln, Becket appears of far inferior mould. The account of the relations of the early English Church with the Celtic Christianity of Britain and of Ireland, though necessarily brief, is extremely good; and the intricate history of church legislation under the Edwards is told with a degree of fulness and lucidity which is especially deserving of praise. We should like to see a larger work by Mr. Hunt on the same subject, or on some special portion of it.

"THE STORY OF THE NATIONS."—*Mediaeval France*: from the Reign of Hugues Capet to the Beginning of the Sixteenth Century. By Gustave Masson. (Fisher Unwin.) This was, we suppose, the last work of the late M. Masson, and, so far as our own knowledge goes, it is certainly his best. The style is remarkably attractive, and free from any trace of foreign idiom; and the selection of material is skilful. There are two very useful maps, several chronological and genealogical tables, and a nearly exhaustive list of "sources," which is convenient for reference, though there are indications that it is not altogether prepared from first-hand knowledge. The history of literature and art is not neglected, and the frequent quotations from mediaeval chronicles are well translated. Altogether this is one of the most interesting works of the series to which it belongs.

"THE STORY OF THE NATIONS."—*Holland.* By J. E. Thorold Rogers. (Fisher Unwin.) Prof. Rogers's contribution to the "Story of the Nations" is somewhat rugged in style, and is here and there marred by the needless obtrusion of the author's political sympathies and antipathies; but it is remarkably vigorous and spirited. We are somewhat disappointed, considering the field in which Prof. Rogers has won his reputation, that he has not dealt more fully with the very interesting economic aspects of Dutch history; and the English war of 1664-1666, which was as glorious for Holland as it was disgraceful for the English government that provoked it, surely deserved more than the two pages allotted to it. Of Dutch literature, Prof. Rogers has absolutely nothing to say. Vondel, and Jacob "Katz" (so misspelt), and Prof. Kuenen, are just mentioned, and that is all. Notwithstanding these defects, the book is well worth reading. The story is told in bold outline, which is easy to follow and to remember. The brief chapter on "The Rise of the Chartered Towns," and the incidental notices of Dutch commerce, are of special value. The illustrations are well chosen, but rather unsatisfactory in execution. Some of them look as if they had previously done duty as initial letters.

The White King; or, Charles I., and the Men and Women, Life and Manners, Literature and Art, of England in the First Half of the Seventeenth Century. By W. H. Davenport Adams. In 2 vols. (George Redway.) Mr. Adams has produced what will be found by the general reader an amusing book; but it is not, we conjecture, intended for the scholar or the student. The volumes read somewhat like the contents of a series of note-books which have never been thoroughly digested; but, contrary to one's experience with most books of the sort, the later pages are much better than the earlier ones. By far the best thing in the first volume is the account of Lord Herbert of Cherbury. The vanity and egotism of the man, his passion for conducting himself after the fashion of the heroes in the old romance books, his desire to fight duels on the slightest occasion, is excellently told. It would be a mistake, however, to regard him as a mere braggart or fool. He had at the back of all his strange longing for making himself notorious a load of sound common-sense. He was, like his brother George, most indubitably a poet, though he seems to have taken little pains with his verses. The lines quoted by Mr. Adams are a proof that he could have written poetry that would have lived had he taken the trouble. Philosophy, however, was in the air. The dead weight of Calvinism had proved a burden too heavy to be borne by those who had a faculty for speculation. It had been in the sixteenth century a resting-place for the children of those who had revolted from the Roman obedience, but it afforded shelter for the higher intellects no longer. The *De Veritate* is a deliberate endeavour to make a foundation for life which shall be independent of ecclesiastical teaching. Lord Herbert's attitude to the current English theology has never been dwelt upon as it deserves. He was a type of the unrest of his day, but his mind was not content with throwing down; it was constructive also on lines which, making the needful exceptions as to time, training, and circumstances, we cannot doubt ran in the right direction. His testimony as to conscience is a bright glimmer of light in a dark place. To some, we imagine, Lord Herbert, although he had his feelings under strict control when the pen was in his hand, will seem needlessly violent. He calls certain opinions of the theologians of his time

Digitized by Google

"atrocious"—a brave thing to do at a time when these horrible fancies were being taught as truth in more than half the pulpits of England. It may be mere fancy on our part, but there has always seemed to us to be a tie of intellectual brotherhood between the speculative Welsh peer and Theodore Parker, the most eloquent of the Boston transcendentalists. The quotations given by Mr. Davenport Adams from the Stafford correspondence are well selected. We trust they will lead many persons to read those entertaining and instructive folios. We have never seen the originals, and have been informed that the compilation made from them in 1739 by William Knowler, rector of Irthlingborough (not Knowles, as Mr. Adams or his printers spell it), bristles with mistakes. Be this as it may, it will continue to be very pleasant reading until its place is taken by an edition which is up to the level of modern requirements. Garrard's letters to Wentworth when Lord Deputy furnish much political and social gossip which, but for that industrious correspondent, would have been forgotten. They are of quite a different character from the other letters in these volumes.

NOTES AND NEWS.

Mr. Buchanan's new poem, announced in the Academy some months ago, is now in the press, and will be published, with illustrations, early in the season. It is in rhymed octosyllabic verse throughout; and, though the subject is romantic and supernatural, the treatment is quasi-critical and satirical, approaching the manner of "White Rose and Red" more nearly that of the "City of Dream." The author has been at work upon this poem for several years.

Mr. Buchanan will also issue this season his autobiographical Recollections, in which he will deal elaborately with the literary history of the last twenty-five years. This work will differ from the gossipy form of memoir now so popular, in so far as it will be occupied to a considerable extent with literary criticism as well as personal memoranda concerning contemporaries. It will be published by Messrs. Bentley, in two library volumes.

Messrs. Trübner & Co. have in the press a work by Mr. S. Alexander, Fellow of Lincoln College, Oxford, entitled *Moral Order and Progress:* an Analysis of Ethical Conceptions. It will be in three Books: Book I., Preliminary—dealing with Conduct and Character; Book II., Statical-Moral Order; Book III., Dynamical-Moral Growth and Progress. It treats ethics independently of biology; but the result is to confirm the theory of evolution by showing that the characteristic differences of moral action are such as should be expected if that theory were true. In particular, Book III. aims at proving that moral ideals follow in their origin and development the same law as natural species.

Messrs. Swan Sonnenschein & Co. will issue shortly *The Mystic Vine*, a Meditation on the Passion of our Lord, translated from the Latin of an unknown writer by Dr. S. J. Eales. The book will have a frontispiece by Mr. Westlake. The same publishers have in preparation fifty devotional studies by the Rev. Wycliffe Vaughan, entitled *The Transfiguration of Our Blessed Lord*, to which the Bishop of Salisbury contributes a preface; *Sunbeams from Heaven for Darkened Chambers*, by Hester Douglas, with a preface by the Bishop of Sodor and Man; and the Rev. J. E. Denison's *Catechising on the Catechism*, with a preface by Canon Liddon.

Mr. Fisher Unwin will publish next week in the "Nation" series *Media*, by Miss Z. A. Ragozin. The period covered is from the fall of Nineveh to the Persian War; and the book includes a study of the Zend-Avesta.

Mr. Cameron Macdowall's new book—*A Queen among Queens*, a Romance of the East—will be published shortly by Messrs. Sonnenschein & Co., in one volume.

Mr. Joseph Hughes, of Pilgrim-street, Ludgate-hill, proposes to publish, under the general heading of "Hughes's Handy Novels," a series of original stories written by authors of repute, and of about the same length as the ordinary three-volume novel, but issued in limp wrapper and also in stiff boards, at one shilling. A special feature will be the readableness of the type. The design for the cover is by Mr. Walter Crane. Mrs. A. Phillips will start the series with *Daphne's Daring;* a Love Story.

Messrs. G. P. Putnam's Sons, of New York, announce a new work by Mr. Theodore Roosevelt, author of "Ranch Life and the Hunting Trail." It is entitled *The Winning of the West and South-West, from the Alleghanies to the Mississippi*; and the first volume, which is now in the press, will cover the period from 1769 to 1783.

A few months since, Mr. John Bright highly recommended a small volume of essays, entitled *For Good Consideration*, by Mr. Edward Butler, as containing excellent advice to orators. A new edition of this work is announced to be published shortly by Mr. Elliot Stock.

The Early English Text Society will next week send out its first two books for this year: (1) in the "Original Series," part i., the text of Mr. F. Horsley's edition of Eadwine's *Canterbury Psalter*, from the unique MS. at Trinity College, Cambridge, about 1150 A.D., with transitional forms from Anglo-Saxon to Early English, like "wyrchende" for Anglo-Saxon *wyrcende*, "senfullen" for Anglo-Saxon *synfullan*; (2) for the "Extra Series" and last, the fourth part of Prof. Skeat's edition of Barbour's *Bruce*.

As Mrs. Humphrey Ward has notoriously suffered at the hands of American pirates, so it appears that Mrs. Margaret Deland's *John Ward, Preacher*—a novel scarcely less talked about in the United States than *Robert Elsmere*—has received similar treatment in this country. Some nine months ago, Messrs. Longmans issued an authorised edition, upon which they pay a royalty to the author; but as the book appeared first abroad, it cannot be the subject of copyright here. An English publisher (who shall be nameless) has now taken advantage of this to issue another edition, without, as we understand it, having received any sanction from the author.

Messrs. Hodges, Figgis & Co., of Dublin, have recently purchased a copy of the extremely rare book, "Justa Edouardo King, Naufrago, ab Amicis Maerentibus Amoris et μνείας χάριν," containing the first edition of Milton's "Lycidas." This copy was for many years in the library of the late Canon Thornhill, under whose supervision a very careful reprint of the work was issued by the Dublin University Press in 1835. It bears an autograph of great interest, "Sidney Mountegue, Anno Domini, 1639. Amen," presumably that of Sir Sidney Montagu (brother of Henry, first Earl of Manchester, and father of the first Earl of Sandwich), who was committed to the Tower in 1642. He married Paulina, third daughter of John Pepys, of Cottenham, Cambridge, the father of Samuel Pepys.

On Monday next, February 25, and the three following days, Messrs. Sotheby will sell the Hopetoun Library. The collection is not very large—only 1263 lots in all; but most of them are such as bibliophiles desire, and there are some extraordinary rarities. First, of course, comes the Mazarin or Gutenberg Bible, of which fresh copies are always turning up—we have just heard of one in the National Library at Rio Janeiro. In his note, the cataloguer quaintly remarks that it "must always rank as the foundation-stone for the library of a divine." Scarcely less rare are Gutenberg's *Balbi Catholicon* (1460); the first edition of Virgil, printed at Rome by Sweynheym and Pannartz (1469); and some of the Aldines—notably the first Virgil, on vellum (1501), and the first Petrarch, also on vellum (1501). The introduction to the catalogue merely gives a list of the principal lots; we wish that it had supplied a history of the collection, which seems to have been inherited from two quarters—the Hopes of Hopetoun, and the Johnstones of Annandale. There are included in the sale some account books and genealogical memoranda of Sir James Hope, the founder of the family in the middle of the sixteenth century; but we believe that the great collector was his grandson Charles, the first earl, and a famous dilettante (1681-1742), here erroneously called James.

At a meeting of the Folk-lore Society, to be held at 22, Albemarle Street, on Tuesday next, February 26, at 8 p.m., Mr. Edward Clodd will read a paper on "The Philosophy of Rumpelstilchen."

A lecture will be given on Friday, March 8, by Mr. Macdonald, author of *Too Late for Gordon and Khartum*, in aid of the book funds of the West Norwood Free Library. This library was opened last autumn, and is the first of four which the Lambeth Libraries Commissioners are establishing in various parts of their large parish. It has proved a very great success, as many as 700 volumes having been given out in one day for home-reading, and an average of 500 persons visiting the news-rooms daily.

The Government of Denmark have recommended a grant of 4500 kroner (say £520) towards the proposal of the Society for the Publication of Old Norse Literature, to reproduce by phototypy the unique MS. of Saemund's or the Older Edda, which is preserved in the Royal Library at Copenhagen.

THE FORTHCOMING MAGAZINES.

The *American and Oriental Record*, which the late Nicholas Trübner started about twenty-four years ago, is now to be enlarged under the title of "Trübner's Record: a Journal devoted to the Literature of the East, with Regular Notes on, and Lists of, Current American, European, and Colonial Publications." Dr. Rost, of the India Office, has undertaken the editorial management of the Oriental section. In addition to personal notices, such as obituaries and announcements of forthcoming works, it is intended to devote more space to reviews, original contributions, and more especially periodical reports on the progress made in the various fields of Oriental research. The first number of the new series will appear on March 15, and thereafter in the middle of each alternate month, though a monthly issue is hoped for in the future.

The March number of the *Antiquary* will contain a defence, by Mr. C. E. Plumptre, of the proposal to erect a monument to Giordano Bruno in Rome; and also papers by Dr. W. F. Ainsworth on the "Kusti or Fillet of the Fire Worshippers," and by Mr. W. Rendle on "Early Hospitals of Southwark."

The March number of *Time* will include articles on "Oysters and Archachon," by Mr. H. W. Lucy; "Rabbit Shooting," by Mr.

Digitized by Google

T. E. Kebbel; "Esoteric Buddhism," by Mr. A. P. Sinnett. In the "Work and Workers" series, Mr. C. E. Mallet will discuss the Charity Organisation Society, and there will also be a story of Quaker life in the Midlands.

UNIVERSITY JOTTINGS.

The late vice-chancellor at Cambridge, Dr. Taylor, of St. John's College, having placed his stipend for the past year (£400) at the disposal of the University, it has been resolved to apply the money in providing sculpture for the new buildings of the University library.

Commander V. Lovett Cameron, R.N., has been invited to deliver an address in the Sheldonian Theatre at Oxford on Thursday next, February 28, upon "Slavery and the Slave Trade in Central Africa." Sir William W. Hunter will take the chair; and we understand that many heads of houses and other prominent members of the University have signified their intention of being present. Commander Cameron received the hon. degree of D.C.L. from Oxford shortly after his adventurous march across Africa.

Mr. H. F. Pelham, reader in Roman History, has been elected a professorial member of the hebdomadal council at Oxford, after a close contest, to fill the vacancy caused by the Rev. T. Fowler's resignation of the chair of logic. He received 113 votes, against 107 given to Canon Paget.

Mr. Samuel Sandars, of Trinity College, Cambridge, has offered at his own cost to complete the design of Mr. Gibbs, the architect of the Senate House, by the addition of six stone urns or vases—three on the south and three on the eastern pediment.

Dr. Charles Waldstein, reader in classical archaeology at Cambridge—who spent Christmas in Athens at the American School—is giving a course of evening lectures on "Some Statues in the Museum of Archaeology in the Light of recent Discoveries in Greece."

Mr. A. H. Bullen's course of six lectures on "Elizabethan Poets" are now being delivered at Oxford in the New Schools, on Tuesdays and Wednesdays, the poets selected being Michael Drayton, Samuel Daniel, Thomas Dekker, George Chapman, Thomas Campion, and Nicholas Breton.

Gonville and Caius College at Cambridge announce three scholarships for competition, in September, in either Hebrew, Sanskrit, or mediaeval and modern languages.

According to the annual report of the Cambridge Philological Society for 1888, the total number of members is 159; and the capital invested yields an interest of about £30.

Prof. A. Farinelli has been appointed Barlow Lecturer on Dante at University College, London, for three years, in succession to Dr. E. Moore. It is understood that Prof. Farinelli will deliver his lectures in Italian. He has previously been Barlow lecturer for six years (1881 to 1886), and his lectures were highly appreciated by the Italian-speaking audience, who attended most regularly. There will be twelve lectures every year in 1890 and the two following years.

IN MEMORIAM.

GUDBRAND VIGFUSSON.

Gudbrand Vigfusson, the greatest Scandinavian scholar of our century, was born in the district of Broadforth, Iceland, of a good family. He was brought up in the north-west of the island by his foster-mother and kinswoman, Kristin Vigfusdottir, to whom (as he thankfully recorded) he owed "not only that he became a man of letters, but almost everything." After passing some time with a tutor in whose house he stayed, he went to the high school then at Bessastad, and when it was moved (wrongly, as he held) to Reykjavik. In 1849 he left, and, by the help of friends, went to Copenhagen University, which he entered in 1850. There a scholarship at the Regentsen and a subsequent appointment as Stipendiarius under the Arna-Magnæan Commission enabled him to enter on the course of study in the literature of his own people which he had marked out for himself. The Arna-Magusean Library, where he passed so many hours, was not yet moved from the quarters in the large loft of the church to which it had been hastily shifted after the fire of Copenhagen, and it was as he described it a curious and interesting place to work in. During the fifties and the first years of the sixties he not only made himself familiar with every scrap of vellum in the library, and got to know every paper-copy and its value, but also made collations and notes, which he was able to use as a firm basis for further investigation. Among his chief friends, other than Icelanders, at the university were H. Larpent (the gifted translator of "Tartuffe" and other of Molière's plays, whose early death Vigfusson often deplored) and K. Dahlenborg.

In his first work, *Timatal*, written at full speed, from October 1854 to April 1855, was seen the *début* of a master. It deals, in detail and methodically, with the chronology of the whole body of the Islandinga Sögur, and its results have not been disturbed save by his own corrections made in the *Corpus Boreale* and the *Origines Islandiae*. His first literary work—the account of a tour in Norway with his friend Unger—appeared in *Nyfélagsrit* in 1855, and it shows him to have already possessed a singular gift of style and a power of writing pure unaffected Icelandic seldom approached by his countrymen. Englishmen will be able to judge of his style from his admirable letters to the Academy and other journals, and from the striking "Visit to Jacob Grimm" in the *Grimm Centenary Pamphlet* (1886). He wrote for several Icelandic periodicals during the succeeding ten years—*Nyfélagsrit* (of which, in 1868, he appears as one of the committee of editors), *Thjodolf*, and *Skirnir*. Perhaps the most notable of these communications, besides those on critical subjects, was the account of the "Tour in Germany" in 1859, when he visited Maurer and Möbius. This tour was a consequence of a visit to Iceland in 1858 (the last he ever paid to his own country), when he met Maurer at Reykjavik and the two came back together in the same ship. But his main business during these ten years lay in editing the Sagas; and his achievements in this line have served as a model for all that has since been done in this direction by others. The last part of *Biskupa Sögur I.* appeared in 1858. The preface (the first of a wonderful series of prefaces in which the diplomatic history of the Icelandic literature is summed up) was written in April and May of that year. In this volume are already apparent his marvellous knowledge of MSS., generous labour in transcription (he always made his own copies), and keen eye for every fact that might throw light upon the genesis and history of any classic work. In 1860 came forth *Bárdarsaga* at Copenhagen and *Forn-Sögur* (with Möbius) at Leipzig; in 1862, the preface to Jon Arnasons's *Thiodsögur* (Folk-tales); in 1864, *Eyrbyggja Saga* at Leipzig, dedicated to John Sigurdsson, his warm colleague and friend. But the greatest task of these years was, perhaps, the edition of *Flatejarbok* (1860, 1862, 1868), every word of which giant codex (now bound in two huge volume) he copied out with his own hand, Unger, his fellow editor, seeing the sheets carefully through the press, the three volumes being completed by masterly preface dated October 1868.

In 1864 opened a new chapter in his life. He was induced, by Sir G. W. Dasent, to come to London to undertake the Icelandic English Lexicon projected by Richard Cleasby. After a stay of some months in London, he came to Oxford, where, in 1866—the Dictionary having finally been undertaken by the University Press—he began in earnest a task which kept him continuously employed for seven years, till, in 1863, the last of four fascicules appeared, with the grammar and index of literature. To the making of this great book—one of the most perfect and readable of existing dictionaries—there had gone no little labour. The materials furnished were miserably inadequate, and form less than one-third of the bulk of the complete work; but his own wide and full reading, and the help which in many directions he got from Fritzner's labours (help he always generously acknowledged) enabled him to supply their shortcomings. The method—one of its chief merits—he worked out with the help of the Dean of Christ Church, whose own long experience in lexicon-making was freely and ungrudgingly placed at Dr. Vigfusson's disposal. It should be added that the whole work was done single-handed, without transcribers or assistants. While engaged on the Dictionary he lived, first, at Clifton Villas, Cowley Road, and next at North Parade, whence he moved later to the well-known rooms at No. 2 St. John's Villas, which most of his Oxford friends will always associate with his kindly presence. He used occasionally to spend part of the vacation at Bessborough Gardens, London, and there I first met him in 1869. Though he lived a retired and laborious life, and never relished the "long English dinner," he had made many firm friends already in England: in London—Carlyle and his family, Mr. G. Wilkinson, Lord Sherbrooke, Sir Edmund Head (who read Icelandic with him), Mr. H. Ward; in Oxford—Mr. Coxe, Sir Henry Acland, the Dean of Winchester, and Prof. Price Prof. Earle, and Mr. Bernard were those he saw most of at this time; nor must the name of Mr. Pembrey, the reader of every Icelandic work that has gone through the Oxford Clarendon Press, be forgotten.

The taking of transcripts at Copenhagen and Stockholm in 1874-75 was part of the preparation for the "Rolls Series" editions of *Orkneyinga* and *Hâconar Saga*, and resulted in the discovery of parts of a fuller text of the former than was before known. These texts were printed, but, owing to causes not under the editor's control, not published for ten years, when, with prefaces added, they were at last given to the world in 1887.

His next work was an edition of *Sturlunga Saga* for the Clarendon Press, a huge complex body of Sagas, giving the history of the latter years of the commonwealth in Iceland, and of the great Sturling family and its various fortunes. To these texts, published in two burly volumes in 1878, he prefixed, under the modest title "Prolegomena," the complete history of the classic literature of Iceland and the MS. materials upon which it rests. This history (which no one but himself could have done) forms a worthy appendix to his Dictionary, and should certainly be prefixed to any fresh edition of it.

It was on the Prolegomena that I first began to work with him; and from the day that I began taking notes at his dictation, in 1877, till the day he died I passed more time with him than with any other friend I had. In Oxford we used to work together at his rooms two or three afternoons a week and often of evenings at my rooms. In the vacations he used to take lodgings near where I lived in London, and

Digitized by Google

we worked from 10 till 7.30 or later in my house (breaking off only for meals and a brisk afternoon walk) for weeks together, for almost three months of each year. In this way we finished the Prolegomena, and then set to work on the *Icelandic Prose Reader* (it was while we were on this that I stayed six weeks with him at St. John's Villas one long vacation). The *Reader* came out in 1879; and the next three years were devoted to the preparation of the *Corpus Poeticum Boreale*—one of the most important of his works, in which the whole body of classic Old Northern poetry is examined, edited, and translated, with full notes, &c. It marks a new epoch in Scandinavian studies; being an attempt to assign date, place, and circumstance to a body of literature which had never before been critically grappled with. This work was followed in 1886 by the *Grimm Centenary Pamphlet* (in which as in the *Corpus* and *Reader* I took part), wherein he further worked out several points of interest suggested during further study; and several small papers in the *English Historical Review* and the Oxford Philological Society's *Transactions* may be referred to as dealing with like subjects.

The next enterprise, one upon which Dr. Vigfusson was engaged till within a few days of his death was the *Origines Islandiae*, to contain critical texts and translations of the "Landnáma-boc," "Libellus," "Early Bishops' Lives," and "Islendinga Sögur," upon which the history of the migration to, settlement in, and early constitutional history of, Iceland rests. Much of this is in print, and it is hoped that it will appear this year. A long stay at Copenhagen—during a few days of which I was with him—and a mass of transcripts were necessitated by this work; and it was at this time that he showed me his old quarters in Regentsen College, that we visited W. Finsen and others of his valued friends, and that we went over the vellums and important paper copies in the Arna-Magnæan Collection together. In 1886 he went for a few days to the Isle of Man, which resulted in "A Re-reading of the Manx Runes" and papers thereon, written with his friend, Mr. E. Savage, in the *Manx Note-Book*. He also, in 1887, paid a visit to Downton to see the Moot-stead there, and in 1888 made his last journey to the Orkneys and Shetland, taking care to inspect the old Thing-steads in those islands.

It was after this journey that the first symptoms of ill-health began to be apparent, and they increased during the Michaelmas term, 1888, till he determined to lay up for a while at the Acland Nursing Home, Oxford. There the fatal nature of his malady—cancer of the stomach and liver—was soon ascertained; and after a few weeks of painless, but wearying, illness, borne with a serene and unclouded mind, he died quietly in sleep, January 31.

On February 3 round his grave at S. Sepulchre's cemetery, Oxford, but a few steps from the home he had long lived in, was assembled a large gathering of his Oxford colleagues and friends—a list too long to cite here—of all classes anxious to pay the last public honours to a great scholar and a wise and good man.

Public distinction he never sought; but he had received the honorary Oxford M.A. in 1871, the centenary doctorate of Upsala in 1877 (and his visit to Sweden to receive this was a source of long pleasure to him), and the order of the Dannebrog in 1885. He held since 1884 the office of lector in Icelandic and kindred subjects in the university of Oxford—a position created for him.

Handsome as a young man, he was of striking appearance in ripe age—a fine brow, shaded by thick brown hair, scarcely threaded by grey; well-shaped features; rather prominent and expressive blue eyes and colourless skin; a spare upright figure, the head only stooping when meditative; characteristics well given in the oil portrait taken of him in 1888 by his friend, Mr. H. M. Paget. He had a clear ringing voice and happy smile ever ready to respond to a pregnant or witty remark. He was remarkably plain and simple in all his tastes. His handwriting fine, regular, and characteristic, was unspoilt by the miles which his pen had so surely traversed in the masses of beautiful transcripts he had made.

Those who knew him will not need my testimony to his strong, sincere, and generous character, his extraordinary and well-controlled memory, his wide learning in many tongues, his eager and unwearied industry, and his fine literary taste. For myself, I can only say that the longer I knew him the more I honoured, trusted, and loved him.

F. York Powell.

ORIGINAL VERSE.

MEMORIES.

The water laps upon the sandy shore,
Beneath the oak-tree roots the rabbits play
While summer's dusk is slowly creeping o'er
The shining mere, the woods that fringe the bay.
I know each flower that blooms upon that shore,
The arrow-head, the purple loosestrife tall,
And lowly centaury's pink star, while o'er
The lesser herbs the fragrant brackens fall.
Time robs me not, for when I close my eyes
The old familiar scenes come back again,
My mind is fuller and perchance more wise,
The years now gone not wholly passed in vain;
Yet something lost of childhood's sweet surprise
Brings back old days with mingled joy and pain.

B. L. Tollemache.

MAGAZINES AND REVIEWS.

The February *Livre* opens with M. Uzanne's proposal for a society of "Bibliophiles Contemporains," who are to publish as well as compare notes and experiences in bibliography. There is always some difficulty in getting international societies to work; but there is no reason on the face of it why this one should not be a success. Two other papers follow in the original part. The first is an account (with a good portrait) of Eugène Renduel, the publisher of the early Romantic movement, including notice of some books printed

"Suivant le rituel
De Renduel,"

as a pleasant bard sings. The other article discusses and quotes some correspondence of Casanova with the Prince de Ligne. We own that the amount of attention paid to "Mdme. Seingalt" by some persons seems to us to be a little excessive; but it may not seem so to others.

COPYRIGHT IN CANADA.

On January 23 a deputation from the Canadian Copyright Association presented a memorial to the Privy Council of Canada—who seem to be identical with the ministers—at Ottawa, praying for a change in the law which shall prohibit still more effectually than at present the grant of copyright to any books not printed within the Dominion. We observe that the Association professes to represent authors; but the memorial is confined solely to the manufacturing interests of publishers and printers.

The occasion of the memorial was the introduction of a Bill into the Dominion Parliament for the adoption of what is known as the Berne International Convention, which contains no provision for domestic manufacture. The existing legislation of Canada, which dates from 1875, requires domestic manufacture as a condition precedent to the grant of copyright, and further provides an elaborate machinery by which foreign authors shall receive a fixed royalty on their books thus reprinted. But, as popular English authors know to their cost, this provision is entirely illusory, partly because no effective measures are taken against the competition of other reprints illictly imported from the United States, and partly, too, because English authors have no ready means of recovering the amount due to them for royalty.

The result is thus stated by Mr. Robertson, the president of the association:

"Take the case of one book which is well known—*In Far Lochaber*, by William Black. That work is not published in Canada, and the English publisher declined to allow it to be reprinted in Canada. What follows? The price of a British edition is thirty-one shillings and sixpence. By going to the United States we are enabled to get a copy in paper for 50 cents, and in cloth for $1 25c. In the case of that celebrated work which commands the attention of the reading world to-day—I mean *Robert Elsmere*—the same thing applies. The English publisher declined to sell the Canadian copyright to a Canadian publisher. He says, 'No. I won't sell to you. You must either buy the American edition or go without it.' The result is that some 20,000 copies of this book have been imported from New York into this country and sold at 50 cents. The publication of *Robert Elsmere* is a strong justification of the ground we take. Had that work been published in this country it would have involved an expenditure of from six to seven thousand dollars; and if the Act which we have framed were law to-day, Mrs. Ward, the authoress, on this edition of 20,000 copies, would have obtained a royalty of $1,000 (whereas it is a question if she will now receive one dollar), and the bookbinders, stereotypers, paper makers, and type-founders would all feel its beneficial influences."

So far as we understand the changes proposed in the draft bill included in the memorial, their aim is to compel English authors and publishers to accept Canadian copyright upon condition of domestic manufacture, and to oust British copyright altogether. In this draft bill it is provided (1) that Canadian copyright can be obtained only for a work registered with the minister of agriculture (!) simultaneously with its first publication elsewhere, and also reprinted in Canada within two months after first publication; and (2) that in default of such registering and reprinting, any person in Canada may reprint the work, subject to the payment of a royalty to the author of 10 per cent. on the retail price. In both cases the importation of foreign reprints is prohibited, though this prohibition is not to extend to the English edition of copyright works.

CORRESPONDENCE.

THE SOURCES OF CHAUCER'S SECOND NONNE'S TALE.

Cambridge: Feb. 20, 1889.

It is commonly understood that the source of Chaucer's Second Nonne's Tale is the Life of St. Cecilia, as given in the *Legenda Aurea*; and, of course, this is the principal source of it, in any case. But I have always felt that I could not rest wholly satisfied with this answer, because it fails to account for the curious word *corniculere* in line 369 (*Cant. Tales*, six-text, group G). Chaucer would never have put in this strange word, unless he had found it in the original Latin. My note on the line says—"It is remarkable that Chaucer should make use of this strange word, because it is found neither in the Latin nor the French version," *i.e.*, of the Life of St. Cecilia.

In other cases we find that Chaucer was constantly in the habit of consulting more sources than one. No doubt he did so here. What, then, was the *other* source? On again consulting Ducange, I observed (what I had missed before) that the word *cornicularius* occurs in the Acts of the Saints, in the Lives of Valerian and Tiburtius. But Chaucer mentions these saints throughout the tale. Valerian was Cecilia's husband, and Tiburce was his brother. Here, then, is the clue. The day of St. Valerian is April 14. On consulting the Acta Sanctorum for that date I found the title, "De Sanctis Martyribus Romanis, Valeriano, sponso Sanctae Ceciliae, Tiburtio ejus fratre, et Maximo Praefecti *Corniculario*," &c. This was a good beginning. We can now find the original passage with ease. Chaucer writes:—

> "Anon thise martirs that I yow devyse,
> Oon Maximus, that was an officere
> Of the Prefectes and his corniculere,
> Him hente; and when he forth the seintes ladde," &c.

And the original Latin (cap. 4, sect. 14) is: "Tunc gloriosi martyres, excepta sententia, a Maximo Corniculario Praefecti ducebantur ad pagum." Further collation soon shows that the account of these saints agrees very closely with the Life of Saint Cecilia, but with slight variations, especially in the order of words, &c., throughout the narrative. It is, however, shorter than the latter, ending at Chaucer's line 409, at the word "stoon." In most places where these differences occur, Chaucer follows the Life of Cecilia rather than the other account. For all that, we must henceforth keep an eye on *both* accounts, as I have sufficiently shown. Thus one more Chaucer puzzle is solved. Observe, too, that *Prefectes* is singular; *of the Prefectes* answers to the modern English phrase "of the prefect's."

Walter W. Skeat.

THE FATHER OF WARREN HASTINGS.

London: Feb. 18, 1889.

In turning over the pages of that unrivalled storehouse of genealogical facts, Foster's *Alumni Oxonienses*, I chanced upon the following entry (vol. ii., p. 624, col. 2, No. 39):

"Hastings, Penyston, s. Penyston, of Daylesford, co. Worcester, *cler.* Balliol Coll. matric. 28 March, 1724, aged 16; his brother Samuel bar.-at-law, Middle Temple, 1717."

Can it be possible that we have here the father of Warren Hastings? So far as I know, the only printed authority for Warren Hastings's ancestry is that given by his biographer, G. R. Gleig, in the *Memoirs* (3 vols. 1841), which afforded Macaulay the occasion for his celebrated essay.

The first member of the family there mentioned by name is Samuel, the great-grandfather of Warren Hastings, who is said to have presented his second son (unnamed, but undoubtedly Penyston) to the rectory of Daylesford in Worcestershire in 1701, and to have alienated that manor in 1715. This second son, the grandfather of Warren Hastings, is stated to have had two sons—Howard, born in 1711, and afterwards in the Customs; and Pynaston, (*sic*) born in 1715. There is no mention of a Samuel. Pynaston married in 1730, when he could not have been more than fifteen years old; and his famous son, Warren, was born on December 6, 1732. Of Pynaston nothing further is recorded, except that he married a second wife, took orders "when he was old enough," and died in the West Indies.

On referring to Nash's *Worcestershire* (1781), I find, under "Dailesford," in the table of incumbents (vol. i., p. 288) that Penyston Hastyngs (*sic*) was rector from 1701 to 1753, on the presentation of Penyston Hastings senior; and that his predecessor was Charles Penyston, on the presentation of the same. It seems, therefore, that Penyston was a family name, and should thus be spelt. We may notice, by the way, that Warren Hastings inherited longevity from his grandfather.

It is hardly credible that there should have been two Pynastons (or Penystons) living at the same time, and both the sons of the rector of Daylesford, the one born in 1708 and the other in 1715. Gleig is by no means an unimpeachable authority. He quotes, indeed, the parish registers for the marriage of Pynaston (at St. Andrew, Worcester) and for the birth of Warren (at Churchill, Oxfordshire); but it is at least possible that he did not verify the birth of Pynaston, though he certainly visited Daylesford. It must also be remembered that Pynaston was the scapegrace of the family, and that his son was always unwilling to talk about him. If he was, in fact, born in 1708, and not in 1715, his marriage in 1730 (when he would be twenty-two) becomes easier to accept; and his having gone to college would indicate that he had been originally intended for the church.

Perhaps some reader of the Academy may be able to solve the difficulty by consulting the Daylesford register.

I may add that the name of Warren Hastings himself, who certainly received the hon. degree of D.C.L. from the university at the Commemoration of 1813, is not to be found in *Alumni Oxonienses*, though other honorary graduates of the time are included. On the memorial tablet in Daylesford Church the degree is recorded, according to Gleig, as "LL.D."

Jas. S. Cotton.

POPE AND ADDISON.

London: Feb. 18, 1889.

If we may regard it as proved, from Mr. Aitken's discovery, that Pope's satire on Addison was published in the *St. James's Journal* of December 15, 1722, before its appearance in *Cythereia* (1723) a point of some interest arises with regard to the quarrel between Pope and Addison.

In discussing the probabilities of the case, in the belief that the verses first appeared in *Cythereia*, I argued that the reading "meaner quill" indicated that "venal quill" was an afterthought, intended to fit in with Pope's story that Gildon had received ten guineas from Addison to abuse Pope and his family. I further argued, from the appearance of "venal quill" in the Longleat version, that Pope must have concocted the story which he afterwards told to Spence at least as early as 1724.

If, however, "venal quill" be the earlier reading, this reasoning cannot stand. Pope's story about Addison and Gildon is, of course, not made any more probable; but, on the other hand, it is evident that he did not mean "venal quill," in December 1722, to have any reference to the ten guineas, otherwise he would never have changed an expression so pregnant with meaning into the "meaner quill" of *Cythereia*. Both "venal" and "meaner" are probably mere epithets generally applicable to Gildon's character. And instead of "venal quill" being an afterthought to square with the ten-guinea story, it seems to be probable that the story of the ten guineas was suggested to Pope's imagination by the use of the word "venal."

With this exception, I think what is said about the character in vol. iii., pp. 231-236 of the Elwin and Courthope edition of Pope's Works remains unaffected by Mr. Aitken's discovery.

W. J. Courthope.

JOHN WEBSTER AND THOMAS ADAMS.

12 Hornton Street, Kensington: Feb. 12, 1889.

Divines of the seventeenth century often borrowed telling phrases from the popular plays of the day; but the use made by Thomas Adams, at that time preacher of the Gospel at Willington, Bedfordshire, of the title of one of John Webster's greatest plays has not, I think, been noticed. Webster's tragedy, "The White Devil," was published in 1612; and on March 7, 1612[3], Adams preached a sermon at Paul's Cross from John xii. 6, which was shortly afterwards published. It was entered at Stationer's Hall on April 28, 1613, "a book called the *white Devill* or the *Hypocrite*, uncased" (Arber's "Transcript"); but the fourth edition, dated 1615, is the earliest I have seen. In that year (1615) Adams printed another sermon, *The Black Devil, or the Apostate*.

Luther had called Judas Iscariot the "white devil," following the words of Christ—"Have I not chosen you twelve, and one of you is a devil?" "A devil he was," says Adams, "black within and full of rancour, but white without, and skinned over with hypocrisy; therefore, to use Luther's words, we will call him the *White Devil*." But doubtless, the phrase had been rendered familiar by the play produced a few months before Adams wrote. In the dedication to Sir Thomas Cheke, the grandson of the great scholar, Sir John Cheke, Adams alludes to the strange title of the sermon. It was only to one who possessed a

Digitized by Google

not undeserved character of virtue that such a book could have been dedicated.

The sermon is of considerable interest in itself, like most of the works of this writer, who was called by Southey "the prose Shakspere of Puritan theologians . . . scarcely inferior to Fuller in wit, or to Taylor in fancy." In spite of the elaborate analysis, with many sub-divisions, and the length, sixty-two quarto pages, the hearers probably did not weary of the discourse. It is full of wise and witty remarks, and contains many allusions to questions of the day. Look at immoderate eating or drinking: "Why is this waste?" Or the pride that turns hospitality to dumb show: "Where lies the wealth of England? In three places, on citizens' tables, in usurers' coffers, and upon courtiers' backs." Look, again, at the vainglorious buildings, emulating the skies; towns pulled down to build palaces with chimnies which never smoke, gates never open, parlours for owls and bats to fly in. "These men turn bread into stones, a trick beyond the devil. Why is this waste?" Take, again, the ambitious seeking after great alliances; the upholding of theatres to the contempt of religion, and ordinaries to play away patrimonies. The censure of Judas—first negative, "this, he said, not that he cared for the poor," and, secondly, affirmative, "he was a thief, and had the bag, and bare what was put therein"—is, of course, worked out fully. It was the sins the preacher arraigned; the persons he would have saved. Were there no thieves among magistrates, lawyers, officers who took bribes, tradesmen, ministers themselves, covetous landlords, "that stretch their rents on the tenter-hooks of an evil conscience, and swell their coffers by undoing their poor tenants"; ingrossers, who forced up prices by hoarding commodities; inclosers, "that pretend a distinction of possessions, a preservation of woods, indeed, to make better and broader their own territories, and to steal from the poor commons: these are horrible thieves." These notes must suffice. They will show how many of the matters alluded to in this sermon are of as much interest now as they were two centuries and a half ago. I will only add that Adams's *Works* were published in three volumes in 1862, in Nichols's series of "Standard Divines."

George A. Aitken.

THE OLD ENGLISH GLOSS "ELMAWES."

University Library, Cambridge: Feb. 18, 1889.

Mr. Aldis Wright has seen in this form "elves"; Prof. Skeat "Elf-mawes"—*f*, through the process of assimilation, bound eventually to disappear, since the English language does not tolerate a sonant spirant before a nasal, and a long nasal cannot be pronounced after *l*; and Mr. Hessels in *mawes* "maidens," taking *elmawes*=hellmaidens.

All this tends towards the right interpretation, which I think I am in a position to supply. *Mawe*, I take, is maiden, A.S. *mæg*, Engl. *may* (g=w=y) Icel. *mey*, Dan. *möe*, *mö*, Swed. *mö*. That *el* stands for "elf" there can be no question. In sense *elmaw* is then identical with, and in form closely allied to, Dan. *ellemöe*, *ellemö*, an elfmaiden, cf. *elledans*—dans, *ellefolk*—folk, *ellepige*—pigsney, *ellevild*—wild, bewitched by elves, &c. *Elmawes* then = elf-maidens.

Eiríkr Magnússon.

APPOINTMENTS FOR NEXT WEEK.

Monday, Feb. 25, 5 p.m. London Institution: "Recent Studies of some Forms of Minutest Life," by the Rev. Dr. Dallinger.
5 p.m. Hellenic: "Certain Vase Fragments of Considerable Interest," by Miss Jane Harrison.
8 p.m. Aristotelian: "Do separate Psychological Functions require separate Physiological Organs?" by Mr. Bernard Hollander.
8.30 p.m. Geographical: "Explorations on the Welle-Mobangi River, from the Congo," by Capt. Vangele, with Notes by Sir F. de Winton.
Tuesday, Feb. 26, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," VI., by Prof. G. J. Romanes.
8 p.m. Society of Arts: "English Bookbinding in the Reign of Henry VIII.," by Mr. W. H. J. Weale.
8 p.m. Civil Engineers: "Alternate-Current Machinery," by Mr. Gisbert Kapp.
8.30 p.m. Anthropological: "A New Instrument for Testing the Delicacy of Perception of Differences of Tint," by Mr. Francis Galton; "The Early Races of Western Asia," by Major C. R. Conder.
8 p.m. Folk-Lore: "The Philosophy of Rumpelstilchen," by Mr. Edward Clodd.
Wednesday, Feb. 27, 3 p.m. University College. Barlow Lecture, "The Lives of Dante attributed to Boccaccio," by the Rev. Dr. E. Moore.
4 p.m. Society for Preserving Memorials of the Dead: Discussion, "Legislation in Aid of the Society's Objects"; "Some Notes upon Monuments in Lambeth Parish Church," by Mrs. A. E. Danvers Taylor.
8 p.m. Society of Arts: "The Irish Lace Industry," by Mr. Alan S. Cole.
Thursday, Feb. 28, 3 p.m. Royal Institution: "The Venom of Serpents, and Allied Poisons," II., by Dr. S. Martin.
8 p.m. University College: Barlow Lecture, "The Lives of Dante, by Villani, Aretino, Manetti, and Filelfo," by the Rev. Dr. E. Moore.
7 p.m. London Institution: "Modern Composers of Classical Song," I., by Mr. Carl Armbruster.
8 p.m. Electrical Engineers.
8 p.m. Cymmrodorion: "Giraldus Cambrensis," by Mr. H. Owen.
8.30 p.m. Antiquaries.
Friday, March 1, 8 p.m. Philological: "A Recent Edition of the Passions and Homilies in the *Lebar Brecc*," by Mr. Whitley Stokes.
8 p.m. Geologists' Association:
9 p.m. Royal Institution: "Leigh Hunt," by Mr. E. Gosse.
Saturday, March 2, 3 p.m. Royal Institution: "Experimental Optics—Polarisation, Wave Theory," II., by Lord Rayleigh.

SCIENCE.

Mental Evolution in Man: Origin of Human Faculty. By G. J. Romanes. (Kegan Paul, Trench, & Co.)

This volume is the first instalment of a series in which Mr. Romanes proposes to deal with the whole subject of mental evolution in man. It may also be considered as a connecting link between his work on mental evolution in animals and the promised works in which the higher manifestations of human faculty are to be studied as a gradual growth. Of all such manifestations language is the primary condition; and language has also been put forward of recent years as the ineffaceable distinction between man and brute, the impassable interruption to a continuity of mental development from one to the other. Mr. Romanes is an evolutionist along the whole line; and he joins issue on the one remaining point where the theory is still disputed by the only opponents worth considering. At the very outset he assumes as admitted that the higher species of living things are derived by natural descent from lower forms of life, and that man, on the physical side at least, offers no exception to this rule. But he finds that there are some philosophers, notably Prof. Mivart, who, while going thus far, refuse to go a step farther, and claim for the human mind, or rather for human reason, a different origin from that conceded to the human body, including, I suppose, its cerebro-spinal axis. They hold that conceptual ideation, or the power to frame general notions as manifested through language, betokens a faculty differing not in degree, but in kind, from the highest animal intelligence. On this ground the author meets them, and endeavours, by an analysis of language considered as an expression of conceptual ideation, to dissolve away the alleged distinction, to show that it is a difference not of kind but of degree.

It may be questioned whether this chivalrous readiness to accept battle on ground chosen by the enemy was altogether wise. One can imagine a shorter and more effectual argument, based on philosophical considerations of higher generality. If all forms of intelligence are conditioned by nervous activity, and vary with the varying size and complexity of the nervous centres, then there can be no question of deriving one mental phenomenon from another, since each springs into existence *de novo* simultaneously with the activity of its material substratum. The continuity implied by evolution belongs solely to the formation and movements of that substratum, and the mental phenomena are merely indices of their variation. It may, of course, be maintained that reason and self-consciousness proceed from a spiritual principle, and cannot be conceived as functions of the brain. The difficulty, however, applies equally to simple consciousness and sensation; and if these can be regarded as dependent in some unknown manner on the nervous system, through which they become subject to the law of evolution, there seems no valid reason for denying to the highest human faculty an analogous dependence, and, consequently, an analogous subjection. All alleged differences of kind spontaneously resolve themselves into differences of degree when both alike can be expressed in terms of matter and motion.

If, then, in attacking the problem on its psychological and linguistic side Mr. Romanes should not prove his case to the general satisfaction, the evolutionist theory will not be compromised by his failure; while if he succeeds the battle is won. Those who wish to master his position must, of course, study it as explained by himself in his own well-known luminous and fascinating style. An argument which extends over nearly four hundred pages, and of which the mere summary, though lamented by the author himself as inadequate, fills nearly fifty more, cannot fairly be dealt with in a few lines. A brief indication of the method adopted must here suffice. Language, understood as a system of communication through signs, is not peculiar to man, since many of the lower animals, including some insects, are known to impart information to one another by gestures. Neither is the use of articulate utterance interchangeable with the expression of thought, for truly rational intercourse can be carried on between human beings by the use of gesture alone. That the power of articulating words is not peculiar to man appears from the example of talking birds, some of which even use words with an evident intelligence of their meaning. By what may be called an accident, the highest animals, dogs and apes, do not possess this power; but in some instances they exhibit an extraordinary power of understanding what is said to them. It is not true, as urged by some, that words are names of concepts and inseparable from them. Below concepts and preparatory to them, but above mere percepts, Mr. Romanes distinguishes certain ideas of a sensuous and yet general character which he calls "recepts." A number of similar objects successively perceived as similar leave a common impression on the mind, made up of the points in which they re-

Digitized by Google

semble one another. The result is a spontaneous unconscious abstraction, a recept. That such elementary generalisations should be formed necessarily follows from the nature of perception itself, which is at first always directed towards certain general characters in the object perceived. Mr. Romanes holds that some animals can recognise recepts by their names, and even name them when they have learned to talk.

"If I say to my dog the word 'Cat,' I arouse in his mind an idea, not of any cat in particular—for he sees so many cats—but of a cat in general" (p. 28).

"One of the parrots which I keep under observation in my own house learnt to imitate the barking of a terrier, which also lived in the house. After a time this barking was used by the parrot as a denotative sound, or proper name, for the terrier—*i.e.*, whenever the bird saw the dog it used to bark, whether or not the dog did so. Next the parrot ceased to apply this denotative name to that particular dog, but invariably did so to any other, or unfamiliar, dog which visited the house. Now the fact that the parrot ceased to bark when it saw my terrier, after it had begun to bark when it saw other dogs, clearly showed that it distinguished between individual dogs, while receptually perceiving their class resemblance" (p. 137).

To talk of "general ideas" and "names" in this connexion seems assuming too much. All we can say is that the word "cat" excited an impulse, probably of fear or hostility, in the dog's mind, such as would have been produced by the appearance of an actual cat; and that the same imitative tendency was awakened in the parrot's mind by the mere sight of a dog as by the sound of its bark; while other associations not running in the direction of imitation were started by the appearance of the familiar terrier. It is only, I think, when names are used as marks of other names, that is to say, when they are combined in propositions, that we can be sure that they are known as names, that they are definitely detached from, and substituted for, the objects which they denote. This consideration leads us on to the analysis of judgment and predication; and here we come to the most questionable part of Mr. Romanes's theory. On the one hand, he extends the term judgment metaphorically to mere associations of actions with impressions, "as when a seabird dives from a height into water, but will not do so upon land" (p. 404), or to the mere generalisation of an associated sign, as when the parrot above cited called every dog "bow-wow"; while, on the other hand, refusing to apply it, except in the same metaphorical sense, to the first simple propositions enunciated by children, on the plea that none but conceptual statements are judgments properly so-called. These last are not merely statements of truths, but of truths "perceived *as true*" (p. 405). Self-consciousness and introspection are necessary in order to their production. As an illustration of what is meant, let us take the following example:

"Let us consider the case of a child about two years old, who is able to frame such a rudimentary communicative, or pre-conceptual proposition as *Dit ki* (Sister is crying). At this age . . . there is no consciousness of self as a thinking agent, and, therefore, no power of stating a truth as true. *Dit* is the denotative name of one recept, *ki* the denotative name of another; the object and the action which these two recepts severally represent happen to occur together before the child's observation; the child therefore denotes them both simultaneously—i.e., *brings them into apposition*. . . . If you hold that this is judgment, you must also hold that animals judge, because I have proved [?] already that . . . the only point wherein it can be alleged that the faculty of judgment differs in animals and in man consists in the presence or absence of self-consciousness" (pp. 227-8).

I do not know what the opponents to whom the author is here specially addressing himself will say, but I think it is quite possible to maintain that judgment first begins when verbal signs previously separated are associated in significant combinations. The operation, whatever it may be called, does not seem to have been performed by any animal as yet observed (p. 204); for to widen the plane of a recept is very different from making the planes of two recepts intersect. Mr. Romanes will urge that the processes of extension and intersection are both alike automatically accomplished, the "apposition of denotative terms" in rudimentary predication being no less "natural and inevitable" than "the extension of denotative terms into connotative terms" (p. 387). Perhaps the apposition is not quite so "inevitable" as is here assumed, since the particular conjunctions predicated must be picked out from the much greater number that actually present themselves to observation. But what I am here more interested in noticing is the distinction admitted by Mr. Romanes between the spontaneous or automatic associations of consciousness which he calls receptual, and those which he ascribes to "a consciously intentional operation of the mind upon the materials of its own ideation, known as such" (p. 396)—where, by one of the typographical errors, unfortunately rather frequent in this volume, "anatomically" is printed for "automatically." A mind distinct from and operating on the particular phenomena of consciousness seems to me a mythological fiction little suited to the general philosophy of the present work. Nor does the distinction between automatic and intentional ideation impress me as either true in itself, or consistent with the principles generally supported by Mr. Romanes. To those who, like myself, disbelieve in free-will, all ideation is an automatic process of greater or less complexity, and more or less illuminated by an accompanying consciousness. I am quite ready to agree with the author that the concept of self came into existence through the use of the first personal pronoun; but I fail to see why it should be assumed as a necessary condition for the delivery of other concepts, having come to the birth without any such assistance itself; while, with regard to propositions, it seems more logical to say that we perceive a statement as true, not in contradistinction to ourselves who make it, but to other statements which are meaningless or false.

A fresh difficulty is introduced when Mr. Romanes tells us that

"in the datum of self-consciousness we each of us possess not merely our own ultimate knowledge . . . but likewise the mode of existence which alone the human mind is capable of conceiving as existence, and therefore the condition *sine qua non* to the possibility of an external world" (p. 194).

Are then the brutes, of whose intelligence we hear so much, what Ferrier, if I remember rightly, once called them, "incarnate absurdities, looking out on a world of unredeemed self-contradiction"? And in what do the author's metaphysics differ from those of Prof. T. H. Green, who says, as quoted on p. 212 of this volume:

"Should the question be asked, If this self-consciousness is not derived from nature, what then is its origin? the answer is that it has no origin. It never began, because it never was not. It is the condition of there being such a thing as beginning or end. Whatever begins or ends does so for it, or in relation to it"?

For in answering that "for my part I feel as convinced as I am of the fact of my self-consciousness itself that it had a beginning in time, and was afterwards the subject of a gradual development," Mr. Romanes takes up a position quite irreconcileable with that adopted less than twenty pages before.

For myself, I agree with Mr. Romanes, that self-consciousness and conceptual ideation, whatever may be their mutual connexion, are the consequences rather than the antecedent conditions of spoken language; and that young children may exhibit virtually human intelligence while, to our apprehension at least, they are no more self-conscious than animals. I agree with him also that we are genealogically connected with the brutes through an ancestor whose mental capacity was about level with that of the children in question. But I hold that the very simplest predication, the coupling of receptual names in significant statements, such as *Dit ki*, marks a stage of intelligence not proved to have been reached by any existing brute. However, Mr. Romanes repeats a story to the contrary effect so charming that it is worth transcribing merely *as* a story:

"The possibility of receptual predication on the part of talking birds is not entirely hypothetical. I have some evidence that it may be actually realised. For instance, a correspondent writes of a cockatoo which had been ill:—'A friend came the same afternoon, and asked him how he was. With his head on one side and one of his cunning looks, he told her that he was "a little better"; and when she asked him if he had not been very ill, he said, "Cockie better; Cockie ever so much better." . . . When I came back (after a prolonged absence) he said, "Mother come back to little Cockie; mother come back to little Cockie. Come and love me, and give me pretty kiss. Nobody pity poor Cockie. The boy beat poor Cockie." He always told me if Jess scolded or beat him. He always told as soon as he saw me, and in such a pitiful tone. . . . The remarkable thing about this bird is that he does not merely "talk" like parrots in general but so habitually talks to the purpose'" (pp. 189-90).

It is to be feared that hard-hearted logicians will doubt the predicative value of poor Cockie's phrases until some more satisfactory evidence as to their origin is forthcoming.

Mr. Romanes regards the origin of language as a problem of secondary interest to the evolutionist. All the evidence goes to prove that there was a time when language did not exist; and, therefore a time when it must have begun to exist. More than one possible derivation may be assigned to the earliest

Digitized by Google

articulated sounds. The imitation of natural sounds would account for much, without excluding a cause still occasionally observed in operation—the arbitrary invention of words. In this part of his work the author frequently comes into collision with Prof. Max Müller. The theory of that philologist—that language began with roots denoting general concepts—he considers unproved and improbable. The reduction of the whole Sanskrit vocabulary to a small number of such roots supplies no valid argument in its favour, since the earliest period to which they can be traced back must be long posterior to the beginning of language. Moreover, such roots, being the most prolific, were the most likely to survive. Mr. Romanes does not explain how names derived from actions came to be substituted for those originally bestowed on the most familiar objects; but this question also might have been dismissed as of less than secondary importance since the virtual surrender of Prof. Max Müller to Darwinism in his recent work on the science of thought; for, by deriving language from the cries of men working together he concedes in principle all that a Darwinian need demand. Our author suggests the name of "yo-he-ho" theory for the explanation alluded to—a slight emendation on the name "yo-he" theory originally proposed by myself in the ACADEMY, and one which I willingly accept. He allows that the *clamor concomitans* may have contributed, among other causes, to the creation of words; but, for the rest, he attributes little importance to its agency.

Mr. Romanes is copious in references to other writers whose researches bear more or less directly on the subjects here discussed. This makes it the more remarkable that the acknowledged chief of the school to which he belongs should never be mentioned. The name of Herbert Spencer does not once occur in the present volume, even where its introduction seemed to be demanded by something more than literary courtesy. Thus, the connexion between perception and classification is discussed without any allusion to the *Principles of Psychology*; the radical identification of reasoning with perception is attributed to a certain M. Binet (p. 32), apparently without a suspicion that it forms a conspicuous feature in the same work; while the ascription of life to inanimate objects is assumed as a primitive impulse of human intelligence (p. 210), without any reference to the opposite view maintained in the *Principles of Sociology*.

There are books which are easy to read and difficult to review, as, conversely, there are others which are difficult to read and easy to review. Mr. Romanes's new volume belongs to the former category. I am not sure that I have done justice to its arguments, but I am sure that its perusal gave me very great pleasure. Philosophers will welcome it as the most closely reasoned defence yet offered of evolutionism on the point where evolutionism most vitally affects our beliefs. The general reader will find it always interesting, and in parts delightfully amusing.

ALFRED W. BENN.

CORRESPONDENCE.

SOME RECENT EMENDATIONS IN THE TEXT OF PLATO.

Oxford: Feb. 19, 1889.

May one once more respectfully remonstrate in the ACADEMY with those fellow-students in Aristotle and Plato who emend the text of these authors before considering their special idioms? Their course seems impolitic, for the credit of knowing something of Latin and Greek will be much diminished when all constructions have been smoothed away till nothing much more complex is admitted than "et ego et Balbus sustulimus manus." At least the emenders might consider their ways and not speak quite so positively. If they write in Latin it does not so much matter. Writing Latin is a sort of personation, and even "apage putidissimum glossema" may be taken as only in character.

In the current number of one of the classical periodicals, in an article containing some interesting though doubtful points, are the following emendations of the text of Plato's *Republic*:

"537 C *τά τε χύδην μαθήματα παισὶν ἐν τῇ παιδείᾳ γενόμενα τούτοις συναπτέον εἰς σύνοψιν οἰκειότητος ἀλλήλων τῶν μαθημάτων καὶ τῆς τοῦ ὄντος φύσεως.* The only way of construing *οἰκειότητος ἀλλήλων τῶν μαθημάτων* is to take *οἰκειότητος ἀλλήλων* closely together, regarding *ἀλλήλων*, in fact, as equivalent to an adjective; the whole phrase then meaning 'correlationship of the sciences.' But although this sounds all very well in English, the Greek remains 'very tolerable and not to be endured.' Is it really possible to believe that Plato could be guilty of such a piece of style as to write *ἀλλήλων τῶν μαθημάτων* side by side when he meant *ἀλλήλων* to go with another word, and might just as well have written *κοινῆς* or some such word instead? Besides, the repetition of *μαθημάτων* after *μαθήματα* in the same sentence, without any obscurity of meaning, if *μαθημάτων* be omitted, is quite unaccountable; if the sentence had been *αὐτῶν τε τῶν μαθημάτων καὶ κ.τ.λ.* the repetition would have been justified, as it is it is not.

"Omit then *τῶν μαθημάτων* as a gloss upon *ἀλλήλων*."

This command to erase an idiomatic form must be disobeyed. "The only way of construing" is to take *ἀλλήλων καὶ τῆς τοῦ ὄντος φύσεως* after *οἰκειότητος*. The words obviously mean "the relationship of the mathematical sciences to one another and to the nature of Being." The relative position of *ἀλλήλων* and *μαθημάτων* is an instance of hyperbaton which is very common indeed in Plato. If the emender will consult Riddell's *Digest of Platonic Idioms* and observe Plato's usage more attentively, he will cease to enquire whether "Plato could be guilty of such a piece of style," and recognise that such apparently awkward juxtapositions are a frequent result of hyperbaton in Plato. As to "the quite unaccountable repetition of *μαθημάτων* after *μαθήματα*," it is well-known that the Greek ear was not so sensitive in this respect as ours. It is not unusual in Plato to repeat a word, not because it is necessary, but to give a little more clearness or point. Here the interposition of *μαθημάτων* makes the reference of the pronoun clearer, since *παισὶν* and *τούτοις* have intervened between it and *μαθήματα*, and also serves to oppose *τὰ μάθηματα* more clearly to *ἡ τοῦ ὄντος φύσις*, which latter the emender seems to think could only be done by introducing *αὐτῶν*.

402 A. *ὅτε τὰ στοιχεῖα μὴ λανθάνοι ἡμᾶς, ὀλίγα ὄντα, ἐν ἅπασιν οἷς ἔστι, περιφερόμενα.*

Here it is proposed to read *ἅπασιν ἐν οἷς*, an emendation which suits the sense, and confirmed, as the emender thinks, by 402 C. *παντα χοῦ περιφερόμενα γνωρίζωμεν καὶ ἐνόντα ἐν οἷς ἔνεστιν αἰσθανώμεθα.* The grammatical reason given, however, is not correct. "*ἐν ἅπασιν οἷς ἔστι* is an extremely harsh phrase. It cannot mean 'in all that are,' as Davies and Vaughan take it, for you cannot attract a relative in the nominative into the case of the antecedent in good Attic." But you can. In the grammar may be found instances from Thucydides, Xenophon, and, what is more to the point, from Plato himself, though the use is uncommon. It seems easier (*vide* Madvig) when the attracted nominative has the same form as the accusative, which is the case here.

The sense which the emender gives the text seems certainly right; but he is unaware evidently that, according to a known idiom in Plato and other Greek writers, it can be got without any emendation. The idiom is that the preposition, which should strictly come before both antecedent and relative, is put sometimes only before the antecedent. See Kühner, § 451, 4, who points out that the same usage is to be found in Latin. See also Stallbaum's note on this very passage; and in *Phaedo*, 76 D. The emender, thinking that *ἅπασιν οἷς ἔστι* can only be construed in one way, is of opinion that it is not "a rational phrase."

J. COOK WILSON.

SCIENCE NOTES.

PROF. A. BLYTT, the Norwegian botanist, has contributed to the *Forhandlinger* of the Society of Sciences of Christiania a long memoir on "The Probable Cause of the Displacement of Beach-lines." He holds that the precession of the equinoxes, and the periodical changes in the eccentricity of the earth's orbit, furnish a key to the calculation of geological epochs. The precession causes the winter and summer to be alternately longer and shorter; and, when the winter is longer, the distinction between inland climate and coast climate becomes more pronounced. He maintains, as a working hypothesis, that precession has left its record in the strata, in the alternation of deposits and the formation of beach-lines, and the greater the eccentricity of the earth's orbit the more distinct is the record. The author was led to his views by studying the distribution of plants, and he published a sketch of his hypothesis in a paper, printed in 1886, entitled "On Variations of Climate in the Course of Time."

PHILOLOGY NOTES.

DR. WINDISCH, professor of Sanskrit in the University of Leipzig, has just published a treatise on the Nyāyabhāshya.

M. LOUIS DUVAU, now a professor at Lille, recently discovered in the Vatican library (Reg. 1701) a large number of *streng* Old-High-German glosses. These have been printed, not only in the *Mélanges d'archéologie et d'histoire*, published by the French School at Rome, but also in the new fasciculus of the memoirs of the Société de Linguistique de Paris.

THE same fasciculus contains the first part (A and B) of a supplement to the Middle Breton glossary which M. Emile Ernault appended to his edition of the mystery of Sainte Barbe, Paris, 1888. It also contains a facsimile and translation of the honorific bilingual inscription (Phoenician and Greek) lately found at the Piraeus, and now in the museum of the Louvre. Shorter papers by MM. Bréal, V. Henry, Parmentier, Möhl, and Ploix make up a number of great interest and value.

The February number of the *Classical Review* (London: Nutt; Boston: Ginn) redeems the promise of American co-operations. Not only is its bulk swollen to ninety-six pages; but it contains an article on "Classical Education in the United States," by Prof. J. H. Wright, of Harvard, and several

Digitized by Google

other Transatlantic contributions. Notable among these is a criticism of a paper on "The Arcado-Cyprian Dialect," where both author and critic are Americans. We also welcome an article on "The Sequence of Tenses in Latin," which comes from New Zealand. Of original articles, the most important is an account of the Greek MSS. in the Estense library at Modena, compiled by Mr. T. W. Allen, a Craven fellow at Oxford. The reviews are very numerous, occupying more than forty pages; but they are also exceptionally valuable. Altogether, the review is becoming more and more indispensable to the classical scholar.

MEETINGS OF SOCIETIES.

Elizabethan Society.—(*Wednesday, February 6.*)

A. H. Bullen, Esq., in the chair.—A paper by Mr. John Addington Symonds on "The Plays of Thomas Dekker" was read by Mr. F. Rogers, vice-president. The most complete edition of Dekker's plays is that published by Mr. John Pearson in 1873. It contains sixteen pieces, written wholly or in part by Dekker; four of these had not been previously reprinted. A romantic drama, in which he undoubtedly took a leading part, "Patient Grissell," is not included in this edition, but may be read in the old Shakspere Society's publications. "Lust's Dominion," though it cannot be claimed with any certainty for Dekker, ought, for reasons which Mr. Symonds afterwards fully assigned, to be carefully perused by all students of his dramatic work. Of these eighteen plays, eight were composed entirely by Dekker—*i.e.*, "The Shoemaker's Holiday," "Old Fortunatus," "Satiromastix," the second part of "The Honest Whore," "The Whore of Babylon," "If this be not a Good Play the Devil's in it," "Match me in London," and "The Wonder of a Kingdom." The remaining ten were composed by him in collaboration with various playwrights. If we identify "Lust's Dominion" with "The Spanish Moor's Tragedy" Dekker here worked with Haughton and Day. In "Patient Grissel" he was engaged with Henry Chettle and William Haughton; in the first part of "The Honest Whore" and in "The Roaring Girl" he collaborated with Thomas Middleton; in "Westward Ho," "Northward Ho," and "The Famous History of Sir Thomas Wyat" he is said to have assisted Webster; "The Virgin Martyr" was the joint production of himself and Massinger; "The Sun's Darling" bears his name, together with that of Ford; "The Witch of Edmonton" is assigned to Dekker, Ford, and William Rowley. In addition to these plays, many in which Dekker had a share together with other dramatists of note are lost; among them four domestic tragedies, in one of which he assisted Jonson and in another Ford. Mr. Symonds analysed the extant plays of Dekker in this manner because they raised the difficult and interesting question of joint authorship. How far was a drama which bears the name of two or more authors on its title-page the product of one common literary effort, or the rehandling of an old composition by a new playwright? This is the first query which suggests itself to the critic; and his answer will, of course, depend greatly upon internal evidences of style. We may, for example, feel tolerably safe in assuming that "The Sun's Darling" was an altered edition made by Ford of some previous piece by Dekker, possibly his "Phaethon." Ford's marked style appears in the first act, and in the concluding scenes of the last act. The songs, with the exception of the first, bear the stamp of Dekker. The case is different with "Patient Grissel." That appears to have been planned and executed in concert by three writers, none of whom displayed a very decided manner. "Sir Thomas Wyat" is made out of two history plays, called "Lady Jane," roughly cut down and badly pieced together. Heywood, Chettle, and a certain Smythe, had each a hand in the production, besides Dekker and Webster, whose names appear alone upon the title-page of the maimed and deformed copy we possess. "The Witch of Edmonton" has employed the critical sagacity of many eminent writers, among them Mr. Swinburne. I agree with this great poet and profound student in feeling sure that we owe the masterly first act to Ford, and the touching character of Susan to Dekker; but I cannot help suspecting that William Rowley was the creator of Mother Sawyer; and, finally, it appears to me that this tragedy, abounding in so many powerful passages, is the recast by Ford of two separate pieces, in which Dekker and Rowley respectively took the leading share. A second problem is suggested by joint authorship. To what extent did two or more playwrights, after planning a piece together, adopt some common style? To what extent, when writing comedies to be acted, not printed, did they efface their own personalities so far as might be, by deliberately using the simplest language of the day in which their plot could be represented? "Westward Ho" and "Northward Ho" are particularly apt to raise this question. We have here excellent pieces of work, full of life and bustle from begininng to end, and well seasoned with humourous illustrations of contemporary society. Yet it is impossible to trace in either of them the meditative style of Webster, or the breezy, cheerful geniality of Dekker's comic manner. The sustained and well-knit plot in both pieces seems to bespeak Webster; the rattling rapidity of the dialogue and action seems to indicate that Dekker worked with free hand on firm lines traced for him by a more weighty thinker. "The Roaring Girl" bears the stamp of the epoch rather than the hall-mark of any individual author. Yet we shall be right in assigning the main share to Middleton; and it is noticeable that Middleton, in his preface to the edition of 1611, does not mention Dekker. The case is exactly reversed when we regard the first part of "The Honest Whore." Middleton had a share in the play, and was paid for it. But Dekker's name appears alone upon the first edition. There is no reason whatever to suppose that Middleton had any interest in the second part of "The Honest Whore," which was published twenty-five years after the first. A third problem suggested by this matter of joint authorship touches upon the question of interpolated scenes. We find Dekker's name joined with Massinger's in the production of "The Virgin Martyr." As a whole, the play must be assigned to Massinger. But Gifford claims the foul comic interludes for Dekker; and no critic who has studied the works of these two playwrights will refuse the beautiful dialogues between Dorothea and her servant Angelo to Dekker. In this case, who conceived the character of Dorothea? Massinger's hand is obvious in her argument with Calista. At what points, again, in the delineation of her character did Massinger allow Dekker to intervene? Was he controlled by the sense that this more tender and more humane poet ought to be suffered to hold the pen at moments when artless sympathy with so exceptional a personality as Dorothea required the ineffable right touch which his collaborator was known to possess? The tragedy of "Lust's Dominion" was printed, with Marlowe's name, by the notorious pirate Kirkman, in 1657. Collier proved, almost conclusively, that it must have been written after Marlowe's death. And the title "Lust's Dominion" is not characteristic of any plays which were produced in the early stages of our drama. It smacks of the last period of theatrical advertisement. Collier also called attention to the fact that Henslowe paid Dekker, Haughton, and Day, for a piece of work called "The Spanish Moor's Tragedy" in February, 1600. He inferred, with plausibility, that this is the play which Kirkman published fifty-seven years afterwards, under the attractive name of Marlowe, with a title altered to suit the taste of the moment. Now, Dekker had been paid in December, 1599, by Henslowe, for his play of "Old Fortunatus." This undisputed piece of Dekker's handicraft bears unmistakeable proof of his having been powerfully influenced by Marlowe. Mr. Symonds then proceeded to give detailed criticisms of "The Shoemaker's Holiday," "Old Fortunatus," "Satiromastix," and "The Honest Whore." A literary critic will pass lightly over points relating to Dekker's possible trade and nationality. It is more important to observe that, in "The Shoemaker's Holiday," one of the poet's salient characteristics, one of the sparks of genius which attracts us to him, emerges with peculiar brightness. That is the sunny cheerful realism of his painting of familiar things, his hearty sympathy with actual life, his power of representing the surface of existence with a light unerring touch, his joyousness, and cleanly humorous acceptance of the world we live in. A German seeking one adjective to describe Dekker under this aspect would call him *levens-lustig*. The bustle of business rejoices him, and stirs his faculty as artist. He paints a mercer's store, a shoemaker's shop, a haberdasher's stall, with gusto. Every lover of good comedy is glad to visit these places under Dekker's genial guidance. We have to duck our head beneath the swinging sign, avoid perhaps a skulking captain at the doorway, and dull our ears to the shrill cries of the 'prentices—"What d'you lack?" Inside the shop there is variety of industry and intrigue: gallants making love to city dames, masters setting forth their wares, ruffiers in silk or homespun cheapening a yard of cloth; journeymen bandying jokes with wenches; 'prentices laying hands upon their clubs; courtiers sneering at "flat-caps"; and often, to end all, a scuffle, which terminates with bouncing oaths and bloody pates. Taverns, too, and suburban pleasure-houses are described by Dekker with remarkable felicity. He is at home in bedlams and bridewells, and can introduce us to places of more questionable character, where pimps and punks angle for their gulls. The pert shop boy, the obliging merchant, the teasing wife, the over-tasked drawer, the shrill-voiced shrew, the swaggering gallant, the fantastic simpleton, the out-at-elbow soldier, the insinuating bawd, the high-flying spendthrift, the gaudy woman of the town, the jealous husband, the light-headed serving maid, the tipsy constable, the sighing lover, the pompous alderman, come and go in these many coloured scenes of city life with a fulness of vitality and a truth to nature which can scarcely be matched in any art-work of that period. Ben Jonson alone, in "Bartholomew's Fair," offers a parallel to Dekker. But Ben Jonson was far more mechanical as a dramatic draughtsman. His studies had not the sketchy air which gives a grace to Dekker's transcripts from the world around him. Of course, there is much that is gross, and even more than gross, downright smutty, in Dekker's vivid Dutch interiors. But we can pardon a coarseness which is obviously natural, which conceals no base intention, and which faithfully reflects the manners of a bygone time. Wherever he may lead us, Dekker is always innocent in his treatment of vice, always tender to suffering, always alive to humour and to pathos, always wholesome in his delineation of erring human nature. The little we know of Dekker's life fills us with sadness to think that a man to whom we owe so much as poet, and whom we so thoroughly love and respect, was acquainted with suffering and thwarted in his vocation even beyond the ordinary ill fate of his fellow craftsmen. He seems to have been in some real sense a literary hack, scribbling pamphlets and plays with ready pen for scanty hire, often, if not always, in debt, as familiar with prisons as with taverns, caring but little for the future of his works, and taking no pains to secure their immortality by patient execution or by thoughtful planning. The printer's devil and the bailiff were always at his elbow while he wrote. He leaves upon our mind the sense of a man who very early in life just missed catching time and opportunity by the forelock, and who passed the years of his manhood in a light-hearted but exhausting race after yesterday. The obscurity which envelops his career makes it impossible to say how far this state of things was due to imprudence—to an unhappy marriage, perhaps—or to some weakness of character, perhaps—or to some vicious habit. His wide and familiar acquaintance with the town in its comical and sordid aspects, his knowledge of mere naked human misery, his sympathy with the sinning and afflicted, lead us to surmise that he was a Bohemian very decidedly out at elbows. But though this is the case, Dekker never ceased to be a Christian and a gentleman in the purest and noblest sense of those high titles. It is invariably good to have dwelt awhile in his company. In spite of the mistakes of judgment rather than of taste or feeling which we occasionally find in him, we leave him with a warmer,

Digitized by Google

truer emotion of human brotherhood. In his artless, simple, kindly way he teaches us more than many pompous moralists and preachers. His clear, illuminative flashes of unpremeditated poetry, striking through chinks and crannies, falling upon the despised and neglected corners of life, silvering the very filth and squalor of reality with a gleam from the heaven that a good and wholesome heart holds shut within mysterious recesses—these unexpected and unstudied rays of spiritual beauty do us more good than the raptures or the sublime descants of pretentious priests and phophets. It is good for us to be with Dekker. He leaves us sweeter and less fretful than he found us. Owing him so deep a debt of gratitude (Mr. Symonds wrote), I bid farewell to him with deep emotion, when I record those affecting words he inscribed some years beyond the age of fifty:—"I have been a priest in Apollo's Temple many years; my voice is decaying with my age; yet yours [the friends to whom he wrote these sentences] being clear and above mine, shall honour me, if you but listen to my old tunes. Are they ill-set? Pardon them. Well? Then receive them." Farewell, honest Dekker! Thy tunes, ill-set or well-set, are still ringing in our ears, after more than three centuries. Thou art still an honoured priest of Apollo's Temple, and, what is more, Englishmen love thee.—Mr. A. H. Bullen briefly reviewed the paper, and made a few remarks upon Dekker as a prose writer, which he ably illustrated by citing passages from some of his amusing pamphlets.—The discussion was continued by Mr. S. L. Lee, Dr. Oswald, Mr. F. Rogers, Mr. F. J. Payne, Mr. B. Dyer, and Mr. J. E. Baker.

Aristotelian Society.—(*Monday, February 11.*)

Shadworth H. Hodgson, Esq., president, in the chair.—The Rev. J. Lightfoot read a paper on "The Philosophy of Revelation." The question is "how do revealing facts reveal?" This is to be distinguished from the empirical question as to the historical accuracy and trustworthiness of the record of events of assumed Divine significance. Religion and the history of religion furnish facts for philosophy, but are not philosophy. If revelation reveals anything, then it may be urged the subject is included under the wider problem of "How is Knowledge possible?" But the term implies a process distinguishable from the ordinary process of experience. An analysis of the religious instinct in man gives us as result the following three elements: (1) the conviction of ideal perfection; (2) the anticipation of some necessary teleology, design, or ultimate significance in the universe; (3) the sense of dependence upon a complete and absolute existence. The term "revelation" is applied either to that which in some mode originates these, and then satisfies them. The contrast in popular language between natural and revealed religion is not between truth discovered by reason, and truth revealed to reason, but only between truth revealed to reason in two different ways. The two ways are (1) a process continuously repeated in the heart of each individual, and (2) certain alleged acts of Divine interference in the course of history. The paper confined attention on the former class. The distinction between faith as the religious organ and reason as the philosophic is meaningless. The common saying, "The just and the unjust walk alike by faith," is only true in a special sense. Under any theory of knowledge there is no antecedent improbability in the assumption that a Divine influence may infuse emotions, &c., just as somehow something produces sensations. Adopting for convenience the Kantian doctrine, it may be shown that this anyhow is possible, for no realm of the unknowable can be philosophically maintained. And this is material enough for a rational interpretation of the phenomena of repentance, &c., in the deepest sense, which otherwise is inexplicable. The religious emotions, although claimed as the possession of so large a proportion of men, yet are strangely neglected in psychology.—The paper was followed by a discussion.

FINE ART.

PORTUGUESE DELFT.

Oporto: Feb. 16, 1889.

It is evidence of how this western corner of the continent has been neglected by the student and the inquirer in certain fields that the existence in Portugal of a very curious and, in a small way, important art production—a true Portuguese faience — has remained undescribed, and virtually unknown, till the present day. Indeed, the first discovery of it to the English public will be through this letter, and is made by one who has no pretensions to be anything but a modest collector of the waifs and strays of the older days. I make no apology for dealing with the matter in some detail, for there can be few modern critical students of a people's characteristics and potentialities who will not admit that inquiry into its aesthetic tendencies and developments is nearly as valuable in arriving at right conclusions as the study of its ballads, its folk lore, or its language.

Six months ago I sent a small collection of old Portuguese faience on loan to the South Kensington Museum. There it still is on show, and there it will probably remain for some time to come. I mentioned this fact incidentally in an article in the June number of the *Fortnightly Review*. The collection consists of about twenty pieces — plates, bowls, jars, and grotesque figures of animals. Their date is from 1600 to 1800; and their potting methods, the prevalence of "blue and white" decoration, the earthy "body" employed, the strong, opaque, stanniferous glaze, the forms of some of the pieces and many of the art *motifs*, are all so like those pertaining to the faience which proceeded from the kilns of Delft that a first discoverer of the ware, searching for a name to distinguish it and let his brother "ceramists" know what he had found, could hit upon no more obvious one than "Portuguese Delft." I have accordingly so christened the newly discovered faience. A closer study, however, of the Portuguese ware, and a comparison of it with its sister faience, exhibits differences as well as resemblances, as shall presently be shown.

It may be well to remark in passing that "blue and white" faience of this age is not common in the South of Europe. I know of hardly any in Spain, none in the South of France, and in Italy none but the ware of Savona, which is clearly a derivative from, or rather another form of, Majolica.

The way in which the discovery of the Portuguese "blue and white" came about is worth relating—the more so as it was the result almost entirely of circumstances, and was not made by anyone in particular. Some years ago I was shown in Lisbon a very valuable collection of *objets d'art* which, among many more costly products of the olden time, included a large number of apparently very fine pieces of "Delft." In those days I knew no more of "Delft" than I do now of the pottery made in Saturn; and, being a new-comer to Portugal, I took it for granted that some at least among the array of grand blue and white jars and bowls around me were the product of Portuguese kilns. The owner, smiling kindly upon my ignorance, set me right. "They were all," he said, "pure Delft." I now know that many of the pieces were in point of fact of Portuguese origin; and the owner of these treasures, who no longer lives, and who loved Portuguese work, would himself have rejoiced to be certain of this fact. The next step in the process of discovery was made at the very interesting exhibition of ceramic art in Oporto in the year 1883. Senhor Joaquim de Vasconcellos prepared a learned official catalogue, with valuable information scattered through it, upon the ceramic art of Portugal, and I wrote a report upon the exhibition for the Academy; but, though we had plenty of the "Portugese Delft" under our eyes, neither Senhor Vasconcellos nor I noticed its existence as such, or called attention to the fact that, long before the manufacture of a certain much-talked of ware at the Royal Factory of Rato, in about 1770—a ware, by the way, which has none of the artistic characteristics of true Delft (indeed, almost no artistic characteristics at all)—there was made at several places in the kingdom this remarkable and beautiful faience which I call "Portuguese Delft." It is essentially faience in the more restricted sense of that word, not mere pottery (as Rato ware is), by reason of its peculiar opaque, and rich, tin-bearing glaze.

There can be no doubt that kilns were set up in Portugal, and the potting secrets of their native land taught by Dutch potters very early in the seventeenth century; and the protective duties levied on foreign ware doubtless stimulated further adventure in this line. As these potteries went on and throve, their owners did what protectionists in all countries have ever done—they asked for more and more protection, and finally for prohibition of all imports from abroad. They obtained actual prohibition in 1783; and the result was that—freed from all healthy competion—Portuguese pottery deteriorated, and in time became so extraordinarily ugly, and so bad in quality, that consumers came to think that tin made more satisfactory receptacles for their drugs and liquors. Consequently, the true art faience of Portugal ceased from the land.

In what are called *potting* qualities—namely in fineness of body, evenness of glaze, truth in modelling and "throwing," in regularity of firing and in correctness of drawing, that is in all the purely manufacturing characteristics—the true "Delft" is a long way ahead of the Portuguese ware. On the other hand, in every artistic quality, in softness and delicacy of clouring, in force and ingenuity of decoration, and in a certain (so to say) *bravura* of design, there is in the "Portuguese Delft" something of the Southerner's *perfervidum ingenium*, which we find in the Majolica artists of North Italy, but never look for as an outcome of the kilns of the "hydropic Dutchman." As in true Delft, the Portuguese faience artist often repeated the designs that he found on the Chinese wares of the period. Instances of this are to be seen in the South Kensington collection. Sometimes the Portuguese draughtsman is original, and sometimes he goes far afield for his decorative *motifs*. On several of the pieces in the South Kensington Museum the grasses, plants, flowers, and the animals, notably the lion rampant on one of the plates, and the delicately drawn gazelle that figures on several of the jars, are all designs of clearly Persian origin.

In Portugal we are at the extreme ocean-bounded limits of a broad zone along which have flowed, from east to west, successive waves of aesthetic movement—a zone bounded to the north, almost continuously, by the Himalayas, the Caucasus, the Pyrenees, and the Alps; and having for southern limits the Indian seas and gulfs, and the sands of the great Sahara.

If we accept the Aryan theory, we shall find what we may call Aryan art-*motifs*, not alone on this peculiarly Portuguese ware, but on much earlier art-products of the country: Aryan art-*motifs* existing side by side with Aryan myths and folklore. For instance, on many pieces of this ware we may find the tree of life and the knop and flower pattern—well-known Aryan symbols of the divine power and bounty, conclusively proving, no doubt, the original Aryan derivation of the designs. But, in my opinion, one may easily look too curiously and too deeply for the origin of art-*motifs*

Digitized by Google

in many products of aesthetic emotion. The archaeologist may find a peculiar cross, a Turanian symbol, very plainly drawn on some Portuguese pots and dishes; but he would be hasty if he concluded that the Portuguese art-work was of essentially Turanian origin. The Portuguese potter—an artist by instinct—appropriated a decorative idea wherever he found it, taking what was near rather than what was far from him; and, if Aryan designs of the Persian species preponderate in the best work he did, it is for no more recondite reason than because the best work was done by the best artists, and the best artists could best appreciate the fine designs on the carpets and fictile ware that came abundantly into the wealthy Portugal of the sixteenth and seventeenth centuries.

With all the differences that exist between true Delft and the local faience to go upon, and, furthermore, with the help of some very convincing historical records and allusions in Portuguese contemporary writings, together with armorial bearings, and dates, and Portuguese legends on the pieces themselves, the conclusion was inevitable that the supposed ware from Delft was, in truth, a true Portuguese faience, carrying with it evidence of the former existence in Portugal of very high artistic taste and faculty. As musical composers have sometimes resolved into harmony a combination of notes wherein previous musicians had found only discord, so the pottery colourist has, at times, done the same thing. His scale is simple, his colours few; particularly in the case of faience, where a highly glazed and durable surface is only obtained by firing at high temperature. Every potter knows that in presence of such kiln-heat as must be used to get these attributes, hardly any colours except the blue derivatives of cobalt survive; hence a certain monotony in the "blue and white" of Delft and in the highly-fired porcelain wares of Nankin. Now a certain colour that will bear a strong heat almost as well as the cobalt blues has been discovered by the Portuguese potters of the last two centuries. It is called by them *cor de vinho*—wine colour—and it is not quite a satisfactory tint in itself, being of a brownish claret colour, and when combined with blue it might seem at first sight to make a discord rather than a harmony. The Portuguese, however, have contrived to combine it with blue in such proportions as to make a real colour-blend, and thus to save their blue and white pieces from that sameness and coldness which end by wearying the eye in such ware. The *cor de vinho* was used in very early pieces. It is to be found on one piece with the arms of Portugal, dated 1641.

Among the Portuguese ware in South Kensington will be found one or two lustred pieces. This ware is of an earlier date than the Portuguese Delft, and was made at Coimbra before 1600, in kilns which afterwards, as I have reason to believe, never turned out lustred ware again. Lustred pieces are very rare in Portugal, and are mostly rough in glaze, and clumsy in design. The lustre is of a golden red, and not of a high order. It is probable that it is of Moorish origin, like the lustred wares of Spain. Among the collection are some imitations of those multi-coloured Delft pieces whose juxtapositions of gaudy colouring were perhaps suggested by the similar juxtaposition of gorgeous hues on the petals of the hybrid tulips which the Dutchman loved, and still loves, to raise. In true Delft these coloured pieces are miracles of "potting" ingenuity and skill. The Portuguese imitations are inferior in this respect, but they often possess truer and softer colour-harmonies than the Dutch pieces.

Oswald Crawfurd.

CORRESPONDENCE.

THE SITE OF OLD BAGHDÂD.

Baghdâd: Jan. 13, 1889.

On January 11, in the company of M. Henri Pognon, the French consul, I visited the site of old Baghdâd. It is on the Mesopotamian side of the Tigris. The remains of the old mound are still plainly visible. The ruins of a very large and compact wall face the river, forming one of its banks. We entered a boat and were rowed along the wall, which is 16 to 20 feet higher than the water. Bricks (32 cm. × 32 × 7) were taken from different places; and every one bore the stamp of "Nebuchadnezzar, King of Babylon, the restorer of Esaqqila and Ezida, son of Nabopolassar, king of Babylon." We noticed three different kinds of stamps. Baghdâd was then an old Babylonian site. Does this not argue for Delitzsch's reading *Bagdadu?*

Robert Francis Harper.

NOTES ON ART AND ARCHAEOLOGY.

The exhibitions to open next week include (1) a collection of water-colour drawings by leading artists of the Dutch school, at the Fine Art Society's, in New Bond Street; (2) a set of choice paintings by Corot, at the Goupil Gallery, also in New Bond Street; and (3) the annual exhibition of water-colour drawings at Messrs. Thos. Agnew & Sons, in Old Bond Street.

Messrs. Dowdeswell will also have on view next week a series of drawings, chiefly of the Austrian and Italian Tyrol, by Mr. J. M. Donne.

A general meeting of the Hellenic Society will take place at 22 Albemarle Street on Monday next, February 25, at 5 p.m., when Miss Jane Harrison will read a paper on "Certain Vase Fragments of Considerable Interest."

A finely-executed fresco has just been discovered in that portion of Canterbury Cathedral which is known as St. Anselm's Chapel, originally dedicated to St. Peter and St. Paul. The removal of a wall, which was probably erected shortly after the great fire in 1174, with a view to strengthening the wall of the choir, disclosed the painting, which represents St. Paul in the act of detaching from his hand and shaking into the flames the viper by which he was bitten on the island of Melita. The painting is about four feet square. The colouring of the fresco is in a wonderful state of preservation, and the string course of bordering remarkably good. It was probably executed towards the close of the twelfth century.

At a recent meeting of the Académie des Inscriptions, M. Héron de Villefosse exhibited casts and photographs of two small sculptured monuments, both found in France, which throw light upon the famous "Hermes" of Praxiteles, discovered a few years ago in the course of the German excavations at Olympia. The god, as is well known, is carrying an infant Dionysos on his left shoulder, and is extending his right arm towards and over him; but unfortunately the right hand is missing. It has been conjectured that the right hand held a bunch of grapes. This conjecture has now been fully confirmed by the two sculptures referred to by M. de Villefosse. One is a bronze statuette, found in Burgundy; the other is a Roman *stele*, from Hatrize, near Briey (Meurthe-et-Moselle). In both of these can be seen an imitation, however feeble, of the "Hermes" of Praxiteles; and in both the god dangles a bunch of grapes from his right hand.

THE STAGE.

"THE LOVE STORY."

The part played by Miss Janet Achurch—the chief part in "The Love Story"—is one of those which are not quite so good as they may seem to the performers of them. For upon the proceedings of Margaret Borth there is laid more than once the heavy burden of improbability; and it is difficult to say to what extent this may discount the effect of the many excellent situations and excellent moments which the author's stage-craft has contrived, and to which the art and temperament of the actress permit her to do justice. Up to a certain point Mr. Leclercq has well imagined the character of Margaret Borth—poetic, highly strung, impulsive, affectionate. But when, in consequence of a plot designed by a defaulting bank manager and one William Trett (who is his creature), the hero of the piece, a blameless novelist—or more than that, as we are given to understand, a novelist of genius—bears to outsiders the air of having made love to Madeleine only because of her fortune, that young lady invites him to "clear himself," and will have nothing to do with him unless he shall do so. The novelist of genius—being gifted, it seems, with common-sense into the bargain—most properly replies that he shall not attempt to clear himself, and that the woman who professes to love him must be so good as to believe him upon his bare and simple word. Madeleine thinks otherwise, and accepts forthwith the renewed offer of the defaulting bank manager, who had, it is quite true—and it is her only excuse for accepting him—importuned her with love while she was still presumably poor. The heroine's bearing is here, as I conceive it, entirely untrue to the character that has been previously drawn for us. A fainter measure of sympathy than would otherwise accompany her goes with her then through her subsequent disasters—through the misery of her awakening to the fact that it is Falshawe whom she loves after all, and Marchastle whom she marries; through the agony of her belief that a shot of hers, fired off by accident, has really killed the man whom, in any honester fashion, she would give half her life to be rid of; through the tortures, lastly, which she suffers when she knows that her lover is self-accused of a crime he never committed. There are two ways, of dealing with your characters in novel or drama. Either they must be true to their own natures at all costs, and the end of the story be what their natures make it, or their action must be forced and wrenched—their natures violated—that the story may fall into some desired channels. Now Mr. Pierre Leclercq is not to be quite acquitted of this latter proceeding. Stay, however, there is a third thing possible. An author, paying regard at bottom to the truth of his characters, may yet fall honestly into a mistake as to their course of action. The commonplace writer, with a good aim, does this, indeed, continually. I am not sure that the writer of genius does not do it now and then. I am not sure that the heroine of Mr. Thomas Hardy's most admirable short story, *Interlopers at the Knap*, would have been so obstinately proof, as Mr. Hardy makes her, against the

Digitized by Google

advances of her lover, when her lover had long repented in sincerity the error of his ways.

But the only grave mistake in the conception of "The Love Story" has been sufficiently dwelt upon; and, where much is ingenious, it is not necessary to insist at length upon defects in treatment—as for instance that the dialogue in the second scene of the first act is distinctly redundant, and that the insufferably voluble Welsh lodginghouse keeper speaks the language of the halfpenny evening newspaper, and that three days (the only interval between the first act and the second) is supposed to be enough to establish the reputation of Mr. Falshawe's novel—an admitted triumph, we are told, at the end of them; yet existing at the beginning of them only in the form of an "advance copy." This has been already a very "straight talk," and minor things may pass, that witness may be borne without further delay to the play's possession of many telling qualities; of a measure of truth to human nature in suffering, and even, in the character of William Trett (which Mr. Fred Thorne plays very funnily), of a measure of truth to it in humour. Whatever the faults of the piece, the piece is worth seeing; for it is planned and executed on the whole with skill, and it is acted, in one or two of its best characters, with something more than discretion and vigour.

Mr. Laurence Cautley—quite a rising actor, as our readers know—strikes at the first rather a commonplace note He warms up to his work, however, as the situation grows interesting, and, in the long run, proves far from inefficient. Mr. Pagden, as a sympathetic solicitor, is adequate; and the grateful though not very important part of the novelist's mother is played with cordiality by Miss Drummond. Mr. Charrington, as the bank manager who marries the heroine when he is wanted by the police, has one of his strongest scenes within a minute or two of the rise of the curtain. This is also one of the scenes which, from the construction of the drama, it is easiest to believe in; and Mr. Charrington plays it with boldness and nervous force. The despair of one moment, the excited rejoicing of the next—as the way is found out of what seemed a hopeless difficulty—are strikingly depicted by a young actor whose methods are not, perhaps, quite fully matured, but who adds to the virtue of earnestness the gift of individualility. Miss Achurch's part—unnatural as I have insisted it must be at times—is at all events extremely full and varied, and only an actress singularly mobile and several-sided could even hope to grapple with it. Miss Achurch plays it quite remarkably. It is doubtful whether there are to-day two other actresses in London who could play with the intensity of this young artist the violent scenes of the third and the pathetic scene of the fourth act. And I am quite sure there are not two who could make out of the love-scene of the first or second (when Madeleine hears Falshawe's declaration of devotion to her) all that Miss Achurch makes of it; playing it as from an observation of life unerringly delicate, and as with a feeling curiously womanly and subtle. Here an artist who is never less than interesting, touches the exquisite. The performance of "The Love Story" is one that the real student of the theatre cannot afford to miss.

FREDERICK WEDMORE.

STAGE NOTES.

MR. WILSON BARRETT will produce, on Thursday in next week, his drama of "Now-a-Days." It will be played every afternoon for awhile. Meantime one or two changes in the direction indicated in the ACADEMY last Saturday—and by several contemporaries likewise—have been made in "The Good Old Times." The piece has been notably "pulled together," and a portion of the prettily-painted panorama in the fourth act has been discreetly sacrificed. The attendance every night is very large. Indeed, we hear that an immense business is being done.

MUSIC.

RECENT CONCERTS.

MR. DANNREUTHER gave his third concert at Orme Square on Thursday evening, February 14, at which was performed a new Sonata in D for pianoforte and violin, by Dr. C. H. Parry. It consists of three movements: an Allegro with interesting thematic material, a charming Andante, and a clever Presto. One great merit of this new work is its conciseness; for diffuseness is the besetting sin of many modern composers. The Sonata was well rendered by Messrs. Dannreuther and Gibson. The programme included pianoforte Trios by Beethoven and Brahms, Bach's Chromatic Fantasia and Fugue; and some songs by Schubert and Bizet artistically rendered by Miss Lena Little.

On Friday afternoon Mr. and Mrs. Henschel gave their first Vocal Recital at Prince's Hall. The programme, as usual, was full of attractive things. Two duets—Gagliano's "Alma mia" and Grétry's graceful "Un bandeau couvre les yeux"—opened the concert well. Mrs. Henschel sang in her best manner Beethoven's "Kennst du das Land," Schubert's "Who is Sylvia?" and Brahms' setting of a Volkslied, "Sandmännchen." It would be difficult to imagine anything more delightful than to listen to such songs interpreted by such artists. Mrs. Henschel does full justice to her part; but no little of the effect which she produced was due to the clever and sympathetic accompaniment of her husband. Mr. Henschel sang, among other things, a new and interesting song by Brahms—"Auf dem Kirschhof"—and two of his favourite Loewe Ballads. A duet from Wagner's early opera, "Die Feen," was admirably rendered. No one unacquainted with the name of the composer would imagine it to have been written by the author of "Tristan."

Mr. Hamish MacCunn's Dramatic Cantata, "The Lay of the Last Minstrel," composed expressly for the Glasgow Choral Union, was performed last Saturday at the Crystal Palace under Mr. Manns' direction. Mr. MacCunn, in this his latest work, has more than maintained his well-earned reputation. He has a Schubertian flow of melody, which, too, like that of the great composer, is unequal. In the skill with which he handles the orchestra he bids fair to become an English Berlioz. The libretto, arranged by Mr. James MacCunn from Scott's well-known poem, served for the moment to inspire the tone-poet, but has not given him a full opportunity of displaying his dramatic powers. One weak feature of the libretto is the comparative tameness of the second, after the excitement of the first, part. The composer shows himself at his best in the ride of Sir William of Deloraine to Melrose Abbey, and in the scene at the tomb of the great Wizard. Mr. MacCunn has fully grasped the situation. It is not so much details of melody, harmony, or orchestration that attract, but the general grouping, the colouring, the oneness of tone and word. The "Ride" has evidently been inspired by Dvorák's "Spectre's Bride," but the music has character of its own. The "Tomb" scene has a touch of genius about it; the thoughts are expressed in a terse and bold manner; there is no straining after effect, and yet all is effective. Another specimen of the composer's mastery is the short chorus "'Tis done." In the opening tenor solo with chorus of the second part, Mr. MacCunn shows us that he can write simply, and yet not fall into the commonplace. There is a touch about it of the chorus of Sylphs and Gnomes in Berlioz's "Faust." In other portions of the Cantata there are undoubtedly weak moments. The basses are at times stiff, or the melody lacks point, or the harmonies are a little far-fetched. But to point out these would serve no useful purpose. A composer of such strength and originality must be aware of his weaknesses; and with every new attempt his genius will ripen. Mr. MacCunn makes considerable use of representative themes; but, after the manner of Wagner, they are worked into the material, not dotted over the surface of the music as we sometimes find them in mere imitators of the style of the Bayreuth master. Mdme. Nordica, Miss Curran, and Messrs. Iver McKay and Andrew Black were the soloists, and did justice to their parts. The orchestral playing was exceedingly good, but the choir did not distinguish itself. The composer was called to the platform at the close. The Cantata was preceded by Cherubini's "Anacreon" Overture, an Aria from "The Magic Flute," effectively sung by Mdme. Nordica, and Mr. MacCunn's clever Concert-Overture, "Land of the Mountain and the Flood."

Otto Hegner gave his second pianoforte recital at St. James's Hall on Monday afternoon. Bach's second English Suite was neatly played, but we missed the *Agréments* in the repeats of the sections of the Sarabande; at least, in spite of what Dr. Spitta says, we imagine this to have been Bach's intention. The chief feature of the programme was Beethoven's Sonata in E flat (Op. 31, No. 3)—a severe test both to the mental and physical powers of the young pianist. Little Otto, however, attacked the music courageously. Mind triumphed over body, and he achieved a brilliant success. Was it excitement which caused him to hurry the tender Minuet? He played besides solos by Chopin, Weber, Huber his master, Paderewski, and Liszt.

Mr. Henschel gave his last subscription concert on Tuesday evening. With one exception, the programme consisted of familiar items. This exception was the Overture to Wagner's opera, "Die Feen." This work was written by the composer at the age of twenty. At that time, Weber was his chief model. What strikes one most in the Overture is the vigour manifested. The principal theme of the Allegro is quite Weberish; but in the short introduction and in one or two other places there are phrases distinctly foreshadowing passages in "Tannhäuser" and "Lohengrin." How strongly does the career of Wagner resemble that of Beethoven! Both possessed strong originality, but in both this was, at first, all but hidden by the influence of great contemporaries. Mr. J. Kruse played Beethoven's Violin Concerto, but did not do justice either to himself or to the work.

Mr. Henschel will give his second and last afternoon concert next Wednesday, when the Leeds Choir will sing in Mendelssohn's "Walpurgis Night," and the Choral Symphony.

LITERATURE.

A History of Eighteenth-Century Literature. By Edmund Gosse. (Macmillan.)

MR. GOSSE begins his book with a misnomer, a chronological misstatement, which he can hardly expect his critics to pass over or to forgive. He makes his eighteenth century begin in the year 1660 and end with 1780. This is just one of those blunders which we critics love to hold up to scorn and reprobation. We are certain a century holds but a hundred years, and Mr. Gosse's consists of a hundred and twenty!

Let the critics, however, say what they please, every student of this great period in our literature knows that Mr. Gosse is right, and will applaud him for his bold chronology. The period which found English written speech, to use Mr. Gosse's own words, "antiquated, amorphous, without a standard of form, and left it a finished thing, the completed body for which subsequent ages could do no more than weave successive robes of ornament and fashion," begins in 1660 with Dryden—poet, critic, and literary reformer—and ends in 1780, when the movement that had continued over four generations had expended most of its force and was in decadence, when Samuel Johnson's life-work had ended, and the dawn of the new day, with Burns, Coleridge, and Wordsworth for its luminaries, was yet hardly visible.

It is, of course, not to be expected that, in a matter which concerns human beings, the progress of their taste, the movement of their thought, and its expression in prose and verse, there can be any such things as hard and fast lines of delimitation, or any date before which men had not thought of eighteenth-century methods, and another after which they no longer followed them. It is, nevertheless, curious how these two dates of 1660 and 1780 do virtually bound and enclose the true eighteenth-century literary period. Mr. Gosse shows how Waller, who in his youth was almost in touch with the Elizabethans, and in manhood lived through the revelry and riot of the Restoration, in his maturity suggested and set the example of that manner in verse and of the heroic couplet which Denham caught up and Dryden made his and made splendid, and handed on to Pope and Johnson and Goldsmith, and which never died out till Erasmus Darwin—a hundred years afterwards—exaggerated and rendered it ridiculous and out of mode for ever.

At the close of the period there is some overlapping too, but it is more in seeming than in fact. Chatterton wrote his famous romantic ballads long before 1780. He published one of the best of the Rowley poems in 1769, and died by his own hand in the following year. Even his great posthumous "Ballad of Charitie" saw the light before 1780. But Chatterton, the child-genius, was an anomaly and his writings an anachronism. They met with no favour till long after; and a literary period is to be distinguished not merely by what is written in it, but by what is written in it and finds full acceptance. The story of Chatterton, his forgeries and his fate, serve but to show how strong and contrary the wind of opinion still blew against true romance. Had Chatterton not felt it to be so strong he would never have hidden his great genius behind the jargon of a false antique. He would have sung with his own natural voice, he would have found favour and lived, and England perhaps would have now on her roll of fame one more poet of the first rank. Chatterton's song was heard untimely, before the winter's frosts had passed away; he does not belong to the century of letters which Dryden began and Johnson ended.

Mr. Gosse's volume is at once a historical review of the period and a series of brief biographies of the writers who made it notable. He does not attempt to condense into a sentence a definition of the age; that is, he does not endeavour at an impossibility, for he knows that when we come to look for salient points in the characteristics of the eighteenth century, we are very soon embarrassed with their number and their complexity. Those cursory persons, therefore, who lack time or tenacity to array the whole of them in their memory, and who desire, either in this review or in Mr. Gosse's book, to have their learning shortened for them into an aphorism or an apopthegm, must submit to be balked of their wishes. Indeed, if a satisfying account of eighteenth-century methods, art-tendencies, limitations, and purpose could be so abbreviated, there had been no need for Mr. Gosse to have written his full and eloquent work.

It is commonly said that the eighteenth century is marked off from all others by its common-sense; but that is only one of its characteristics. There are, besides, its classic restraint; its moderation, that often comes so near to being common-place; its level excellence of utterance, that seldom sinks and never soars; its admirable cultivation of lucidity; its respectability; its rationalism; its so-called correctness of language, that turns in the very mouths of those who use it to be conventional and essentially incorrect; its wit; its abhorrence of romance; its avoidance of naturalism, as we now understand that word; and the fact that its appeal to nature and her phenomena is never made at first hand.

What Mr. Gosse brings out well is that this period, through which literary expression was sharpened, strengthened, and purified by four generations of writers, was also a period of slow growth and gradual development from lower forms of thought and expression to higher and more spiritual ones. To make this clear, he divides the century, somewhat arbitrarily, it must be admitted—it could be no otherwise—but usefully, into three main epochs or ages. First, the age of Dryden, when common-sense reigned, but when the ghosts of the fiery enthusiasms of older days appeared now and again, taking the form of braggart, huffing rant and extreme coarseness. Secondly, the age of Swift: an age of compromise between extremes, political as well as literary; an age of repression of all excess, an age of literary suppleness, wit, antithesis, and refinement, exhibited in Pope and Addison with something too much, perhaps, of a dogmatic and morality-preaching tendency. This is the period wherein the drama ends, which, by-the-by, if it try to teach, always dies. It was now that the social essay took form in the *Spectator*, and *Guardian*, and *Tatler*, and prose style was cultivated as it never was before. It was an age made still more notable and important by the imagination and spiritualising touch of Berkeley, with a promise in his writings of fuller-reaching utterance in a day to come. Thirdly, there is the age of Johnson, where the literary movement of the century is still at work, but in decadence, and yet when a new spirit is stirring it uneasily to larger and more humane issues. It is the beginning of what we now perceive to be the most important literary event since the Renaissance—the first discovery of the English novel, beginning in this sub-period with Richardson and Fielding, and ending in it with Goldsmith and Miss Burney.

With such a book as this of Mr. Gosse's, it is difficult rightly to perform the commonly easy office of the critic, and either to blame or to differ. I must confess I find myself in a dull monotony of agreement with the hundreds of sentences that Mr. Gosse has passed on the labours and characteristics of the men of this past-away century. Very seldom have I wished to insert a qualification or to heighten the note of Mr. Gosse's praise or of his censure. Perhaps the author hardly does full justice to the triumphant and all-sufficing nature of true genius when he qualifies his praise of Chatterton by suggesting that he borrowed from Thomson, Goldsmith, Collins, or Gray. In ninety-nine cases out of a hundred, when a writer strikes out something great he is but following the law of our gregarious species, and the germ of his utterance may be traced to a predecessor; but genius is not bound by this or by any law, and for my part I find the "Ballad of Charitie" or the "Minstrel's Roundelay" as perfectly underived creations as "Hamlet" or "Macbeth."

Mr. Gosse's book is one for the student because of its fulness, its trustworthiness, and its thorough soundness of criticism; and one for the general reader because of its pleasantness and interest. It is a book, indeed, not easy to put down or to part with; and my own agreement with the author's opinion has been so constant, he expresses so well what I myself have often only obscurely thought, that it has been to me less like reading the utterances of a critic than listening to a congenial companion talking upon a subject of which he is fuller of knowledge, riper in judgment, and juster in expression than myself, but never once sententious or dictatorial. After all, Mr. Gosse's secret is no other than that of the great poet-critic of Rome—his urbanity; and one can almost hear him say with Horace, as he offers his opinions,

> "Si quid novisti rectius istis
> Candidus imperti; si non, his utere mecum."

Such a critical tone is rare; and, as with all good things, it is the more pleasant because it is rare.

Three Generations of Englishwomen: Memoirs and Correspondence of Mrs. John Taylor, Mrs. Sarah Austin, and Lady Duff Gordon. By Janet Ross. In 2 vols. (John Murray.)

If dullness be the characteristic of Norfolk scenery, it was not that of Norwich society during the latter half of the last and the beginning of the present century. Indeed, that city might then have almost laid claim to be the "modern Athens" south of the border, and certainly it shared with its northern rival the air of conscious superiority which is a note of provincialism. Those who contributed to make Norwich at that time an important intellectual centre were persons of considerable natural ability and no little culture, but they were not giants. The most conspicuous figures in the group were Dr. Alderson and his daughter Amelia Opie, the Martineaus and Gurneys, that excellent instructress of youth—Mrs. Barbauld, Sir Thomas Beevor, Dr. Reeves, William Windham, Dr. Rigby (whose *Letters from France* were published a few years ago), and the whole family of John Taylor. In the history of that family, whose members (as the Duke of Sussex once said) reversed the proverb that it takes nine tailors to make a man, Mr. Francis Galton must have found some apt examples of hereditary excellence both in mind and body. Mrs. Ross, as a daughter of Lady Duff Gordon, exhibits a natural pride in her ancestral and other relatives, but even she has failed to do thorough justice to the parent stock. She is, for instance, mistaken in supposing that Dr. Rigby married the daughter of Dr. John Taylor. Sarah Taylor was his mother, not his wife; and it is certainly worth adding that Lady Eastlake is his daughter, and has inherited in no mean degree those gifts and graces by which her grandmother's family has been distinguished. This is a trifling error, and one for which Mrs. Ross has made the amplest atonement in the general care which she has bestowed in editing the materials at her disposal. She has enabled us to make acquaintance with not a few men and women whom it is a pleasure to know, and has given us a further insight into the lives and thoughts of some about whom one can never learn too much.

Mrs. John Taylor, who is the representative of the first generation, was a daughter of John Cook, of Norwich, and married in the year 1777. She is described as a handsome and gifted woman, whose energetic character and liberal opinions, joined with great kindness of heart, made her a centre of the circle of remarkable people who frequented Norwich. Some of her letters have been preserved, and display the family faculty of fluent writing. Of course, they are somewhat didactic and sententious, as becomes a lady who regarded the society of Mr. and Mrs. Barbauld as a privilege of the highest order. She was thoroughly practical, found her greatest happiness in domestic life, enjoyed intellectual society and occupied a high position in it, had rather a contempt for imaginative literature, and looked upon romantic people as troublesome. Dr. James Martineau, writing to Mrs. Ross, says:

"I retain a vivid remembrance of your great-grandmother, Mrs. John Taylor, as a very remarkable woman. She was, I believe, one of the contributors to the budget read at the meetings, held at intervals of a few years, of the Taylor and Martineau families, the descendants of two sisters, who at last were upwards of seventy in number. These papers consisted of essays, poems and dramas; the latter being acted by the younger members of the two families, and I well remember taking a part when a boy. An amusing picture rises before me as I think of your great-grandmother. It was the duty of every *mater-familias* in those days to sally forth on market days, before breakfast, to lay in the needful stores for the larder. My mother used to take me with her to help with the porterage of her purchases. We went pretty early, but on the way were almost sure to meet Mrs. John Taylor on her return from the market-place, bravely struggling with her own load, without any boy to help her. Yet she could never pass us without stopping for a friendly chat, often running up into grave and stirring themes. And I remember how my boyish sense of humour was touched by the effect of so much eloquent discourse from the lips of the old lady, weighted by her huge basket, with the shank of a leg of mutton thrust out to betray its contents."

Of the children of this worthy lady—the "Madam Roland of Norwich," as she was sometimes called—the sons were all distinguished in their respective spheres. The eldest, John, was an engineer, under whose direction the first tunnel made in England, that through Morvel Down, was executed in 1806. Richard, the second son, was editor of the *Philosophical Magazine*; Edward was Gresham professor of music; Philip was an inventive genius and intimate with all the scientific men of his day; and Arthur, the youngest son, made printing his pursuit and archaeology his pastime. Besides these five sons, Mrs. Taylor had two daughters. The elder, Susan, married Dr. Reeve, whose son is the present editor of the *Edinburgh Review*; the younger, Sarah, became, in 1819, the wife of John Austin, who had left the army to become a barrister. His works on jurisprudence have won for him an enduring reputation, no small share of which should be assigned to his faithful helpmate. Her extraordinary vigour both of mind and body were of the greatest service to her husband, who was despondent, irritable, and constantly ailing. His intellectual powers fitted him, indeed, for tasks of any magnitude; but he was hampered by physical weakness, by an over-critical mind, and an unfortunate habit of spending so much time and exertion on superfluous study and thought as to reduce him to bodily prostration before his work was completed. His wife's calm temperament and sound judgment were of almost as much value to her husband as her skill in domestic management (for the Austins had to struggle with very limited means) and her acquaintance with foreign languages. In this last respect her genius chiefly showed itself, and it is through her translations from the German that she has hitherto been best known. They gained general approval. Prof. Ranke expressed the delight he had experienced "in hearing his thoughts speak in the ringing tones of the purest English," and termed her "his English self." Mrs. Austin had a double qualification for the work of translation: she knew not only German but also English. We may go further and say that she knew England and the English. Her correspondence with Guizot and Gladstone, with Mill and Whewell and B. St. Hilaire, shows the keen interest she took in social and political questions, and also her freedom from party prejudices. There is a wonderful freshness about her letters—whether written in French or German or in her own language; and often does one come across observations made years ago, which are singularly appropriate to our own times. Thus, writing to M. Guizot in 1851, she says: "My own discouragement about France arises more from the political character of the people (of all classes) than from anything else. Every government seems a new toy, soon to be pulled in pieces and broken." In the same year she suggests to Mr. Gladstone that advance in education of which we are just beginning to feel the need. We have a good system of primary education, but that is all. "Give us," she says, "a scheme for excellent *burgher schools*, to which the people shall pay a good price, and have in return as much as their money can procure." But it is not in Mrs Austin's letters alone that there is so much that is interesting. Open these volumes where we will, we are pretty sure to come across something worth notice contributed by her numerous correspondents. For example, as long ago as 1844, Baron von Humboldt had discovered some of Darwin's merits. Hallam, in 1848, avowed his belief that every vote given to Louis Napoleon for President of the Republic might be reckoned as given to him for emperor, "to which [position], if he commits no great blunder by his own incapacity, he will be pushed in a short time." The sage of Chelsea contributes a few interesting letters, but does not prophecy. Mrs. Austin is less discreet. In 1855 she asserts that

"the next despotism the world will have to undergo is that of the press. This might be foreseen as soon as we get a reading populace. When the people have read enough to become clear-sighted and reasonable, the despotism will fall of itself. But when will that be? Two centuries hence?"

Mrs. Austin died in 1867, and was buried at Weybridge by the side of the husband who had been to her "the object of the profoundest veneration and the tenderest pity." One can scarcely help regretting that her pen was not exercised in other ways than in translating and editing the works of others. But these volumes will bear evidence to the justice of the reputation she enjoyed—a reputation for judgment, knowledge, culture, and largeness of heart. Of her daughter Lucy, little need be said. Lady Duff Gordon's name is familiar even to the present generation of English, and, when forgotten by them, will be remembered by the Arabs among whom she lived and died. Her letters, which Mrs. Ross publishes, are of the same character as those we have already seen—full of wit and playful humour, of tender sympathy and heroic fortitude. She won all hearts, from the highest to the lowest, and was beloved alike by princes and poets and by the poorest fellaheen.

Charles J. Robinson.

Field and Hedgerow. By Richard Jefferies. (Longmans.)

In forming a judicial estimate of these last essays of Richard Jefferies, collected by his widow, it is by no means easy, though very necessary, to detach therefrom any consideration of certain facts and circumstances of the author's life which Mr. Besant's generous *Eulogy* tended to emphasise. The reader, too, is not permitted to forget that they were written during a protracted period of physical suffering. In the opening essay, "Hours of Spring," which abounds with realistic description of animal and plant life in Jefferies's finest manner, he himself strikes a keynote of sadness which, however, it is pleasant to find, does not persistently obtrude throughout the volume:

"I wonder to myself how they can all get on without me—how they manage, bird and flower, without me to keep the calendar for them. For I noted it so carefully and lovingly, day by day, the seed-leaves on the mounds on the sheltered places that come so early, the pushing up of the young grass, the succulent dandelion, the coltsfoot on the heavy, thick clods, the trodden chickweed despised at the foot of the gate-post, so common and small, and yet so dear to me. . . . Day by day a change; always a note to make. The moss dying on the tree trunks, dog's-mercury stirring under the ash-poles, bird's-claw buds of beech lengthening; books upon books to be filled with these things. I cannot think how they manage without me. . . . To-day, through the window-pane, I see a lark high up against the grey cloud, and hear his song. . . . It is years since I went out amongst them in the old fields and saw them in the green corn. . . . Without me to tell him, how does this lark to-day, that I hear through the window, know it is his hour? . . . Each note falls into my heart like a knife."

But I quote this passage for reasons other than its intrinsic sadness. It serves to show the peculiar posture of mind induced by Jefferies's life-long intimate communion with nature. His inmost being was fulfilled with her influences. To him the creatures of wood, and cornfield, and pasturage, and "the stray things of the hedge" and roadside were spirit and were life; and he had come to regard himself as being as vitally necessary to them as they were to him. This accounts for an assertion that might well seem great egotism in *The Story of My Heart*—"Except when I walk by the sea, and my soul is by it, the sea is dead."

Moreover, the quotation discloses Jefferies's method: "Always a note to make . . . Books upon books to be filled with these things." And this may not be thought unimportant when it is borne in mind that some critics refuse to recognise in his work any higher quality than that of picturesque "cataloguing"—a mere recital of externals, leading to no definite conclusions. "You only find in Rome what you take thither," said Goethe. They whose interest in the life of the country is but a languid preference, or prompted by motives of novelty and fashion, are as little likely to experience satisfaction in the perusal of these essays as to find abiding charm in the contemplation of the landscape and existence Jefferies so faithfully portrays. To true lovers of the rural life, however, the minute description, the frequent elaboration of details, in Jefferies rarely proves tedious or gives an impression of incompleteness. For his work is informed with the felt presence of nature, and instinct with the finer mysteries of living things. "In his hands," as Mr. Aubrey de Vere says of Wordsworth, "ordinary things become extraordinary, because he sees in them, and teaches his readers to see, depths and heights not suspected." And this because, like Thoreau, Jefferies dedicated his genius with entire love and absolute self-detachment from the world of action to the woods and fields of his own countryside. All the same, there are now and then indications of the reporter; and an abruptness and inconsequence in his statement of facts which favour a supposition that occasional passages are merely transcripts from his notebook—*e.g.*:

"It is curious that there seems to be a distinct race of flat heads among the cottagers; the children look as if the front part of the head had been sat upon and compressed. Straw hats, the common sort, seem to be made to fit these shallow crowns. In some parts they cook dates; others cook oranges, making them into dumplings, and also stewing them."

But this instance is exceptional. What M. Taine has written of Dickens applies as forcibly to the writer whose lovingly observant eye, faculty of insight, and power of interpretation and reproduction have given us a series of pictures, incomparable in freshness and charm, of natural England and rural life:

"He has the passion and patience of the painters of his nation; he reckons his details one by one, notes the various hues of the old tree-trunks. . . And this minute description has nothing cold about it; if it is thus detailed, it is because the contemplation was intense; it proves its passion by its exactness."

The present volume has the peculiar characteristics familiar to readers of Jefferies's other purely descriptive books. In it are found the minuteness of observation, the adequate realisation of animal and plant life, the temper of contemplation, and the interpretation of the slightest hints and suggestions, so largely displayed in his earlier writings. There is still, but in a much less degree than heretofore, the old pagan sense of joyousness in living, of keen delight in life for life's own sake. And there is the same pervading consciousness of the relentlessness in nature, as exhibited in the life and death struggle perpetually waged between brute force and cunning, in field and coppice, hedge and stream. In this implied discernment of the absolute indifference of nature to man he suggests comparison with Mr. Thomas Hardy, in some of whose rustic stories the same feeling is even more effectively illustrated.

In Jefferies's last contributions to the literature of nature, there are certain signs of exhaustion, but there are also not a few descriptions no whit inferior to his best work. The following excerpt from "The Makers of Summer" will recall a disquisition on the identity of the colours of our native wild creatures with those of the trees, the bushes, the grasses, and the flowers of our woods and meadows, in an essay entitled "The Haunt of the Hare," in a previous volume:

"There is scarcely a colour that cannot be matched in the gay world of wings. Red, blue, and yellow, and brown and purple—shaded and toned—relieved with dots and curious markings; in the butterflies, night tints in the pattern of the under wings, as if these were shaded with the dusk of the evening, being in shadow under the vane. Gold and orange, red, bright scarlet, and ruby and bronze in the flies. Dark velvet, brown velvet, greys, amber, and gold edgings like military coats in the wild bees. If fifteen or twenty delicate plates of the thinnest possible material, each tinted differently, were placed one over the other, and all translucent, perhaps they might produce something of that singular shadow-painting seen on the wings of moths. They are the shadows of the colours, and yet they are equally distinct. The thin edges of the flies' wings catch the sunbeams, and throw them aside. Look, too, at the bees' limbs, which are sometimes yellow, and sometimes orange-red with pollen. The eyes, too, of many insects are coloured. They know your shadow from that of a cloud. If a cloud comes over, the instant the edge of the shadow reaches the grass-moths they stop, so do some of the butterflies and other insects, as the wild bees remain quiescent. As the edge of our shadow falls on them they rise and fly, so that to observe them closely it must not be allowed to overlap them."

Jefferies's thorough knowledge of practical details and of the ways and means of agricultural life is seen to advantage in several of the essays—*e.g.*, "Field Words and Ways" and "Steam on Country Roads," in the former of which, too, the undeviating habit and peculiar mental temperament of the labourer in Southern England are exemplified. The figures in this volume are, at best, mere adjuncts of the scenes in which they are set, individual sketches wanting in passionate human interest. In this respect, too, the present essays resemble their predecessors. Whatever defects there are in these were also inherent in the writings which brought him honourable recognition and fame; and they are inseparable from the limitations of his genius.

John F. Rolph.

A Memoir of Edward Steere, D.D., Third Missionary Bishop in Central Africa. By the Rev. R. M. Heanley. (Bell.)

A memoir of Bishop Steere is of special interest at the present time, when the members of the Universities Mission to Central Africa are in serious personal danger, and their work liable at any moment to be interrupted and ruined. Bishop Steere more than any other man is responsible for the methods of work and organisation which distinguish the mission, so that the discerning reader will be able to judge from this Memoir what exactly is involved in the continuance or the termination of missionary effort in his diocese.

And besides this first source of interest in the book there is a second, not so exciting as the first perhaps, but quite as important. The discussion which has lately been carried on as to the aims, the conduct, and the efficacy of missions to the heathen receives valuable illustration in the account of Bishop Steere's work in Africa. A great many of the adverse criticisms which have been made upon the sayings and doings of missionaries are emphatically endorsed by Bishop Steere's practice and experience; but, on the other hand, the notion that the missionary of

Digitized by Google

apostolic and primitive times, who bore privations and faced death that he might rescue men from vice and ignorance, is an extinct species, and has been succeeded by self-seeking and self-indulgent incapables, is shown, so far as the Universities Mission to Central Africa is concerned, to be a delusion. Not only are devoted and courageous missionaries living and dying in these latter days, but their work is as successful as ever. The history of Bishop Steere is a clear proof that wisdom and energy are not wasted when they are employed in missionary work; a plentiful harvest of the righteousness which exalts nations is the result.

Archdeacon Maples, in his well-written "recollections," printed in chapter xi. of the Memoir, states that the bishop was wanting in the "power of helping forward the conversion of individual souls, such as has distinguished other great missionaries," and claims for him, as his special grace, his "readiness to turn his brain or his hands to any work." This criticism is probably accurate; but the history of Bishop Steere's life suggests continually to the reader that the patient humility which turns its brain or hand to any work, and persistently, in the smallest details of every day life, holds up before men's eyes the clear light of a noble example, will in the long run do more to raise men's lives than the most earnest emotional appeals. This is specially the case when the man to be raised is a savage—to convert him is only too easy; to permanently raise his moral tone must usually be a slow and difficult process. The missionary to the heathen needs ever to have in mind the parable of the seed growing silently. Bishop Steere was, first of all, remarkable for patient thoroughness, and scorn of any work which would not last; but his plans, however carefully executed, were strikingly original and daring in conception. This is shown not so much in his arduous and dangerous journeys as in such an achievement as the erection, almost with his own hands, of Christ Church, Zanzibar, on the site of the slave market; in the refusal to call it his cathedral, because "we will build our cathedral on the shores of the Nyassa some day"; in his establishment of a common fund for his staff in Africa, each man being allowed £20 a year for clothes and other things which could not be provided in kind. The self-indulgent priest did not exist in Bishop Steere's diocese. To a member of his staff who suggested that a horse might be useful, he writes:

"I have a very strong objection to people's riding about at all, unless it is a case of absolute necessity. I do not think we are justified in taking the money of poor people, and spending it on horses or carriages, or in any other kind of luxury. . . . I am intensely disgusted at the spirit of self-indulgence which seems to be more and more the spirit of the age, and am, I dare say, inclined to go unreasonable lengths against it, but still I am so inclined."

This hardy self-denial was an essential part of the bishop's character. "What is the special vice of the rich?" he asks in a letter to a friend; and he answers "that they spend very nearly all they have in some way or other on themselves." At the Church Congress of 1871 he complains that "the army of the Church of England cannot go on to conquer, because it has found its Capua in our country parsonages," and points out that "the duty of the Church in regard to the slave trade is, of course, to put an end to it altogether." This can only be done thoroughly by the "evangelisation of the African nation"; but "it is because Englishmen are lukewarm about the whole matter that the slave trade continues as it is."

As having some bearing upon the question of the bishop's inability to convert we may note his protest against the collection of information by the missionary societies from the reports of the missionaries themselves.

"What a grand scope for a vain man to display himself, what a sore temptation to exaggerate, to say not what one knows but what one hopes. . . A good missionary is himself the most touching, the most interesting thing about his station. . . . Of this we can ordinarily hear nothing. . . . He cannot draw a picture of his own soul to be printed off in the society's penny monthly."

Another doctrine of the bishop's, important in relation to missionary work, was that "missions sent out by a society in England and managed by a committee at home can never be quite satisfactory." The result of this view was the separation of the Universities' Mission from the Society for the Propagation of the Gospel, because the latter society demanded the administrative control of funds collected by their committee. Bishop Steere considered that the control should rest with himself and the priests under him.

We have touched upon only a few of the points of interest in Mr. Heanley's excellent Memoir. Bishop Steere succeeded Bishop Tozer just when he was most wanted; and his rare gifts as a constructive statesman, joined with patient perseverance and humble attention to detail, account for the growth of the mission during his episcopate. We are apt to forget that the bishop was both a linguistic genius and an acute metaphysician, because these qualities were ornaments not essentials of his character, and it is his character which impresses us and commands our admiration. The Universities of Oxford and Cambridge need not grudge to London University the honour of having trained the third bishop of their mission. His virtues belonged to the man, and could not be produced by any educational method. Ronald Bayne.

Scottish Song: its Wealth, Wisdom, and Social Significance. By John Stuart Blackie. (Blackwood.)

Emeritus Prof. Blackie is a born lecturer, not a born man of letters. So he is seen both at his worst and at his best in this volume, which is not so much a compact work as a series of lectures published in book form. To him a Scottish provincial platform is the equivalent of another man's native heath. He frequently interrupts his discourse to amuse his audience with a song or the sword dance, or occasionally even with the information that his name is not Macgregor, but Blackie. Such interruptions are somewhat out of place when they occur in connexion with a lecture on the land question or on the second aorists that are to be found in Plato's *Republic*; but they seem the natural accompaniment of the breezy rhapsodies on honest men, bonnie lasses, good Scotch music, "the fine art of osculation," and moderation in the indulgence of passion, which constitute the bulk of a volume that is very much more one of exposition than of criticism. On the other hand, the method of dealing with essentially literary subjects by lectures leads not infrequently to inaccuracy, and encourages diffuseness. Both inaccuracy and diffuseness disfigure this book.

To the true Burnsian, who is more bent on letting the public know (or, perhaps, on ascertaining for himself) what Burns actually did and wrote than, like Prof. Blackie, on curtain-lecturing him for not controlling his passions, it is extremely exasperating to find him represented as "crooning these beautiful lines with his face to the west":

"Bring the lassie back to me
That's aye sae neat an' clean."

And

"What sighs an' vows among the knowes
Hae passed atween us twa."

It is hardly possible to avoid asking whether much confidence can be placed in the literary judgment of a critic who attributes these grotesque commonplaces—the work of one of those imitators of Burns who have done greater disservice to his memory than his assailants, or even than his defenders—to a poet who never wrote a feeble line and never perpetrated a *gaucherie*. Prof. Blackie further commits not a few errors, both of omission and of commission. He includes in his list of Scotch "singers," or, rather, of Scotch writers whose best verse deserves to be set to music, many men and one or two women who have earned no such distinction, and excludes from it one or two genuine masters of Scotch pathos. Finally, Prof. Blackie's style, like that of most men who are lecturers first and literary artists afterwards, suffers from fatty degeneration. His book is studded with banal phrases, like "the stout son of the cloudy North," "the merry old bard of Teos," and "the blush of the bonnie blooming heather." How came, too, such a worshipper of Aphrodite—in tartans, and not *décolletée*—to write of the author of "Auld Robin Gray" that,

"with a wise self-reliance, and a cheerful independence not over common in her sex, she abstained from amorous seductions and connubial entanglements till she reached the mature age of forty, and then allied herself to Andrew Barnard, Esq., son of the Bishop of Limerick"?

Scottish Song is not, however, without its merits. For one thing, it starts well. The true "value and significance" of Scottish song are to be found, as Prof. Blackie maintains, in its being a genuine product of Scottish soil, a genuine expression both of Scottish nationality and of Scottish individuality. It is undoubtedly the effervescence of Scottish (half-Celtic) passion, the expression of Scottish patriotism, the solace of Scottish poverty. This story is as old as Ben Nevis; but Prof. Blackie retells it with such gusto, and with such amplitude of detail, as to give it all the air of freshness if not of originality. His classification of the songs he is an admirer of into "songs of love, courtship and marriage," "patriotic songs, war songs, Jacobite ballads," "songs of

Digitized by Google

character and incident in daily life," "drinking songs," "sea songs, naval songs, and boat songs," and "songs of thought and sentiment"—is excellent both in itself and as a development of the fundamental idea of his book.

At the same time, Prof. Blackie cannot be congratulated on the mission which he has obviously undertaken. He hopes to convert the drawing-rooms of Glasgow and Edinburgh, Aberdeen and Dundee, from Beethoven and Chopin back to the old Scotch music He deserves to fail, and he will fail, for the simple reason that, while Scotch lyrics are, taken as a whole, the best in the world, Scotch music is the worst in the world. There are, indeed, one or two Scotch songs of supreme excellence, even as musical compositions; but the singing of most of them is an exhibition of lung-power, and nothing more—excusable, and even valuable in the medical torture-chamber of an insurance company, but utterly out of place at a social gathering.

William Wallace.

The Haydock Papers: a Glimpse into English Catholic Life under the Shade of Persecution and in the Dawn of Freedom. By Joseph Gillow. (Burns & Oates.)

Mr. Gillow is well known outside the limits of the religious body to which he belongs by his *Biographical Dictionary of English Catholics*, three volumes of which, containing about half the alphabet, have already appeared. It is a most useful book of reference, and must have been a work of great labour. The volume before us is of a different character. Mr. Gillow seems to have here printed many of the memoranda compiled for use in his dictionary. We do not say this in any spirit of depreciation or cavil. The value of the contents of a notebook depends entirely on who has been the noter. Mr. Gillow knows well what things to select, so there is hardly a page of these miscellaneous collections which will not be of permanent value to the future historian of religious thought. They relate almost solely to Lancashire, Cheshire, Cumberland, and Yorkshire. We wish they had been extended to the rest of England.

The fortunes of the Catholic body in our country during the last century have been overlooked by historians, except at such times as there was a clamour for the relaxation of penal laws or the safety of the capital imperilled by "No Popery" fanatics This is strange and by no means a credit to those who have undertaken to instruct us. Whatever our opinions may be as to the relation in which Roman Catholics stand to ascertainable truth, their existence here under conditions of extreme difficulty is a matter of interest. The fact, too, that they represented in so many ways the religious convictions and feelings of the men of the middle ages renders them objects of regard to persons who have no sort of sympathy with their faith. The influence of Catholics on English life since the Reformation settlement has commonly been estimated much too lightly. It is true that the aristocracy and middle class, as time went on, in great part accepted Protestantism, and that till the middle of the reign of George III. the Catholic poor were becoming less and less numerous; but it must, on the other hand, be borne in mind that, notwithstanding all laws to the contrary, a number of English yearly migrated to the foreign colleges. These young men came home again well instructed in popular knowledge. They had not only gained a knowledge of French by living where it was spoken, but their understandings had been widened by association with foreigners. It was only the sons of very rich men who, in those days, made the grand tour. To almost every other Protestant Englishman the Continent was unknown, and as a consequence insular prejudices flourished in a manner we cannot easily bring ourselves to realise. The Roman Catholic gentleman who had received his education in a foreign college was not unfrequently a source of intellectual light to his neighbours. Cut off, too, as he was from all civil employment, he not unfrequently kept up his reading in a way that would astonish his present representatives.

Mr. Gillow has furnished us with side lights, illustrating the lives of many of these "Papist" gentlemen. The Haydocks, of course, hold the foremost place. They were a strong, brave race, with a pedigree going back to the time of Edward I., and intermarried with many of the oldest families of Lancashire. We find them mixed up with almost every Catholic movement that has a place in history, and they laboured and suffered oftentimes in positions where none but an antiquary will wish to follow them. Mr. Gillow cannot be said to have written a history of the race, but he has furnished a key to it, and accumulated materials and references which will make the work light to anyone who follows in his track. To our mind the letters that James Haydock, a student at Douai, wrote home to his parents about a century ago are the most interesting things in the volume. They, perhaps, do not tell us anything that is quite new; but they show to us a form of life which the French Revolution swept away for ever, and which seems now so very far from us. We are, by-the-bye, no apologists for the French Revolution—the small modicum of rational freedom the world has derived from it seems dearly purchased by that carnival of blood and horror; but why does Mr. Gillow speak of what occurred then as producing "the most disastrous events that ever agitated the civilised world"? Does he not know what happened in Italy during the long agony when the Roman Empire was falling: the terrible period—for we may include it all, with but little exaggeration—from the death of Constantine to the time of Charles the Great. Has he never read of the Vandal Conquest and rule in Northern Africa, or what happened when the last Constantine fell before the sword of Mohammed the Second?

We yet await a supplementary volume to the *Monasticon*, which shall give us a detailed history of the religious houses and colleges founded by the Roman Catholic exiles. Much already exists in print, scattered in a hundred places; much more is still in MS. The only book dealing with all of them with which we are acquainted is the "Notices" by the late Edward Petre, and this is a mere pamphlet. Mr. Gillow contributes some details which will be useful for such a work. Among other things he gives is a list of the members of the college of Douai on October 1, 1792. In glancing over this list two memorable names have caught our eye. John Lingard, the future historian, was a member of the divinity school; and Daniel O'Connell, then a lad of seventeen, was in the rhetoric class. We must not close this notice without directing attention to the graphic diary of a Mr. Slaughter, who was engaged in hunting down a Jesuit in 1716. There are also a few shreds of folklore that should not be missed. On one occasion it seems a witch turned a pitcher of milk into a goose, which walked by her side; on another an old woman, a member of the same unholy sisterhood, milked a cow into a riddle until the animal died. A not dissimilar tale occurs in Stukeley's Diary. There the tale relates to Shropshire.

Edward Peacock.

NEW NOVELS.

Esther Denison. By Adeline Sergeant. In 3 vols. (Bentley.)

A Game of Chance. By Ella J. Curtis. In 3 vols. (Hurst & Blackett.)

Monica. By Evelyn Everett Green. In 3 vols. (Ward & Downey.)

Beechcroft at Rockstone. By Charlotte M. Yonge. In 2 vols. (Macmillan.)

The Strangest Journey of my Life, and other Stories. By F. Pigot. (Ward & Downey.)

The Philistines. By Arlo Bates. (Boston, U.S.: Ticknor.)

The Maids of Dulverton. By Guy Balguy. (Bristol: Arrowsmith.)

The motto from Wordsworth, "Not without hope we suffer and we mourn," fairly represents the burden of Miss Sergeant's last novel. The lesson is not new, for it is as old as Aeschylus, and we cannot say that the present story enforces it with any great freshness or originality. At the same time, *Esther Denison* is, on the whole, excellently written, and shows an advance on the author's previous works. Sebastian Malet is an unconventional study, with his high aspirations and incompletely developed intellectual powers. The essential complement to his nature, to bring out its finer capabilities, is Esther Denison, the daughter of a country minister who has been done to death by the intolerance of his flock. But Malet fails to perceive how necessary Esther is to him until it is too late, and he becomes enmeshed in the wiles of a frivolous woman, whom he eventually marries. They lead a wretched life; and Malet is sinking into hopelessness and despair, when he is relieved of his intolerable burden by a shipwreck, which occurs while himself and his family are on their way to South America. Malet is saved, and his wife is lost—at least, she is reported dead. After a while, the widower returns to England, and finds in Esther the happiness which might have been his long ago, for she has loved him ever since they were children together. Their joy, however, is ruthlessly—though only temporarily—destroyed; for, like a female Enoch Arden, the supposed dead wife reappears and claims her rights. This is extremely hard on Esther, who is drawn by the author sometimes as too

Digitized by Google

much saint and too little woman. But Mrs. Malet number one is terribly shattered in constitution; and in a short time, as the Yankees would say, she gracefully "pegs out," lamented by few who knew her. Then Esther comes into her own again, and all ends happily. Some of the pathetic scenes in these volumes are graphically touched in. But, in narrating her shipwreck, Mrs. Malet, by a curious use of language, makes a passage intended to be pathetic rather ludicrous: "I found myself alone," she says, "in a small boat, *with only two men and my baby in my arms.*"

A Game of Chance is a brisk, rattling novel, full of go and bustle. The characters are not what would be called "high-toned," and the writer has no power of reflection or analysis; but she unquestionably knows how to keep the ball of excitement rolling, and her readers will have no reason to complain of lack of interest. The story turns upon the personation of a mistress by a maid. The husband of the former, a British officer, is killed in a polo match in India; and his widow's maid, who is wonderfully like her mistress in appearance, comes over to England, and is received by Sir John Erskine as his daughter-in-law. Her beauty captivates him, and turns him for a time into a maudlin old fool. The impostor has also palmed off upon him her own child as his veritable grandson and heir to the baronetcy. Of course such an imposition cannot long be maintained without a male accomplice. The subterfuges to which the pair are reduced are very ingenious, and form the staple of the three volumes. The bubble bursts at last, and the pair take to flight; but a terrible retribution overtakes the woman, the nature of which must be discovered by the reader himself. There are two subsidiary plots—one relating to certain love-passages (by no means smooth ones) between a young musical genius and a kind of Lady Clara Vere de Vere; and the other concerned with a strange marriage, where the husband and wife separate on their wedding-day, and do not discover their mutual affection until several years afterwards. It is but bare justice to say that the narrative never flags for a moment.

Miss Everett Green has been very successful in delineating one of those women who are an honour to their sex in Monica Trevelyn. Her steadfastness in trial, her faithfulness in affection, and her noble resignation under the most crushing sorrow that could fall upon her, stamp her as one in a thousand; and this narrative of her chequered career will be read with deep interest. The action chiefly takes place at Castle Trevlyn, and amid the wild Cornish scenery that surrounds it. Lord Trevlyn, Monica's father, is without a son; but before he dies he has the satisfaction of seeing his daughter wedded to the next heir. Randolph Trevlyn, who, from his many sterling qualities, is a worthy husband for Monica. She has also another suitor, Sir Conrad Fitzgerald, the villain of the novel, about whom there is a strong dash of Adelphi melodrama. When his schemes fail, he gnashes his teeth, his eyes emit a baleful light, and he tears round like a lunatic vowing the most fearful vengeance. Unfortunately, he deals forth many cruel and evil blows before brain fever and some other concomitants of a righteous judgment overtake him. He at length dies penitent, forgiven by the woman whom he has terribly wronged. These incidents by no means exhaust the plot of the novel, which is very varied in interest, while the writer also is happy in investing her work with a certain amount of unmistakeable local colouring.

It is unnecessary at this time of day to dwell upon the grace and pleasantness of Miss Yonge's stories. But as even the great Homer sometimes nods, so let it be confessed with bated breath that we have found *Beechcroft at Rocks'one* somewhat wearisome. It is a story for children; but one of them who has read it with us, *aetat.* fifteen, agrees decidedly with our verdict. There are two exciting incidents in the book—the fall of a cliff at the seaside, and a little legal trouble about three missing £5 notes; but, apart from these, there is nothing unduly to excite the youthful mind.

Mr. Pigot's collection of stories is very entertaining, but that which gives its name to the volume is by no means the best. We should be inclined to award the palm to "The Pirate's Diamonds," "The Curate's Last Half-Crown," and "A Romance of the Engadine." Besides possessing the power to make his sketches run smoothly, the author has a pretty touch in describing scenery.

The Philistines is another evidence that the Americans are infusing more thought and originality into their novels than the majority of English writers. It would, perhaps, require a practical knowledge of Boston people and Boston culture to appreciate thoroughly the varying shades of character depicted in this story, but there is enough upon the surface to thoroughly interest even an English reader. Mr. Bates is no ordinary writer. Indeed, were it not for a strong undertone of cynicism in his work, he would deserve to take high rank. There is something of a Transatlantic Thackeray about him. A few of Mr. Bates's epigrammatic sentences, put into the mouth of an artist, may be quoted at random:

"Honesty is a charming thing for digestive purposes, but it is a luxury too expensive for me. The gods in this country bid for shams, and shams I purpose giving them." "Theology is chiefly some one man's insistence that everybody else shall make the same mistakes that he does." "To allow that there is any duty above making the best of life is a species of moral suicide." "Civilised honesty consists largely in making the truth convey a false impression, so that one is saved a lie in words while telling one in effect." "Egotism is the supreme evil." "Most people marry for the honeymoon, and very few for the whole life."

This book is unquestionably clever; but its worst fault is that, to the general reader, it would seem to point to two very erroneous conclusions—namely, that art is false, and life is hopeless.

The Maids of Dulverton, although it cannot compete with certain of Mr. Arrowsmith's "shilling dreadfuls" in sensationalism, is much pleasanter reading. Crude somewhat in style, and lacking in literary finish, it yet presents us with a plot containing some new features, and one which, on the whole, is successfully worked out.

G. Barnett Smith.

SOME EDUCATIONAL BOOKS.

The Republic of Plato. Books I. to V. With Introduction and Notes. By T. H. Warren. (Macmillan.) It is a wonderful thing that the whole of *The Republic* has never been edited with a good English commentary. The book has long been one of the central points of Oxford teaching. Learned lecturers have brought to bear on it the results of years of reading. Clever young men have come to it with open minds, and with aspirations of making all things clear in a brilliant new edition. But somehow no complete commentary has ever appeared, and the partial editions hitherto attempted have been elementary, and intended chiefly for passmen. Mr. Hardy has edited Book I.; Messrs. Luscombe and Newnham, Books I.-IV. But these were unambitious works, and we fear that Mr. Warren's edition of the first five books will not take rank above them. It is far from being complete in any sense. The language of Plato is not thoroughly studied; his philosophy is not explained; no sketch is given of his political institutions. The reader is left to pick out for himself and to piece together the details of Plato's views, and every teacher in the Oxford School of Literae Humaniores knows how hard men find it to extract and combine the views of an author. It may be that Mr. Warren felt disinclined for the work of analysis, and certainly the little sketch of one matter which he has attempted does not encourage us to think highly of his powers. Plato's systematised education, he tells us,

"is to begin with music, gymnastics, and the elements of science . . . Then comes the second stage of necessary gymnastics. . . . And finally, there is the third of dialectic."

Has Mr. Warren forgotten the ten years' study of deeper mathematics, of astronomy, and of harmonics, which is to come between the age of twenty, when gymnastics end, and thirty, when dialectic begins? When we come to the commentary, we find that there are not half enough notes for an author who is idiomatic, irregular in language, and philosophic in thought. The irregularity in 425c, *καὶ τελευτῶν δή, οἶμαι, φαῖμεν ἄν*, passes unnoticed. The uncertainty as to 460c, *κατακρύψουσι*, where Plato may have meant infanticide or may not, is left unrelieved by Mr. Warren's note. Indeed his notes sometimes amazingly overlook the real difficulty; for instance, he translates 436d, *κατὰ ταὐτὰ ἑαυτῶν τὰ τοιαῦτα*, "In the same parts of themselves as aforesaid." Nor is the English style of the preface and introduction free from awkwardness or even from bad grammar.

"I have to thank for a far larger and more constant debt than the very large one which will appear on every page to my old Master and friend, the first and most Platonic of English Platonists."

Does Mr. Warren mean that the Master and the Platonist are one person or two? The text followed is that of Baiter's fourth edition, and his misprint of *καλῶν* for *κακῶν* at p. 465 B-C is faithfully reproduced.

Deductive Logic. By St. George Stock. (Longmans.) Deductive logic, in the opinion of a distinguished logician, is one of the subjects best adapted to the purpose of the examiner. It forms, says Jevons, a sort of intellectual treadmill, by which the exertion of power can be accurately measured. Among the constructors of such machinery Mr. Stock holds a high place. He has chosen an excellent model, upon which he has superadded all the newest spokes and cogs. He may be congratulated on the successful attainment of the purpose which he thus describes:

"My object has been to produce a work which should be as thoroughly representative of the present state of the logic of the Oxford schools as

Digitized by Google

any of the text-books of the past. The qualities which I have aimed at before all others have been clearness and consistency."

These qualities will endear this text-book to candidates for the "schools" at Oxford, or wherever else examination flourishes. It is related of some Cambridge "pollman" that he was once so ill-advised as to desert a private tutor, particularly successful in preparing that class of students, in order to become the pupil of the eminent Shilleto. On being asked how he liked the change, he expressed himself dissatisfied. "Shilleto," he said, "compares Porson and Bentley, and tells you the meaning of the passage may be either this or that. But Big Smith tells you what it *is!*" The intellectual virtue so naïvely described is possessed in a high degree by Mr. Stock. The long experience in teaching to which he alludes has, doubtless, convinced him that the feeling of the average student is "Denique sit quidvis simplex dumtaxat et unum." On each moot point he selects some one aspect on which to throw a concentrated light. The selection appears to us in general judicious, and the illumination as considerable as the imposed condition—absence of diffusion—permits. For instance, we may express an approbation thus qualified of his ruling on the questions—whether abstract terms are connotative, what is conversion by negation, and similar subtle points. Mr. Stock has remembered that his subject is logic, not dialectic. He deserves the praise which Tacitus gives to his father-in-law—that he maintained, what is most difficult, moderation in philosophy.

Select Passages from French and German Poets for Repetition. Compiled by Clovis Bévenot. (Rivingtons.) The headmaster of Clifton College, in the short preface which he has added to his colleague's compilation, points out that the plan successfully adopted at Clifton for Greek and Latin repetition is hereby extended to the teaching of modern languages. Short pieces, none of them exceeding two or three pages, are printed, with English verse translations opposite. Nine poems from the French, and sixteen from the German, make up the total which Mr. Bévenot thinks can be adequately retained in the youthful memory. We should have been inclined to add a few more to the French, and perhaps to omit some of the shorter and slighter German ones. Possibly a speech or dramatic fragment in both languages might advantageously have been added. Of the French, five are by Victor Hugo, two by Leconte de Lisle; the remaining two by Charles D'Orléans and Chênedollé. The latter's "Le Gladiateur" is faced by Byron's well-known stanzas, from which Chênedollé borrowed his poem. Schoolboys, heedless of the note on p. 38, will probably invert the relations between the two poems, misled by the general plan of the book. The notes (pp. 88-93), on the pronunciation and elocution of French poetry have been wisely added, and seem plainly and clearly put; and the account of the French and German authors (pp. 38-9, 84-7) is given in an abridged but attractive form. Heine is easily learned by heart. His "quintessential charm" will perhaps escape boys. We are glad Mr. Bévenot has found room for Schiller's "Indian Death Dirge" (p. 44), which is not only a delightful poem, but exactly the poem for boys. Goethe appears in three poems—the inevitable "Kennst du das Land?" the scene at the well from "Hermann and Dorothea," and the "Prologue in Heaven" from "Faust." Uhland's "Lost Church" and Freiligrath's "Spectre Caravan" conclude a very serviceable little volume. There is a misprint—"Sonn" for "Sonne"—which ruins the scansion of the first line of "Am Brunnen" (p. 70).

English Verse. Selected and arranged by E. W. Howson. (Rivingtons.) We have noticed ere now more than one anthology for girls; but this is, we can well believe, the first that has been compiled for use in one of our great public schools for boys. The public school is that which claims Byron, and which boasts among its present masters a laureate in E. E. B. If Harrow leads the way by introducing English poetry into its curriculum, we may rest assured that smaller schools will follow. But, as Mr. Howson points out in a very sensible preface, the main object is, not that boys should learn English poetry, but that they should like it. He has classified his selections under three heads: (1) religious, where we are glad to observe that his choice is very catholic, and is based entirely upon poetical grounds; (2) heroic, with special reference to English history; and (3) elegiac and sentimental, which epithets are interpreted widely enough to include Burns's "For a' that and a' that" and the "Epistle to a Young Friend" by the same. A minimum of notes have been appended. We doubt, however, whether the battle of Corunna is properly described as being an incident of "the Peninular War" (p. 125); and we are sure that "Cranbourne's oaks" are not in *Hampshire* (p. 98). Finally, it is not beneath notice that this little volume is excellently printed.

Nathan der Weise: a Dramatic Poem. By Lessing. Edited, with English Notes, &c., by C. A. Buchheim. Second Revised Edition. (Oxford: Clarendon Press.) As we have already spoken favourably of this excellent edition of *Nathan*, it is not necessary to say more than that this is really a "revised" edition. Perhaps the most remarkable addition is the note on the motto ("Introite, nam et hic Dii sunt" which Lessing prefixed to the play and attributed to Aulus Gellius. It is in fact due to Aristotle (*Hist. Anim.* i. 5), but was inserted by P. Beroaldus in his edition (Bologna, 1503), in A. Gellius's preface to his *Noctes Atticae*, in a place where a blank had been left in the MS. for a Greek quotation. Thence it found its way into many of the old editions, one of which no doubt came into the hands of Lessing.

MR. A. G. GRENFELL, of Westminster, has prepared *A Greek Copy-Book* (Longmans), which we may commend to those teachers who suffer from the slovenly writing of Greek by their pupils. We are glad to see that Mr. Grenfell insists upon the importance of making each letter as upright as possible—a maxim which is obtaining support also in English penmanship. His examples seem well chosen. They include the maxims of the Seven Sages for uncials, and gnomic lines from the poets for cursives. We doubt, however, the admissibility of Theocritus. Finally, we venture the suggestion that a substitute may here be found for the old ruinous practice of exacting "lines," written against time, as a school punishment.

MESSRS. MACMILLAN are now issuing the revised edition of Green's *Short History of the English People*, in four parts, for school use. Each part has a separate index, and also the corresponding portion of the convenient analysis compiled by Mr. C. W. A. Tait, of Clifton College. This classical work thus enters, we hope, upon a new lease of popularity, such as the author himself would have most desired.

MR. W. H. WIDGERY, of University College School, has reprinted in pamphlet form (David Nutt) his articles on "The Teaching of Languages in Schools," to which we have already called attention on their first appearance in the *Journal of Education*. At the end he has appended a list of books consulted, which forms a bibliography of the subject, in chronological order. The notes on the early printed works, and the references to recent German publications, are especially valuable.

WE have also received *The Schoolmaster's Calendar* and Handbook of Examinations and Open Scholarships (George Bell & Sons), which is now in its third year of issue. The details given for the technical colleges are particularly useful.

NOTES AND NEWS.

THE Clarendon Press are now printing the Constitutional Documents of the Puritan Revolution, selected and edited by Mr. S. R. Gardiner.

MESSRS. GEORGE BELL & SONS will shortly issue a new volume by Michael Field, entitled, *Long Ago*, consisting of short lyrics expanded from the fragments of Sappho. The book is being printed at the Chiswick Press, and will have for frontispiece a figure of Sappho taken from a vase at Athens. The edition is to be limited to 100 copies.

MESSRS. MACMILLAN will publish immediately Matthew Arnold's reports on elementary schools during the thirty years that he was an inspector, from 1852 to 1882. The volume has been edited by Sir Francis R. Sandford.

THE same publishers announce a new volume of essays by Mr. Aubrey de Vere, entitled *Literature in its Social Aspects.*

MESSRS. LONGMANS have in the press a book called *Cardinal Lavigerie and Slavery in Central Africa*, which has been written under the sanction of the Cardinal himself, and will contain the latest details of his crusade for the abolition of the slave trade.

WE hear that Mrs. Hamilton King will publish a new volume of poems this autumn, under the title of *Northern Ballads.*

MR. G. F. WARNER, of the British Museum, is preparing an edition of Mandeville's Travels for the Roxburghe Club. The Club's last issue was Mr. Alfred H. Huth's gift-book of his edition of his unique MS. of "The Miroure of Mans Saluacione—a fifteenth century translation into English of the *Speculum Humanae Salvationis*," with a facsimile of the first page of the MS.

MR. WALTER RYE, having just finished his History of North Erpingham, is now hard at work at his History of Cromer for its Church Restoration Fund. He hopes to make it the most complete history of a parish ever published. His next book will be an account of Carrow Abbey, with facsimiles, illustrations, &c., of which the owner of the abbey, Mr. Colman, M.P., will bear the cost. He has given Mr. Rye *carte blanche*, so that the work will be worthy of its county.

FOLLOWING the example of Nottingham and other towns, the corporation of Gloucester have resolved to print a Calendar of their early records; and they have entrusted the work to Mr. W. H. Stevenson, one of the reporters of the Royal Commission upon Historical MSS., and the editor of the Nottingham charters. This Calendar consists principally of full abstracts, in English, of early local deeds, nearly 1300 in number, of which 571 are older than the fourteenth century. There will also be given abstracts of the royal charters and letters patent, descriptions of the early books, rolls, &c., of the corporation, a facsimile of one of the early deeds, and reproductions of several ancient seals. It is also intended to issue, as a companion volume, the Gloucester Rent-roll, drawn up in 1455, which is in such detail as to serve practically as a survey and directory of the city at that time. This will be printed in the original Latin (the contractions being extended), with an English translation; and

Digitized by Google

the curious drawings in the MS., of churches, wells, &c., will be reproduced in facsimile. Both volumes will be printed by the well-known local printer, Mr. John Bellows; and they will be published, by subscription, in a limited edition, at the comparatively low price of 17s. 6d. for the two. Subscribers should address themselves to the Town Clerk, Gloucester.

M. Gabriel Sarrazin, the editor of the *Revue Contemporaine*—who will be known to many readers of the Academy by his critical essays on English poetry entitled *Poètes Modernes de l'Angleterre* (1885)—has now just ready for the press a companion volume, dealing with other poets then omitted, which he proposes to call *La Renaissance de la Poésie Anglaise, 1798-1889*. A chapter from this forthcoming book, upon Robert Browning, appears in French in the current number of the *Universal Review*; but we understand that the whole has been translated into English, and will be published here about the same time as the French original.

The Florentine publisher, Signor Barbera, has in the press a new life of the English Condottiere, Sir John Hawkwood, by Mr. John Temple Leader and Signor Marcotti. The book has been written after much research among original and other sources in Italy and elsewhere, published and unpublished; and it will appear both in English and Italian.

We are about to witness a new departure in Welsh literature by the appearance of a series of "Welsh Classics for the People," which will include such rarities as *Llith a Ban*, the first lectionary of the Welsh Church, of which there is but one perfect copy; also *Synwyr Pen Pob Kymro*, probably the first book printed in the Welsh language, from the unique copy at Shirburn Castle; thirteenth-century translations of portions of the New Testament; the complete poetical works of Davyd ap Gwilym, a contemporary of Chaucer; &c., &c. This series is under the editorship of Mr. Gwenogvryn Evans, the planner and joint-editor with Prof. Rhŷs of the "Old Welsh Texts." The first volume, the 1588 translation of the Book of Job, by Bishop Morgan, is now ready.

Contrary to the usual custom, the next volume of the "Old Welsh Texts" will not appear on St. David's Day, but may be expected in June. The delay has arisen partly from an illness of one of the editors, Mr. Evans, and partly from the great length of the work in hand, which will include Dares Phrygius; Geoffrey's Brutt (*sic*); Brutt y Tywyssogion; Brutt y Saeson; and probably a list of the Commotes and Cantreds of Wales.

Messrs. Cassell & Co. will shortly publish Miss Florence Warden's new novel, *St. Cuthbert's Tower*, in three volumes.

Told in a City Garden, by Eastwood Kidson, and *Poems*, by the late J. Dawson Hull, are two new volumes of verse announced for early publication by Mr. Elliot Stock.

Prof. B. ten Brink's new volume on *English Literature*, including "Chaucer and his Circle," where the professor's previous discoveries gained him a wide reputation, is being translated, with the author's sanction and supervision, by Dr. Clarke Robinson, of Durham.

To the second edition of his *Life of Savonarola*, which will be issued immediately by Mr. Fisher Unwin, Prof. Villari has added a new preface, in which he combats some recent criticisms passed on him with reference to the authenticity of the early biographies of Savonarola, and the discoveries and views of Ranke and the German School.

Messrs. Williams & Norgate are about to issue a second edition, revised and extended, of *Metaphysica nova et vetusta*, by "Scotus Novanticus" (Prof. S. S. Laurie, of Edinburgh).

The committee of the Athenaeum Club have selected the following gentlemen for extraordinary election: Prof. W. J. Russell, of St. Bartholomew's; Prof. W. Y. Sellar, of Edinburgh; and Mr. Marcus Stone.

Mr. Isaac Pitman will be presented with the gold medal struck in commemoration of the Phonographic Jubilee, 1887, at a dinner to be held at the Holborn Restaurant on Thursday next, March 7. The chair will be taken by Viscount Bury.

In Dr. Furnivall's series of Shakspere Quarto Facsimilies, the second part of *The Troublesome Raigne of King John* (1594) has been lately issued, with Forewords by Dr. Furnivall, giving the old playwrights' material from Holinshed. This is the first facsimile ever made of the play.

Messrs. Macmillan have this week issued *Hereward the Wake*, in their cheap edition of Charles Kingsley's works. We are not surprised to find that it has been the least popular of his novels. First published, in two volumes, in 1866, a one-volume edition was not called for before 1873; in the next two years there were three reprints, but no other until the "Eversley" edition of 1881. After all, however, *Hereward* can be called unsuccessful only when judged by the author's own earlier and better works; for there have been altogether eleven editions of it in twenty-three years.

THE FORTHCOMING MAGAZINES.

Beginning with the present month, there will be published a new magazine for the blind, in "braille" type, to be called *Santa Lucia*. It will differ from one or two other journals of the kind already in existence by giving the best literary material, towards which object both authors and publishers of well-known works have liberally assisted. The first number will include contributions from Sir Edwin Arnold, Mrs. Frances Hodgson Burnett, Dr. Thomas Hodgkin, Mr. R. Bridges, &c.; as well as copyright pieces from the late Miss Procter and C. S. Calverley. The editors and publishers are Mariabella and Elizabeth Hodgkin, of Childwall, Richmond-on-Thames.

The first number of a new weekly journal, entitled *Work:* an Illustrated Magazine of Practice and Theory for all Workmen, Professional and Amateur, will be published by Messrs. Cassell & Co. on March 20. Its object is to give a clear and practical exposition of methods to be followed in every art, craft, and science that bears directly or indirectly on handiwork of a constructive or decorative character, freely illustrated with sketches, diagrams, or working drawings to scale.

Under the title of the *Universal Republic*, an occasional magazine, edited by Mr. G. J. Holyoake, will be published next week by the Co-operative Printing Office, at 35, Russell-street, Covent Garden. The object of the magazine is to advocate the amity of nations.

The March number of the *Sunday at Home* contains an article on "Missions and Missionaries," by the Rev. C. Merk, formerly chaplain on the Punjab frontier.

UNIVERSITY JOTTINGS.

It is understood that the candidates for the chair of logic at Oxford, vacant by the resignation of the Rev. T. Fowler, are Prof. Adamson, of Owens College; Mr. Venn, from Cambridge; and the following Oxford men: Messrs. Cannan, Case, Courtney, Stock, and Cook Wilson.

Mr. J. H. Middleton has been re-elected to the Slade professorship of fine art at Cambridge for a second term of three years.

Count Charles Landberg, of Stuttgart—as president of the commission appointed by the King of Sweden to make arrangements for the eighth international congress of orientalists, to be held this year at Stockholm—has addressed the following letter to the vice-chancellors of Oxford and Cambridge:

"Tibi, magnifice rector, clarissimisque sodalibus tuis nuntiamus anno 1889 die mensis Septembris 2 auspiciis augustissimi nostri regis Oscaris II. ex universis gentibus Holmiam conventuros studiorum orientalium professores atque fautores. Quamobrem vos invitamus atque cohortamur, ut sodalem vestrae tam praeclarae tamque de ejusmodi studiis meritae universitatis in hunc conventum legatum mittatis. Quod si eritis nobis gratificati, et augustissimo illi patrono haud mediocriter placebit et maximo nos honore affectos maxima gratia devincetis."

Prof. Bensley, successor of the late Hon. Ion Keith-Falconer in the Lord Almoner's chair of Arabic, has been appointed to represent Cambridge at the congress, with a grant of £30 from the university chest to defray his expenses.

Mr. C. H. Herford, of Trinity College—author of *Essential Characteristics of Romantic and Classical Styles* (1880) and *Literary Relations of England and Germany in the Sixteenth Century* (1886), and now professor of English literature at Aberystwyth—has been approved by the general board of studies at Cambridge for the degree of Doctor in Letters. It is curious to notice, in the same number of the *University Reporter*, that the judges have not awarded the Harness prize for this year, the subject for which was "Shakspere's *Troilus and Cressida*, as illustrating his Attitude towards Classical Legend and Mediaeval Romance."

Prof. Mahaffy, of Dublin, will visit the United States next summer. He has undertaken to deliver two courses of lectures—on "The Everyday Life of the Greeks" and "The History of Civilisation"—at the Chautauqua Assembly, in New York, which corresponds nearly with our own last year's gathering of non-academical students at Oxford in the long vacation. He will also, we understand, not keep silence on the Irish question.

Mr. E. Gosse, the Clark lecturer at Trinity College, Cambridge, will deliver two lectures this term on "English Prose Fiction before Defoe (1560-1700)"; the special subjects of each being "The Novel under Elizabeth," and "The Heroic Novel of the Seventeenth Century."

Prof. A. V. Dicey will deliver a public lecture at Oxford on Saturday next, March 9, upon "The Right of Public Meeting."

The University of St. Andrews has resolved to establish professorial classes for the university education of women during the coming summer. The subjects of instruction will be those now taught in the university, and, in addition, the languages and literatures of France and Germany. The lectures will be of the same character as those given to the students in winter, but they will also be adapted to the LL.A. diploma.

Mr. Willem S. Logeman, principal of Newton School, Rock Ferry, was to deliver a lecture on Friday, March 1, at University College, Liverpool, on "Phonetics."

ORIGINAL VERSE.

TO A MASTER IN PARADISE.

I.

Your life, O Master, was a mighty rock
Reared amid breakers, whereupon a flock
Of birds were ever nestled; sometimes white,
Soft things, and sometimes fierce ones and untame,
Shorn of their plumy pride by pain and fright,
Hurt of the darts they had provoked; who came,
Tost by the heavy tempest to your breast,
Craving but quiet, and receiving rest.

God bad His waters over you to come,
And hide your shelter from the wayfaring;
So the poor pilgrim birds of weary wing
Missed their good rock amid the breakers' foam—
And flew until they found a better thing,
A sunlit country for their rest and home.

II.

Your life, O Master, was a mighty tree
Which dew, and sun, and rain, had perfectly
Matured and brought to bear in plenitude
And utter beauty and divine content,
Its leaves for healing and its fruit for food,
With Eden smells of wondrous ravishment.
And men and women there were healed and fed,
And in your happy shadow gladdened.

God's voice did break the tree and lay it low;
And all those men and women, shelterless,
Weary and hungry in their great distress,
Mourned for their loss with very bitter woe—
Then found that home whither all souls must press,
And God's own self for evermore did know.

Emily H. Hickey.

IN MEMORIAM.

GUDBRAND VIGFUSSON.

Chalfont St. Peter: Feb. 23, 1889.

May I, as an old friend and pupil of Dr. Vigfusson, be allowed to add a few words to the kindly notice by Mr. York Powell in the Academy of February 23?

Dr. Vigfusson was a person whom no one who really knew could help respecting. Where he had firm convictions, he was capable of intense feeling, and spoke with an animation which made him at times rather a hot disputant. In religious matters, though very reticent, he had a few very clear ideas, or perhaps I should rather say, very strong feelings. He was particularly fond of the Gospels, and considered that in the systematising of religious formulae there was a tendency to miss the true power of the life and words of Christ—he had a perfect horror of such a book as Martensen's *Dogmatics*. He also read with great delight the poetical parts of the Old Testament. Here his interests were not only poetical, but critical. He especially liked Ewald, and would often compare the growth of Hebrew literature, especially some of the Psalms, with the way in which Sagas were developed in different recensions. He was constantly complaining of the want of "spirituality" of modern Germany, and lamented that in education and literature they were exercising what he considered a baneful influence on other nations—on England less than on others. By spirituality I think he meant a poetical imagination combined with strong feeling. In this sense, he had himself a keenly spiritual nature. He had a dislike for archaeology, grammar, and the new philology; and, I think I may add, for pure science in every form. His tastes were delightfully simple. He had an almost childish love of flowers, and nothing pleased him better than an afternoon ramble in Bagley Wood; but, of course, he would have nothing to say to scientific botany. He showed little affection for modern Iceland, and his compatriots were rather sore on this point. The country he thought was too much affected by the unspiritual influences of modern times; and yet he was extremely pleased with a flower sent to him which had been picked in his native island.

F. H. Woods.

Oxford: Feb. 25, 1889.

The vivid portrait of the life and work of Vigfusson drawn by his two most intimate Oxford friends—Mr. York Powell in the Academy of February 23, and Mr. Charles Plummer, in the *Oxford Magazine* of February 6—is hardly complete, I venture to think, without mentioning a *pium desiderium* which he always cherished, and which he expressed more than once to the writer of this note: I mean his desire to bring out a critical edition of the Icelandic and Old Norse Bible text. Among his own collection of Scandinavian works he was proud to possess one of the earliest and most precious Icelandic Bibles, which surely deserves an accurate reprint—a task he would have himself gladly undertaken had it been entrusted to him. Although there are several later editions published by the British Bible Society, they have but little critical value. Vigfusson's project having been frustrated by his lamented death, it may be hoped that some competent scholar will take up the task.

In briefly recording what Vigfusson had still at heart to accomplish, I cannot refrain from adding how his free thought and thorough scholarship never made him despise simple Scripture truth as the foundation of his learning, and how piety and simplicity of faith adorned his sympathetic mind and character.

H. K.

M. RENAN ON MODERN FRANCE.

We quote the following extracts from M. Renan's speech at the reception of M. Jules Claretie into the Académie française:

"Il y a plus d'un quart de siècle que nous nous vîmes pour la première fois chez M. Michelet. Le lieu, si hospitalier, l'affection qui nous attachait au maître, et une rare communauté de sentiments nous unissaient. Vous étiez dans tout le feu de vos premières ardeurs révolutionnaires; j'étais sous le coup des conversations intérieures que j'avais eues en Orient, comme les disciples d'Emmaüs, avec un voyageur mystérieux. Nous nous entendîmes assez vite. Vous l'avouerai-je? Je crois bien que, en ces premiers entretiens, nous dîmes quelque mal de l'Académie française. Oh! l'Académie, Monsieur, a des indulgences infinies pour le mal que l'on dit d'elle. Les grosses injures ne l'atteignent pas; les doux reproches des hommes de talent, elle les prend pour des marques d'amour, et elle en tient bonne note pour ses faveurs futures. Certes, il est un point sur lequel nous avions pleinement raison: c'est quand nous regrettions que la compagnie ne comptât pas dans son sein le maître exquis, l'historien charmant, qui nous consolait dans nos tristesses d'alors. Mais que voulez-vous! Une compagnie littéraire infaillible! Nous en aurions presque peur. Les Académies n'ont pas la prétention de posséder la règle d'une justice absolue. Il suffit qu'elles aient raison quelque-fois. Il y faut laisser une place aux rapprochements imprévus, aux spirituels jeux du hasard, aux aimables rencontres enfin, comme celle qui nous amène aujourd'hui en cette enceinte—vous, engagé volontaire des corps francs de la littérature d'il y a trente ans, pour prendre place en ce Sénat conservateur—moi, disciple égaré, mais obstiné, de saint Tudual ou de saint Corentin, pour vous y souhaiter la bienvenue et vous serrer la main au nom d'une vieille amitié.

* * * * *

"Comment être juste autrement qu'en l'aimant et la haïssant tour à tour, envers cette génération brillante, qui reçut d'une main légère et porta sans embarras le lourd héritage de l'ancienne France, de la Révolution, de l'empire, mais ne sut rien transmettre à ceux qui vinrent après elle; qui fit sentir en littérature le prix de la forme achevée, et laissa peu d'œuvres irréprochables; qui réagit contre un ton général de pompe factice et de solennité exagérée, et fut elle même rarement exempte d'affectation; qui, avec une richesse, une exubérance, une ampleur de génie vraiment extraordinaires, produisit des milliers de livres excellents, dont pas un seul n'est bien sûr de l'avenir? La cause en est avant tout, je me hâte de le dire, à la nature infiniment delicate des pensées que nous cherchons à exprimer. Le dix-septième et le dix-huitième siècles, roulant dans un cercle d'idées très borné, se privant de toute vérité qui ne pouvait pas se renfermer dans un cadre fini, arrivaient plus facilement à un style achevé qu'un siècle, comme le nôtre, surchargé de connaissances et persuadé avec raison qu'on rétrécit l'esprit humain en le limitant aux idées claires. Il y a tant de choses que nous ne pouvons qu'augurer, deviner, pressentir! Les defauts des modernes viennent souvent de ce que, luttant corps à corps avec l'infini, ils veulent dire à la fois trop de choses. Mais combien d'autres faiblesses ces grands novateurs dont nous sommes les disciples auraient pu éviter! Les bonnes époques de l'antiquité grecque et latine, le dix-septième et le dix-huitième siècles nous avaient habitués, quand il s'agit des ouvrages de l'esprit, à chercher avant tout le naturel; dans l'auteur on voulait toucher un homme; la modestie était considérée comme une condition pour plaire. Tout cela fut changé par la génération nouvelle. Le déchirement souvent nécessaire, qu'une âme délicate n'accomplit, au début de la vie, qu'avec crainte et tremblement, s'appela d'un affreux barbarisme 's'affirmer.' On se paya de mots sonores dont les grands siècles avaient usé avec beaucoup de discretion. La vanité, la présomption effrénées, l'amour du succès à tout prix, furent accueillis du public avec une indulgence exagérée. Tel romancier se disait plus grand que Napoléon, et cela ne paraissait pas trop fort. Les effusions les plus immodérées d'une vantardise enfantine réussirent à se faire accepter.

* * * * *

"Les centenaires ne sont la faute de personne; on ne peut pas empêcher les siècles d'avoir cent ans. C'est bien fâcheux cependant. Rien de plus malsain que de rythmer la vie du présent sur le passé, quand le passé est exceptionnel. Les centenaires appellent les apothéoses; c'est trop. Une absoute solennelle avec un panégyrique, rien de mieux; un embaumement, où le mort est enveloppé de bandelettes pour qu'il ne ressuscite plus, nous plairait aussi infiniment; gardons-nous au moins de tout ce qui pourrait faire croire que de tels actes d'imprudence juvénile et d'irréflexion grandiose peuvent se recommencer. C'est la gloire d'une nation d'avoir dans son histoire des apparitions prodigieuses, qui n'arrivent qu'une fois: Jeanne d'Arc, Louis XIV., la Révolution, Napoléon; mais c'est là aussi un danger. L'essence de ces apparitions est d'être uniques. Elles sont belles à condition de n'être pas renouvelées. La Révolution doit rester un accès de maladie sacrée, comme disaient les anciens. La fièvre peut être féconde, quand elle est l'indice d'un travail intérieur; mais il ne faut pas qu'elle dure ou se répète; en ce cas, c'est la mort. La Révolution est condamnée, s'il est prouvé qu'au bout de cent ans elle en est encore à recommencer, à chercher sa voie, à se débattre sans cesse dans les conspirations et l'anarchie.

"Vous êtes jeune; vous verrez la solution de cette énigme, Monsieur. Les hommes extraordinaires pour lesquels nous nous sommes

Digitized by Google

passionnés, eurent-ils tort, eurent-ils raison? De cette ivresse inouïe, réduite à l'exacte balance des profits et pertes, que reste-t-il? Le sort de ces grands enthousiastes sera-t-il de demeurer éternellement isolés, suspendus dans le vide, victimes d'une noble folie? Ou bien ont-ils, en somme, fondé quelque chose et préparé l'avenir? On ne le sait pas encore. J'estime que, dans quelques années, on le saura. Si, dans dix ou vingt ans, la France est prospère et libre, fidèle à la légalité, entourée de la sympathie des portions libérales du monde, oh! alors, la cause de la Révolution est sauvée; le monde l'aimera et en goûtera les fruits, sans en avoir savouré les amertumes. Mais si, dans dix ou vingt ans, la France est toujours à l'état de crise, anéantie à l'extérieur, livrée à l'intérieur aux menaces des sectes et aux enterprises de la basse popularité, oh! alors il faudra dire que notre entraînement d'artistes nous a fait commettre une faute politique, que ces audacieux novateurs, pour lesquels nous avons eu des faiblesses, eurent absolument tort. La Révolution dans ce cas serait vaincue pour plus d'un siècle. En guerre, un capitaine toujours battu ne saurait être un grand capitaine; en politique, un principe qui dans l'espace de cent ans épuise une nation ne saurait être le véritable.

"Suspendons notre jugement. Nos fils auront la réponse à une question qui nous tient dans une incertitude douloureuse. Certes, l'histoire nous a montré plus d'une fois une cause vaincue ressuscitant, au bout de plusieurs siècles, avec la nation qui avait péri en la représentant, victime de sa supériorité et des services rendus à l'œuvre commune de l'humanité. Mais notre abnégation ne va pas jusqu'à sacrifier à une résurrection et a des apothéoses hypothétiques l'existence de notre chère patrie. La vraie manière d'honorer les généreuses utopies du passé, c'est de les montrer réalisées et applicables. Le but de l'humanité, qui saurait le dire? Mais, qu'il s'agisse de l'humanité ou qu'il s'agisse de la nature, les seuls organismes qui laissent une trace durable sont ceux qui, engendrés dans la douleur, grandissent dans la lutte, s'accommodent aux nécessités du milieu et résistent à l'épreuve décisive de la vie."

CORRESPONDENCE.

CHAUCER'S "PUELLA" AND "RUBEUS."

Cambridge: Feb. 24, 1889.

In Chaucer's "Knightes Tale," ll. 1183-7, we find:

> "The statue of Mars upon a carte stood
> Armed, and loked grim as he wer wood,
> And over his heed ther shynen two figures
> Of sterres, that been cleped in scriptures
> That oon Puella, that other Rubeus."

The only light we get on these lines is the remark in Speght: "The names of two figures in geomancy, representing two constellations in heaven; Puella signifieth Mars retrograde, and Rubeus Mars direct."

I have always wondered whence Speght obtained this. It cannot be right, because neither Mars direct nor Mars retrograde can possibly be a constellation. Mars is only, in any case, a single planet.

I have had some trouble to find out what "geomancy" really is; but I believe the definition in Ogilvie's Dictionary is correct, viz.—"A kind of divination by means of figures or lines, formed by little dots or points, originally on the earth, and afterwards on paper." How are we to reconcile this with the above?

The clue is to be found in Cornelius Agrippa, *De Occulta Philosophia*, cap. 48: De Figuris Geomanticis. He gives a list of the sixteen geomantic figures. The system, so far as I understand it, was this. The person wishing to divine formed one of these sixteen figures, and then interpreted it, or had it interpreted for him, by the aid of astrology. Curiously enough, an article has just appeared in the *Saturday Review* for February 16, 1889, on "Divination by Spotting." This is precisely geomancy, which is now, it seems, being revived by credulous people. The way to form the geomantic figures is there clearly described, and is as follows:—Take a pencil, and hurriedly jot down on a paper a number of dots in a line, without counting them. Do the same three times more. Now count the dots. If the dots in the first line are odd, put down one dot on another small paper halfway across it. If the dots are even, put down two dots, one towards one side, and one towards the other, like the two upper dots on a four at cards. Do this four times in all, putting the resulting single dot or pair of dots a little lower down each time. If, for instance, all the results are even, we obtain eight dots, situate like the eight pips on a nine of diamonds if the central pip be omitted. If the first, third, and fourth rows are even, while the second is odd, we get seven dots, disposed (very nearly) as on a seven of diamonds. This last arrangement is Chaucerian, as we shall see. This "science" was called geomancy, because the "figures" were originally made on soft earth or in dust with the point of a stick. Thus each "figure" consisted of from four to eight dots or "stars," representing not a real, but an artificial, constellation, *i.e.*, a collection of stars symmetrically arranged in an arbitrary, not an actual or natural, shape. Accordingly, Chaucer does not place the figures in the sky, but makes them form artificial ornaments over the head of Mars' statue. They might, for example, have been "painted with a subtle pencil" (see l. 1,191) in gold or silver. The "statue" of Mars was not a wooden image, but a painted picture; we should now call it the figure of Mars, or the representation of him (I wish to avoid the word figure here).

Hence the passage means precisely this: "The representation of Mars showed him standing in a chariot, in full armour, and with a furious look. Above his head were represented two collections (or sets) of stars (technically called 'figures') shining like those in a constellation. One of these arrangements was that which writers call 'Puella,' and the other was that called 'Rubeus.'" These names were in actual use. Each "Figura" had its "Nomen," its "Elementum," its "Planeta," and its "Signum," or sign of the Zodiac.

It is necessary to quote three of these. The first figure consists of five stars, arranged thus: Draw a diamond, situate as in card playing, place a star at each angle, and add a fifth star close below the lowest angle, and call this figure 1; the second consists of seven stars, arranged like the seven at cards, call this figure 2; the third consists of five stars, four in a diamond, and the fifth close above the highest angle, call this figure 3 (it is merely figure 1 turned upside down). Figure 1 results from odd, even, odd, odd; figure 2 from even, odd, even, even; and figure 3 from odd, odd, even, odd. Then, according to Cornelius Agrippa (who seems to have made some mistake, not to be wondered at when we remember how utterly arbitrary is the whole system), the "facts" are these: Figure 1 has for its name "Puella," or "Mundus facie"; its element is water, its planet is Venus, and its sign is Libra. Figure 2 has for its name "Rubeus," or "Ruffus"; its element is fire, its planet is Mars, and its sign is Gemini. Figure 3 has for its name "Puer," or "Flavus," or "Imberbis"; its element is fire, its planet is Mars, and its sign is Aries.

When we consider that the planets are not here denoted by their names, but by their astrological symbols (easily mistaken), and that the symbols for Mars and Venus are more alike than any others, it is to be suspected that the planet belonging to Figure 1 was, sometimes at least, considered to be Mars. This will bring the matter right. Or, perhaps, Chaucer confused "Puella" with "Puer"; for surely "Puella" suits Venus better. That "Rubeus" belonged to Mars cannot be doubted, as Chaucer calls him red. "Rubeus" portended dire calamities; *cf.* "the infortune of Marte," l. 1163; and "manasing of Mars," l. 1177.

The question remains, Whence did Chaucer

Digitized by Google

get this? I suspect it was from Hali, the Arabian (see Prologue, l. 431), who is said to have written on geomancy. Another author was Arbatel, and another (or the same) was Almadal; these also are clearly Arabian names. Other authors on geomancy, according to Agrippa, were Gerardus Cremonensis, Bartholomaeus Parmensis, and "quidam Tundinus."

There is a long explanation of geomancy, called in German *Punctirkunst*, in Zedler's Universal Lexicon, under that title. He refers to Weigel; and, in particular, to Buddeus, *Thesaurus de Atheismo et Superstitionibus*, cap. 9, sect. 7, p. 764; also to the same, p. 391. But I cannot come at a copy of Buddeus that contains this work. Neither do I know if Hali's treatise still exists. Perhaps some one can tell us. WALTER W. SKEAT.

THE 42-LINE OR "MAZARIN" BIBLE.

Cambridge: Feb. 23, 1889.

In to-day's ACADEMY (p. 130, third column) it is said that the Hopetoun Library copy of "the Mazarin or Gutenberg Bible" is about to be sold by Messrs. Sotheby.

That the happy owners of copies of the Mazarin or 42-line Bible, as well as booksellers and auctioneers, should feel disposed to call it the "Gutenberg" Bible is quite natural; as the idea that this splendid work, finished before August 15, 1456, was one of the first productions of John Gutenberg, whom some people wish to regard as the inventor of printing, imparts a charm and pecuniary value to the book, which it would not have if it were called the "Schoeffer" Bible. And yet, according to all rules of bibliography, this Bible must be attributed to Peter Schoeffer, said to have been the successor or rival or enemy of Gutenberg.

It is true that the bibliographical evidence for ascribing it to Schoeffer rests chiefly on researches made by myself, and explained in my *Gutenberg—Was he the Inventor of Printing?* (p. 167 *seqq.* and preface, p. xiii.). But all that I have said on the subject has been endorsed by the late Mr. Bradshaw, and corroborated by him on different grounds than mine (see an account of a paper read by him on early Bibles in *The Printing Times* for 1885, p. 102). Moreover, even the most ardent German supporters of Gutenberg's claims to the invention of printing no longer believe that the 42-line Bible was his work.

Therefore, I think that in a scientific paper like the ACADEMY the statement that there is a "Mazarin or Gutenberg Bible" for sale should not pass unnoticed.

The notion that Gutenberg was the inventor of printing rests on no solid foundation. The earliest statements about an invention of printing in Germany or by Gutenberg distinctly say that it is a "rumour." The earliest authentic documents which speak of Gutenberg's connexion with printing, and should and would have spoken of him as the inventor of the art if he had invented it, are hopelessly silent on this point. And Ulrich Zell, a pupil of the early Mainz school of printing, who must have known Gutenberg and Fust and Schoeffer, and the traditions of the art, distinctly says, in the Cologne Chronicle of 1499, that the first beginnings of the art were found in Holland. And nothing has as yet been said or done to invalidate Adrian Junius's assertion that the art was invented at Haarlem by Lourens Janszoon Coster. J. H. HESSELS.

"CHOUSE."

Oxford: Feb. 26, 1889.

The Rev. C. B. Mount, in investigating the history of the substantive and verb "chouse" for the Dictionary, has pointed out that the statement made by Gifford in his note to Ben Jonson's "Alchemist," Act I., Sc. i. (where this sb. first appears in a transferred sense), is without known foundation. Gifford's story is that

"in 1609 Sir Robert Shirley [when in the East] sent a messenger or *chiaus* [properly *chaush*] to this country as his agent for the Grand Signior and the Sophy. Before Sir Robert reached England his agent had 'chiaused' the Turkish and Persian merchants [in London] of £4000, and taken his flight."

Not only have we been unable to discover any contemporary reference to this swindling transaction; but we do find that this asserted origin appears to have been totally unknown to the numerous writers who speculated upon the word, down to Gifford's own time, including even Peter Whalley, the earlier editor of Ben Jonson. Whence did Gifford get his story, more than 200 years after date? Help in solving this question is much wanted.

I may add that I know nothing of "chouse" in the sense of "swindler, cheat," which figures (since Gifford's time) in modern dictionaries. Dr. Johnson's two meanings were (1) a bubble, a tool, a man fit to be cheated; (2) a trick or sham. The sense "swindler" nowhere occurs among our numerous quotations; and it was entirely unknown to dictionaries, until Gifford attributed it to the passage in Ben Jonson, and fortified it by his *ben trovato* story. One would be thankful to know that this story is not itself a "chouse"; but received etymology is so honeycombed with invented stories that we have constantly to suspect them.

J. A. H. MURRAY.

AMERICANISMS.

London: February 27, 1889.

In estimating the number of new words that are continually being added to the English language by our Transatlantic cousins, it is scarcely fair to take (as is often done) the eccentric vocabulary of the humourous press, or even of those enterprising journalists who are expected to coin new terms as part of their daily task.

But I have been often struck by strange words and phrases, of the nature of Americanisms, in the New York *Nation*, which ranks in sobriety with our own *Spectator*. In the number last received (February 14), I find two such:

"We can understand how the last evil, the imaginary one, may be met, if any single [State] Legislature has the courage to grapple with it, the Granger Meat Bill of Pennsylvania having *blazed* the way."

Of course, there is no difficulty in understanding the metaphor implied in the verb "blazed"; but the usage is not recorded in Dr. Murray's *New English Dictionary*. There is, however, an amusing example of it quoted in Mr. John S. Farmer's *Americanisms*, privately published only the other day:

"Adam was created first, and it does not seem unlikely that Eve, when she found that Adam had preceded her in the creation, felt piqued about it. Possibly Adam may have tried to excuse himself by saying it was an unexplored region, and it was necessary for him to *blaze* the way. At all events, Eve and her daughters have headed the family procession ever since."—*Texas Siftings*.

The other word may not be an Americanism proper, though I have been unable to find it in the ordinary English Dictionaries. I have condensed the passage:

"By a bill introduced into the New Jersey Legislature, the Boards of Freeholders are empowered to have the county roads 'graded, paved with *telford*, macadamised, or otherwise improved by means of stone, for a width of at least twelve feet in the centre thereof.'"

On turning to the article "Road" in the *Encyclopaedia Britannica* (Ninth Edition, vol. xx.), I find that "the name of Telford is associated with a pitched foundation," which "consists of flat stones carefully set on edge in courses across the road with the broadest edges downwards"; and it also appears that Telford was the inventor of the granite block paving now almost banished from the streets of London. The latter seems to be the sense wanted; but it is curious that Telford's fame as a roadmaker should thus be familiarly preserved only in the United States.

JAS. S. COTTON.

HINREK VAN ALKMAR'S "REINAERT."

London: Feb. 23, 1889.

The importance is unquestionable of the fragments of a previously unknown printed "Reinaert" in clearing up a mystery of which Jacob Grimm (*Reinhart F.* 1834, p. clxxv.) was the only one of all the writers on the subject who ever ventured on anything like a rational solution; and admirable as was his conjecture, scarcely any heed was given to it until it was so fully confirmed by the subsequent discovery of these fragments. But most assuredly Henry Bradshaw had nothing whatever to do with the discovery, either of the fragments themselves, as the reviewer of Mr. Prothero's Memoir (ACADEMY, Feb. 2) supposes, or of the light they throw on Hinrek von Alkmar's true place in relation to the *Reineke Vos*, of which he was for a long time erroneously supposed to be the author.

Some time before Bradshaw can have begun to turn his attention to such matters, these fragments, then in the library of the late Mr. Culemann of Hanover, had been made known by Karl Gödeke in his *Deutsche Wochenschrift* (Feb. 1854). And even supposing Bradshaw to have been aware of their existence (which I have some reason to doubt) before they were fully reprinted and described by Hoffmann von Fallersleben in 1862 (*Horae Belgicae*, xii.), it is certain that before that time he cannot have *seen* them, for they never left Germany until they were brought over for sale in London (Feb. 1870), and we know that Bradshaw never was in Germany until 1862. Of course, until Bradshaw had seen them, he could give no opinion as to the press from which they came, viz., that of Gerard Leeu.

FR. NORGATE.

A LETTER OF THE POET OF THE "SEASONS."

Bristol: Feb. 20, 1889.

The letter by the poet of the *Seasons*, to which your correspondent, Sir George Douglas, refers, has been published more recently than either he or the editor of the *Kelso Mail* seems to imagine. It is quoted entire in a life of the poet published in 1822 (*Lives of the Scottish Poets*, vol. i., T. Boys, Ludgate Hill). This letter was addressed to "Dr. Cranstoun at Ancrum by Berwick"; and it discredits Dr. Johnson's statement that the poem "Winter" was Thomson's sole means of subsistence on entering London, by proving that the poem at that time was not even written. The biography to which I allude gives many interesting particulars of the poet's life and character.

ARTHUR L. SALMON.

ENGLISH TRANSLATIONS OF DANTE'S PROSE WORKS.

Stanhoe Grange, Norfolk: Feb. 22, 1889.

I should be glad to have the opportunity of rectifying a slip which occurs in my notice of Prof. Fay's "Concordance of the *Divina Commedia*," printed in to-day's ACADEMY.

I find that I have, by omitting to mention it, inadvertently by implication condemned Mr.

Digitized by Google

F. J. Church's well-known translation of the *De Monarchia* as unsatisfactory. I need hardly say that such was not my intention. Instead of saying that "none of Dante's prose works, except the *Vita Nuova*, has been satisfactorily rendered in English," I ought to have said "none except the *V. N.* and the *De Monarchia*."

PAGET TOYNBEE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 4, 5 p.m. London Institution: "Soap Bubbles, and what may be shown with them," by Mr. C. V. Boys.
5 p.m. Royal Institution: General Monthly Meeting.
8 p.m. Society of Arts: Cantor Lecture. "The Decoration and Illustration of Books," 1, by Mr. Walter Crane.
8 p.m. Victoria Institute: "The Logos of Philosophy," by Mr. H. Clarke.

TUESDAY, March 5, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," VII., by Prof. G. J. Romanes.
8 p.m. Biblical Archaeology: "Nebuchadnezzar in the Bible and the Cuneiform Inscriptions," by the Rev. C. J. Ball.
8 p.m. Civil Engineers: Discussion. "Alternate-Current Machinery," by Mr. Gisbert Kapp.
8.30 p.m. Zoological: "South-American Coleoptera of the Genus *Diabrotica*," by Mr. Joseph S. Baly; "New Genera and Species of Eastern Coleoptera of the Family *Telephoridae*," by the Rev. H. S. Gorham; "New Land-Shells from the Island of Korar (Pelew Group)," by Col. R. H. Beddome; "The Anatomy of a Rare Cephalopod (*Gonatus fabricii*)," by Mr. W. E. Hoyle.

WEDNESDAY, March 6, 3 p.m. University College, Barlow Lecture, "Personal Traits and Characteristics of Dante, as gathered from the Early Biographies, and illustrated by Passages in his own Writings," by the Rev. Dr. E. Moore.
8 p.m. Society of Arts: "Arc Lamps and their Mechanism," by Prof. Silvanus P. Thompson.
8 p.m. Geological: "The Subdivisions of the Speeton Clay," by Mr. G. W. Lamplugh; "The Geology of Madagascar," by the Rev. R. Baron; "The Petrographical Characters of some Rocks collected in Madagascar by the Rev. R. Baron," by Mr. F. H. Hatch.
8 p.m. Elizabethan: "John Webster," by the Rev. Stopford A. Brooke.

THURSDAY, March 7, 3 p.m. Royal Institution: "The Venom of Serpents, and Allied Poisons," III., by Dr. S. Martin.
4 p.m. Archaeological Institute: "The Carmelite Priory or House of White Friars at Hulne," by Mr. W. H. St. John Hope; "A Salute of Henry VI.," by Mr. E. C. Hulme.
7 p.m. London Institution: "Modern Composers of Classical Song," II., by Mr. Carl Armbruster.
8 p.m. Linnean: "The Vascular System of Floral Organs," by the Rev. G. Henslow.
8 p.m. Chemical: Election of Fellows.
8.30 p.m. Antiquaries: Election of Fellows.

FRIDAY, March 8, 7.30 p.m. Civil Engineers: Students' Meeting, "Mining in Spain, with Special Reference to the Lead Mines of Linares," by Mr. C. F. Smith.
8 p.m. Society of Arts: "The Present Condition and Prospects of Indian Agriculture," by Prof. R. Wallace.
8 p.m. New Shakspere: "Lady Macbeth," by Miss B. Lamb.
9 p.m. Royal Institution: "The Discharge of a Leyden Jar," by Prof. Oliver Lodge.

SATURDAY, March 9, 3 p.m. Royal Institution: "Experimental Optics—Polarisation, Wave Theory," III., by Lord Rayleigh.
3 p.m. Physical: "The Magneto-Optic Notation by Transient Currents, with Reference to the Time required for the Production of the Effect," "An Electrostatic Field produced by Varying Magnetic Induction." "Some Experiments allied to those of Hertz," "The Velocity of Electric Pulses along a Pair of Isolated Wires," "Sundry Laboratory Notes," by Prof. O. Y. Lodge.
3.45 p.m. Botanic: General Meeting.

SCIENCE.

Essays in Biblical Greek. By Edwin Hatch. (Oxford: Clarendon Press.)

(*First Notice.*)

THIS is without doubt a book of marked importance. Its details are valuable; but more important than any details are the freshness, independence, and philosophic breadth of view by which it is characterised. We are all of us apt to fall into grooves in our thinking. When a few leading scholars make use of a particular method it soon comes to be followed as a matter of course and without any thought of the limitations and qualifications to which it is subject. It is, therefore, the greatest service that can be rendered to the scholar and student that he should be sent back to first principles, and compelled to verify his assumptions and revise his methods of procedure. This is what Dr. Hatch has done. He has turned us out of our ruts and has made us examine and test the instruments with which we are in the habit of working. His book is clearly the product of ripe experience. Only one who had worked for years directly upon the materials could have written it. It shows as much caution and circumspection in the statement of principles as boldness in their application; and it is written in a style which seems to me to hold a distinguished place among the models of clear, compact, masculine English. Along with the firmness and precision of well-digested knowledge it has also the freshness of touch which comes from writing "with the eye upon the object."

I wish to guard against the language of exaggerated eulogy. I am not consciously affected by private friendship; and I intend to express plainly my own differences of opinion, which are not inconsiderable. But the reader shall judge for himself of the calibre of the book which is set before him. The specimens which follow are for the most part selected with a view to the more detailed discussion upon which I hope to enter in another article; but so far as style is concerned they are only samples, the like of which might be taken from nearly every page. Before going on to these, I must, however, first briefly explain that the essays now printed represent two courses of lectures given on the Grinfield foundation—a single lecture in each term, and during the years 1880-1883. The subjects of the lectures fall into two groups—the first dealing mainly with the use of words, the second with problems relating to the text. I extract a few passages which lay down principles under each of these heads:

"The tendency of almost all students of an ancient book is to lay too great a stress upon the meaning of single words, to draw too subtle distinctions between synonyms, to press unduly the force of metaphors, and to estimate the weight of compound words in current use by weighing separately the elements of which they are compounded. Whereas in the ordinary speech of men, and with all but a narrow, however admirable, school of writers in a literary age, distinctions between synonyms tend to fade away, the original force of metaphors becomes so weakened by familiarity as to be rarely present to the mind of the speaker, and compound words acquire a meaning of their own which cannot be resolved into the separate meanings of their component parts" (p. 15).

Again:

"In examining any philosophical terms which are found in Hellenistic Greek it is necessary to observe to an increased degree the caution with which all Hellenistic words must be treated. At every step the student is haunted by their classical meanings, and at every step the ghosts of their classical meanings must be exorcised. For Greece and the Greek world had come not only under a different political rule, and into new social circumstances, but also into a new atmosphere of thought and into a new attitude of mind towards the questions with which philosophy deals. Those questions were, almost of necessity, stated in their ancient form. The technical terms remained the same; but by the operation of those silent changes by which all thinking races are constantly elaborating new meanings, and finding new points of view, the connotation of those terms and the answers to those questions had undergone more than one complete transformation. The philosophical words of Hellenistic Greek must be viewed in relation not to past but to contemporary philosophy. Nor can that contemporary philosophy be taken as an undivided whole. It is as various in its character as the philosophy of our own time, with which it is the more interesting to compare it, because, as in our modern philosophy, a large part of it was syncretistic" (p. 94).

I append to this, as an example at once of largeness of view and of condensed clearness of statement, the short paragraph which treats with the critical condition of the writings of Philo:

"Many of the MSS. which contain them remain uncollated; no attempt has been made to differentiate the characteristics of the main group of writings so as to afford a criterion for distinguishing between the writings of Philo himself and those of his school; the philosophy itself, which is more like a mosaic than an organic unity, has for the most part not been resolved into its elements" (p. 95).

I may perhaps in passing express the opinion that Philo is too literary to furnish the best analogies for the Greek of the New Testament. I expect greater results from the examination of the Apocryphal and Pseudepigraphic writings, Jewish and Christian, the authors or translators of which were more directly on a level with the writers of the New Testament, and moved more within the same circle of ideas.

Turning to the part which deals with the text, I quote first from the opening of the chapter on composite quotations, in regard to which Dr. Hatch puts forward a view to which many enquiries are tending.

"It may naturally be supposed that a race [like the Jews] which laid stress on moral progress, whose religious services had variable elements of both prayer and praise, and which was carrying on an active propaganda, would have, among other books, manuals of morals, of devotion, and of controversy. It may also be supposed, if we take into consideration the contemporary habit of making collections of *excerpta*, and the special authority which the Jews attached to their sacred books, that some of these manuals would consist of extracts from the Old Testament. The existence of composite quotations in the New Testament, and in some of the early Fathers suggests the hypothesis that we have in them relics of such manuals" (p. 203).

My last quotation shall be from the summary of the chapter on the LXX. text of Job, where again Dr. Hatch puts forward an interesting theory.

"The result of the enquiry is that the hypothesis which was advanced at the outset explains satisfactorily the majority of the passages which Origen supplied from Theodotion. In other words, it seems probable that the Book of Job originally existed in a shorter form than at present; and that in the interval between the time of the original translation and that of Theodotion large additions were made to the text by a poet whose imaginative power was at least not inferior to that of the original writer. The additions are in general

Digitized by Google

harmony with the existing text, though they do not always exactly fit in to their place; nor is it likely that the difficulties will be solved until the ten factors which are necessary to their solution have each engaged the attention of skilled specialists, namely, the philology and the textual criticism, not only of the Hebrew, but also of the Greek, the Syro-Hexaplar, the Sahidic, and the Latin versions. Of these ten factors, only the first two, namely, the philology and the textual criticism of the Hebrew, have as yet been dealt with by competent scholars" (pp. 244-5).

I have indulged rather largely in quotation, partly because the book is its own best expounder, and partly because I want the reader to have before him the texts on which I propose to offer some comments later on. I would ask his attention especially to the first two extracts, which it seems to me will affect the study of Biblical Greek for some time to come. To these I hope to return; but I will confine myself for the present to one remark. Anyone may see that the book represents a great amount of first-hand work. It is perhaps a natural consequence of this that little should be said of other workers in the field. My own feeling is that that little is rather too disparaging. It is, for instance, surely an exaggeration to say that the writings of Philo, except for the doctrine of the Λόγος, "are an almost wholly unworked mine." The page on which these words occur was doubtless in type before the appearance of Dr. James Drummond's elaborate monograph, which was published last year; but it does not do justice to Dr. Edersheim's important article in the *Dictionary of Christian Biography*, or to the many marks of the careful study of Philo in the same writer's *Life and Times of Jesus the Messiah*. I should have thought, too, that the phrase would have to be modified in view of Siegfried's *Philo von Alexandria*, not to speak of Loesner and a number of older workers. More readers still will be startled by the sweeping statements on p. 1: "The language of the New Testament has not yet attracted the special attention of any considerable scholar. There is no good lexicon There is no philological commentary. There is no adequate grammar." I can understand what Dr. Hatch means. He is judging by an absolute, and not by a relative, standard. And he has a better right to do this than most of us have. Bacon's saying about the dwarf perched on the giant's shoulder is less applicable to him. It is but seldom that he climbs on to any man's shoulder. He prefers to work his own way afresh from the foundations. From a less elevated standpoint I should myself be well content to call Thayer-Grimm's a "good" lexicon, as reflecting with scrupulous care the stage so far reached by Biblical scholarship. Considering, too, the vast stores of philological material collected in the last century by Wetstein and his contemporaries, and the way in which they have been worked up, not without additions (such, for instance, as the elaborate notes on τοῦ πονηροῦ, by Bishop Lightfoot; and on ἐπιούσιος, by Bishop Lightfoot and Mr. McClellan), by our own best commentators, and on the Continent, notably by C. F. A. Fritzsche, I should hesitate to say that there was "no philological commentary." The commentaries of the last-named writer on St. Matthew, St. Mark, and Romans, at least were primarily and professedly philological, and their author was a scholar of wide learning and of great ability. Many a lesser workman has been glad to fill his carts at that quarry. And, as regards grammars, could it be said that Biblical scholarship — with Winer-Moulton and Buttmann-Thayer — was far behind classical scholarship, at least until a few years ago? It is true that glimpses are given us from time to time of still better things. We think of the refined and beautiful work in Dr. Field's *Otium Norvicense*. We think of a few stray grammatical notes in the *Speaker's Commentary* on 1 Corinthians, and of the "Notes on Orthography" at the end of Westcott and Hort's *Greek Testament*. The thought of these last is apt to call up a sigh of mingled regret and fear that the world may be left the poorer of what the rich man's bounty could so easily spare. What might not the hand which wrote the "Notes on Orthography" do, I will not say merely for the philology, but for all else connected with the Greek Testament! It might teach us—as it has already begun to teach us—what the science of the nineteenth century, as applied to Biblical studies, ought to be. Would that I could help these eminent men to realise what an utterly indifferent matter is completeness and roundness of form to the scholar thirsting for knowledge; how thankfully the merest *Adversaria* would be received, and how superfluous are apologies (see Academy, January 19, 1889. p. 43) for anything, whatever it may be, which finds its way into print!

I am digressing, and yet not digressing, from the subject in hand. Surely, here, too, is a great opportunity. We may have no lack of gratitude towards the past and yet feel that a duty lies before us in the present. A work like this by Dr. Hatch is admirably fitted to give the impulse to a new movement. Brief though it be, as the publication of an isolated course of lectures, it is yet a masterly tracing of the lines for revived enquiry. I cannot myself at once yield assent to all its propositions; but such differences as exist might, I think, soon be thrashed out. And if we are to have a new movement I think that all eyes would look to Dr. Hatch as the natural head for it. His present book shows exceptional qualifications for the very difficult work of a lexicographer and grammarian. And just at this moment there is an unusual supply of younger scholars who would be willing to join in combined and organised work. Is it too much to hope that something definite may be started?

W. Sanday.

SCIENCE NOTES.

A committee has been formed of members of the Royal Society, with Lord Rayleigh as its president, to co-operate with the local committee appointed in Munich to promote the erection of a statue to Georg Simon Ohm, the discoverer of the laws of the electric current, who was born at Erlangen on March 16, 1789. Profs. G. Carey Foster and John Perry have consented to act as secretaries and to receive subscriptions.

The Geologists' Association—of which Mr. T. V. Holmes has recently been elected president, in succession to Mr. F. W. Rudler—will, on Saturday, March 15, visit the National History Museum, Cromwell-road, when Mr. W. Carruthers, keeper of the botanical department, will give an exposition of the fossil fungi, lichens, and mosses.

A sketch of the "Geological History of the Yellowstone National Park," by Mr. Arnold Hague, of the United States Geological Survey, has been printed in the *Transactions* of the American Institute of Mining Engineers. In the Eocene period this area became the theatre of great volcanic activity, which abated in pliocene times, and probably died out in the quarternary epoch. It is believed that the waters now flowing from the geysers and hot springs are merely surface waters, which in percolating downwards have become heated by means of the steam which rises in large volumes from deep-seated sources. Mr. Hague's sketch forms an excellent scientific guide to the famous park.

PHILOLOGY NOTES.

M. Bénédite, who has received a commission from the French Government to collect inscriptions in the Sinaitic peninsula for the *Corpus* of the Institut, reports that he has already collected more than three hundred hitherto unpublished.

At a recent meeting of the Académie des Inscriptions, M. Revillout reported the acquisition by the Louvre of a fragmentary papyrus containing sixteen columns of a speech of Hyperides, the contemporary and opponent of Demosthenes. Hitherto, all that has been preserved of this orator is three papyri in the British Museum, found at Thebes, in Egypt, in 1847 and 1856. But these are enough to confirm the verdict of Longinus, which has been thus summed up by Prof. Jebb: "Hyperides was the Sheridan of Athens." Longinus further remarks that in one of his speeches, that against Athenogenes, he displayed a talent which not even Demosthenes could equal. Now, it happens that the newly discovered papyrus consists of this very speech against Athenogenes, up to the present entirely unknown. Unfortunately, the papyrus is very much broken, so that M. Revillout has not yet ventured to publish the complete text or a translation. But he hopes before long to succeed in piecing the fragments together, with care and patience.

At the congress of Orientalists to be held at Stockholm, Prof. De Goeje, of Leiden, will read a paper on the origin of the legend of St. Brendan.

A revised and enlarged edition of Prof. Whitney's *Sanskrit Grammar* has just appeared at Leipzig.

MEETINGS OF SOCIETIES.

Physical Society.—(*Annual General Meeting, Saturday, February 9.*)

Prof. Reinold, president, in the chair.—The reports of the council and treasurer were read and adopted. From the former it appears that the number of members has only slightly increased during the year, due, it is supposed, to the advantages offered by the society not being generally known; and a fly-leaf has been prepared, giving a short account of the society's objects and procedure, copies of which may be obtained from the secretaries. During the past year Vol. I., Part I, of *Physical Memoirs selected and translated from Foreign Sources* has been printed and issued to the members; and the translations of important memoirs by Fourier, Hittorf, and Volta are well advanced, and will be published shortly. The treasurer's report showed the financial position of the society to be very satisfactory. Owing to the lamented death of Prof. Clausius, a vacancy has occurred in the list of honorary members, to fill which Prof. R. W. Bunsen was nominated by the

Digitized by Google

council and duly elected. The following were elected to form the new council:—president: Prof. A. W. Reinold; vice-presidents: Dr. E. Atkinson, Prof. W. E. Ayrton, Shelford Bidwell, Lord Rayleigh; secretaries: Walter Baily, Prof. J. Perry; treasurer: Prof. A. W. Rücker; demonstrator: C. Vernon Boys; other members of council: Hon. R. Abercromby, T. H. Blakesley, W. H. Coffin, Conrad W. Cooke, Prof. O. Lodge, Prof. W. Ramsay, W. N. Shaw, Prof. S. P. Thompson, H. Tomlinson, and Dr. G. M. Whipple.

ANTHROPOLOGICAL INSTITUTE.—(*Tuesday, February 12.*)

DR. JOHN BEDDOE, president, in the chair.—Dr. Beddoe read a paper on "Human Remains discovered by General Pitt-Rivers at Woodcuts, Rotherley, and Winkelbury Camp."—Mr. Bernard Hollander read a paper on "Centres of Ideation in the Brain." The object of this paper was to furnish the basis of a scientific phrenology. The author took it for granted (1) that all mind manifestation is dependent on brain matter; (2) that the various elements of the mind have distinct seats in the brain, which, however, have not yet been determined; (3) that the recent researches by physiological experimenters and pathological investigators — which have resulted in defining distinct regions for motion and sensation—established the physiological correlative of psychological actions. By applying galvanic currents to definite portions of the brain, or by destroying certain areas, physiological experimenters caused movements of certain limbs and muscles. In itself the distribution of motor areas in the brain would be of little value to the psychologist, except that it proves to him the plurality of functions of the brain. When we, however, observe that the movements caused by excitation form the physical parallel of a mental action, we may arrive at the psychological function of a certain portion of brain, by reducing the various faculties of the mind to their elements and watching their physical expression. To arrive at the demonstration of centres of ideation: (1) we must observe the physical expressions of our thoughts and feelings; (2) we must take the limbs and muscles, which are affected by definite emotions, and see on what occasions they were made to move by central excitation. Thus we find that in a definite part of the frontal convolution (Ferrier's centre No. 7) the galvanic current had the effect of elevating the cheeks and angles of the mouth with closure of the eyes. On no other region could the same be effected. Darwin points out (*Expressions of the Emotions*, p. 202) that under the emotion of joy, the mouth is acted on exclusively by the great zygomatic muscles, which serve to draw the corners backwards and upwards. The upper and lower orbicular muscles are at the same time more or less contracted. Duchenne and Sir C. Bell are of the same opinion; and Sir Crichton Browne, speaking of the general paralysis of the insane, says: "In this malady there is invariably optimism, delusions as to wealth, rank, &c., and insane joyousness, while its very earliest physical symptom is trembling at the corners of the mouth." The effect produced by the galvanic current on Ferrier's centre No. 7. is thus shown to be the physical expression of the emotion of joy. Combe located there his "organ of cheerfulness," which he afterwards called "hope"; and there is no doubt some relation between the effect of Ferrier's experiment and the result of Combe's observations. Prof. Sigmund Exner says the centres for the facial movements extend from the gyrus centralis anterior to the latter halves of the lower frontal convolutions—an area which corresponds with Gall's "centre for mimicry" (afterwards named "imitation"). Most marked, however, is the harmony between the results of modern experiments and the observations made by the early phrenologists when we arrive at the demonstration of the "gustatory" centre. Prof. Ferrier's experiments on the lower extremity of the temporo-sphenoidal convolution caused movements of the lips, tongue, and cheeks—indications of gustatory sensation. Looking up the *Edinburgh Phrenological Journal* (vol. 10, p. 249), we find that many men claimed the discovery (in 1824) of the organ for gustatory sensation, afterwards called "gustativeness" or "alimentiveness," and that they located this centre in exactly the same region. As this organ is difficult to be observed on account of the zygomatic arch and the temporal muscle, phrenology was much abused at the time. Prof. Ferrier's experiments on his centre No. 11, on the lower extremity of the ascending parietal convolution, resulted in retraction of the angle of the mouth. The action is that of the platysma myoides muscle, which, as Sir C. Bell (*Anatomy of Expression*, p. 168) states, is strongly contracted under the influence of fear, and which he calls the muscle of fright. Phrenologists (Gall and Spurzheim) located in this region their organ of "cautiousness" which they found largely developed in persons known for their timidity. Prof. Ferrier's centre No. 7, is said to cause "raising of the shoulders with extension of the arms," a movement which Darwin and Mantegazza refer to the expression of patience, submission, and the absence of any intention to resist. Gall's organ of "veneration," which corresponds with this centre, is said to produce an instinctive feeling of respect; and when defective in children, Combe says, "it has the effect of making them regardless of authority, prone to rebellion, and little attentive to command." Though the work as described is far from complete, it may have the effect of causing Gall's theories to be re-examined, and of pointing out a sure method for the demonstration of centres of ideation.

MANCHESTER GOETHE SOCIETY.—(*Wednesday, February 13.*)

THE REV. F. F. CORNISH in the chair.—The hon. sec. read a paper by Prof. C. H. Herford on "Goethe's Theories on Epic Poetry, with special reference to the Epic Fragments." In the introduction Prof. Herford drew attention to the uncertain tenure of life held by epic in modern times, and accounted for this by the fact that the great shadow of Homer broods over all the future of his art, ever provoking imitation of the inimitable. Modern epic poetry has been paralysed by its incapacity either to adopt the Homeric type or to create a new one on similar lines. It has been most successful where it has most frankly abandoned the heroic atmosphere of the *Iliad*. Goethe alone among modern poets has produced work in epic which reveals in every line Homeric inspiration, and itself takes rank among classics of all literature. It was from his profound interest in Homer, fostered by the influences of his Italian journey, that Goethe's essays in epic poetry arose; and it was during the first half decade of his friendship with Schiller that all his finest work in this line was done. *Reineke Fuchs*, produced at an earlier date (1793), may be regarded merely as an experiment in the art of telling a prolonged and quasi-epic story in the verse and manner of Homer; but in the *Hermann and Dorothea*, and in the fragmentary *Achilleis*, not only Homer, but Homer made concrete and sensuous in painting and sculpture, lives in the finely profiled men and women who move with a certain statuesque dignity and quiescence upon a landscape background mellow and harmonious, but somewhat colourless, like his. The method by which the effect is achieved in the two poems is, however, quite different. In the former Goethe has been true to his natural instinct, that poetic realism which works from without to within—which starts from the commonplace facts of life and idealises them, merely by dissolving away that in them which is discordant with the simple, primary issues of human nature. In the latter he has, in a manner less natural and congenial to him, merely adopted, with a few harmonising touches, the ideal creations of a splendid but alien poetry. That the brilliantly successful completion of *Hermann and Dorothea* led only to splendid promise, but to no mature growth, is due partly to the absorbing character of the other work on which Goethe was engaged, and partly no doubt to the paralysing effect on such a poetic faculty as his of the excessive aesthetic discussion which then occupied himself and Schiller. The theories regarding epic which they together evolved proved fatal to a projected epic, *Die Jagd* (afterwards worked out as a prose *Novelle*); and another epic, *Tell*, begun with great ardour after Goethe's visit to Switzerland in 1797, was also dropped, though for other reasons. The narrow limits of a real time and place were wholly foreign to Goethe's genius, and he passed on the material he had collected to Schiller. In the meantime a remark thrown out by Schiller in their continued discussions turned Goethe's thoughts once more to Homer: epos and drama, says Schiller, necessarily approximate as each draws nearer perfection; and for modern poets, unable to command either the stage of Attic tragedy or the audience of the Homeric rhapsode, there is also a practical necessity of supplementing each form of art from the resources and methods of the other. Hence Goethe's attempt in the *Achilleis* to construct an epic on a tragic motive. He had sought for the possible materials for another epic in the interval between Hector's death and the departure of the Greeks; but he had found only tragic subjects, suited rather for dramatic than epic treatment. Now, however, urged on by Schiller, he lays his own doubts aside, and determines to treat the death of Achilles in epic manner. He begins the work with eagerness and zest, but his moods fluctuate incessantly: now he is drawn within the magic spell of Homer, and determines to follow him implicitly, to be antique at all costs; now his own artistic nature asserts itself, and he aspires at a bolder, more independent treatment. Yet, in spite of his conviction that a modern epic cannot be a mere continuation of the *Iliad*, Goethe seems to have yielded in the immediate presence of that poem to the overpowering domination of Homer, which, working at a safer distance, he had easily resisted in his *Hermann and Dorothea*. Instead of frankly accepting he only jealously admits the modern elements, and is in the main so entirely Homeric that his occasional deviations from Homer almost seem blunders. It was probably his sense of the growing discord between matter and form that paralysed his interest in the splendid subject he had chosen. The first canto, with its stately picture of the council of gods, is more Homeric than its successors could have been; the love passion of Achilles and Polyxena, which was to bring about the tragic climax, must have been a theme hard to combine with the severely Homeric tone of the opening. And so the poem remained unfinished, and as an incompleted work it must be judged. Considered as an attempt to renew Homer, the *Achilleis* is a splendid approximation to success where success was impossible; considered apart from Homer, it is a brilliant fragment, injured by a certain compositeness of effect.

ROYAL ASIATIC SOCIETY.—(*Monday, February 18.*)

SIR MONIER MONIER-WILLIAMS in the chair.—Mr. E. J. Rapson gave a sketch of some MS. notes on the Northern and Western Kshatrapas by the late Pandit Bhagvānlāl Indraji, and illustrated his remarks by a series of coins selected by the Pandit for publication in the *Journal* of the society. He described the celebrated lion capital which, together with a collection of coins numbering about 4000, the Pandit bequeathed to the British Museum. The inscriptions on this capital afford a clue to the knowledge of three distinct dynasties, each bearing the name of Kshatrapas, who were contemporaries in the territory between the Himalayas and Mathurā after the dissolution of the Graeco-Bactrian kingdom. The coins of these Kshatrapas were published by Prinsep and Cunningham under the title "Buddhist Satraps." The dates of these Northern Kshatrapas may be approximately known, as they copy the type of well-known Çatra-Parthian and Hindu dynasties. Bhagvānlāl contends that there is evidence to show that one of these rulers, the Mahākshatrapa Kusula Patika, gained supremacy over the rest. The Western Kshatrapas ruled for more than two centuries over Kathiāwād, Kachch, and part of the Mahratta country. They used commonly to be called Sāh kings. Bhagvānlāl connected them with the Northern Kshatrapas, and supposed the first two rulers of this dynasty, Nahāpara and Chashtana, to have been originally generals of Kusula Patika, who were sent on military expeditions to the Deccan and Mālwa. The Pandit's collection of the coins of these Kshatrapas is the most complete in existence, and contains numerous dated specimens in a perfect state of preservation. It is a most valuable addition to

Digitized by Google

the national collection. The Pandit's notes are to be arranged and edited, so as to form an article in some future number of the society's *Journal*.

FINE ART.

Ancient Rome in the Light of Recent Discoveries. By R. Lanciani. (Macmillan.)

"THERE is no doubt," says Signor Lanciani, "that the Romans have done more harm to their own city than all invading hosts put together." Is this mischief now going on under a new form? That is the question for which everyone who has seen Rome will look for an answer in these pages. Signor Lanciani meets it with an emphatic "No." Private research, like private speculation, is, of course, doing mischief. Prince Alexander Torlonia, by excavating in the remains of Trajan's dock at Ostia for five years, has done "more harm to the place in this short time than had been done in fifteen centuries of abandonment and desolation." But the national action has not been of a destructive or injurious character. The preface which the author, who is director of excavations for the national government and the municipality of Rome, attaches to his book is an *Apologia pro operibus suis*; and he makes out a good case in his own defence. When we are alarmed by hearing that, since 1870, 266,000,000 cubic feet of earth have been removed from within the city, he reminds us how hundreds of statues and busts, coins and inscriptions, lamps and ornaments, have thereby come to light. If we hear with some regret that the Ghetto was levelled with the ground in 1887, we are compelled to believe that the work was necessary, and has been done with care, when we read his bitter comments on the Roman nobles who have disfigured their city by the sale of their villas and gardens for building lots. One who loves the Campagna (as Signor Lanciani's charming chapter on it shows that he does), not only for its antiquities, but also for its landscapes, may well be angry with the changed aspect of the city as viewed from it.

"Rome, seen from one of the neighbouring heights, is no more the Rome of our dreams, of a beautiful brownish hue, surrounded by dense masses of foliage: it is an immense white dazzling spot, some six miles in diameter, bordering directly on the wilderness of the Campagna."

He is merciful enough not to tell us what it looks like now from the terrace by the church of S. Pietro in Montorio. Even the great public park which comprises, or is to comprise, the valleys of the Forum and of the Colosseum, half of the Coelian and Aventine Hills, the Palace of the Caesars and the Baths of Caracalla, must, as it is gradually cleared of trees and modern buildings, and as row beyond row of ruinous foundations comes to light, cause a huge patch of dreary ugliness in the foreground of a charming picture. Ruins do not make a good view, unless they be on a large scale or be overgrown. Every inch of them may be of unspeakable interest, but the *coup d'œil* is not pleasant when you look out over naked brick cores and chipped drums of columns.

Such, however, is the price which this generation has to pay for a thorough search of the soil of Rome, and for the careful preservation of all that it contains. Some future conqueror may carry off the art-treasures—*de meliora*,—but no future Michael Angelo will be allowed to cut pedestals for statues out of the columns of the temple of Castor and Pollux. The ruins will no longer be exposed to external violence or to mischief from people nesting within them. No more thieves will have a chance of living in the Arch of Titus. The ruins and other objects are for the present, at least, under the protection of a strong and resolute young nation, and in the charge of careful and enthusiastic keepers. It is part of the pleasure of reading Signor Lanciani's book to see the impression which modern changes and recent discoveries have made on a skilled archaeologist. He is less cautious in theory perhaps than a German would be in his position, more romantic and imaginative; but he hates destruction and disfigurement of all kinds. We hope—and of course we quite believe—that he does not carry his hostility to Mithras-worship beyond words; but it is curious to find a modern archaeologist writing about this cult as containing "horrid mysteries" and an "abominable sacrament."

The director's plan has been to give us an account of the work and of the "finds" of the last few years, and he has grouped his matter very skilfully. The prosaic details of Roman life, the splendour of its great institutions, the romance of the lost and found works of art—from one of these topics to another Signor Lanciani hurries us with an interest which never flags. The book will help to kindle enthusiasm in young readers and to keep it alive in veteran archaeologists. They will enjoy the account of explorations of which they have seen hints here and there in the newspapers; and they may perhaps think that even to be absent from Rome has its advantages when they read how the Equiline burial-ground, which Horace has made so familiar to us, has been opened, and how unbearable, after all these centuries, was the smell of the "uniform mass of black, viscid, pestilential, unctuous matter." But no narrative of exploration is more thrilling than the account of how the Sitting Boxer was brought to light in 1885 on the slope of the Quirinal. How much one would give to know something of the people who hid the statue so carefully, and protected the surface of the bronze by using sifted earth!

Signor Lanciani has not been quite fortunate in his translator. No one ought to have made him talk of a wine as "the famous Caecubus," or ascribe to Cicero a book "De Divinitate." But trivial errors of this kind diminish but little the value of a deeply interesting and splendidly illustrated work.

FRANKLIN T. RICHARDS.

THE ROYAL SCOTTISH ACADEMY.

THE strength of the present exhibition of the Royal Scottish Academy may be said to lie in its figure-pictures and its portraiture; for—though a Scotch exhibition has always some good landscape works to show—several of the most capable landscape-painters of the North are, for various reasons, represented this year by comparatively few examples of their art; while (let it be added with thankfulness) some of those who are usually most productive, but at the same time, most feeble and mannered in their productions, occupy less space upon the walls than has been their former custom. On the whole, we should say that the foreign influence, which for years has been all but paramount in the displays of the Glasgow Institute, is this year more distinctly visible than heretofore within the sacred enclosure of the Academy itself. Two of its recently elected associates, Mr. James Guthrie and Mr. Arthur Melville, are French-trained students, and display—to an extent even obtrusive and excessive—the influence of foreign art-methods: the former in several dexterous figure-subjects and landscapes in pastel; the latter in a female half-length in oils and a clever Eastern subject, "The Court of a Mosque," in water-colours.

The works that come from London include Mr. Seymour Lucas's effective and accomplished "St. Paul's: the King's Visit to Wren"; Mr. Gow's "Cromwell at Dunbar," excellent in the concentration of its composition and in the crispness of touch by which its figures are expressed; Mr. Alma-Tadema's "My Doctor," so quaint in its arrangement, so delicate and pulpy in its flesh-painting; and Mr. Briton Riviere's "Cantatina." The subject by a Scottish painter which is attracting most attention is the "Alma: Advance of the 42nd Highlanders," a spirited and thoughtfully executed battle-piece, upon which Mr. Robert Gibb has been engaged for several years past. Mr. Martin Hardie—an associate of the Academy, and one of the most promising of its younger figure-painters—marks a great advance, in delicacy of tone, freedom of handling, and general pictorial power in his "Unrecorded Coronation," which represents, with (as in Tennyson's "Morte D'Arthur") "perhaps, some modern touches here and there," an imagined incident in the early life of Queen Mary, during her seclusion in Inchmahome, the "Isle of Rest," in the Lake of Monteith. The picture shows a scene of early spring; and on the grass, powdered with the whiteness of daisies, is gathered a ring of white-clad children—the Queen's Marys—one of whom sets on the head of their little golden-haired monarch a wreath of blossoming hawthorn. Several interiors with figures, handled with much spirit, and marked by character and humour, come from Mr. G. O. Reid; Mr. Austen Brown has a couple of vigorous pastorals, strong in brush-work and forcible in colouring, founded apparently upon the art of Van Marcke; Mr. R. Gemmell Hutchison is represented by his pictures of soldiers in church, "In Time of Peace"—a work obviously suggested by the "Last Muster" of Mr. Herkomer; Mr. Payton Reid treats, with much potency of colouring, several Venetian subjects, in which brightly dressed figures play an important part; and Mr. J. H. Lorimer sends, in addition to a pair of large figure-pictures, a little *genre*-subject, "A Quiet Corner," singularly effective in colour, spirited in touch, and delicately expressive in its renderings of varied textures.

Chief among the landscapes of the exhibition is Mr. George Reid's low-toned and impressive view of Montrose—a work most accomplished in its portrayal of a great expanse of sky filled with billowy white clouds, and in its accurate rendering of the various planes of flat receding land and of level sea, beyond which the blue walls and towers of the town are visible on the horizon line. By Mr. A. D. Reid, a younger brother of the last-named painter, is a successful and boldly touched view of "Dordrecht"; Mr. Lawton Wingate has two fresh and vivid scenes of wooded fields; Mr. W. D. McKay's most important contribution is his quietly coloured landscape, entitled "November"; Mr. M'Taggart's large method and powerful rendering of light and atmosphere are seen to advantage in his "Machri-

Digitized by Google

hanish Bay"; and Mr. W. Hole, in his "Gethsemane," paints a tender effect of rising moon, over blue hills and bosky, shadowy forest.

In the department of portraiture, Mr. George Reid is again the most prominent and powerful exhibitor with his full-length of the Earl of Stair and that of the Marquis of Breadalbane which figured in the Royal Academy of 1884, and especially with his cabinet-sized portrait of "R. S. Wyld, Esq., LL.D."—a work singularly refined and delicate in its flesh-painting. Mr. Robert Gibb sends a dignified portrait of Sir Arthur Halkett, Bart., of Pitfirrane, who figures in that painter's Alma subject as the ensign bearing the colours of the 42nd regiment. Mr. Otto Leyde exhibits the most successful work that we have seen from his brush in his seated half-length of the Hon. Mrs. Cheape; and, among the younger men, Mr. Austen Brown, Mr. Duddingstone Herdman, Mr. Kay Robertson, Mr. Burn Murdoch, and Mr. John Bowie show works of excellent promise, in some cases of excellent performance.

The water-colour room contains a very fair proportion of interesting subjects, among which we may name Mr. Tom Scott's figure-picture, "The Legend of Ladywood," and his landscapes; the landscapes of Mr. R. B. Nisbet; Mr. G. O. Reid's largely handled figure-piece, "Preparing for Guard"; Mr. E. A. Walton's "Grandfather's Garden," with its effective rendering of shade dappled with sunshine; and Mr. H. W. Kerr's excellently handled head of "A Connemara Bailiff." As usual in the Scottish Academy exhibitions, the display of sculpture is rather meagre and commonplace. But we may mention Mr. D. W. Stevenson's head of "Hamish MacCunn, Esq.," the composer (his portrait, an oil-sketch by Mr. Pettie, hangs in the water-colour room); and Mr. J. M. Rhind's fine heroic group, "An Act of Mercy," and his effective portrait busts, especially one of the wrinkled face of an aged peasant woman.

NOTES ON ART AND ARCHAEOLOGY.

ON Friday and Saturday of next week Messrs. Christie will sell by auction a large number of pictures and drawings originally commissioned by the proprietors of the *Graphic* for reproduction in that journal. The majority are in black and white; but there are also several in water-colour and in oil, notably the series of twenty-one paintings entitled "Shakspere's Heroines," which will be offered in a single lot.

MESSRS. T. & W. VOKINS will have on view next week a loan collection of water-colour drawings by George Cattermole, at their gallery in Great Portland Street. As usual with Messrs. Vokins's exhibitions, admission will be entirely free.

HERR TEUBNER, of Leipzig, announces a book upon the animals and plants found on ancient coins and gems, by F. Imhoof and O. Keller, to be illustrated with twenty-four plates of photographs, containing altogether nearly 1400 examples.

MESSRS. DOWDESWELL have now on view a series of fifty sketches by Mr. Charles E. Hern, art tutor to the princesses at Marlborough House, of "The Churches of London." The studies have all been painted on the spot, in the busy streets, or in quiet corners, and under all conditions of weather. The subjects selected include St. Paul's, Westminster Abbey, St. Martin's-in-the-Fields, St. Clement Danes, St. Michael's and All Angels; Paddington, Putney, and Chelsea Churches; the Oratory, Brompton; Farm Street Church; the synagogues in Portman Square and St. Petersburgh Place; St. George's, Hanover Square; St. Paul's, Knightsbridge; St. Bride's, Fleet Street; St. Mary's, in the Strand; St. Giles-in-the-Fields, &c. Mr. Hern is a purist, painting in simple water-colours, without the use of the so-called "artists' mediums" to obtain effects.

AT the meeting of the Society of Antiquaries last week, the following resolution was unanimously adopted:

"That, in view of the urgent necessity for saving the Abbey church of Westminster from being further overcrowded with monuments and tombs, the Society of Antiquaries regards with great satisfaction the proposal to add to the existing buildings a chapel, in due subordination to the main fabric, and at the same time so closely connected with it as to preserve the continuity of that national sentiment towards the Abbey, which is associated solely with the church and its subordinate chapels, and cannot be transferred to any other building; that the society would respectfully urge the dean and chapter of Westminster to use all their efforts to preserve every part of the ancient buildings in their charge from destruction and unnecessary restoration."

THE STAGE.

STAGE NOTES.

THIS day week is fixed for the withdrawal of "Mamma" from the Court Theatre; and Mr. and Mrs. Kendal will thereafter appear in Mr. Pinero's new play, "The Weaker Sex," which they have already been performing in the country.

WE shall next week be able to give some account of "Now-a-Days"—produced by Mr. Wilson Barrett, at the Princess's, on Thursday afternoon.

THE Shakspere Reading Society, which numbers some two or three hundred persons, gave their annual semi-public entertainment on Wednesday week, in the theatre of the London Institution. "Twelfth Night" had been rehearsed, and was then interpreted very carefully under the direction of Mr. William Poel, who had of course selected from the ranks of the society appropriate readers for most of the parts in the comedy, but had, as regards one or two of them, gone outside the roll of members, that the performance might be the more fitting. The thing was really extremely well done. Mr. Rawson Buckley, as Orsino, showed himself possessed of certain of the best qualities of a *jeune premier*. Mr. Stalman was a good Antonio; Mr. Blagrove gave proof of his versatility in the part of the sea captain; there was general approbation for Mr. Murray, Mr. Jennings, and Mr. Leonard Howard, as Sir Toby, Sir Andrew Aguecheek, and Malvolio. They were in truth both funny and discreet. Miss Florence Bourne, as Viola, made it evident that she had some gifts of nature — among them what the French call "le tempérament" —while the well-practised lady who elected to be described in the bill of the play as Miss Hannah Hall brought no small measure of art, no little delicacy in the management of her means, to her admirable reading of Olivia—a character apt sometimes to be a little shunted. The performance, instead of being dull, as readings not seldom are, was a treat; and we are pleased to render tribute to the ability of the performers, and to the skill with which their work was organised and directed by Mr. Poel.

MUSIC.

CÉSAR CUI.

Cesar Cui. Esquisse critique par la Contesse de Mercy-Argenteau. (Paris: Fischbacher.) Who is C. Cui? is a question that not a few musicians in this country would ask on reading the title of this book. Among modern Russian composers he holds a distinguished place, and our author, indeed, places him at the head of the "new school." Unless our memory deceive us, Rubinstein played one of his pieces at his Russian recital, but apart from this we do not remember to have seen his name in any concert programme.

Antoine Cui, father of the composer, a French soldier in Napoleon's army, was wounded at Smolensk in 1812, and on recovery settled at Wilna, where he married Julie Gucewicz, "de petite noblesse lithuanienne." César Cui was born in 1835, and at the age of fifteen was sent to St. Petersburg to study engineering. He soon distinguished himself in his profession, and at this moment he is major-general and professor at three military academies in St. Petersburg. But he was, from early youth, passionately fond of music, and in 1864 he began to write articles in various Russian and French papers. One of his chief aims was to make known the works of contemporary musicians, and especially those of his own countrymen. As a specimen of his writing some of his articles are given—notably one on Weber's "Freyschütz." From a symphonic point of view Cui does not find the themes sufficiently developed; but as an opera-overture he is perfectly satisfied with it. A somewhat curious criticism—to find fault with a piece for not satisfying certain conditions which the composer had not in view when he wrote it. In another article the Russian critic exposes, with no little humour, the exclusiveness of the St. Petersburg Conservatorium. In a third he attacks the composer Serow, editor of *Musique et Théâtre*. Serow declared that the best way of judging musical works was to listen to them with the composer's ears. Extremely difficult, says Cui, unless M. Serow, in addition to his paper, sets up a manufactory of musico-historic ears; then one could go to the play with a set of ears in one's pocket, and enjoy alike the "Calife de Bagdad," "Tancrède," and "Euryanthe." In a light article on Italian opera he tells us how he admires the constancy, the patience of MM. les abonnés.

"In early life, amid the roses of love, they listen to 'Trovatore.' In ripe age, amid family cares and business worries, they still listen to 'Trovatore.' At the close of life, their hair powdered with the snow of years, they still listen to 'Trovatore.'"

But it is time to turn to Cui, the composer. He has written music for orchestra, for violin, and 'cello, and for pianoforte. Besides all this, the catalogue includes ninety-eight romances and no less than four operas. Cui is a great admirer of Schumann. The theme of his Op. 1 (scherzo for orchestra) is made out of the musical letters in his wife's family name—clearly an imitation of Schumann's Op. 1 and of the "Carneval." Cui's Op. 2 is entitled "Scherzo à la Schumann." The suite for orchestra (Op. 38), quite a recent work, is mentioned in terms of high praise. Among the pianoforte works are "Douze Miniatures" (Op. 28), and "Six Miniatures" (Op. 39), to which Mdme. Argenteau does full justice. They are, in fact, charming little pieces. So far as we are acquainted with Cui's pianoforte music, we agree generally with the criticisms expressed. It is quite evident that the composer has a horror of the commonplace. This leads him at times into extravagance, especially in the matter of harmony. One feels that certain effects have been sought after. The same thing might indeed be said of Grieg, only that, in his case, the peculiar harmonies and rhythms seem to come more from within than from without. Mdme. Argenteau is constantly referring to Cui's ingenuity, delicacy, and refinement; and in noticing some of his vocal works, she even goes so far as to speak of "recherche et exagération." This, we venture to think, is

Digitized by Google

Cui's weak point. We must pass over the romances, and say something about the operas. As already stated, there are four. We can express no personal opinion, but it may be of interest to musicians to learn something of what is said about them. "Le Prisonnier de Caucase" is an early work. It dates from 1857, but an act was added in 1881. Mdme. Argenteau can scarcely find expressions strong enough to show her admiration for the added portion. "Le Fils du Mandarin," a light and lively opera, is "un des plus gentils opéras comiques en existence." "William Ratcliff," based on Heine's drama of that name, is of much greater importance than either of the previous two. Cui had for many years meditated on form and on the true style of dramatic music. Of course he was acquainted with Wagner's musical dramas, but the important rôle played by the orchestra in them was not to his taste. He renounces none of the existing forms, demanding only that each shall be introduced at a suitable moment. Wagner's music, with rare exceptions, he finds heavy and monotonous, and unvocal. Cui has only tried to abolish the inconsistencies and absurdities of Italian opera. He will not take Wagner as model. This is quite reasonable, and in this the Russian composer shows his independence; but his biographer, in her enthusiasm for Cui and the new Russian school, misrepresents the Bayreuth master. The following statement, in reference to the *leitmotif*, makes us think that she cannot be well acquainted with "Tristan" and "Die Meistersinger."

"Chez Wagner, chaque idée, chaque héros, chaque objet est representé par un motif qui, à la réapparition du héros, de l'objet ou de l'idée, revient aussi, mais sans développement, presque sans aucune altération, et constitue un nouvel élément de monotonie."

Were this so, Wagner's works would indeed be monotonous. If only a quarter of what Mdme. Argenteau says about "William Ratcliff" be true, it must be an opera of great interest and originality. For her it is "un des plus beaux opéras qui existent." What, then, about "Angelo," the fourth opera, finished in 1876? It is described as "la plus belle et la plus parfaite" of his works. Immense prominence is given to recitative, but "récitatif melodieux," as Mdme. Argenteau pointedly remarks.

The musical public at St. Petersburg takes little notice of Cui, and, for the most part, he is abused by the press. But the composer consoles himself with the reflection that praise might mean decline of talent on his part.

J. S. SHEDLOCK.

RECENT CONCERTS.

MR. AND MRS. HENSCHEL gave their second and last vocal recital at Prince's Hall on Friday, February 22. The programme consisted entirely of Mr. Henschel's own music—songs, duets, and the *Serbisches Liederspiel* performed several times at the Popular Concerts. Mr. Henschel is an accomplished musician: he can write a simple melody or construct a skilful canon, and his compositions, generally, show much talent. But variety is pleasing. The interpretation of the various items was, however, excellent—especially the songs sung by Mrs. Henschel. The public go, we imagine, chiefly to hear attractive singing; hence there was a large and enthusiastic audience.

February 23 was the anniversary of Handel's birthday, so the Crystal Palace authorities commemorated the event by giving the Overture to "Saul," one of the finest of the composer's efforts in that particular branch. The chief event of the afternoon was, however, the first performance of Dr. Stanford's new Symphony (No. 4) in F major (Op. 31). This work was originally produced by the composer at a concert given by him, at Berlin, on January 14 last. It bears the following superscription:

"Thro' Youth to Strife
Thro' Death to Life";

and from this one naturally concludes that the music rests, as the saying goes, on a poetic basis. The poetic pedestal may, however, for the moment, be ignored; for the various movements have meaning quite apart from the pictures existing in the composer's mind during the period of gestation. The opening Allegro is full of vigour, and the various sections are well balanced; but it appeals chiefly to the intellect. The Intermezzo is a delightful movement, in the first section of which Dr. Stanford has made use of the Entr'acte in his "Oedipus Rex" music. In the Andante the principal theme is flowing and passionate. The sprightly Finale in rondo-form effectively concludes the work. The performance was exceedingly good, and the applause was acknowledged by the composer from the gallery. Dr. Stanford has fully maintained his past reputation, but more than this would, we imagine, be false praise. Miss Fanny Davies played, in her best manner, a somewhat dry Concerto by Reinecke, and Fräulein Fullinger was heard to great advantage in Beethoven's "Ah, Perfido."

Little Otto Hegner gave his third and last pianoforte Recital on Monday. The programme was not so interesting as those of the first two Recitals, but the boy's playing was finer than ever. His reading of Chopin's not particularly attractive Rondo (Op. 16) was remarkable for energy, brilliancy, and finish. The Chopin-Liszt pieces were given with marvellous delicacy, and Rubinstein's difficult Valse Caprice was dashed off quite *à la* Rubinstein.

Grieg and his wife met with an enthusiastic reception at the last Saturday Popular Concert. On the following Monday evening they appeared for the second time, and the hall was again crowded. The composer-pianist has a sympathetic touch, and moreover plays his own music to perfection. Hence the three trifles which he gave were most acceptable. The public tried to extort a fourth, but was not successful. Mrs. Grieg sings her husband's charming songs with feeling and intelligence, and thus amply atones for any shortcomings, whether in the strength or quality of her voice. The delightful Sonata in F (Op. 8) interpreted by the composer and Mdme. Néruda gave, of course, full satisfaction. The programme included Dvorák's interesting Quartet in E flat (Op. 51) and Beethoven's Trio for strings in G (Op. 9, No. 2). Mr. and Mrs. Grieg make their third and last appearance at these concerts next Saturday afternoon.

On Tuesday evening at the Novello Concert, at St. James's Hall, Dr. Mackenzie's "The Dream of Jubal" was performed for the first time in London. This poem with music was composed for the Liverpool Philharmonic Society, and produced there on February 5. The book has been written by Mr. Joseph Bennett, who has now for the second time furnished Dr. Mackenzie with material calculated to call forth his best powers. The form of the libretto is original. Jubal, "the father of all such as handle the harp and pipe," dreams a dream. An angel reveals to him, in a series of tone-pictures, the after-development of his art. First comes a "Gloria in Excelsis," an elaborate and well-written movement for soli and chorus. The opening theme recalls the "Gloria" in Beethoven's Mass in D. In tonality and in many of the harmonic progressions there is a strong archaic flavour. Next a spirited triumphal march and chorus, and after that a tenor solo with chorus, "The Song of the Sickle," a graceful *Volkslied*. A fine funeral march is specially noticeable for its major section, in which the voices take part. A short and pleasing duet for soprano and tenor is the last dream-picture. These instrumental and vocal pieces are connected by a recitation with running orchestral accompaniment, such as we find in Mendelssohn's "Antigone," only of much more importance. When Jubal awakes he calls on his children to "invoke, with sounding praise, this holy art." This concluding chorus contains some of the composer's best writing, although the actual close is tame. It ends with a theme from the "Hallelujah" chorus. This theme has been already introduced in the opening scene, with a footnote indicating the source whence it was taken. Dr. Mackenzie may be allowed a fancy of this kind, but we hope he will not find imitators. It seems better to borrow other people's ideas unconsciously. We have spoken of the form of the libretto; we ought also to notice the elegant and poetical diction of many of the lines. The work was conducted by the composer, who was much applauded at the close. Besides this several of the numbers were well received, though, of course, much of the applause after Miss Macintyre's solo—"The Lord is good," Mr. Lloyd's "Sickle" song, and the duet was meant for the vocalists. The lady sang with feeling and fervour. Miss L. Neal and Mr. A. Black rendered effective aid. The recitation was spoken by Mr. Charles Fry in a quiet yet effective manner. The choir sang with energy. The "Jubal" was preceded by M. Saint-Saens's Nineteenth Psalm, in which Miss L. Lehmann and Mr. Lloyd were the principal vocalists.

Mr. Henschel gave his last concert on Wednesday afternoon. The programme included Mendelssohn's "First Walpurgis Night" and the Choral Symphony. The choir was composed of over 160 members of the Leeds Choir, and probably no finer body of voices has ever been heard in St. James's Hall. In the first work the famous "Come with torches" was given with surprising dash and brilliancy. We mention this as one of the special features, but all the choruses were magnificently sung. The soloists were Miss Lena Little, and Messrs. Harley, Henschel, and Heinrich. Mr. A. Broughton, conductor of the Leeds Philharmonic Choir, wielded the *bâton*; and at the close he received a well-deserved ovation. Mr. Henschel conducted the Beethoven Symphony. The instrumental movements were exceedingly well rendered. It has often been asserted that in the second part of this work the composer disregarded the sustaining power and compass of human voices. The Leeds choristers, if this be true, must then be superhuman, for they are able to do justice to the master's choral music. It was, indeed, a grand vocal display. The voices are not only strong, but of sweet sympathetic quality. The body of tone is as remarkable in the quiet as in the loud passages. The soloists were Miss Fillunger, Miss Lena Little, and Messrs. Harley and Heinrich. The first named sang with much power. The hall was crowded. Mr. Henschel certainly deserves the thanks of all who were present for this great treat.

MUSIC NOTES.

AT the next meeting of the Wagner Society—to be held at Trinity College, Mandeville Place, on Friday, March 15—Mr. W. Ashton Ellis will deliver a lecture on "The Wagner-Liszt Correspondence."

MR. CHARLES JOHN HALL'S exercise for the degree of Doctor of Music was performed in the theatre of the London University on Saturday afternoon, February 23. The Cantata, entitled "Dante's Vision," is written for solo voices, chorus, and orchestra.

LITERATURE.

Essays. By Mark Pattison. In 2 vols. (Oxford: Clarendon Press.)

THESE essays are a complete vindication of their distinguished author. It used to be the fashion to pity or to blame him for not having done more, to excuse him because his youth was unhappy, and his middle life unlucky; but no one who reads these essays will believe that ill-luck was needed to make him a pessimist. It is hard for pessimists to do their best, and if Mark Pattison had been as hopeful as Dr. Pusey he would still have gathered much more than he was able to impart. All the more interesting of his essays were, like the famous essay on the "Tendencies of Religious Thought," in the nature of introductions to inquiries which neither he nor anyone else was in a position to undertake. The writer is more occupied in finding and showing the right point of view than in imparting knowledge. He is full of stimulating *aperçus*, but it lay in the nature of the subject that these should be sometimes inconsistent and sometimes obsolete. With such a method a fastidious writer was likely to give us articles rather than books—lives of scholars rather than a history of scholarship—even if he could have restrained his curiosity and brought all his reading to bear on a subject that could be mastered.

He said himself, *apropos* of the intellectual vigour of Warburton, in whom he could find little else to praise:

"The causes which concur to break down vigour in a writer are so many that before the thought comes to the birth it has mostly lost all the raciness of the soil from which it springs. Of these causes, classical education and a nice and conscientious sense of truth are among the more powerful. He who can set at nought the traditions of taste, and take up an opinion irrespective of the facts, can employ the whole energies of his mind in giving momentum to the view he happens to have espoused."

This is a hard saying, and what makes it harder is that self-distrust and self-restraint have no reward. They do not give a single eye the happy privilege of seeing the right facts in the right order, which belongs to many who trust their sympathies and take no visible pains to be impartial and disinterested. Few have taken such pains to this end as the the late Rector of Lincoln, and yet wherever he turns the spectre of the Catholic reaction makes his way dark and slippery. Certainly the Congregation of the Index was a serious obstacle to learning, but the counter-Reformation is not guilty of killing the Renaissance, nor of the decline of Italy between Leo X. and Urban VIII. The decline of Germany between Reuchlin and Chemnitz was equally marked, and, as Mr. Gardiner has observed, had declared itself unmistakably before the Thirty Years' War began. The Renaissance might have been more fruitful if Erasmus had been strong enough to suppress Luther, who would have been too much for the university of Cologne, even if that venerable institution had not discredited itself in advance by the futile quarrel with Reuchlin, in which all the hierarchy were on his side. This quarrel is described in a paper on the *Litterae Obscurorum Virorum*, headed "The Antecedents of the Reformation," which we are always assured was somehow determined by the Renaissance. This is about as true or as false as the theory that the change in literary fashions in England, which set in at the end of last century, was determined by the French Revolution. In both cases a change in the *milieu* emancipated, magnified, and, it may be, transformed a movement which was already in progress. But though we have a hint of this in phrases like "the godless orthodoxy of the fifteenth century," Mark Pattison preferred in general to explain the Reformation by the state of knowledge or opinion—anything rather than justification by faith. The assumption that knowledge is the paramount factor in religious evolution leads to the often-repeated statement that at some time in the sixteenth century the Roman Church broke once for all with knowledge, and allied herself with and cast in her lot with the ignorant and powerful multitude. The counter-Reformation was not the work of demagogues, but of men who preferred institutions to majorities, and took much honest and not unsuccessful pains to assimilate new knowledge. After all, Bellarmine understood the fathers better than Jewell, and Petau than Bull. It was love of freedom rather than love of truth which made it impossible for Scaliger to follow Lipsius. He would not have been compelled to believe that the Divine Names and the Celestial Hierarchy were written by a convert of St. Paul's, but he would not in his lifetime have been permitted to disprove it publicly. It is the same in little things and great. "It was impossible for Scaliger to be a Catholic. His criticism was to him an instrument of truth." "Pope had a Catholic education and wanted rectitude and openness" That is the explanation of the shabby series of tricks he played to get his letters printed in his lifetime. Would Fleury or Flechier have judged the tricks more leniently than Sherlock or Waterland—or Mark Pattison, who takes a much more reasonable and charitable view of Pope's delinquencies than Mr. Elwin who laboriously detected them? Again, Huet spent a good deal of his later life in pottering over an argument in favour of philosophic doubt, as if it would be a gain to orthodoxy that even common-sense had to be taken on faith In fact, the posthumous publication of his views shocked the orthodox all the same. We are told that Huet was a sincere instrument of some deep design to desolate the territory of philosophy, which it was necessary to abandon, because the Cartesians were gaining ground on the traditionalists, who on some topics argued better. Apart from this, this sketch of Huet is perhaps the most genial and sympathetic in Mr. Pattison's gallery of scholars. All his portraits are brilliant, and all are tantalising; for the author is continually trying to convey an estimate of works with which his readers are unfamiliar, while he cannot make room to describe them. We learn to appreciate Scaliger's great feat of restoring the Chronicle of Eusebius, but we fail to learn why Wolf's *Prolegomena* were epoch-making, or what they contained which Heyne might not have anticipated We learn that Huet's *Demonstratio Evangelica* was the book of evidences in its day, but not what it was like compared with other books of evidences. The argument of the Divine Legation is only discussed obliquely, as reflecting the "political" temper of its author and his time. Though overloaded and overstated, that argument is really ingenious and important: all lawgivers and theologians who have been in earnest about morals have been emphatic in proportion to their earnestness about the life to come—except in ancient Israel. Since Warburton wrote, the ancient religion of India has been brought to light, and the discovery tells in his favour. Buddha seems to have wished to dispense with heaven: even he did not attempt to dispense with hell. The traditional illustration of the length of eternity is improved from one of his most authentic utterances. There were two reasons which may have made Mark Pattison unjust to Warburton: he was too spiritual (in a grave, austere way of his own) to see that other-worldliness is the nearest approach the natural man can make to spirituality; he was too subtle, too persistently bent upon realising and testing, to understand "the form of sound words" to plain people. One doubts whether he—any more than Warburton—had access to *the* Holiest; but he waited long between the porch and the altar straining dim eyes for a glimpse of the glory behind the veil, while Warburton contentedly went his rounds outside with a grievous crabtree cudgel for the benefit of all whom he suspected of loosening the stakes or fraying the cords of the tabernacle.

There is a curious contrast between Mark Pattison's treatment of Warburton and his treatment of Buckle. If Gibbon called Warburton learned it was by way of irony; but Buckle is called learned by Mr. Pattison himself, in an essay where some most amazing remarks about a certain king "Gudisthes" and another king "Alaska" are quoted at length. "Gudisthes," one guesses must be the blameless king of the *Mahabharata*; but who is "Alaska"? Buckle's reading, though vast and carefully tabulated, was as undisciplined as Warburton's. Both were self-taught, both had collected huge masses of secondhand knowledge: neither was in a position to follow its latest developments. The essay on Buckle, which was written in 1857, is extremely able and distinctly crude. Buckle's ineffectual pretension to substitute a series of deductions from social science for ordinary history is exposed with quiet mastery; but his caricature of the "sceptical theory of arbitrary interposition," which is quite incompatible with the orthodox doctrine of the Divine Eternity, is accepted as if neither St. Augustine nor Babbage had written. The only alternatives entertained are that everything is determined by fixed laws, or else that the arbitrary momentary action of God or man makes everything incalculable; and

Buckle is praised for assuming the former. Mark Pattison follows him without demur in his attack on the claims of governments, religion, or morals to influence progress; but he believes that he overstates the influence of knowledge. The criticism depends partly upon doubtful theories of stationary societies, to which the correlation of knowledge and progress is supposed to be wholly inapplicable, but chiefly on the assumption that power and passion are always ready to combine against knowledge, and when they combine are irresistible. For proof we are referred to the establishment of the Second Empire, and the contrast between the state of Italy in the fifteenth century and in the nineteenth. The establishment of the Second Empire was really a victory of financiers over journalists, mostly ignorant; and the economical decline in Italy would not have been arrested if native dynasties had continued to rule at Milan and Naples as well as at Florence. As to the supposed influence of literature on progress, we are told "The monks were all along in possession of the literature of Greece and Rome, but they could not use it. It was pitched at too high a level for them, and they preferred the *Legenda Aurea*." This may be true of the monks of the fifteenth century. In the days of Alcuin, and again in the days of Lanfranc, the monks took their full share in the revival of humanism; and they are the section of the educated world who are not to blame because, from the days of Abelard to the days of Owen, the thorns of dialectic sprang up with the good seed and choked it. If *questiones quodlibitates* displaced the classics, and the Golden Legend displaced the Fathers, we have to thank the Friars, who might have been plausibly accused of throwing themselves upon the philosophical movement of their day to strangle it, as the Jesuits threw themselves upon the literary movement of the Renaissance.

Such suggestions are less edifying and not more instructive than the picture of the discreet activity of the Church in Merovingian times, which forms the first part of the early essay on St. Gregory of Tours. The second part is less suggestive. It is a paraphrase of St. Gregory's version of the deposition of St. Praelectatus. We have not Chilperic's. St. Gregory, for his own time, is as good an authority as the best French memoirs: he is hardly better, and we can check them. As we cannot check St. Gregory, historians are thankful to take all his statements for granted.

There is less excuse for one-sidedness in a controversial article on the Calas case. We learn that the elder Calas had not a fair trial, that the court admitted much worthless hearsay evidence against him; but we do not learn what the whole weight of the case against him was. We learn instead that he was condemned at Toulouse because there public opinion ran against him, and his memory was rehabilitated at Paris because there Voltaire succeeded in turning public opinion the other way, and that it was becoming fashionable when M. Coquerel wrote to trust the Parliament of Toulouse against Voltaire.

The essay on Calvin at Geneva, which appeared in the *Westminster Review* for 1855, is a remarkable contrast to the essay on Buckle which also appeared there. One exalts the personal ethical element in history as much as the other annihilates it. The common ground of both is the impotence of culture.

"The educated man of our day is paralysed by this fastidious intellectualism which disdains the littlenesses of ordinary life. . . . Refined knowledge is entrenching itself in literature; but literature is becoming less and less powerful in its action on society as the element of will becomes more palpably deficient in it."

Such insight may excuse a good many paradoxes. Calvin's "great merit lies in his comparative neglect of dogma." He was the one Reformer who had a coherent doctrine. "In the suppression of the liberties of Geneva was sown the seed of liberty in Europe." It appears from the essay that "the suppression of the liberties of Geneva" simply meant that the majority enforced the standard of propriety which they permanently preferred and approved upon the small upper class who disliked it without disapproving it. Holland, certainly, did more than Geneva for the liberties of Europe; and there they found the language of the Apocalypse on Babylon too weak to express their disgust at the discipline of Geneva which, no doubt, was the great work of Calvin. When Bishop Wilberforce, more indifferent to dogma then Calvin, tried to silence controversy by the din of practical work at the first Oxford Church Congress, Mark Pattison trembled for the future of learning in the Church of England. His terrors were as unreal as his picture of the past. "It is not the authority of the existing Church which is thrown off in the Protestant system It was the authoritative decisions of a past generation of churchmen which the existing Church claimed to examine." This omits one essential fact. Luther and his party claimed to be "the existing Church," with no better right than the Jacobins claimed to be the sovereign people. When England separated itself, in the sixteenth century, from Rome, we claimed, as a National Church, the right to repudiate its jurisdiction, to remodel its discipline, and to rescind a portion of its doctrine. To talk of what "we as a National Church" claimed to do is pure mythology. The crown, having remodelled the temporal position of the clergy to its mind, set a small and unpopular section of them who were under foreign influence to remodel doctrine and worship (under royal supervision) as they judged edifying and safe. There are better things in the essay than this:

"Round the names of Pearson, Bull, Hammond, Stillingfleet, and the rest of the Caroline divines, gathers a faint lunar reflection of the noonday glory which surrounds the majestic edifice of the Catholic theology of the middle ages. The Anglican scholars appeared to have re-opened for Christendom the long-lost records of its early faith and discipline . . . But this hopeful beginning led to little or no substantial results. Like fruit in a wet autumn, learning in our Church promised well at first, but has hung on the tree ever since still immature."

This may be onesided, but it is not groundless, though Anglican orthodoxy is, perhaps, less purely accidental and insular than the critic implies. Perhaps, as theology in Germany has never ceased to be a *Brod Studium*, Mr. Pattison may have been right in treating the court favour of the hyper-Lutheran orthodox as a serious danger to the progress of knowledge, but one misses all reference to Old Testament criticism and anything like an adequate survey of the state of the *mêlée* when Baur struck into it. Now one is tempted to ask if the Tübingen school and the whole subject are not treated a little too solemnly. There is a good deal to suggest a suspicion that German criticism of sacred antiquities has been on the whole a corrupt following of German criticism of secular antiquities. Ewald's history of Israel is rather too like a parody of Niebuhr's history of Rome; Baur's history of doctrine too like a parody of Hegel's history of philosophy.

G. A. Simcox.

Love's Widowhood, and Other Poems. By Alfred Austin. (Macmillan.)

If in a volume of miscellaneous poems the changes of mood and the variety of subject multiply the chances of securing that sympathy which the poet craves, they also entail the disadvantage that no individual reader is likely to possess sufficient suppleness of imagination, or sensitiveness of sentiment, or range of experience to enable him to adapt himself with due alertness to all these changes. Mr. Austin's new volume appears to me to occupy this position; and it is not improbably owing to some such defect of faculty or temperament that, in spite of its many beauties of thought and phrase, "Love's Widowhood" fails to reach one with effectual appeal. The theme is love in autumn—the autumn of the heart as of the year. The emotion is in tone and colour with the season—deeply and thrillingly tender rather than passionate, though the memory of passion occasionally flashes through the utterances of that "Only She," who, when in years gone by her affection was flouted as mercenary calculation, kept her pledge alike to mother and son—"gave what he asked and what she banned withheld," "scorned all bond save love's unwritten troth," and now led a life of patient and beautiful widowhood, bereft of both husband and child. The "ethical situation" is novel to poetry, and indeed, so far as I am aware, even to fiction; but notwithstanding the delicacy of treatment, it touches no responsive chord. The emotional experiences of the lover are needed to preclude the cold criticism of the casuist. And yet who will not appreciate the fine feeling of these stanzas:

"Dead? Is he dead? how could he die, or be
Other than living unto love whose breath
Defends whate'er it breathes upon from death?
Therefore so long as *I* live, so must he,
Warmed by my warmth and fed by it perpetually.

"Change? Did he change? How could he change, or lose
The glory love once rayed around his hair?
The years have gone, the halo still is there.
There is no art like Love's, for it imbues
Its forms with lasting light and never-fading hues.

"Why doth he come not? Wherefore should he come,
Who never from my side can go away?
His is the first face seen when dawns the day,
His the voice heard when birds sing or bees hum,
And his the presence felt when night is dark and dumb."

The setting of the story is marked by a reserved grace and suggestiveness, for here

Mr. Austin produces his effects by mere hints and indications. The form of verse, resembling a fragment of a Spenserian stanza, translates into musical modulations the "pensive patience in the air" and the sad-sweet colour of the season. In a line he gives us a picture of the glad harvest fields with their sheaves—

"And tawny tents of peace stood dotted o'er the ground;"

in three a lovely glimpse of an orchard scene—

"The ruddy apples bend the branches down,
Like children tugging at their mother's gown.
There are all colours, russet, red, and gold."

This charming child-group is matched by a vignette, equally unexpected and fairylike, in the delightful "Dedication to Lady Windsor"—

"Where vines, just newly burgeoned, link
Their hands to join the dance of Spring,
Green lizards glisten from cleft and chink,
And almond blossoms, rosy pink,
Cluster and perch, ere taking wing."

Then there is a vision of the full harvest moon rising at sunset—

"Thrice thus it came, *nor later nor more soon*,
And thrice I hailed its disc, and begged of it a boon."

The statement I have italicised is, of course, not absolutely accurate; but who in these matters would prefer the chronometer to the "dandelion's clock"? What I wish to note is how the poet cannot merely indicate but paint in full one of the loveliest effects in nature; for surely this is the same moon, though younger by a few days, as that which lights up the following sonnet—one of the most exquisite things in the book:

"When acorns fall, and swallows troop for flight,
And hope matured slow mellows to regret,
And Autumn, pressed by Winter for his debt,
Drops leaf on leaf, till she be beggared quite;
Should then the crescent moon's unselfish light
Gleam up the sky, just as the sun doth set,
Her brightening gaze, though day and dark have met,
Prolongs the gloaming, and retards the night.
So, fair young life, new risen upon mine,
Just as it owns the edict of decay,
And Fancy's fires should pale and pass away,
My menaced glory takes a glow from thine,
And, in the deepening sundown of my day,
Thou with thy dawn delayest my decline."

I can scarcely forgive Mr. Austin, however, for spoiling the sylvan child picture I have quoted by completing the stanza with such a closing line as the following—

"There are all colours, russet, red, and gold,
Pippins of every sort, *and codlins manifold*."

And here let me make an end of fault-finding by merely referring to the manner in which Mr. Austin strains his metre by what appears to me to be impossible elisions:

"When dykes are silvery runnels that skip and sing."

"That scatters itself unbidden and unbought."

"The frown that like a shadow still follows wrong."

"Shortly I heard her voice. 'Are you there?' she said."

Onomatopœia may justify the first instance, but the last is certainly out of keeping with the dignity of the context. I feel the same objection to the verse in the bridal scene on p. 46—

"The threshold of the village church we crossed,
And stood with downcast eyes *and bending backs*."

Finally, can jackdaws be said to "browse" (p. 39)? These are perhaps trivial blemishes, but they mar great beauties.

Tinged with the same autumnal sentiment as "Love's Widowhood" is "A Dialogue at Fiesole"—a piece of blank verse, chequered with playful fancy and grave thought as with sun and shadow, and relieved with sweet and simple lyric interludes, more than one of which Suckling or Carew might have been glad to claim as his own. But, indeed, the September mood runs through many of the poems, and its prevalence is a little curious. Days come to all men—to poets, perhaps, more often than others—when one's very heart appears to have grown grey, and the soul is depressed with the burthen of its pre-natal immortality; but if Mr. Austin suspects that his genius has begun to show signs of the sere and yellow leaf, his misgiving is certainly not confirmed by these pages. On the contrary, what strikes me as the most telling, the most vividly poetic and artistically-finished thing in the whole volume is the ballad entitled, "In the Month when sings the Cuckoo." It is a very revel of colour and sound, of human passion, and of the sensuous magic of the sylvan world.

"The popinjay mates and the lapwing woos;
Cuckoo!
In the lane is a footstep. I wonder whose?
Cuckoo, cuckoo!
How sweet are low whispers! and sweet, so sweet,
When the warm hands touch and the shy lips meet,
And sorrel and woodruff are round our feet,
In the month when sings the cuckoo!"

The conception is worked out in fine dramatic form; the music of the verse is irresistible.

"O, to lie once more in the long fresh grass,
Cuckoo!
And dream of the sounds and the scents that pass;
Cuckoo, cuckoo!
To savour the woodbine, surmise the dove,
With no roof save the far-off sky above,
And a curtain of kisses round couch of love,
While distantly called the cuckoo.
"But if now I slept, I should sleep to wake
To the sleepless pang and the dreamless ache,
To the wild babe blossom within my heart,
To the darkening terror and swelling smart,
To the searching look and the words apart,
And the hint of the tell-tale cuckoo."

The pity of it, one thinks; but the poet in his dramatic mood has no cue for pity. Maiden frailty is no concern of his. He is at one with the joyous cuckoo, with the ever youthful world, with the seething sap and the hot human blood, with the physical impulses of the irresponsible season. His but to fill the stage with the revelry and irony of nature.

"The kine are unmilked, and the cream unchurned,
Cuckoo!
The pillow unpressed, and the quilt unturned
Cuckoo, cuckoo!
'Twas easy to gibe at a beldame's fear
For the quick brief blush and the sidelong tear;
But if maids will gad in the youth of the year,
They should heed what says the cuckoo."

Cold comfort! And thus to the mocking refrain of the cuckoo we reach, through the old familiar stages, the tragic close of that love which loves not wisely, but too well:

"There are marks in the meadow laid up for hay,
Cuckoo!
And the tread of a foot where no foot should stray;
Cuckoo, cuckoo!
The banks of the pool are broken down
Where the water is quiet and deep and brown"—

Need the rest be told? Here, if anywhere, we have the glamour of inspiration. The incident is as old as society; but, take up the book, and in each stanza you will find that hall-mark of genius—the unexpected and the inevitable.

I have left myself no space to dwell on several other poems of which special note had been taken; but I have written to little purpose if I have not already indicated in sufficient measure the high quality of Mr. Austin's new volume. If I cannot think that it will materially add to, I am convinced it cannot detract from, the reputation of the author of *Prince Lucifer*—and that assuredly is no meagre praise.

William Canton.

Two Centuries of Irish History—1691-1870. With Introduction by James Bryce. (Kegan Paul, Trench, & Co.)

Were it merely for the sake of Mr. Bryce's brief but admirable prefatory remarks on the value of history as applied to politics, I should be tempted to regard this volume, edited with extreme care by Mr. Barry O'Brien, as by far the most important history of Ireland which the Home Rule agitation has as yet called into being. Few persons, indeed, are so well qualified as is Mr. Bryce to determine the exact limits of history as applied to practical politics. And at this time especially, when history is being appealed to as the touchstone of political systems, his remarks possess a peculiar value.

History, Mr. Bryce reminds us, does not repeat itself. Situations and conjunctions of phenomena do, indeed, recur again and again, similar in all appearance to one another, but under circumstances so entirely different as to render it impossible to argue with any degree of confidence from the one to the other. The real value of history to the statesman does not consist in furnishing him with a set of general maxims or recipes capable of being directly applied to the solution of any political problem, but in supplying him with the material or data necessary for a thorough comprehension of the problem itself. As to the proper policy to be pursued, or the right remedies to be adopted in any particular case, there will always remain ample room for difference of opinion. Home Rule, if I may thus point my remark, may, as a satisfactory solution of the Irish problem, still remain a disputed question; but having mastered the facts of Irish history, we shall become more diffident and more charitable than perhaps we are at present, both in judging the Irish people and in condemning one another's conclusions.

With this object in view it was wisely resolved to limit the scope of the book to the last two centuries, beginning with the treaty of Limerick in 1691, and concluding with the Land Act of 1870 and the formation of the Home Rule Association. For, in the present state of Irish historical research, to have proceeded further back would only have served to perplex the reader without casting any compensating light on the question under consideration. Moreover, with the surrender of Limerick, and the departure of Sarsfield and his swordmen, we enter upon an entirely new epoch in Irish history. The problem which for centuries had per-

Digitized by Google

plexed the brains of English statesmen had at last, to all appearance, been solved. Colonised by Englishmen and Scotchmen, Ireland seemed at last to have ceased to be Ireland and to have realised the dream of another England beyond the seas. For a hundred years, at any rate, the "English Interest" in Ireland was secure. Utterly prostrated by the terrible storm that had swept their island, deprived of their lands and outlawed on account of their religion, the Irish Catholics sank into a state of mere serfdom, dependent even for their very existence on the goodwill of their Protestant masters. For them the next century was a period of unmitigated misery and profound degradation, far worse in its moral effects even than the war that had preceded it. It is a painful chapter, and one does not wonder that it should still rankle in the breasts of Irishmen. But when Dr. Sullivan says that one of the great central facts of Irish history is that the colonists never wished the Catholics to become Protestants, just as in earlier times they did not wish them to become English, I feel compelled to protest against an inference which is as untrue as it is ungenerous. English legislation may have been mistaken, but to say that it was dishonest is an indictment wholly unwarranted by history and of a nature too serious to be overlooked. The Statute of Kilkenny, the reforms of Henry VIII. and St. Leger, the plantation schemes of Elizabeth and James I., the transportations and transplantations of Cromwell, just as much as the Penal Code and the Act of Union itself, were all directed to one point—the assimilation of Ireland in customs, laws, and religion to England. Nothing is more remarkable than the evident sincerity of the English Government and the good intentions of English statesmen in this respect, unless, indeed, it be the complete failure of their efforts. To reduce Ireland to "civility and good government" is the burden of every State document from the days of Henry VIII. down to the last Coercion Act. To maintain the opposite and to assert that "landgrabbing," in one form or another, has always been the mainspring of English legislation is wilfully to distort history.

Passing from this point, but still confining our attention to the Catholic peasantry, I could have wished that Dr. Sigerson, to whom has been allotted the period from the establishment of legislative independence to the Act of Union, had devoted greater space than he has done to a consideration of the tithe question. To overlook this point, or, rather, not sufficiently to emphasise it, is to overlook one of the most potent factors in recent Irish agitation. That agitation, whatever outward shape it may assume, is essentially a social revolution. And there is, in my opinion, no part of Grattan's political career that reflects greater credit on him as a man, and more clearly reveals his prescience as a statesman, than his attempt to secure an equitable modification of the tithe system, and to relieve the Catholic peasantry from a burden as iniquitous as it was grievous. The rejection of his plan (one of the gravest indictments that can be brought against the Irish Parliament) was attended with the most disastrous consequences; for it not only paved the way for rebellion and rendered possible the Act of Union, but developed an agrarian agitation in opposition to which all remedial legislation seems utterly futile.

Englishmen wonder why, after fifty years' concessions, Irishmen are not more loyal than they are. But men do not gather grapes of thorns or figs of thistles. Nevertheless, no one can read this book without feeling that some progress has been made, and that Ireland to-day is a happier country than ever it was before. Nay, could we see dispassionately, we might even recognise in the agitation of the hour cause for rejoicing; for agitation, though more dangerous to the ruling class, is infinitely more preferable than apathy and death. Humanly speaking, it was to O'Connell more than to any other cause that the great awakening of the Irish people from the degradation and apathy in which they had been steeped for more than a century was due. Protestant statesmen, like Grattan, had laboured much and done something to alleviate the lot of their Catholic fellow-subjects. Liberty of conscience had been conceded to them, and a certain amount of political power. The Emancipation Act of 1793 was, as FitzGibbon and Duigenan recognised and deplored, pregnant with the promise of future concessions. But the great mass of the people had looked on apathetically. They had declined to raise even the feeblest protest against the Act of Union, hating equally, as Lord Cornwallis said, both the Government and the Opposition. Each election as it came round saw them driven to the poll to vote for their landlords with as much indifference to the issues at stake as if they had been mere beasts of the field. It was O'Connell that first roused them from their lethargy, and taught them self-reliance. This was his great work—the formation of a healthy national sentiment. His strength, as Dr. Bridges truly says, lay in this—that "his faith in the national life of Ireland never failed." His mission was to create a nation. Against the iniquitous toleration of the Orange Society he never ceased to protest with impetuous violence; but he never confounded Protestants with Orangemen. His one object was Ireland.

"He does not," says an intelligent French observer, quoted by Dr. Bridges, "pretend to know anything beyond Ireland. He lends an eloquent voice to the sentiments, the passions, even the prejudices, of six millions of men. Hence his extreme popularity; hence also his numerous contradictions and inconsistencies. But his contradictions are natural, his inconsistencies patriotic. . . . O'Connell is of the people. He is a glass in which Ireland may see herself completely reflected, or rather he is Ireland himself."

The disfranchisement of the forty-shilling freeholders was a terrible catastrophe. But the movement originated by O'Connell did not die with him; and what Ireland lost in his days she has more than recovered by the Ballot Act of 1872 and the Reform Act of 1884. There is much in Irish agitation that is intensely distasteful, but it is only just to remember that it was the only resource left to those who shrunk from conspiracy or despaired of insurrection.

Turning for a moment or two from the governed to the governing class, it is easy to see that England's chief faults have throughout been those of ignorance and heedlessness. Ever since the day when the Treaty of Limerick humbled the native population in the dust, England has been content to maintain her authority in the island by means of a dominant caste. But of all the possible modes of governing a dependency, this, as Mr. Bryce remarks, seems to be about the worst:

"The operation of natural forces is interfered with, because revolution, the natural remedy in extreme cases of misgovernment, is prevented by the power of the superior country. The superior country remains ignorant of the facts and insensible of her responsibility. The dominant caste ceases to have patriotism, because it looks to the superior country for support and remains alienated from the mass of its fellow-subjects. It has even an interest in checking any progress which may threaten its own ascendency."

This is, indeed, just what happened in Ireland. Unable to control the great popular uprising born of French revolutionary ideas, profoundly contemptuous of all pretensions at national life apart from England, and sincerely afraid of their own position, FitzGibbon and the "Castle faction," as they were called, appealed to England and suppressed a movement which, properly directed, would have culminated in a peaceable and bloodless revolution. On this point no one could have expressed himself with greater emphasis than did Lord Cornwallis.

"Those," he wrote to his friend Major-General Ross, "who are called principal persons here are men who have been raised into consequence only by having the entire disposal of the patronage of the Crown in return for their undertaking the management of the country, because the Lords-Lieutenant were too idle or too incapable to manage it themselves. They are detested by everybody but their immediate followers, and have no influence but what is founded on the grossest corruption."

The same thing is observable subsequent to the Union, and simply because the Union was not as Cornwallis desired to make it—a union between the two nations—but merely a union between England on the one hand and the Protestant ascendency on the other. Instead of paving the way for peace and prosperity, as Unionist writers fondly hoped it would, the Act of Union only gave a fresh lease of power to the old Castle oligarchy. The evil consequences of this dual form of government are well described by Mr. Bryce:

"Had England," he says, "left administration and legislation entirely in the hands of the Ascendency, excluding them from the legislature of Britain, the administration would probably have been no worse, and a spirit of Irish patriotism, a sense of responsibility to the mass of the inhabitants and dread of their displeasure, such as seemed to be growing up in the last half of the preceding century, might have arisen to weld the Anglo-Irish and the native Irish into one people. It was the combination of dependency government with the government of a denationalised caste that proved so fatal during the first seventy years of this century, as during the first eighty of the century preceding."

The remarks I have ventured to make have been chiefly suggested by Mr. Bryce's thoughtful introduction. Of the book itself it is sufficient to say that, though there are points

Digitized by Google

in it quite open to dispute from an historical standpoint, it is nevertheless remarkable for the correctness of its facts and the impartiality of its judgments. Mr. O'Brien has carefully selected his writers, and their names are eminently calculated to obtain for it a respectful and attentive perusal from men of all shades of opinion.

R. Dunlop.

Stephen Hislop. By George Smith. (John Murray.)

In a miserable little Indian stream, a mere *nullah* at ordinary times, but swollen on the occasion by a sudden freshet, there perished five and twenty years ago, in darkness and without a soul at hand to aid, a very remarkable man. This was Stephen Hislop, pioneer missionary in Central India, the narrative of whose life and labours is now before us in Dr. Smith's most interesting memoir.

Born in 1817 at Duns, in Berwickshire, he left school (where he came out first in mathematics and classics) at the age of seventeen, for the University of Edinburgh, where he graduated with the highest honours in moral philosophy and Hebrew; and after attending a course of divinity at Glasgow, and working for a few years as a tutor, he was sent out to India at the close of 1844 by the foreign missions committee of the Free Church of Scotland as their first missionary at Nagpur. There he laboured unceasingly for nearly nineteen years, with the exception of sick leave home in 1859-60, until his tragic death brought his useful and active career to an abrupt and untimely end; and during this time he did so much, and of such a varied nature, that it is impossible to give more than a mere sketch of what he accomplished. Besides his labours as a devoted and successful missionary, he worked all the time at the geology, philology, botany, zoology, and archaeology of the Central Provinces, and to such good purpose that he became widely known in the world of science.

His missionary work lying chiefly among the Marathas of the province to which he had been sent, his first care, from the moment he set foot in Bombay, was to master their language, a preliminary difficulty that his characteristic energy overcame so rapidly that he was soon enabled to open a native school in the city of Nagpur. While his study of Marathi was progressing, he established a mission and school at Kampti for the Madras troops stationed there; and, although he never acquired a sufficient knowledge of either Telugu or Tamil to preach to the soldiers in their own language, he preached through an interpreter so effectively that he soon made numerous converts. His work among the Marathas was always attended with marked success. This was partly due to his own personal character—a singular mixture of gentleness and energy, kindness and firmness; partly to his patience, and the unwearied attention he could devote to any subject he had in hand; partly to his absolute mastery of the language; and greatly to his rich stores of scientific and general knowledge, by which he was enabled first to interest and attract, and then to guide the minds of his hearers. His influence over the natives was most extraordinary, and they repaid his efforts for them by the greatest affection and admiration.

In geology Mr. Hislop's name ranks very high, his work in this direction being only second in importance to that of his regular calling; while in botanical and zoological research he was scarcely less persevering and successful. He made a special study of the tertiary and mesozoic strata of the Central Provinces, and enriched the Bombay and Bengal Asiatic Societies and the Geological Society, not only with numerous papers for their *Transactions*, but also with magnificent collections of fossils for their museums. He had the enviable fortune of discovering the valuable coal beds of the Nagpur district, and of being the first to construct a geological map of the country—a work only accomplished after great labour and perseverance. He likewise made a careful study of the various soils of the province, and was thus enabled to render much assistance to the government when making the land settlement.

Mr. Hislop's contributions to philology were also most important. He was the first to reduce to writing the Gond language, which he studied with his usual energy at all spare moments, and for a grammar of which he was collecting materials at the time that he was so suddenly snatched away. He went much among the Gonds, and made careful notes of their manners and customs, traditions, songs, and art; many of which are given at length in the chapter of Dr. Smith's excellent memoir devoted to this primitive people. He also made a special study of the archaeology of the country; and it was, in fact, while on an expedition to investigate the stone-circles and mounds of the Nagpur district that he met with his untimely death. Neither should his services in another direction be forgotten; as it was greatly owing to his representations to influential friends at Calcutta that the unsatisfactory condition of civil affairs at Nagpur was superseded by the advent of Sir Richard Temple, whose vigorous administration soon put matters to rights in the Central Provinces.

At Christmas, 1862, the Bishop of Calcutta, who was on a tour of inspection through his diocese, and had reached Jabalpur, came on to Nagpur at the invitation of his old pupil, the Chief Commissioner, to visit him at his seat of government, and consecrate the beautiful new church just completed at Sitabaldi. The Free Church missionary and the Anglican prelate then met for the first and only time; and those who were present on the occasion well remember the interest shown by the bishop in the work of his fellow labourer, and their visit to his schools. Both met their deaths in the same terrible way; but the first was more fortunate than the other, as his remains were found and suitably interred at Nagpur, while those of the lamented Dr. Cotton were never recovered from the swollen Ganges.

A quarter of a century has elapsed since the fatal waters of the Krishna closed over Mr. Hislop's head; and, although many may be inclined to think that his biography has been too long delayed, none can regret that the work has been performed by such able hands.

M. Beazeley.

NEW NOVELS.

Masters of the World. By Mary A. M. Hoppus. In 3 vols. (Bentley.)

Chance or Fate? By Alice M. O'Hanlon. In 3 vols. (Chatto & Windus.)

A Strange Message. By Dora Russell. In 3 vols. (Sampson Low.)

John Newbold's Ordeal. By T. A. Pinkerton. In 2 vols. (Sonnenschein.)

Fitzgerald the Fenian. By J. D. Maginn. In 2 vols. (Chapman & Hall.)

Clement Ker. By George Fleming. (Bristol: Arrowsmith.)

Doubt. By J. S. Little. (Spencer Blackett.)

The classical novel is a kind of Loadstone Rock. Remote, little sought, and generally rather damaging to the seeker when found, we do not know that the great advance in minute archaeological knowledge since the example of it in England was set (almost, if not quite, for the first time) by Lockhart's *Valerius* has lessened any of the difficulties of the adventure. It has certainly increased one of them—the danger of overloading the narrative with local colour. Mrs. Marks, or Miss Hoppus—for the title-page provides a choice—has chosen the most difficult way; for she has indulged in a minuteness of detail which would do credit or discredit to the industrious Herr Ebers himself, who may have possibly suggested it. It is fair to say, however, that *Masters of the World* is a vigorous attempt at the probably impossible—much more vigorous, for instance, than the last book of the kind—the *Nearra* of a year or two ago—that we remember. The time selected is that of the "Calvus Nero" in his last days of bloodthirsty delirium, and the chief interest centres round the doomed house of the Pisos. The opening scene in the grotto of Pausilypum has a movement and business-like conduct which is very fairly maintained throughout; and even the historical foreknowledge of the actual catastrophe does not prevent the final chapters from keeping up a distinct interest in the question whether Domitian's fears or his fate will get the better. The inevitable Christian episode is also managed well; and the Greek slave Chione is a capital tragic heroine (not in the very least like Bulwer's), well contrasted with the Roman Domitia. Every now and then, of course, the archaeological maut gets aboon the narrative meal. "I took you back to my pulvinar," strikes us, we confess, as slightly ludicrous. Why not "He passed his manus over his heated frons," or "Come to my brachia, you fasciculus of deliciae"? This kind of Macaronic writing ends in the jargon of the Limousin scholar. Nor can we conceive why Mrs. Marks has joined the ranks of the strange persons who write "Vergil." "Vergilius," of course, everyone may write if he chooses; but "Vergil" is neither fish nor flesh, neither Latin nor English—a mere piece of bastard pedantry which a fourth-form usher at Soli might, *mutatis mutandis*, have been proud of. These things, however, will get themselves done in your classical novel; and it is Mrs. Marks's great merit that they never quite spoil the current of her story or the liveliness of her characters. To find a better book of

Digitized by Google

the kind (for *Marius the Epicurean* does not compete) we must go back to *Hypatia*, which certainly is a good deal better.

Novels have now become multiplied to such an extent that, like plays in the later days of the French eighteenth century, they almost necessarily, except in the hands of a writer of positive genius, reconstruct, puzzle-fashion, very much the same patterns out of very much the same pieces. There is, however, quite sufficient novelty about Miss O'Hanlon's *Chance or Fate?* so far as story goes, while the descriptions of two different parts of the world—the West of Ireland and the West Indies—are of quite unusual vividness. The relations of Kathleen Errington with her rather disreputable old father (to have called him old to his face would have been the fittest punishment for his numerous sins) are not very novel. The beginning suggests rather old tracks; but things improve considerably as the story goes on. Its central point—the blowing out to sea in a small yacht of two girls—is managed without too great improbability on the one hand, or too close copying of newspapers on the other, and gives good interest of mere incident. The "moral" interest turns on a different matter—the faithlessness of Kathleen's elder sister Elaine to a virtuous lover, and her taking up with a much lower kind of person. Altogether there is good matter in *Chance or Fate?* with plenty of complications not noticed yet, and everything well suited to assist the novel reader in "serenely arriving," as the poet says, at the end of the third volume; and what can readers ask for more in an ordinary way than that?

The virtues of what is, we believe, called in commercial English a "level sample" usually belong to Miss Dora Russell's books. If they are not often above themselves, they are still less often below; and this is no small merit. For our own private relaxation and delight we do not know that we should resort to them; but that is no argument in their disfavour. The manners in *A Strange Message* sometimes strike us as a little wanting in repose; and the constant repetition of "laughed Leonora," "scoffed Lady Bab," and so forth, is a little trying, not only as it reminds one of those about Mrs. Hominy, but as it is in itself an irritating mannerism. But these are not the things for which Miss Russell's readers go to her or avoid her. They go to her for a thick and slab mixture tossed up by no means without art, of bigamy or preparations for bigamy, of suspected murder, of accidents, of heroic forgiveness or fiendish punishment of enemies—in short, for a good bustle of the melodramatic kind. We hardly remember an instance in which Miss Russell has disappointed her patrons—certainly she has not here.

There is a certain amount of cleverness in *John Newbold's Ordeal*, but it is marred by many errors. The general idea of the love imbroglios between John Newbold (son of a rather unclerical archdeacon and supposed heir of a rich brewer and money-lender), Lady Emily Felsing (daughter of a ruined peer), Juliet Leigh (an heiress of more than millionaire attractions), Linda Newbold (John's sister), and other persons, is not amiss, and some of Mr. Pinkerton's smartnesses come off. Unfortunately some do not. "Just so might a well-practised peltast annoy and perhaps overcome a person armed with the most improved revolver, and quite convinced that slinging was out of date," appears a hopeless enigma till it suddenly occurs that Mr. Pinkerton possesses a private dictionary with entries in this form—"PELT, *v.*: To throw, hurl, sling; PELTAST, *n.*: One who pelts." The parson-and-lawn-tennis scenes suggest a following rather faithful than wise of Mr. Anthony Trollope and Mrs. Oliphant; and Lady Emily has such curious resemblances to, and at the same time such curious differences from, *the* Lady Emily (her of *Marriage*) that Mr. Pinkerton probably has not read Miss Ferrier. Biscoe the brewer is one of the laboured caricatures for which Dickens is only partially and indirectly responsible. Altogether *John Newbold's Ordeal* (is it too bad to suggest that even the title is rather dangerously reminiscent?) is not an incompetent book, but one which can hardly be called good. The author must "jock" less, or more easily, must talk less about his characters, or better, must remember less about other authors or to more purpose, before he can be fully commended.

Fitzgerald the Fenian bears no record of previous work on the title-page, and there is an unsophisticated air about the writing of it which more positively speaks it a first book. It is not by any means to be harshly spoken of, though the author has a good deal to learn. Despite its promising or threatening title, it will, as a political novel, probably please neither party in the great battle. For Mr. Maginn, while tender to Fenians, a protester against evictions, and not unfavourable to Home Rule in its earlier form, is dead against not only dynamite but Land League methods generally—thus being a kind of Laodicean. On the other hand, those whom the introduction of any politics in a novel bores will find a great deal too much of them here. It is an honest book, however; and more than one of the characters, though drawn by an unpractised hand, is not unlifelike But it is very ill-printed. "Louisa" is a pretty name, but "Lousia" is not; and any schoolboy will assure Mr. Maginn that "*delectus*" is by no means "dilectus."

It would appear that the public is experiencing, in the opinion of its caterers, the usual results of dram-drinking, for Messrs. Arrowsmith have started a series of two-shilling "shockers" ("equal to more than three small bottles"). We do not think much of *Clement Ker*. That person, who was a baronet and, of course, a villain, had two cousins to whom he was rather kind, and who regarded him with virtuous abhorrence. He was apt to lose his temper when tenants came and asked for remissions of rent and loans of money after luncheon—which is, indeed, a trial to poor humanity. He had a wife whom one of the cousins loved, and who loved one of the cousins. He had a "mire" in the Dartmoor sense on his estate, in which one of his ancestors had buried a murdered brother, and which nearly drowned one of the cousins; and in his mansion he had a Thing, which is very imperfectly described. All these are crimes, no doubt; but the more tangible offences which made Sir Clement Ker justly reprobated by the county are left very much in their native shadow. He was finished off, of course—whether by the Thing or not *non constat*; and one of the cousins had a stiff back for thirty years afterwards from having eavesdropped too long in a cramped posture.

Mr. Little's "dreadful" is a single dose, and rather a weak one. To suspect your wife and your friend, to sulk with both instead of having it out, and then to discover what Mr. Crosley discovered, must be rather humiliating; but it is not very interesting to read about. Besides, the tragic conclusion of the story is out of place; and an innocent, ladylike Mary Crosley would hardly have winked at such an entanglement, even though it were not technically immoral, between her guest and her maid as that which caused the trouble, if she had been not only as innocent but as ladylike as Mr. Little represents her.

GEORGE SAINTSBURY.

BOOKS OF TRAVEL.

The Last Voyage in the "Sunbeam." By the late Lady Brassey. Illustrated by R. T. Pritchett, and from Photographs. (Longmans.) The personal interest that attaches to this volume causes it to be rather sad reading. The melancholy close overshadows it from the first; and the brief jottings from the invalid's diary seem to be tinged with a presentiment. The early chapters relating to India are particularly meagre, though even here we find some of those bright descriptions of scenery and native life which made the original *Voyage of the "Sunbeam"* so deservedly popular. When Borneo is reached, the pen seems to be brightened by the novelty of the surroundings; and the circumnavigation of the Australian colonies reveals Lady Brassey's active sympathy with the people and the country, in the face of increasing ill-health. After this, Lord Brassey takes up the task, and records in plain, sailor-like language the incidents of the run home. The book is embellished by a large number of illustrations. Many of these are in the best style of English wood-engraving; but we do not greatly care for the full-page plates, printed in monotone at Nuremberg.

Powder, Spur, and Spear: a Sporting Medley. By J. Moray Brown. (Chapman & Hall.) Books of Indian sport generally resemble each other as one oak-leaf does its neighbour. They are sure to hold panther and tiger-shooting stories, pigsticking and regimental races, with many recitals of "first spear" and shells and bullets fired into "the brute" in vain. Mr. Brown, feeling, perhaps, that readers are now tolerably tired of these, the ordinary amusements of all Indian cantonments, has diversified his book with chapters on rabbit shooting and salmon fishing at home. "The Spectre Stag of Vizamah" is perhaps his best chapter, for it contains a well-written account of Kashmir scenery, and nothing is shot, the mighty stag escaping seemingly as if an animal of enchantment. Curiously enough the stalkers on many a Scotch moor can tell the same tales of phantom stags with enormous spread of antlers as does the shikari on the heights above the Jhelum. Mr. Brown's book will amuse an idle man for half-an-hour, but even he soon grows tired of spearing innocent bears. Books of Oriental sport should contain more natural history and less butchery. A manual of Indian sports, written on the lines of St. John's admirable books on Scottish sport, with a deep sympathy for the curious habits of the creatures shot, is yet to seek; but such a book would at

Digitized by Google

once command a large sale and bring its writer fame. It will be said that few men have leisure for making observations on Indian natural history; to which it may be fairly replied, "Then why write on it, and yet give the reader little but shooting and spearing?" Mr. Brown should have asked a classical friend to revise his proofs. *In puris naturibus* at p. 2 does not conciliate a critic; still less (p. 47) *necessitas non habet lex*; and of his English verses (p. 81) the less said the better. But paper, print, binding, and illustrations in *Powder, Spur, and Spear* are alike excellent.

Scottish Moors and Indian Jungles. By Capt. J. T. Newall. (Hurst & Blackett.) The sport which the author enjoyed among tigers, wild boars, and bears in Upper Sind affords pleasant reminiscences of shooting, but does not call for further remark. No ethnological notices or points of natural history, such as ordinarily diversify such narratives, are appended. The deerstalking on the moor of Scaliscro, in Lewis, which forms the first half of this book, possesses a peculiar interest for valetudinarians. Early in life the author was thrown from a horse and paralysed in the lower limbs. When many men would have sunk under this affliction, and few sportsmen would have cherished a hope of ever again pursuing their favourite recreation, Capt. Newall rose undauntedly to the occasion. He devised a kind of palanquin on which he was carried by four men, and thus was enabled not only to catch salmon, but even to stalk and shoot deer. Readers who enjoyed the wild scenery in which the "Princess of Thule" lived may care to have it limned carefully for them by Capt. Newall's pencil, and well described by his pen. There is a good deal of amusing gossip too in the Scotch chapters of this book on grouse, woodcock, salmon, and other denizens of the moors and rivers of the north, and much to delight all lovers of Scotland. These remarks will show that the Scotch half of this book is in our estimation preferable to the Indian portion. The sketches are characteristic reproductions of scenery, but the animals represented in them are on far too large a scale.

A Guide to Trinidad. By J. H. Collens. Second edition. (Elliot Stock.) Mr. Collens has written an excellent Guide to a most interesting place. Now that the voyage to the West Indies is becoming a favourite holiday, and the great beauty of the Lesser Antilles is better known, there is need of such guidance as may be obtained from this book. It not only serves as a Guide to Trinidad, but gives useful information as to what may be done from that island as a centre. In addition to the hints as to cost and mode of living, there is a valuable and interesting account of the life and customs of the labouring population, which in Trinidad, as in Demerara, includes a large proportion of Indian coolies. The public institutions and educational work are dealt with in detail, and the topographical and economic information is given very judiciously. Though the naturalist will not find much in this guide to interest him, it is odd to note that the author gives a short account of the fish-eating habits of certain bats, a discovery communicated for the first time to the Linnean Society as recently as last December. The plate of Trinidad antiquities given at the end is interesting, since these show a greater likeness to Central American objects of the kind than to any Carib antiquities known to us. At all events, they throw some light on the relationship of the Arouacas and the Chaimas, the inhabitants of the island at the time of its discovery, who presumably made and used the objects figured.

WE welcome an English translation of Baedeker's *Greece* (Dulau), that has appeared in ample time for those who contemplate paying a visit to that country during Easter, which is, on the whole, the best time of the year for the purpose. Within the last few years the conditions of travel in Greece have been entirely revolutionised by the introduction of railways. At the same time, the attractions to the classical scholar have been multiplied by the progress of excavation, which has revealed an entirely new stratum of archaeology, while the policy of retaining *in situ* the objects found compels a visit. Some twenty years ago to have been to Greece was almost as rare a boast as to have circumnavigated the globe. Greece now rivals Switzerland as the playground of our university tutors and our public schoolmasters. It was, therefore, incumbent upon Karl Baedeker not to delay any longer giving us a translation of his German handbook, which has already passed through two editions. The original work was mainly compiled by Dr. Lolling, of Athens, with the assistance of Dr. Dörpfeld for the account of Olympia; and the historical sketch of Greek art was written by Prof. Kekulé, of Bonn. But it is evident that the English editor (Mr. J. F. Muirhead) has not only subjected the whole to a careful revision, but has adapted it to English needs in the best way, by taking counsel of such authorities as Prof. Mahaffy, Dr. Sandys, Dr. J. T. Clarke, &c. The result is a handbook to the traveller no less indispensable than its predecessors, some of which, we notice, have reached a tenth and twelfth edition.

WE may also mention that the series of "Guides-Joanne" (Paris: Hachette) has now extended to Eastern Europe. There lie before us the first part of *Etats du Danube et des Balkans*, dealing with Southern and Eastern Hungary, Dalmatia, Montenegro, Bosnia, and Herzegovina; and also the first part of *Greece*, confined to Athens and its neighbourhood. In the latter, the most notable feature is the description of the museums, compiled by a member of the Ecole d'Athènes.

WE have received from Mr. John Murray a new edition, being the twenty-first, of his Handbook for *Holland and Belgium*—the two countries which have been for centuries the favourite resort of little-travelled Englishmen. This edition has been revised throughout to such an extent as to be almost entirely rewritten; and, in particular, a new method has been adopted which will, we understand, be extended to other handbooks in the series. This consists in combining with the index at the end some of the features of a directory, so that the traveller can obtain the necessary information about hotels, means of communication, &c., in a concentrated form, and at the same time, these pages can more easily be kept up to date, while the body of the work is left untouched. The innovation seems so useful that one wonders it had not been thought of before.

FOLLOWING the example of the Orient line, the P. & O. Company have issued—in the far more convenient shape of a pocket-book—a guide for travellers to the Mediterranean, the East, and Australia. The historical account of the undertaking is written by the chairman, Mr. Thomas Sutherland, who practically tells the story of his own life-work. Mr. Sutherland also contributes an article on the Suez Canal; while Egypt is described by Mr. Stanley Lane-Poole, India by Sir Edwin Arnold, China (at considerable length) by Sir Thomas Wade, Japan by Mr. H. W. Lucy, and Australasia by Mr. Hume Nisbet. There are abundant illustrations of ships, maps, tables, and blank pages for memoranda on the voyage; and altogether the little volume seems admirably suited for its purpose.

SIR HENRY EDWARDS has recently printed for the gratification of his friends an interesting account, under the suggestive title of *How to Pass the Winter*, of the tour in the East which he has just taken in company with Sir Edward Watkin, who lost his wife last autumn. The two travellers traversed 20,000 miles under the most comfortable arrangements on shipboard or in a saloon railway-carriage. They combined business with pleasure; for they inspected the works and property, including "a real mountain of coal," of the Assam railway and trading company, and visited the tea plantations which are bringing prosperity to Ceylon.

NOTES AND NEWS.

MESSRS. SAMPSON LOW announce a volume of essays by Dr. Geffcken, entitled *The British Empire*, with a portrait. Among the personages specially treated of are the Prince Consort, Lord Palmerston, Lord Beaconsfield, and Mr. Gladstone. The work has been translated from the German, with the author's co-operation, by Mr. S. J. McMullan.

MESSRS. LONGMANS have in the press *Russia in Central Asia*, by the Hon. George Curzon, M.P., with illustrations and maps. This book is a description of a journey made in the autumn of 1888 along the newly completed Trans-Caspian railway through the Central Asian dominions of the Czar, together with the latest information, brought up to date, about those regions, and critical essays, dealing with the frontier and other political questions.

MESSRS. BLACKIE & SON will publish, on March 15, the first volume of the *Modern Cyclopaedia:* a Handy Book of Reference on all Subjects and for all Readers, with numerous Illustrations and Maps, edited by Dr. Charles Annandale, the editor of the "Imperial Dictionary." The work will be completed in eight volumes, of about 500 pages each, to appear at regular intervals of three months.

A CHANGE is announced in Mr. Walter Scott's two series of "Great Writers" and "Canterbury Poets," each of which has hitherto appeared at the rate of one volume a month. The former will be discontinued altogether for a while, and then renewed with contributions from Goldwin Smith, J. A. Symonds, Richard Garnett, Oscar Browning, Frederick Wedmore, and Cosmo Monkhouse. The next volume of the "Canterbury Poets" will be a collection of *American Sonnets*, edited by Mr. William Sharp, which will be published in May; and henceforth the rate of publication will be bi-monthly.

MESSRS. T. & T. CLARK, of Edinburgh, have in the press *The Prophecies of Isaiah*, expounded by Dr. C. von Orelli, of Basel, translated by Prof. J. S. Banks; *A New Commentary on Genesis*, by Prof. Franz Delitzsch, vol. ii. (completing the work); also a translation of a new work, by Prof. Delitzsch, entitled *Iris*—this is a collection of essays on treatises on colours and flowers, and will exhibit the learned author in a somewhat new character, showing his usual thoroughness of research, but discoursing on these "life-long pet themes," as he calls them, in the style suited to a popular audience.—*The Redemption of Man*, by Principal Simon, Congregational Hall, Edinburgh; and *The Book of Exodus*, by James MacGregor, late Professor of Systematic Theology, New College, Edinburgh ("Bible Class Handbook" series).

TWO works of fiction by Mr. Stuart Cumberland, the "thought-reader," will be published immediately: *The Vasty Deep:* a Strange Story of To-day, by Messrs. Sampson Low; and *A Fatal Affinity*, which also deals with the mysterious, by Mr. Spencer Blackett.

Digitized by Google

The Trade of the United Kingdom with the World: a Handbook of Illustration and Reference, by T. J. Dymes, is announced for early publication by Mr. Elliot Stock.

The Land of Gold and Ivory is the title of a new handbook to South Africa which Messrs. W. B. Whittingham & Co. have in the press. The same publishers are issuing a fourth edition of Mr. Mathers's *Golden South Africa* and an enlarged edition of *South Africa as a Health Resort*, completing the thirtieth thousand.

MR. EDWARD GARNETT will issue immediately a small volume of stories by Miss Grace Black, entitled *A Beggar and Other Fantasies*.

MESSRS. T. FISHER UNWIN will publish next week a second and revised edition of *Old Chelsea*, by Dr. Benjamin Ellis Martin.

THE Chaucer Society has just engraved from MS. illuminations the earliest known views of the Tower, Billingsgate, London Bridge, and of Canterbury, with its Lydgate group of pilgrims.

DR. LEON KELLNER has half printed for the Early-English Text Society his edition of the unique Caxton's *Blanchardyn and Eglantyne*. Miss Mary Bateson has ready her copy of George Ashby's *Poems* (1463-84) from unique MSS. at Cambridge; and Dr. Kellner has undertaken to edit the unique MS. of the romance of *The Three Kings' Sons* from the Harleian MS. 276. The society hopes to complete its issues in both original and extra series before June, and then to ask its members for advance subscriptions for its 1890 books, which ought to be ready in October. It has no less than sixteen Parts at press in various stages of forwardness.

PROF. KÖLBING of Breslau has just issued his edition of the Early-English romance of *Ipomedon* in three unique fifteenth-century versions: (1) in verse from the Chetham MS. 8009, in 8890 lines, in 12-line stanzas; (2) in couplets from the Harleian MS. 2252, in 2346 lines; (3) in prose, from the Marquis of Bath's incomplete Longleat MS. 25. There is a long introduction of 131 pages, discussing the linguistic and other peculiarities of each version of the story, and comparing them with the original French of Hue de Rotelande. A mass of notes and several indexes complete this careful edition, which is all the more welcome since the Chetham and Longleat MS. have not before been printed.

PROF. KÖLBING has now in the press the whole text of his edition of the *Arthour and Merlin* from the Auchinleck MS., and the Douce, Lincoln's Inn, and Percy Folio MSS., with an extract of 1500 lines from Lonelich's *Merlin* at Corpus, Cambridge, a sequel to the *Graal*, edited by Dr. Furnivall. All that is left of Lonelich's version is 28,000 lines. Prof. Kölbing will hereafter edit it for the Early English Text Society.

MR EADWARD MUYBRIDGE, of Philadelphia—who had agreed to give a discourse after Easter, at the Royal Institution, on "The Science of Animal Locomotion in its Relation to Design in Art" (illustrated by the zoopraxiscope), a subject of great novelty and interest—has kindly consented to deliver it on Friday evening, February 22, Dr. Edgar Crookshank being compelled through illness to defer his discourse on "Microbes" on that evening as previously arranged.

ON Monday next, March 11, Messrs. Sotheby will begin the sale—which will last altogether for eight days—of the extremely interesting library got together by Mr. William Mansfield Mackenzie, W.S., of Edinburgh. In works relating to the stage, such as biographies, controversial pamphlets, playbills, portraits, &c., this collection is probably unrivalled. But Mr. Mackenzie's enthusiasm was by no means confined to dramatic enthusiasm. It was for him that Bedford recently bound an extra illustrated copy of Andrew Tuer's *Bartolozzi*, with nearly 400 additional plates, and some seventy-six autograph letters. He was the purchaser the other day of Charles Lamb's paper-covered *Prince Dorus*, which he had protected by a loose watered silk cover, and enclosed in a drop morocco case. He had collected, and had uniformly bound in morocco by Riviere—with the pictorial covers included—fifty original editions of Dickens, thirty-nine of Thackeray, and fifty-nine of Lever. He also possessed the three original editions of Keats; and a long series of Tennyson, including not only a large paper copy of the *Poems by Two Brothers* (1827), and the so-called "Canada" reprint of suppressed poems (1862), but also the poet's proof-sheets of *Enoch Arden*, which was apparently first intended to bear the title of "Idylls of the Hearth." The total number of lots in the sale is 2485.

THE FORTHCOMING MAGAZINES.

THERE will be issued about the end of next month a magazine devoted, in the main, to Celtic subjects, entitled *The Highland Monthly*, to fill the place of the *Celtic Magazine*, which was discontinued some months ago. It will be edited conjointly by Mr. Duncan Campbell, of the *Northern Chronicle*, and by Mr. Alex. Macbain, rector of Raining's School, Inverness. The first number will contain the opening chapters of a serial tale, entitled "The Long Glen," illustrating the habits and life of a former generation of Highlanders.

THE publishers of *Stationery and Bookselling* have made arrangements to produce a series of papers on the "History of Bookselling and Publishing" in Great Britain and Ireland since the commencement of the trade, but more particularly during the latter half of the eighteenth and the early half of the present centuries. They hope to produce the first portion in the March number. It will deal with "Early Bookselling in Edinburgh," and will contain notes, historical and biographical, of Allan Ramsay, Donaldson, Miller, Bell, Creech, &c.

THE proprietors of *The Graphic* will issue on Monday next, March 11, a special number devoted to the Parnell Commission, containing a great number of engravings reproduced from sketches made by Mr. Sidney P. Hall.

THE March number of the *Political Science Quarterly* will open with an article by Mr. H. L. Osgood, upon "Scientific Anarchism," reviewing the theories of Proudhon and showing the aims of American Anarchists. Prof. Gustav Cohn, of Göttingen, taking the progressive income taxes of Switzerland as his text, indicates the merits and the dangers of this democratic scheme of taxation. A Conservative Frenchman, M. Gauvain, explains the causes of the present crisis in France and the significance of "Boulangism." Mr. Bernheim sketches the history of the ballot in New York, and argues for the Australian system. Prof. Woodrow Wilson analyses and criticises Bryce's "American Commonwealth." The June number of the same review will contain an article by Prof. Sloane, of Princeton, continuing and bringing down to May 1 the "Record of Events" heretofore published in the *New Princeton Review*.

UNIVERSITY JOTTINGS.

WE understand that the university of Oxford proposes to nominate Prof. Sayce to attend the Stockholm congress of Orientalists as their delegate.

ON Sunday next, March 10, Prof. Cheyne will deliver the first of his series of Bampton lectures, in which it is understood that he will continue his exposition of the Psalms.

IN accordance with general expectation, Mr. D. S. Margoliouth, of New College, has been elected to the Laudian chair of Arabic at Oxford, which has been vacant since the death of Dr. Gandell about a year ago.

IN convocation at Oxford next week it will be proposed to expend £200, from the university chest, on the purchase of books and photographs for the archaeological library in the university galleries; and also £100, from the Craven fund, on the publication of a monograph on the antiquities of Cyprus by Mr. D. G. Hogarth, late Craven fellow.

THERE was to be a meeting to-day at Oxford, in Wadham College, of those who signed the protest against the sacrifice of education to examination. The Hon. Auberon Herbert is announced to explain the practical measures it is now proposed to take.

AT a meeting held recently at King's College, London, a committee was appointed to invite subscriptions for a testimonial to Dr. Leonhard Schmitz, from friends, pupils, and others, "as an expression of the honour and gratitude with which they regard his long and eminent services as a scholar, a teacher, and a man of letters." It will be remembered that Dr. Schmitz, who is now in his eighty-third year, met with a grievious accident a few weeks ago at Portsmouth, whither he had gone to conduct an examination for the University of London. The Prince of Wales, to whom Dr. Schmitz gave lectures in history in 1859, has given his patronage to the proposal, as also have the members of the House of Orleans. The treasurers of the fund are Dr. William Smith, 94, Westbourne Terrace; and Dr. Wace, principal of King's College.

WE have now received Part II. of the Nebraska *University Studies*, Part I. of which we noticed a little while ago. It opens with a chemical paper by a lady—"On the Conversion of some of the Homologues of Benzol-Phenol into Primary and Secondary Amines," by Rachel Lloyd—upon which we can express no opinion. Then follow "Some Observations upon the Sentence-Length in English Prose," by L. A. Sherman, the general editor of the publication. This is an attempt to evaluate literary style by counting the average number of words in the sentences of various authors. While admitting that such statistics possess a certain interest, we must enter a protest against the conclusion that the short sentences of Macaulay place him at the head of modern writers of English—or, perhaps, second to Bartol! The concluding paper is an elaborate examination—extending to sixty-four pages—of "The Sounds and Inflexions of the Cyprian Dialect," mainly based upon Deecke's edition of the Inscriptions in Collitz's "Sammlung der Griechischen Dialekt-Inschriften," Bd. I. Heft. I. (1883). This seems an admirable piece of work, and affords a fresh proof of the attraction which the study of Greek dialects is exercising upon the young scholars of America.

OBITUARY

MR. R. H. SUTTON, the well-known second-hand bookseller of Manchester, died on Sunday last at the early age of thirty-seven. He was a man of amiable character and intellectual sympathies. A few days before his death he had published a very careful reprint of the first Manchester Directory, which was compiled by Elizabeth Raffald in 1772, and of which only one copy is known to have survived. This is now in the Manchester Free Library.

ORIGINAL VERSE.

SNOWFALL.

In cottage-home upon the gorse-sprent down
Blithe children clap their ruddy hands to see
The large, soft flakes that fall so silently
And clothe in white the branches bare and brown
Of beech and chestnut, and with sparkle crown
The ancient lych-gate: in the churchyard nigh,
The bird with warm red breast and mild dark eye,
That heedeth not the Winter's churlish frown,
From stone to stone doth flit: in dim and deep
Recesses of the whitening yews, that spread
Gaunt, sinewy, sheltering arms above the Dead,
Redwing and missel-thrush the silent shower
Of whiteness shun: beneath the boughs some sheep,
The vicar's scanty flock, affrighted, cower.

JOHN F. ROLPH.

MAGAZINES AND REVIEWS.

THE March number of the *Archaeological Review* begins a third volume with a remarkable article by Mr. Joseph Jacobs, entitled "Recent Research in Biblical Archaeology." While we cannot ourselves be converted to the extension given to the word "archaeology," we admit none the less readily both the learning and the skill with which the author maintains his position. After giving a singularly clear conspectus of the main results reached, from the literary side, by historical criticism of the early books of the Old Testament, Mr. Jacobs advances the claims of "institutional archaeology" to throw new light upon the ascertained facts. In other words, he would apply the method of "survivals"—of which method, by the way, he regards Maclennan and not Sir H. S. Maine as the author—to the interpretation of the legends and customs preserved in the early history of Israel. In England, at any rate, none will be disposed to question the legitimacy and fruitfulness of this method, when used to test the results of textual and philological criticism; but the present writer for one is by no means prepared to allow either that this method is a trustworthy guide by itself, or that it can properly be called "archaeology." Nothing seems to us gained by thus changing the connotation of an established term. Two other articles in this number—on "A Fresh Scottish Ashpitel Tale" and on "The Luck of Edenhall"—help to confirm our conservatism.

THE *Expositor* for March contains three useful contributions to Biblical theology—by Dr. Bruce on "Christ and Moses" (Heb. iii.), by Dr. Milligan on the Priesthood of the Church, and by Prof. Findlay on the "crowning" of Jesus "for death" (Heb. ii. 9). The last-named writer inclines to Dr. Bruce's as against Dr. Davidson's side of the exegetical controversy. Dean Chadwick gives a fine psychological characterisation of the apostle Peter. Dr. Marcus Dods warmly recommends Archdeacon Farrar's *Lives of the Fathers*. The other contributors are Dr. Curtiss (of Chicago), Dr. Cheyne, and Mr. Chase, whose parody of Vischer's and Harnack's hypothesis on the Christian interpolations of the so-called Johannine Apocalypse will amuse even Harnack in his lighter moments. This style, however, will become tedious, if tried too often.

THE CIVIL CODE OF MONTENEGRO.

Opsti imovinski zakonik za Knjazevinu Crnu Goru. (Cetinje.) Since July last the new Civil Code framed by M. Bogisic has been in force in Montenegro. This code, though strictly scientific, differs from all others in Europe by the striking originality of its system both in form and in contents—an originality that is in complete accordance with the country to which it applies. The author's great aim has been to avoid that antagonism between legal principles and customary rules which has to be encountered whenever a systematic codification is attempted. Hitherto, codifiers have always paid too much attention to formal jurisprudence, to the neglect of the popular elements. M. Bogisic's desire is that the different sources of law should continue to coexist after codification, and that they should go on developing in mutual harmony. To attain this object, or at any rate to approximate to it, he has excluded from his code certain subjects which are met with in all others, and he has included certain subjects not commonly found elsewhere. He has constructed his classification in a novel way, and has endeavoured to counterbalance to a certain extent written and customary law. He has adopted a simple and lucid style, so as to be understood by the people; and he has framed his technical terms on a new and rational system.

In a French pamphlet* M. Bogisic has himself explained the principles and method he has followed. Concerning the harmony between the code and customary right he says:

"Le codificateur s'il veut atteindre ce but, doit avoir toujours les dispositions de la coutume présentes à son esprit, comme si elles faisaient partie intégrante de son œuvre" (ch. iv.).

As regards the arrangement of subjects, he demands that this should be done according to the natural affinity that exists between the different institutions, though this rule admits of modification consistent with his own principles:

"Faire précéder les matières qui se recontrent le moins fréquemment dans la vie populaire, de celles dont la fréquence est plus grande, afin que celles-ci conduisent aux autres, menant aussi le lecteur du plus connu au moins connu . . . faire précéder, autant que possible, les dispositions généralisées, c'est à dire abstraites, des éléments concrets" (ch. v.).

It is matter for regret that this Code, which in many respects is interesting both for its principles and for its details, has not yet been translated into a language more familiar to the jurists of Western Europe than the Serbian, the vernacular of Montenegro.

M. Bogisic is already known in England through the works of the late Sir H. S. Maine, who frequently quotes from him to explain the juridical institutions of the Southern Slavs. He is a Serb by birth, being a native of Ragusa on the Adriatic. He has studied in Austria, Germany, and France, and is now professor of law in the University of Odessa. Quite recently he was nominated a corresponding member of the Institut de France.

IV. PAVLOVITCH.

CORRESPONDENCE.

WORDSWORTH'S "RECLUSE."

St. John's College, Cambridge: March 4, 1889.

Although I fear the harm is already done, I should like to enter a protest against the title under which Wordsworth's latest poem has been published. Anyone sufficiently interested in the poet to have read the preface to the "Excursion" is aware that Wordsworth chose the title "The Recluse" for a contemplated philosophical poem in three parts, of which the second part was to be the "Excursion." The beautiful and most characteristic poem which has been given to the world within the last few weeks was designed to be the *first book* only of the *first part* of the great work.

Like all the separate books of the "Excursion" and of the "Prelude" (which latter, it will be remembered, was to stand to the "Recluse" as "the antechapel" to "the body of a Gothic church"), this book has its particular title, "Home at Grasmere." No title could be more appropriate or better indicate the contents of the poem. When we have closed the "Prelude" we have had Wordsworth's life traced for us up to

"that summer under whose indulgent skies
Upon smooth Quantock's airy ridge we roved."

"Home at Grasmere" continues the "history of a poet's mind" through the first months of his settling once more under the shadow of his native mountains. Nevertheless, by a strange act of human perversity, this proper and attractive title has been thrust into obscurity, and the poem has been sent into the world under a name which received from its author a quite different application. Is it too late to demand that in future the title "The Recluse" shall be left to indicate the vast and never completed whole; and the fragment which is the subject

Digitized by Google

of my letter shall be known to lovers of Wordsworth by the name which Wordsworth gave it as "Home at Grasmere"?

G. C. M. SMITH.

CHAUCER'S DESCRIPTIONS OF MARS, VENUS, AND DIANA.

Cambridge: March 1, 1889.

Chaucer's descriptions of Mars and Venus in "The Knightes Tale" (1183-1190, 1097-1108) are well known. For the latter, Dr. Furnivall, in his Six-text Edition, p. 25, note 9, refers us to Albricus Philosophus in Staveren's *Auctores Mythographici*, 1702, vol. ii., p. 903. It occurs also in Albrici Philosophi De Deorum Imaginibus Libellus, in an edition of the *Mythographi Latini*, Amsterdam, 1681, vol. ii., p. 304; cap. v. ("De Venere"). As some may like to see the passage, I transcribe as much as is material:

"Pingebatur Venus pulcherrima puella, nuda, et in mari natans; et in manu sua dextra concham marinam tenens atque gestans; roeisque candidis et rubris sertum gerebat in capite ornatum, et columbis circa se volando, comitabatur. . . . Hinc et Cupido filius suus alatus et caecus assistebat, qui sagitta et arcu, quos tenebat, Apollinem sagittabat."

In chap. iii., at p. 302, there is a description of Mars; though Dr. Furnivall does not notice it. It is, however, worth looking at, as it mentions his chariot, his furious look, and his wolf. I quote all that is material:

"Erat enim ejus figura tanquam hominis furibundi, in curru sedens, armatus lorica, et caeteris armis offensivis et defensivis; qui et galeam habebat in capite, et flagellum in manu portans, accinctusque mucrone. Currus vero ejus ab equis rabidis trahi videbatur. Ante illum vero lupus ovem portans pingebatur, quia illud scilicet animal ab antiquis gentilibus ipsi Marti specialiter consecratum est."

In chap. vii., at p. 308, there is a description of Diana. It has small resemblance to Chaucer's; still, it mentions her three forms ("The Knightes Tale," 1455) and her bow:

"Diana, quae et Luna, Proserpina, Hecate nuncupatur, ultima inter planetas est, propter quod ultima ponitur in numero fictorum deorum. Ipsa ergo pingebatur in specie unius dominae, coma dissoluta, quae arcum tenebat et sagittam. Cervos quoque cornutos in venatione insequi videbatur," &c.

The moon is here called the last planet, because Saturn is taken as the first. Very often the reckoning was made in the reverse direction.

Chaucer's description of Diana refers to the stories of Callisto, Arcas, Daphne, Actaeon, and Atalanta; all of these are from Ovid's *Metamorphoses*, viz.—Daphne from book i., Callisto and Arcas from book ii., Actaeon from book iii., and Atalanta from book viii. Hence, too, we gain a confirmation of the suggestion that "the vale of Galgopheye," in l. 1768 of "The Knightes Tale," must be Ovid's "Vallis Gargaphie" (*Met.* iii. 156), because the story of Actaeon begins with a reference to this valley.

WALTER W. SKEAT.

POPE AND ADDISON.

London: March 6, 1889.

It is true, as your correspondent "F. G." remarks, that books published at the end of the year were, and still are, frequently post-dated; and it is, therefore, possible that the version of Pope's lines on Addison in *Cythereia* (1723) may after all be earlier than that given in the *St. James's Journal* for December 15, 1722; but I do not think that this was the case. I have looked through most of the contemporary newspapers from November 1722 to the end of 1723, in the hope of finding an advertisement of *Cythereia*, but without success. It seems to me, however, that the version in the newspaper is less correct than that in *Cythereia*, and that it was an entirely unauthorised version, written down from what was passing from mouth to mouth in the coffee-houses.

One other point has just come under my notice. It is well known that Curll published a version of Pope's lines in 1727, in an edition of the *Court Poems*; but it does not seem to have been noticed that he published another version in 1726. In the Hopetoun Library, just sold at Messrs. Sotheby's rooms, there was a copy of *Court Poems*. In Two Parts. By Mr. Pope, &c., dated 1726, and published by Curll; and the version in that book agreed exactly, I believe, with that in *Cythereia*, whereas the version of 1727 contains several variations.

G. A. AITKEN.

THE CLIFF OF THE DEAD AMONG THE TEUTONS.

Berkeley, Cal.: Feb. 12, 1889.

Permit me once more to summarise the views already presented in opposition to Mr. Stevenson's speculations, as he himself terms them.

(1) Two independent conjectures are required, one for the "Elene" and one for the "Judith," in order to obviate the objectionable association of *neowol* and *næs*. Both conjectures are against the authority of the respective manuscripts, one, *niðernesse*, requires the introduction of a new word into the poetical vocabulary of Old English, and both are rejected by all subsequent editors. If either conjecture be overthrown, the difficulty reappears as formidable as ever. But what would be said by Greek scholars to an emendation of Sophocles which required the introduction into his text of a word found only once in Greek literature, and then in Thucydides? What would be said if the emendation were by a notoriously inaccurate scholar, and had been quietly ignored in later editions?

But, supposing both conjectures to stand, Mr. Stevenson is still ready to assert—"There are, however, several passages where it is impossible to thus explain *næs*, and where it is equally impossible to translate it by 'headland.'" If this admission must be made about *næs* at all, why not make it in all cases alike, and thus eliminate the more than doubtful conjectures? And if no argument is to be drawn from the conjectures, why adduce them?

(2) Mr. Stevenson asks (ACADEMY, December 8): "Is the *w* of *neowel* original or is it an insertion?" I answered (ACADEMY, January 19): "The *w* of *neowol* is epenthetic, secondary, and inorganic," and referred to Sweet and Sievers as my authorities. Yet Mr. Stevenson says in reply (ACADEMY, January 26): "I did not reject, lightly or otherwise, authorities like Sweet and Sievers." If not, why raise the question about the *w* of *neowel*, which seemed to imply that their explanation had either been overlooked or disbelieved? The question, and the doubt suggested by the question, seemed more unaccountable because Mr. Stevenson apparently rejected Uppstrom's theory that the *w* was original.

(3) If, as Mr. Stevenson says, "Sievers's etymology of *néol* does not account for the meaning 'abysmal,'" Sweet's *Oldest English Texts* succeeds better with its meaning *infimus*, which I had already adduced in my letter to the ACADEMY of December 1. If the general meaning is thus settled (by this and other quotations for the two senses *pronus* and *infimus*) nothing remains except to discover, if possible, how the meaning "dark" grows out of these two allied senses.

(4) Mr. Stevenson says (ACADEMY, December 8): "Is it possible that we have a confusion of three words here: (1) *ni-hald*, 'pronus'; (2) *niwol*, 'low, deep'; (3) *nifol*, 'cloudy, dark'? But, unless he rejects or ignores the statements of Sweet and Sievers, he must see that he is not dealing with three words, but with two—his (1) and (2) being virtually identical.

(5) Again, Mr. Stevenson says (ACADEMY, December 8): "If *niwol* could be shown to be in some cases a confusion with *nifol*," &c., and (ACADEMY, January 26): "What I suggested was that two independent words, *neowol* and *nifol*, had become confused in meaning through their resemblance in form." But I deny such resemblance in form as could lead to confusion. If resemblance in form means anything, it means similarity of phonetic value, for I presume we have passed the stage in which similarity of appearance on the written page could be employed in an argument of this nature. Now I have shown that the *w* of *neowol*, if it had any phonetic value, had one quite distinct from that of the *f* in *nifol*. If, notwithstanding, Mr. Stevenson or anyone else chooses to assume that the phonetic values of the two words were sufficiently similar to cause confusion, I shall not quarrel with him, for a dispute between two merely subjective opinions would be both barren and endless.

I must certainly confess to a little rashness, or at least carelessness, in my translation of *nicor*; but I beg to express the hope that my arguments may not, on this account, be deprived of such weight as they may chance to possess.

ALBERT S. COOK.

THE VERB "BLAZE."

Oxford: March 4, 1889.

As Mr. Cotton's reference to the *New English Dictionary* under this word in last week's ACADEMY has been read by many in the sense that this word is omitted from the Dictionary, may I be permitted to say that the word is fully treated and fully explained as: "BLAZE *v.*[3] To mark (*trees*) with white by chopping off a piece of bark. Also, to indicate (a *spot* or *path*) by such marks." Five quotations are given, from 1812 downwards, including one from *Fraser's Magazine*, 1850: "The settlers blazed roads through the woods, by chipping the bark of the trees." It is true that no quotation is given with a metaphorical use of "blaze the way," but surely this is so obvious as a permanent possibility that it hardly needs notice. At least, consideration of space led to our omission of one earlier than 1848, given by Bartlett—"Champollion died in 1832, having done little more than blaze out the road to be travelled by others."

J. A. H. MURRAY.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 11, 5 p.m. London Institution: "Marriage Laws—Ancient and Modern," by Dr. E. Tylor.

8 p.m. Society of Arts: Cantor Lecture, "The Decoration and Illustration of Books," II., by Mr. Walter Crane.

8 p.m. Aristotelian: Symposium, "What takes place in Voluntary Action?" by Messrs. B. Bosanquet, P. Daphne, J. S. Mann, and A. M. Ogilvie.

8.30 p.m. Geographical: "The Trans-Caspian Railway," by the Hon. G. Curzon.

TUESDAY, March 12, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," VIII., by Prof. G. J. Romanes.

8 p.m. Civil Engineers.

8 p.m. Metropolitan Scientific Association: "The Gault of Folkestone," by Mr. F. Chapman.

8 p.m. Colonial Institute.

8.30 p.m. Anthropological: "An artificially deformed Skull from Mallicollo," by Prof. Flower; "Some Examples of Pre-historic Trephining and Skull Boring from America," by Prof. Victor Horsley; "The use of 'Elk' Teeth for Money in North America," by Mr. H. Balfour; "The Comparative Anthropometry of English Jews," by Messrs. Joseph Jacobs and Isidore Spielman.

WEDNESDAY, March 13, 8 p.m. Microscopical: *Psamathiomya pectinata*, a New Dipterous Insect," by Mr. J. Deby.
8 p.m. Society of Arts: "Aluminium and its Manufacture by the Deville-Castner Process," by Mr. W. Anderson.
THURSDAY, March 14, 3 p.m. Royal Institution: "The Venom of Serpents, and Allied Poisons," IV., by Dr. S. Martin.
6 p.m. London Institution: "Algeria and Marocco," by Mr. H. Blackburn.
8 p.m. Linnean.
8 p.m. Mathematical: "Notes on Plane Curves," IV., Involution-Condition of a Cubic and its Hessian, V., Figure of a Certain Cubic and its Hessian, by the President; "The Problem of Duration of Play," by Major Macmahon; "Some Results in the Elementary Theory of Numbers," by Mr. C. Leudesdorf; "The Characteristics of an Asymmetric Optical Instrument," by Dr. J. Lammor.
8 p.m. Electrical Engineers: Discussion, "Some Electric Lighting Central Stations in Europe and their Lessons," by Prof. George Forbes.
8 p.m. Cymmrodorion: "The Celt and the Pleasantness of Nature," by the Rev. H. Elvet Lewis.
8 30 p.m. Antiquaries.
FRIDAY, March 15, 8 p.m. Philological: "English Etymologies," by Prof. Skeat.
9 p.m. Royal Institution: "Beacon Lights and Fog Signals," by Sir J. N. Douglass.
SATURDAY, March 16, 3 p.m. Royal Institution: "Experimental Optics—Polarisation, Wave Theory," IV., by Lord Rayleigh.

SCIENCE.

M. Tullii Ciceronis pro A. Cluentio Oratio. With Notes by W. Y. Fausset. (Rivingtons.)

MR. FAUSSET'S edition of Cicero's speech *pro Cluentio* is one of the most careful and independent pieces of work upon Cicero that has been published for some years past. The speech has been curiously neglected in Germany. The edition of Classen, now more than fifty years old, and never re-issued, did good service in its day, but was too purely critical to be of much help to the ordinary student. Since Classen no German scholar has given any special attention to the speech, probably because its length and its numerous difficulties make it less suitable for school reading than a dozen others which have fully supplied the needs of boys, or at least have been supposed to have a better claim upon their time. In this country Prof. W. Ramsay's edition has been long known, and deservedly esteemed. But with all its merits it was very unequal, especially on the critical side; and unfortunately no attempt has been made to improve it materially in more recent issues. Some years ago Mr. (now Principal) Peterson published a translation, enriched by valuable contributions from Prof. Nettleship, the merits of which were recognised at the time in the ACADEMY. But there was abundance of room for an edition which should be fully abreast of modern scholarship, and deal thoroughly with the many textual and historical difficulties. The speech well deserves elucidation. It is an admirable specimen of Cicero's forensic skill in dealing triumphantly with a case which had some very weak points; the narrative is told in his best style, except where he had a purpose in being misleading through vagueness. His humour and dramatic vividness are nowhere better exhibited; and the diction is that of his best and brightest period.

Mr. Fausset has done full justice to his task; and, setting aside a few slips of little importance, the only serious criticism to be made is that he has spent too much pains and labour on it. It is no uncommon thing for a diligent commentator to fail to keep always in view the class of students for whom his notes are intended; and this is a mistake into which Mr. Fausset has not seldom fallen. He has written "for more advanced students, whether in the sixth form of a public school or at the university." Such students are certain to have read at least two or three speeches of Cicero previously; indeed the *Cluentiana* is little fitted to be the first introduction to the orator's style, because of the difficulties of the subject matter. Why, then, explain to such the construction of *interest*, the usages of *an*, or the meaning of *novus homo*? There are too many instances in which a grammatical usage is explained at length, with a reference to Roby's grammar, where the references alone would have been quite sufficient. In a new edition it would be worth while to rigidly suppress all notes which do not add anything to what is given in the easily accessible authorities referred to; and such instances of digression as the discussion of the etymology of *pessum*, hung upon the peg of *pervertit*. Of positive errors there are extremely few. It is a curious slip which makes Cicero to have "successfully combated the Attic style of C. Licinius Calvus" at a time when the latter was still wearing the Roman equivalent of petticoats. The symbolical nature of the *lectus genialis* is missed in § 15; the alternative explanation of *censoria subscriptio* in § 136 is surely disproved by the context; the notion of subtlety is oddly attached to a lasso in § 150 (rather "springe"), and the note on *aculeum evellere* in § 152 seems misleading: "Decidius" is wrongly introduced in § 161; and the connexion of *elogium* with √*lak* is worse than doubtful. As a rule, Mr. Fausset's instinct for points of syntax is both keen and sound, and even the more advanced student will profit much by his notes; but it is hard to see any iterative force in *quaesiveram* in § 52 (it is quite unlike the preceding *ut quicquid apprehenderam*); and in § 123 it is not noticed that *subscripserint* is dependent upon a subjunctive. The critical notes, extending to more than fifty pages, are with good judgment kept distinct from the explanatory notes—it is a serious drawback to Ramsay's edition that they are mixed up—and, as a rule, Mr. Fausset's decisions are well reasoned and sensible, though his suggestion of *omnino* in § 6 is not attractive. He professes to have been "somewhat chary of giving scraps of translations"; but it is only the idle schoolboy who will share this opinion, and there is at least as much translation, of a high order of merit, as can fairly be expected. It is worth noting that the editor has not been misled by Lewis and Short's error as to the meaning of *subsortitio* in § 91.

Many points of interest would arise for discussion, if space were not so limited; but I must here be content with giving a hearty welcome to a piece of work which is excellent in itself, and which, we may hope, gives high promise of more of the kind in the future. The difficult speech *pro Caecina* still waits for an English editor.

A. S. WILKINS.

SOME BOOKS ON CHEMISTRY.

Watts' Dictionary of Chemistry. Revised and entirely rewritten by H. Foster Morley and M. M. Pattison Muir, assisted by Eminent Contributors. In four volumes. Vol. i. (Longmans.) The publication of the original "Watts' Dictionary" was commenced a quarter of a century ago. Seven years have passed since the last of its nine volumes appeared. Its great value and its unique position among books of reference have been recognised by all chemists. We think that the publishers and editors of the present revision have exercised a wise discretion in limiting the scope and in modifying the plan of the new issue. Chemical mineralogy and applied chemistry are now excluded. The latter subject will, however, be treated by Prof. Thorpe in a separate volume. The space thus gained will allow of a more thorough discussion of the pure science and of descriptive chemistry. Moreover, by an ingenious and very complete system of abbreviations, very great condensation, sometimes to the extent of one-half, is affected in the amount of letterpress required for each subject. This change often renders the text unintelligible to any reader who has not thoroughly mastered the meaning of the signs employed as unfolded in the editors' "Introduction." Owing to the above and other changes and omissions, one great advantage is secured, for the new edition of the dictionary will admit of rapid completion, so that the fourth and concluding volume will appear before the first is out of date. If arrangements could have been made for the simultaneous preparation of a volume on "Processes of Chemical Analysis," and of another on "The Chemistry of Minerals," the whole domain of chemistry would have been annexed. Indeed, as it is, we cannot help regretting that minerals—the raw materials of the science—are practically excluded from consideration. Without them chemistry would not exist; the technical applications of the science stand on a different footing. Many readers will also regret the disappearance of the excellent article on crystallography which was a valuable feature of the former edition. Including the editors, there are twenty-one contributors to the volume before us. The reputation of these chemists in their special departments guarantees the soundness and adequacy of the articles which they have furnished. Were it possible in a brief notice to criticise a work having so wide a scope as this dictionary, we feel convinced, from a partial examination of the first instalment of 750 pages, that the tenor of our review would be one of high commendation. It is, however, idle to expect that such a work could be free from mistakes and deficiencies. We venture to cite two examples. The list of alkaloids (pp. 117 and 118) is open to a good deal of criticism. It is neither sufficient nor exact to give nothing but the name of a large *genus* of plants as yielding a particular alkaloid, when, perhaps, a single *species* only of that genus has been ascertained to furnish the base in question. Then, too, why should such a specific name as *Moschata* be made to commence with a capital letter, while the *Rhoeas* of Papaver Rhoeas is not distinguished in this way? Again, the errors in spelling botanical names are not a few. *Sophora* becomes *Saphora*; *Trigonella*, *Trigomella*; and *Gelsemium* not only *Gelsenium*, but also *Geselmium*. In fact, a number of new alkaloids still unknown to science are thus manufactured, for we have "gelsenine," "geselmine," "saphorine," and "trigomelline." We never yet heard of "Pareiro bark." Our second instance shall be taken from the article on Carbon. The suggestion (p. 129) that charcoal and the other forms of amorphous carbon are not to be regarded as belonging to a distinct modification of that element, but are probably graphite, cannot be considered sound in the presence of such a distinctive reaction as that which they yield with potassium chlorate and nitric acid. Yet, if exception may be taken to some of the theoretical views propounded in this volume, they are, as a general rule,

Digitized by Google

characterised by sound judgment, and exhibit an intimate acquaintance with the latest discussions of chemical philosophy.

Practical Organic Chemistry. By S. Rideal. (H. K. Lewis.) This little book of 160 small pages is planned with particular reference to the requirements of medical students. It gives the chief qualitative reactions by means of which the organic acids, the carbohydrates, the organic bases, and a few important neutral bodies may be detected and distinguished. That the book is far from being a complete text-book on the subject of which it treats may be gathered from the fact that ethylen, marsh-gas, actylen, benzene, naphthalin, anthracen, aniline, paraffin, and a host of other compounds of the first rank are not named in its pages. Several comparatively new tests, not generally found in similar manuals, are given in their proper places; and, generally speaking, the directions are clear and exact. Exception may, however, be taken to the observation as to the occurrence of hydrocyanic acid (p. 49) and to many of the observations on cellulose (pp. 96, 97). Nor do we like Dr. Rideal's way of spelling generic names with a small initial letter.

A Class-Book of Elementary Chemistry. By W. W. Fisher. (Oxford: Clarendon Press.) When a manual of chemistry presents no distinctive features marking it out from the crowd of similar books which encumber our shelves, we can do no more than try its accuracy by a few favourite tests, and endeavour to ascertain whether, so far as it goes, it is quite up to the level of recent advances in the science of which it treats. We cannot say that the present class-book comes up to our ideal. We find the old error as to the average percentage of carbon dioxide in the air reproduced on p. 45. We are told on p. 232 that pure tin crackles when bent. Nothing is said as to the formation of graphitic acid from graphite—a distinguishing reaction of this form of carbon, and one which was made in the university in which Mr. Fisher teaches. The Tuscan sources of borcaic acid named on p. 136 sink into insignificance beside those of California, to which no reference is made in the pages under review.

The Scientific Papers of the late T. Andrews, M.D., F.R.S. By P. G. Tait, and A. Crum Brown. (Macmillan.) It is an agreeable but difficult task to notice a book such as that before us. The important discoveries of Andrews have been long known and appreciated by chemists and physicists, and it would be impossible to review them adequately within our narrow limits. We are glad to have his papers in a collected and readable form. There is much in their style and scope which reminds one of the work of Graham and of Faraday. They are marked by originality, ingenuity in methods of experimenting, perseverance, and trustworthiness. His researches on the continuity of the states of matter, on the true constitution of ozone, and on the thermal phenomena of chemical action unfolded most important truths and are models of good work. The brief memoir of fifty-three pages prefixed to the "Collected Papers" presents a delightful picture of this enthusiastic student of science. His first paper was published in the *Philosophical Magazine* when he was a boy of fifteen!

OBITUARY.

PROF. H. VON DECHEN.

GERMANY has recently lost her most venerable geologist by the death of Heinrich von Dechen. Born eighty-nine years ago, his earliest contribution to scientific literature dates back as far as 1825. Working with such men as Oeynhausen and Karstav he soon became conspicuous as a zealous geologist, and acquired great reputation as an authority on the Rhine Province. Having in early life worked also in England and Scotland, he became a foreign member of the Geological Society of London in 1827. Among his numerous works, the most important is his geological map of Rhenish Prussia and Westphalia, on the scale of $\frac{1}{80000}$—a work which, with the preparation of the text, occupied twenty-five of the best years of his active life.

CORRESPONDENCE.

DR. BURGESS'S NEW IMPRESSIONS OF THE ROCK-EDICTS OF AS'OKA.

Vienna: February 25, 1889.

During the working seasons of 1886-87 and 1887-88, Dr. Burgess undertook at my request the preparation of new impressions of the Girnâr, Kâlsi, Shâhbâzgarhi, and Mansehra versions of As'oka's rock-edicts, and handed them over to me in the course of last summer. Other pressing work prevented me utilising them at once, and I finished deciphering them only last week. These new impressions have been taken with scrupulous care and consummate skill on strong Indian country paper, on the reverse of which the letters are visible in relief, from $\frac{1}{8}$ to $\frac{1}{4}$ of an inch high. Particularly difficult or doubtful passages have been done twice or even thrice over.

The results which these new materials yield are very valuable. It is possible to make with their help numerous corrections even in the comparatively speaking well-preserved Girnâr and Kâlsi versions. In the former they even exhibit some signs which both M. Senart and myself have failed to detect on the stone. Their importance for the Shâhbâzgarhi and Mansehra versions is, as might be expected, much greater. They enable me to give a complete and intelligible text even of the difficult hitherto not explained passage of the thirteenth edict, which is fully preserved in Shâhbâzgarhi alone. As the restoration of this passage is, perhaps, the most important service which the new impressions render, I give it *in extenso*. The words for the greater part lost in the other versions are:

Yo pi cha apakareya ti chhamitaviyamate vo devanam priyasa, yam s'ako chhamanaye. Ya pi cha atavi devanam priyasa vijite bhoti, ta pi anuneti, anunijhape ti. Anutape pi cha prabhave devanam priyasa. Vuchati tesha, kiti? avatrapeyu na cha hamñeyasu. Ichhati hi devanam priyo savrabhutana achhati samyamam samachariyam rabhasiye. Esha cha mukhamate vijaye devanam priyasa yo dhramavijayo.

The close translation of these sentences should be in my opinion as follows:

"And if anybody does [*me*] an injury, the Beloved of the gods holds that it is necessary even [then] to forgive what can be forgiven. Even on [*the inhabitants of*] those forests which are in the dominions of the Beloved of the gods, he takes compassion [*when it is suggested to him*], that he should destroy [*them*] one after the other; and the power of the Beloved of the gods [*would*] even [*suffice*] to torment [*them*]. Unto them it is said—what? 'They shall live contentedly and not be slain.' For the Beloved of the gods desires for all creatures freedom from hurt, self-restraint, impartiality, a state of joy. And the Beloved of the gods holds this conquest to be chiefest, to wit, the conquest through the law."

The general sense is just what one would expect, as As'oka has declared in the preceding that he regards with horror even a hundredth or a thousandth part of the atrocities perpetrated by his armies during the conquest of Kaliṅga. The use of the word *atavi* "the forests" for *âtavikâh* "the men of the forest, the jungle-tribes," is curious, but analogous to that of *amtâ* "the frontiers" for "the neighbours." *Rabhasiye* is an interesting ἅπαξ λεγόμενον; it is evidently the Sanskrit *râbhasyam*, which, according to Ujjvaladatta on *Unâdisû'ra*, i. 117, means "a state of joy." This meaning fits very well and closely agrees with the sense of the various reading *mâdava* or *mâdavam* found in Kâlsi and Girnâr. Some other passages of the Shâhbâzgarhi version, such as Ed. iii., l. 6 and Ed. ix., ll. 19-20, which have remained inexplicable even after M. Senart's late revision of Edicts i.-xii., come out quite correctly.

The Mansehra version, too, becomes perfectly readable. A score or so of signs, sometimes four or five consecutively, are gone in Edicts i. and ii., and single ones here and there in Edicts iii. and ix.-xi. But the losses are unimportant. In the beginning of Edict v. this version has preserved an important word which is lost in Girnâr, Dhauli, and Jaugada, and indistinct in the older Kâlsi facsimiles. M. Senart has already recognised that its first three letters are *adika*. Dr. Burgess's impression gives plainly *adikare* and that of the Kâlsi edict not *amdihute*, as I had read formerly, but *âdi[ka]le*. *Adikare-âdikale* is equivalent to Sanskrit *âdikarah*, which etymologically means "the beginner, the originator," and is known from the Koshas as a name of the creator Brahmâ. It also corresponds with the Jaina epithet of the Tirthaṅkaras, *âdikaro* or *âdigaro*, for which in Jaina Sanskrit texts *âdikartâ* appears. In As'oka's inscription the word has its etymological meaning. We read in

"Mansehra: *Kalanam dukaram, Ye adikare kayânasa se dukaram karoti.*
Kâlsi: *Kayâne dukale, E âdi[ka]le kayânasâ se dukale kaleti.*"

The translation is:

"Good [*works*] are difficult of performance. He who is the originator of good [*works*] accomplishes something difficult of performance."

As'oka means to say that he has done something particularly difficult, as he has first appointed the overseers of the sacred law and otherwise taken care that the law will be kept; and, as he has first done much for the happiness of his subjects, the task of his successors, whom he exhorts in the sequel to follow his example, will be much easier.

The new impressions yield also important palaeographical results. They show that several letters of the North Indian alphabet have interesting varieties of form. They also reveal the use of a double *mm* in the word *sammapratipati*. This *mma* appears in three passages in that shape, which it has in the facsimile of the *Corpus Inscriptionum Indicarum*, Plate ii., l. 5. They finally prove that Sir A. Cunningham was right in reading *asti, striyaka, samstuta*, and so forth. The signs for *tha* and *tha* are very different from that for *sta*, which plainly shows its origin from a combination of *sa* and *ta*.

I trust that it will be possible to prepare readable facsimiles of the northern versions according to these new impressions, and that the original sheets will, like the impressions of the Dhauli and Jaugada versions, eventually be taken over by the British Museum, and thus be made accessible to all students of Indian palaeography.

G. BÜHLER.

SCIENCE NOTES.

THE council of the Geologists' Association have under consideration a proposal to organise an excursion during October next to the active volcanic regions of Italy. The proposal was submitted by Dr. Lavis, who is intimately acquainted with the regions in question, and who would be the principal leader of the party.

THE Marquis de Nadaillac has communicated to the *Matériaux pour l'Histoire de l'Homme* the

Digitized by Google

details of the arrangements for the anthropological department of the forthcoming exhibition in Paris, with which he is closely concerned. The most novel feature will be the popular illustration of prehistoric archaeology by means of scenes and life-size models. The first group will represent a savage and his wife in the act of making rude stone implements; another will depict a cavern of the early stone age, with the "old man of Cro Magnon" working his implements of bone. The neolithic age will be represented by a dolmen, with a potter fabricating a rude vase, while another workman polishes his stone-axe. In illustration of the early stages of metallurgy, the man of the bronze age will be seen busy with his melting-pot and moulds; while a rude group of iron-workers, copied from certain African savages, will represent the primitive smelters of the iron age. The prehistoric pits for flint-mining at Mur de Barrez will be reproduced, with the ancient miners at work. An anthropometric laboratory will be opened, an anthropological congress will be held, and, indeed, every department of anthropology will be illustrated on a most liberal scale.

THE first volume of a revised and augmented edition of Prof. D'Arbois de Jubainville's work, *Les premiers Habitants de l'Europe*, has just appeared. It deals, first, with the non-Indo-Europeans (cave-men, Iberians, Pelasgians, Etruscans, Phoenicians), and, secondly, with some of the Indo-European races (Scythians, Thracians, Illyrians, and Ligurians).

PHILOLOGY NOTES.

FOLKLORISTS will be glad to hear that Mr. C. H. Tawney, the translator of the *Kathá-sarit-ságara*, is now working at the Jaina *Kathákoça*.

THE forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain the following articles: "The True Name of the God of Israel," by the Rev. C. J. Ball; "The Sacred Trees of the Assyrian Monuments," by Dr. Bonavia; "Origin from Babylonia and Elam of the Early Chinese Civilisation: a Summary of the Proofs," by Prof. Terrien de Lacouperie; and "A Buddhist Repertory" (continued), by Prof. Ch. de Harlez.

MESSRS. PARKER & Co. will publish in a few days Ovid, *Metamorphoses*, Book XI., with English notes, &c., by the Rev. Edgar Sanderson; and also Ovid, *Tristia*, Book III., with notes by the same.

THE *Revue Critique* for March 4 contains a review, by M. J. Halévy, of Dr. Neubauer's "Catalogue of Hebrew MSS. in the Bodleian and the College Libraries of Oxford," which concludes thus:

"C'est une œuvre monumentale qui comptera dans les études hébraïques et qui constituera le meilleur titre d'honneur, non seulement pour le savant qui lui a consacré sa vie, mais pour la direction de la Bibliothèque d'Oxford qui en a conçu et réalisé la publication."

MEETINGS OF SOCIETIES.

ROYAL MICROSCOPICAL SOCIETY.—(*Annual Meeting, Wednesday, February 13.*)

DR. C. T. HUDSON in the chair.—The report of the council was read, showing an increase in the number of fellows, and in the revenue of the society. This will probably be the last annual meeting in the present library, which is required by King's College, and the society will have to seek a new habitation.—Dr. Hudson delivered his annual address, taking as his subject, "Rotifers and their Distribution."

ELIZABETHAN SOCIETY.—(*Wednesday, February 20.*)

W. H. COWHAM, ESQ., in the chair.—A paper was read on "George Chapman," by Mr. Havelock Ellis. Chapman stands before us between two younger men—Marlowe and Ben Jonson. Marlowe was the typical artist of the English Renaissance. It was beauty that he sought everywhere, and, above all, beauty and the complete aesthetic utterance of his own aspiring nature; to everything else he was indifferent. Ben Jonson might be called the critic of the movement, using the word in its largest sense as the critic of life. He was the keen critic of men—the student whose interests were as wide as the whole of knowledge, and whose vision was everywhere clear and profound. He it is, and not Shakspere, who must be compared with Goethe. And to gather up the significance of Chapman into a single word, as Marlowe was the artist, and Jonson the critic, so Chapman was the moralist of the English Renaissance. About Marlowe there is little suspicion of ethics; and, while he more than others must be called Chapman's master, his influence was within the purely artistic domain. The obvious unlikeness of our rugged Homer-Lucan to the incomparable lover of ideal beauty who died so young has probably caused this influence to be underrated. Yet it is very distinct, and must in all Chapman's early work—poems and plays—perpetually arrest the attention of the reader who is familiar with Marlowe. It is not seen merely in his imagery and illusions: it lies in the very structure of his strong and uplifted verse. The true inheritor of Marlowe's "mighty line," he threw into it a more vigorous, lofty, and spiritual eloquence. This influence also comes out in the soaring and ambitious temper of Chapman's heroes. The audacious Bussy sometimes recalls Faustus; Biron, his central hero, is an elderly Tamburlaine, moralised and unwieldy. It will be seen that it is to Marlowe's earlier work that Chapman was chiefly attracted. His "Edward II." represents the effort after a pure Greek perfection of tone and outline to which Chapman, with all his fervid love for the "ancient Greek souls," and his greater knowledge, never once attained. Here Chapman was like his friend Jonson, who, with the same classic ardour as himself, and a riper scholarship, was not among those to whom the Hellenic charm has been revealed. Chapman's ethics are those of Stoicism, sometimes faintly tinged by Christianity. If we turn to the works of his favourite Seneca we shall miss few of the moral ideals and aims on which Chapman loved to insist. Not, indeed, that they are merely copied. Chapman expresses them with less of the quiet charm of Seneca, it is true, but with a robust energy and a touch of fiery imagination which Seneca never knew. We see in Chapman the Stoic's insistence on the virtues of an active life and contempt for the philosophers who, in Seneca's words, "know rather to speak than to live"; the Stoic's deep-rooted feeling for the divinity of man and the supremacy of man's most marked characteristic, reason, and its power over life and death. Chapman delights in giving utterance to the inwardness of moral law, freedom from all restraints but those imposed by the relationship between man and the universe. An Enchiridion of noble and eloquent aphorisms might be gathered from his writings. Chapman expresses his ideal of life under the form of the word Virtue. We do not nowadays talk with much enthusiasm about Virtue (with a capital V); and we must be careful to distinguish Chapman's Virtue from the rather feeble and colourless pattern of modern conventional morality. This Virtue is an offshoot of free and energetic Stoicism, grafted on the exuberant stock of Elizabethan renaissance. It is, in accordance with etymology, the quality of manhood, of virile and unfettered energy; or, as Lowell puts it, it is, "that kind of purity recalling Hamlet's word 'robustness,' and seems to be shouted through a speaking-trumpet in a gale of wind." Chapman's personality remains interesting for us even when we grow tired of his work. He was sometimes a great poet; he was always a great Englishman of "absolute and full soul." It is only in our more strenuous moments that we can turn to him for delight; but in those moments we shall always find in him the "excitation to heroical life," the contagious enthusiasm of all those things which, in his own phrasing, heighten man's transition into God. To read Chapman is to experience the strong invigoration of a stiff breeze in mid-South Atlantic. It is as much as you can do to keep your feet, but the exhilaration of it! He has ever been a favourite with the best men of new and expanding civilisations; with the young and ardent representatives of a progressive morality or a revolutionary ideal. Emerson delighted in Chapman; Lowell wrote of him—"He has kindled enthusiasm such as no other poet since Shakspere has kindled." Shelley chose famous words of his as the motto for his great poem of revolt. The sonnet of Keats would alone serve to immortalise the memory of his "Homer." We see self-conscious in him the spirit of those audacious adventurers with whom England has filled the world. If we would still be in touch with the men of this make, there is no worthier way of preparing ourselves than by looking back to those Englishmen of the Elizabethan age whose pulses were so nobly stirred, and among whom not least stands the virile form of George Chapman.

SOCIETY OF LITERATURE.—(*Wednesday, February 20.*)

J. HAYNES, ESQ., treasurer, in the chair.—A paper was read by Dr. Zerffi upon "Certain Great English Writers of the Seventeenth and Eighteenth Centuries." Concrete facts and generalisations were contrasted, and the reader showed, through Newton and John Locke, that experience, knowledge, and reason ought to be the fundamental principles of our modern progressive civilisation. The writings of the third Earl of Shaftesbury were mentioned as works which opened, not only in England, but also in France and Germany, an entirely new method of inquiry. Toland wrote in a less elegant style than Shaftesbury, but was extremely logical, while Collins attempted to solve the question of "necessity" and "liberty." Dr. Matthew Tindal went a step further, and asserted in his great work, *Christianity as Old as the Creation*, that God acts in conformity to the reason and nature of things. William Wollaston endeavoured to improve the religious feelings of the masses and to promote toleration in opposition to sectarian dissension. Morgan and Mandeville had been both misunderstood—the former wanted to see Christianity purified, while the latter held up avarice, luxury, pride, and party hatred to general contempt. Chubb, the "partner of a tallow-chandler," kindled a fiery torch of enlightenment and was the direct forerunner of the witty and learned Viscount Bolingbroke, who, through his *Letters on the Study and Use of History*, created not only a sensation, but a total change in the plan of our education and literature, which ought to be principally based on a correct knowledge of history.—Mr. E. Gilbert Highton, secretary, explained that the deistical writers, upon whose works Dr. Zerffi had commented, were comparatively little known and read at the present day, because their arguments had been thoroughly refuted in their own time by Berkeley, Butler, Bentley, and others.

BROWNING SOCIETY.—(*Friday, February 22.*)

DR. FURNIVALL (president), in the chair.—The chairman read a paper by Mr. J. B. Oldham, on "The Difficulties to be encountered in studying Browning's Poems." The writer of the paper offered it as a "Confessio Amantis," the confession to truth of one who deeply and reverently admired the poet. It dealt with the structural deformities in many of the poems, the discords, distortions, inversions, omissions, too frequently met with.—Mr. Oldham admitted that some foundation of intellectual substance is necessary in a poem, that modern poetry tends to be merely musical, whereas it should have its roots in what rouses deep feeling and its expression in musical form. Poetry and music, he considered, agree in that ideal opera "Les Huguenots." The Browning Society owed its existence to the difficulties with which the poet's works teemed, and found its vocation in clearing away the problems he invented. These difficulties were of three classes, and were to be found in the subject—matter of many of his poems, in his methods of treatment, and in his eccentric and characteristic forms of expression. With regard to the third class, style is that singularity in an author's manner of expressing himself which stamps it as his own. No one has a right to quarrel with that, but genius is not denoted by a difficult style. The greatest poems survive because they are the most intelligible. It is most difficult to obtain at once a clear idea of

Digitized by Google

the whole of one of Browning's poems. The mind is overburdened with a multitude of details, and craves some principle of order to make them plain. The central idea escapes us, even after we have read the poem again and again. Now, a sense of unity should be strong in any conception of life. Mr. Watts has said that "clearness of scene" should be counted the chief quality in poetry. No other poet is excepted from this law of unity, from order, grace and finish. Then, again, his details are too much in the rough. Mr. Pater points out how "the labour of the file has always had its function." This labour is absent in Browning's works. Mr. Oldham gave illustrations of distortions, inversions, obscurities, omissions from "The Ring and the Book," "Sordello," "Another Way of Love," "Apollo and the Fates," from "Parleyings," "Pacchiarotto," and other poems. Many of his faults would be scarcely culpable in a poetaster, but are faults in a poet, and especially in one who has often shown himself gifted with a fine sense of beauty of form. His absurd rhymes are among these. They arrest attention, weaken the sense, and upset the interest.—The chairman proposed a vote of thanks to Mr. Oldham.—Dr. Berdoe did not see the use of a paper like this. The Browning society could scarcely propose to educate Mr. Browning. It would be better to set to work to get possession of the gold and leave the quartz alone. Had the writer of the paper helped to unravel the problems, members might be grateful; but to select a series of passages for censure was scarcely worthy of the society's thanks. It is an abuse of our classics to take certain passages out of them and talk about their absurdity. Indeed, a sentence of the critic's paper was itself so very involved that the tables might have been turned upon him. He could not but remember some witty words of Mr. Birrell, who, writing on Browning, said: "Brother and sister dunces, give me your ears, not to crop, but to whisper into their furry depths, "Let us bless God there is such a thing as genius."—Mr. Revell agreed with Dr. Berdoe to a great extent. Members of the society admitted Browning's barbarities, were not his thick and thin worshippers, and the paper was not needed by them. But bad work needed reprobation, and Browning's uncouthness led to the neglect of many of his poems. His thinking was intellectual rather than poetical. It was reasoned, logical thinking thrown into the form of verse.—Mr. Shaw's first impulse was to move an amendment to the vote of thanks, and suggest a vote of condolence with the society in its place. The writer of the paper had not made a contribution worthy of thanks. He speaks of Browning as a true poet, and then says Browning prefers not to express himself clearly, as if the intense and constant effort to express himself clearly were not the condition of every man of common-sense. Does Browning sit down and think how obscure he can make his poem? Then we got the usual nonsense about the simplicity of the greatest poets, which facts contradict all along the line. Shelley seems simple to some and nonsensical to others. As for the "labour of the file," let the critic take his file and go along at "Sordello" In youth that is very well; but a man arrives at a point when he says: "I might make this smoother by filing it, but time is getting short; it is better to do something else." As for the "everlasting laws of poetry"—a critic takes what poetry he prefers, finds out its methods, sets them up as conventions, and calls them "everlasting laws." To whom is Browning discordant and unintelligible? No doubt there are people to whom Dr. Watts is unintelligible. Mozart was called obscure and unintelligible; and people said he did it on purpose, because he might have followed the beautiful simplicity of his forerunners. Then Beethoven came; and people said his music was hopelessly unintelligible, and that he did it on purpose, because he might have followed the beautiful simplicity of Mozart. And then Wagner came; and people still say his music is hopelessly unintelligible, and that he did it on purpose, because he might followed the beautiful simplicity of Beethoven.—Mr. Slater partly agreed and partly disagreed with Mr. Shaw. To understand a poet fully, we must have an intelligence equal to his own. The judgment of the present day is not necessarily that of the future. Still there were obscurities and sins of omission in Browning's poems which he might have avoided.—The chairman asked—Is it wise in the society to discuss the subject as it was done in the paper? He thought it was, and it was in accordance with the plan of the society as stated in its prospectus. We all knew how hard many of the poems were when we first read them, and he himself considered that Browning was hindered in getting hold of people by his obscurities. After giving instances of these, and of his compression of a subject, Dr. Furnivall continued: Condensation is not a vehicle of poetry, nor is it possible to render dramatic poetry in the form of stanzas. For these things we must blame him, although we must also look at them from his point of view. He likes rhyming, and does much of it for enjoyment. Witness his absurd double rhymes. It is to be regretted that he does so much of his work for exercise. Just so much will not live. What future will care for Sludge or Hohenstiel Schwangau?

Aristotelian Society.—(*Monday, February 25.*)

Shadworth H. Hodgson, Esq., president, in the chair.—A paper was read by Mr. Bernard Hollander, entitled "Do Separate Psychological Functions require Separate Physiological Organs?" Though the researches of physiologists, and investigations made by pathologists, have resulted in defining distinct regions for motion and sensation, we are still ignorant of the subjective side of these localisations. That the various elements of the mind have separate seats in the brain can, however, not be doubted; for the same movements which occur during certain emotions can be effected by applying galvanic currents to definite portions of the brain. In other words, the thought-current and the physical current, starting from the same point, travel on the same line and produce the same physical effect. That there are thought-centres can also be judged from the effect produced by destruction of a definite region. For instance, the destruction of the visual region is followed not only by loss of sight, but also by loss of visual ideation and recollection, which means a distinct injury to the mind. There is no doubt whatever that musical genius requires not only a good auditory apparatus, but also a highly organised auditory brain-centre; and that the powers of a painter to distinguish between the shades of colour are dependent primarily on a distinct nerve-centre of superior quality, of whose localisation, however, we are still ignorant. Without assuming special centres, we should be unable to explain the transmission of peculiarities of character. Man has to thank his parents not only for the fortunes they bequeath him, but also for his organisation. He is born with certain pro-dispositions; and though he can modify his nature, he can do so only to a certain extent. Viewed in his present state, man has a complex psychical nature so complex that it is extremely difficult to analyse it. We do not know as yet what constitutes a genius. All we know is that it is a gift of nature; and as it is generally partial, it must depend on the condition of definite organs. Why should genius be so closely allied to madness, why should a change of brain cause a change of character, or an injury to the brain disturb the manifestation of the faculties, unless the impulses which form the elements of character, require definite brain centres. The question is of great importance to the student of moral responsibility, for if good dispositions can be transmitted, so can bad ones. As long as mind was thought to be a substance independent of matter, speculations as to its nature were abundant. Recent researches, however, have limited the inquiry; and prove not only the alliance between mind and body, but also the fact that nerve-centres are the condition for the manifestation of thought, and that separate psychological functions require separate physiological organs.

Hellenic Society.—(*Monday, February 25.*)

E. M. Thompson, Esq., vice-president, in the chair.—Miss Jane E. Harrison read a very valuable paper on "Some Fragments of Vase Paintings." After apologising for the scattered nature of most of the evidence she had to bring before the meeting, she showed a drawing of a very fine red-figured vase in the possession of Miss Tricoupi, at Athens. It depicted the wrestling of Herakles and Antaeus, and the exploit of Theseus and Skiron; and had also a special claim to attention from the fact that it made the fifth known instance of a vase bearing the "love-name" Athenodotos. In connexion with the Theseus scene, Miss Harrison commented on the famous De Luynes fragments (in the Bibliothèque Nationale) which she is about to publish in the *Hellenic Journal*, and which present several difficulties in the matter of restoration. Next in order came a series of fragments recently discovered in the Acropolis; and first in interest were the fragments of an exquisitely beautiful vase with a white ground, and presumably from the hand of Euphranios. The fragments represent the myth of Orpheus and the Thracian women, and gave rise to a good deal of animated discussion. With reference to an early oracle-figured fragment depicting Aphrodite with a child on her elbow, Miss Harrison rejected the obvious interpretation that the child was Eros, and maintained that Aphrodite was represented here in the more general aspect of Kourotrophos. Relying mainly on three passages from Pausanias (vi. 20, viii. 21-3, and ix. 27, 2), she dwelt on the close analogies between Aphrodite Ourania, the eldest of the Fates, and Eileithyia; and deprecated, in the study of early local divinities, that specialisation of attributes which was characteristic only of the Olympian system which later became dominant. The last fragment commented on was the figure of a maiden bearing in her hand two problematic objects. At the close of the paper, Mr. Watkiss Lloyd, with reference to the Orpheus fragments, commented on the generally problematic character of Thracian myths.—Mr. Cecil Smith made some very interesting remarks on the practice of tattooing, as instanced by the Thracian women, and on the burning question whether "love-names" denote historical personages. He inclined to agree with Studniczka's view, as opposed to that of Hartwig.—Mr. Gardner commented on the great beauty and repose of the design, and congratulated the society on leading the way in the matter of the adequate publication of these white-ground vases.—Mr. Howorth doubted the restoration adopted, and further took the opportunity of protesting, in the name of the society, against permission having been given to the Germans to excavate at Idalium, in Cyprus.—The chairman promised that the matter should be inquired into.

Folklore Society.—(*Tuesday, February 26.*)

G. L. Gomme, Esq. (director), in the chair.—Mr. Edward Clodd read a paper on "The Philosophy of Rumpelstiltskin." After referring to the work of analysis and tabulation of folk-tales which the council, with the help of other members of the society, has in hand—a work which may be expected to throw light on the origin and diffusion of folk-tales—the author of the paper explained that his interest in the variants of "Rumpelstiltskin" had been excited by finding an old Suffolk tale, entitled "Tom Tit Tot" among county "Notes and Queries," published in the *Ipswich Journal* during 1877-1878. After this tale was read in full, abstracts of variants from Cornwall, Scotland, Sweden, Iceland, Germany, Austria-Hungary, Spain, Mongolia, &c., with references from archaic legends in Grimm and in the *Corpus Poeticum Boreale*, were given. The philosophy at the core of each story, the nucleus of primitive thought round which the incidents had gathered, was shown to be the widespread notion that the name of any king, whether human or superhuman, is an integral part of that king, and that to know it puts its owner in the power of another. This notion is a part of that general confusion between names and things which is a universal feature of barbaric modes of thought, and is closely related to fetichism, shamanism, and other products of uncultured intelligence. Examples from both the lower and the higher culture were cited, and conclusions deduced as to the like attitude of the mind before like phenomena which awakened man's fears until the true nature of those phenomena was explained by science.—Mr. Nutt drew attention to the splendid folk-tale, "Tom

Digitized by Google

Tit Tot," which Mr. Clodd had rescued, and discussed the incidents in the story which Mr. Clodd had not dealt with.—Dr. Gaster, Mr. Jacobs, and the chairman also took part in the debate.

FINE ART.

ART BOOKS.

Japan and its Art. By Marcus Huish. (Fine Art Society.) In this book Mr. Huish seems to us to have supplied a distinct want. The papers which he has contributed monthly to the pages of his magazine, the *Art Journal*, if not written for publication in book form, are well adapted for the purpose. Each of them forms a chapter on one of the very varied subjects which are of interest in connexion with Japanese art and Japan. The history, the social life, the legends, the religions, the various branches of its art, are all treated separately, and yet together. Both art and history illustrate one another in its carefully and pleasantly-written pages, and in its well-chosen and well-executed cuts. The material for such a short and comprehensive view of things Japanese is now very plentiful; but where to choose, and what to pick, is an art in itself, and one that Mr. Huish understands better than most. He has, besides, his own taste and knowledge and his own collection to help him, as well as the advice of collectors and experts. The result of his labour is a pretty book, and an interesting book, and a book that ought to be very generally acceptable. If it will not teach all that is to be learnt on the many subjects treated, it will teach what most people want to know—just enough to give a much more intelligent interest than before to many ignorant lovers of Japanese art, and to whet the appetite of those inclined to deeper and more serious study. Its general plan is so good that it might be used by Mr. Huish for a larger work of a more exhaustive character. Some of the chapters, as that on the legendary lore, would bear expansion into a volume by itself, which would be of great value to collectors. To understand the stories which are illustrated on their knife-handles and sword guards, their netsukes and coloured prints, is all that is needed to make most of them completely content with their possessions. This book contains much help of the kind. Mr. Huish has been wise in choosing small illustrations in order to give more of them; and it would not be difficult, with the aid of a few more still, to illustrate in quite a small compass all the most frequent of the subjects of Japanese artists, and a good many of the rarer ones. A well-arranged book of this kind would be certain of a pretty wide popularity. While recommending such a scheme to Mr. Huish's attention, we do not wish to suggest that there is any lack of this kind of interest in his present work, which contains as much both of text and illustration as such a volume could conveniently bear. It is a handy and comprehensive little book, well put together, and charmingly "got up."

The Application of Ornament. By Lewis F. Day. (Batsford.) This is the third of Mr. Day's text-books of ornamental design, which form (or will form when finished) the most practical and sound work of the kind in the English language. The present volume is not more useful, but it will be interesting to a wider circle of readers, for it deals with many questions which are stumbling-blocks to a number of persons not without taste or education. What should be understood by the word "conventional," a term so frequently misapplied, and so seldom understood in its most rational and honourable sense; "where to stop in ornament," another difficult point for the amateur as well as the artist; and how far the material and the tools employed should regulate design: such questions as these are of very wide interest, and they could scarcely be treated in a more concise and sensible manner than by Mr. Day in this volume. We have found ourselves differing from him only slightly and occasionally. We think that "savagery" is scarcely a quality appropriate to work in hard stone, like crystal or porphyry, where the perfect precision of the result attainable seems to us to justify any amount of labour in execution, and any degree of delicacy in design. Nor do we think he is quite right about Wedgewood ware. He does not seem to us to estimate the quality of the material—the exceptionally fine-grained stoneware capable of the sharpest and smoothest of treatment, and independent of glaze. It is also, we think, scarcely correct to talk of its colour as "crude." It may be simple, and frequently "cold," but it is scarcely "crude." However, on the points in which we differ from Mr. Day, and those (by far the largest in number) on which we agree with him, we hope to have something more to say when the present series is concluded. The next volume is to be on natural form and its adaptation to ornamental design. Mr. Day's text-books have received the approval of the Science and Art Department—a fact which deserves notice, not as a recommendation of Mr. Day's books, but as a sign of unusual intelligence at South Kensington.

Bryan's Dictionary of Painters and Engravers. Part XI. Edited by Graves and Armstrong. (Bell.) The commencement of the article on Vecelli (Titian) shows that this revised edition of Bryan is drawing to an end, and drawing to an end in a satisfactory manner—notwithstanding the laxity which marked the editorship of part of the first volume. The present instalment is rather barren in illustrious names; but there is Turner, and Perugino (Vannucci), and some of the greater Dutchmen like Teniers, Terborch, and Van der Helst. The merit of the last-named painter is, we think, but scantily recognised. Of Turner the account is by no means enthusiastic; but the article is ably written, and all the important facts of his life admirably summarised. On the whole, the part is well up to the mark.

LETTER FROM EGYPT.

Assouan: Feb. 12, 1889.

LITTLE progress seems to have been made with the excavation of the temple of Luxor since I last saw it three years ago. The most important part of the work had already been accomplished at that time, and the traveller in his boat on the river had the opportunity of admiring one of the most magnificent monuments of ancient Egypt. But it is a pity that the ruin cannot be properly protected. Before the work of excavation commenced, a portion of the building was kept under lock and key; now the whole of the temple has been allowed to become the common refuse-heap of the village. The tourist who has been induced to pay a hundred piastres in Cairo for permission to visit the monuments of ancient Egypt, upon the understanding that something was being done in return to protect them, will be grievously disappointed. The tourists have done their duty manfully, but the government have neglected to do theirs. Karnak is still open to the ravages of goats and herdboys, and Medinet Abu, like Dêr el-Medineh, to the intrusions of beggars and *antika*-sellers, who scrape the blue paint off the walls to mix with their forged scarabs; while a tomb at Thebes, reopened a few weeks ago by M. Bouriant, has already been wantonly defaced by the natives; and in the tombs discovered by Sir Francis Grenfell at Assouan the paintings have been disfigured by Arabic *graffiti*. It is true that outside some of the tombs placards are lying on the sand with a request in English that visitors should refrain from injuring the monuments; but it is to be presumed that the inscribers of the *graffiti* cannot read English. The interesting inscriptions over the tombs of the Third Dynasty at Mêdum have been literally smashed to fragments; and, since my last visit to Beni Hassan, the paintings in the tombs have suffered severely, easily protected though they might be. In fact, the only place so far where our "permits" have been of use was the temple of Edfu; and even here the "guardian" did not conceal his disappointment at being shown a piece of printed card instead of the old *bakshish*. The temple of Edfu is well cared for; but so it has been ever since I have known Egypt. If the Egyptian government expects to receive another golden crop of guineas from the visitors to the monuments next winter, the ancient monuments of the country must be looked after in a very different way from that in which they are being looked after now.

Of discoveries, I have not much to report. Opposite Maghágha, on the north side of the Gebel Sheikh Embárek, we found the site of an old city covered, like the desert immediately surrounding it, with myriads of flint flakes, cores, and arrow-heads. The whole of Egypt must once have been supplied by it with flint implements. We also found there some flint spear-heads, knives, and curious crescent-shaped instruments with the cutting edge on the inner side, the whole being mixed with Roman pottery. Among the pottery I picked up a fragment inscribed with Greek letters as well as a coin of the Roman Empire. At Tehneh I was taken to see an altar of colossal size, lying on its side in a quarry on the crest of a hill to the north of the village. An inscription upon it in Greek characters, much defaced by the weather, stated that it had been made in honour of an emperor, whose name had been erased, by Ignatius Tiberinus, the inspector of the quarry, and a citizen of Alexandria. The altar is 7 ft. 1 in. in length by 4 ft. 3 in. in breadth.

We explored the quarries at the back of the ruins of Antinopolis without discovering anything to reward us for our trouble except the remains of a Roman fort with a quarry immediately below it, the entrance to which had once been closed by a gate. It had evidently been worked by convicts. An adjoining quarry had been used as a church by the early Copts, whose chief gathering-place, however, was a few miles further south in the quarries behind Dêr Abu Hannes. The inscriptions I have copied in the latter have been published in the *Proceedings* of the Society of Biblical Archæology. This year I found in them a defaced Phœnician *graffito* which had previously escaped my notice. The letters בר are now alone legible.

On the southern side of the plain of Gow el-Kebîr I came across an Egyptian tomb adorned with hieroglyphs and sculptures, rudely cut but still comparatively little injured. It had belonged to an Egyptian gentleman of the name of Ahu.

My enquiries at Tel el-Amarna, as well as at Ekhmîm and Luxor, have proved that M. Grébaut was right in the belief he expressed to me at Cairo that the find of cuneiform tablets at Tel el-Amarna is exhausted, and that no more are left in native hands. At Tel el-Amarna I was shown the place where they were discovered. It was not a tomb, as has been asserted, but the foundation of the palace to the north of the mounds. The *fellahîn* had just begun to work there for manure when I visited the spot three years ago. I was also

Digitized by Google

taken to the ruins of an ancient chamber of crude brick, adjoining the site of the temple, which had lately been opened by the natives. The bricks of which it was built were all stamped with the cartouches of Khu-en-Aten and his god.

A fragment of one of the cuneiform tablets in the possession of the Rev. M. Murch is written in characters which have the well-known Assyrian forms, and it may therefore have been sent by the Assyrian king. But the beginning of the text is lost. It is addressed to Amenophis IV., the royal "brother" of the writer. His father, Nabkhurriya or Amenophis III., is more than once referred to, as well as certain presents, including fourteen blocks of "mountain crystal" and "four papyri."

A new source of supply of Greek ostraka has turned up in Ekhmîm. Those I have seen relate to the taxation of the olive-grounds which seem to have existed in the neighbourhood in the Roman age. Here is the translation of one of them: "For the oil-works I have received for the servants of the master Kolluthos one measure of pure oil. (Signed) Apollo(nio)s the inspector, the 10th of the month Athyr, the 10th year of Tiberius." At Gebelên also, where three years ago I found two demotic ostraka, I picked up the other day one inscribed with Greek.

I saw Mr. Petrie in the Fayum on my way up the river, and he there placed in my hands two fine papyri of the sixth century, which he had recently disinterred. They are in Greek, and relate to the sale of certain property by "Eulogios, formerly a Melitian monk, but now orthodox, the son of Joseph and Tlesis, originally inhabiting the mountain on the Arsinoite frontier, called Labla, but now living in the monastery of the Makru-Phyôn in the suburbs of Arsinoê." In the one case he sold to "the Melitian priest Pursis" a monastery which adjoined on the south "the monastery of the blessed Andreas the priest, and on the north the monastery of Naharaos the priest," on the west being "the public road on which stands the monastery of Peter the deacon." In the other case a monastery was sold to Papnuthios and Julius, "both Melitian monks of the monastery of Labla in the suburbs of Arsinoê," which adjoined "a deserted monastery" on the south, the monastery of Naharaos on the north, and "the public road" on the west. For the topography of the Arsinoite nome the two deeds will be of great value and interest.

A. H. Sayce.

OBITUARY.

HENRY ECROYD SMITH.

Mr. Henry Ecroyd Smith, the well-known antiquarian writer, for many years connected with the Mayer Museum of Antiquities at Liverpool, died on January 25, at Middleham, Yorkshire, at the age of sixty-six. His most important works were *Reliquiae Isurianae;* the Remains of Roman Isurium—now Aldboro', near Boroughbridge, Yorkshire (1852), and *Reliques of the Anglo-Saxon Churches of St. Bridget and St. Hildeburga at West Kirby, Cheshire* (1870). He contributed to the *Transactions* of the Historic Society of Lancashire and Cheshire not fewer than twenty papers. His annual list of Notabilia of the Archaeology and Natural History of the Mersey District, extending from 1863 to 1874, has been of much value to local antiquaries. More recently, since he left the neighbourhood of Liverpool, he published a history of Coningsburg Castle, also an account of the ancient remains discovered in the grounds of the late G. S. Gibson. He collected materials for a new edition of Lord Braybrooke's history of Saffron Walden, and some years ago printed a volume on the history of his family—the Smiths of Yorkshire. He published also a catalogue of Roman tessellated floors found in different parts of Britain, one of which is in the Museum at Saffron Walden. His Essex archaeological papers include an account of a Saxon cemetery discovered in an ancient British Oppidum. In early life Mr. Smith was engaged in commercial pursuits, and he was for a time employed on the Liverpool Dock Estate; afterwards he removed to Saffron Walden.

NOTES ON ART AND ARCHAEOLOGY.

The Royal Institute of Painters in Water-Colours—whose exhibition opens much earlier than usual—have invited a certain number of distinguished guests to a dinner in the gallery on Wednesday in next week.

The Royal Society of Painter-Etchers open their first exhibition next week in their new quarters—the gallery of the Royal Society of Painters in Water Colours, in Pall Mall East.

There have been some welcome changes lately in the arrangements of the two great fore-courts which constitute the vestibule of the South Kensington Museum, and in the classification of the reproductions which they contain. Greater prominence is now given to the casts from French sculptures already forming part of the collection, and some examples of importance have recently been added. Among these are the famous "Beau Christ d'Amiens"—a masterpiece of thirteenth-century Gothic sculpture, so majestic that it dwarfs all its surroundings; and a section of the beautiful carved choir-stalls from the abbey-church of St. Denis. This last-mentioned example is, with a carelessness of which the South Kensington authorities have furnished so many similar instances, classified as of the fourteenth century. It is really a characteristic example of the peculiar transitional style of France, in which late Gothic and early Renaissance forms appear side by side almost unblended; and as such it cannot be dated earlier than the last years of the fifteenth, or the first years of the sixteenth, century. The central relief, with its perspective effects, shows unmistakably the influence of the Florentine pictorial style of the fifteenth century. Why, too, is the newly added bust of a child, attributed to Luca della Robbia, stated to be "sixteenth century"? And why is a cast from the small bronze plaque of the "Deposition" in the Ambras collection, near Vienna, though attributed to Donatello, put down to the same period? In the latter instance the error is the less comprehensible since the dates of the great sculptor's birth and death are correctly given.

With reference to a critism on Lanciani's *Ancient Rome in the Light of Recent Discoveries* in the Academy of last week, a correspondent writes that he believes the book was originally written in English; and we have ourselves independent reasons for the same belief.

THE STAGE.

"NOW-A-DAYS."

It is said that the competent sporting man can pick holes in "Now-a-days," just as the competent lawyer has been able to pick holes in nearly every English serious comedy or domestic drama produced within the last thirty years. The comedy and the domestic drama live in spite of the competent lawyer, and perhaps "Now-a-days" may bear up under the weight of the disapproval of the competent authority on sport. For, as one must never allow oneself to tire of repeating, work is to be estimated not by the presence or the absence of faults, but by the presence or absence of qualities. And, applying to the play at the Princesses' this positive treatment—sometimes the only healthy one in criticism—it has undoubtedly to be recognised that Mr. Wilson Barrett's drama has the elements of vitality; that it commands the interest of the public in virtue of a healthy and ingenious story, of very neat stage construction, of some telling sketches of character, and of vigorous dialogue. Whatever may be the improbabilities connected with the fortunes of the celebrated racehorse that won the Derby after a secret imprisonment at Brixton, the fable is one which holds the attention of the spectator. The play is not keenly analytical, is not poetic, is not essentially literary; and no one knows this better than its author, who has contrived a piece which shall be full of action, and which shall likewise present to several welcome performers excellent opportunity for strong "characterisation." The piece fulfils a want. It has, moreover, the merit of being by no means a "one-part piece." Mr. Julian Cross, Mr. Lewis Waller, Mr. George Barrett, and Miss Webster are provided for with care. Other players are not forgotten. Miss Norreys's presence is acceptable, though there is hardly found for her precisely the thing which she can do best. And, without any wrenching of scene or situation, without disturbing in any way the natural course of the story, without diverting the action from its proper channel, there is found, happily, for Mr. Wilson Barrett himself a part which, more than any part which he has lately "created," must commend him in the eyes of the competent observer of his art. Mr. Barrett plays no more a blameless clergyman, nor a lonely exile, nor even a convict accused inaccurately. He gives vitality to the dramatist's already tolerably vigorous portrait of a Yorkshire trainer, hard-headed, somewhat egotistical, yet at bottom tender-hearted: what is called an "Englishman" essentially, and, perhaps, a Yorkshireman most of all.

Some people—chiefly, of course, people without originality—are now-a-days so desperately cultivated that their sympathies run in a narrow groove. These are not a little disposed to condemn all such plays as Mr. Barrett's new one, because they do not deal chiefly with persons of "the higher education," or because they are not merely elegant, or because they are not merely cynical. Fortunately there is always an appeal from such superfine criticism. There is always a larger tribunal, a weightier court to sit in final judgment on the case. Such a court settles that popular drama of the quality of Mr. Barrett's has a real value, and may claim a reasonable place. We would, for our own parts, rather see Mr. Barrett play Hamlet, or—to come to a really poetic piece of our own day—Chatterton, than any part in any more or less sensational drama that has ever been produced. But that is not everything. The art of the actor has to be exercised variously, if he is to please all sections of that public which takes an interest in it. And if it is to be engaged, for a time at least, with the modern play, with every possible attraction of scenery and effect, we would far rather that modern play should be "Now-a-days," in which the actor studies from the life, shrinks from nothing that is unsympathetic, and does full justice to all

Digitized by Google

that is sympathetic, in the rough but intensely human character of John Saxton, than that it should be a play which compels or invites the actor to be "faultily faultless, icily regular." Of the other artistes who have already been named as taking part in the new piece, the greatest mark is made perhaps this time by Mr. Lewis Waller, who, in his representation of a *jeune premier*, remembers that manliness is every bit as necessary as elegance; and by Miss Webster, whose healthy good nature and comely shrewdness are allied with some real capacity for the emotional. Among those not yet named, Miss Hawthorne goes with smoothness through the business of one of the heroines; Messrs. Hodges, Cliffe, Melford, and Elliot'are useful exponents of character; and Mr. Welch, as Jumper, a stable-boy who can be "got at," points the wholesome moral that even a very good North-country accent is not proof positive of simple integrity.

FREDERICK WEDMORE.

STAGE NOTES.

A COMMITTEE has been formed to collect subscriptions for a testimonial to Mr. J. Maddison Morton, the author of "Box and Cox," "Lend Me Five Shillings," &c., who is in his seventy-ninth year, and who has himself reaped little benefit from his popular success, being now left with very inadequate resources. The hon. secretaries of the committee are Mr. Samuel French and Mr. Walter Emden, who may be addressed at Terry's Theatre.

MUSIC.

RECENT CONCERTS.

A FINE performance of Brahms's Sextet in G (Op. 36), under the leadership of Mdme. Néruda, was given at the Popular Concert last Saturday afternoon. Now that Herr Joachim has arrived, and will assume command at these concerts until the end of the season, it is the moment to recall the valuable service already rendered by Mdme. Néruda. In addition to her charm and finish, she seems to gain every day in depth and feeling, and her readings of the works of the great masters satisfy the most critical. Mdme. de Pachmann, who made her *début* here shortly before her marriage, played some short pianoforte solos. Her selection was not altogether a satisfactory one. Why did she not give the whole of Raff's interesting Suite in E minor (Op. 72), instead of playing from it only the opening prelude and the closing fugue. It was evidently not curtailed on account of its length, for she added Rubinstein's Barcarolle in G and Weber's Rondo in E flat, two light and somewhat hackneyed pieces. Mdme. Pachmann is an accomplished pianist, and there was but little fault to find with her rendering of these trifles. She was recalled three times. Miss Liza Lehmann was the vocalist, and, as usual, charmed her audience.

Herr Joachim was received on the following Monday evening with enthusiasm. He played magnificently, and displayed all that vigour and earnestness which have for so many years stamped him as an artist without a rival. He led Beethoven's Quartet in E minor (Op. 59, No. 2), and gave as solo, and, we believe, for the first time, Spohr's adagio from the sixth Violin Concerto. For an encore he played a Scherzo by the same composer. He was ably accompanied by Miss Agnes Zimmermann, who was likewise heard in three of Henselt's difficult and, so far as the first two are concerned, dry *Etudes*. She was well received, but refused the encore.

We must take another opportunity of noticing an interesting novelty performed last Saturday at the Crystal Palace. This was a Marche Funèbre for the closing scene of "Hamlet," written by Berlioz in 1848—the third of three pieces for orchestra and chorus published by the composer under the title "Tristia." Apparently little or nothing is known about the occasion for which it was written. It is not mentioned in the *Mémoires*.

The first Bach Choir Concert took place on Monday evening. In spite of what the poet says, there is, after all, something in a name, and we have sometimes thought that this society scarcely gave sufficient prominence to the composer whose name it bears. No fault, however, could be found with the programme last Monday: it was Bach from beginning to end. First came the Cantata "Wachet auf," written at Leipzig, probably, in 1731. It is one of the composer's finest inspirations, and Dr. Spitta speaks appropriately of the mystical tone that pervades the whole work. It contains two duets for soprano and bass, to the first of which there is a violin obbligato accompaniment which was played by Herr Joachim, and to the second an oboe obbligato played by Mr. Lebon. The next vocal work was the grand 8-part Motet, "Singet dem Herrn," also written at Leipzig. The last was the Cantata "Halt im Gedächtniss Jesu Christ," another of the compositions written by the master at his ripest period. It contains only one solo—a beautiful tenor Aria. Most effective is the introduction of the Easter chorale, "Erschienen ist der herrlich Tag," in the middle of the work. The purely instrumental music consisted of the concerto in the A minor Violin Concerto, and the wonderful Sonata in G minor for violin alone. The last-named was first played by Herr Joachim at the Popular Concerts on February 16, 1874, and repeated next week; but it has not been heard in its entirety since then. Here, then, is a programme which for interest could scarcely be surpassed, and it only remains for us to say a few words about the performance. The choir was heard at its best in the Motet, the greater part of which was admirably rendered. In the first Cantata, the two duets, in which the old master gives us some of his lightest and most melodious strains, were artistically sung by Miss L. Lehmann and Mr. Plunket Greene; but in quality their voices were not well balanced. Miss E. Himing sang the recitatives carefully in the second Cantata. Of course, Herr Joachim played splendidly. Dr. Stanford conducted with his usual activity and intelligence.

J. S. SHEDLOCK.

MUSIC NOTES.

THE Wind Instrument Chamber Music Society has been founded, with Lord Chelmsford as president, after the example of a similar society in Paris. It is proposed to hold special concerts, and to offer prizes for compositions. Three concerts will be given, at the Royal Academy of Music, on March 23, April 5, and May 3, at the last of which Beethoven's posthumous Trio for flute, bassoon, and piano will be heard for the first time in London.

MR. WILLIAM ASHTON ELLIS, editor of the *Meister*, will deliver a lecture before the Wagner Society on Friday next, March 15, at Trinity College, Mandeville-place, on "The Wagner-Liszt Correspondence."

THERE will be altogether eighteen performances at Bayreuth this year, between July 21 and August 18. "Parsifal" will be given nine times, "Tristan und Isolde" four times, and "Die Meistersinger" five times; the last will be conducted by Dr. Hans Richter. Tickets may be obtained in this country from Messrs. Chappell & Co., but a few free admissions have been placed at the disposal of the London branch of the Wagner Society.

MACMILLAN & CO.'S NEW BOOKS.

NEW AND ENLARGED EDITION.

THE WORKS of LORD TENNYSON,
Poet Laureate. A New and Enlarged Edition. With a Portrait. Crown 8vo, 7s. 6d.
*** This Volume contains all LORD TENNYSON'S POEMS published up to this time.*

TWENTY-SIXTH YEAR OF PUBLICATION.

THE STATESMAN'S YEAR BOOK:
A Statistical and Historical Annual of the States of the Civilised World. Revised after Official Returns. For the Year 1889. Edited by J. SCOTT KELTIE, Librarian to the Royal Geographical Society. Crown 8vo, 10s. 6d.
The *Athenæum* says: "It is one of the most useful books of reference."

A NEW SELECTION OF THOMAS CARLYLE'S LETTERS.

LETTERS of THOMAS CARLYLE.
1826-1836. Edited by CHARLES ELIOT NORTON. 2 vols. Uniform with the "Early Letters of Thomas Carlyle, 1814-1826"; "Correspondence between Goethe and Carlyle"; and Professor Charles Eliot Norton's Edition of "Carlyle's Reminiscences." Crown 8vo, 18s.

CHILDREN of the STATE. By Florence DAVENPORT-HILL. Edited by FANNY FOWKE. Second Edition. Revised and Enlarged. Crown 8vo, 6s.

Now ready, Vols. I. and II., with Portraits. Crown 8vo, 2s. 6d. each.

ENGLISH MEN OF ACTION.

GENERAL GORDON. By Colonel Sir WILLIAM BUTLER.
The *Spectator* says:—"This is beyond all question the best of the complete narratives of the career of General Gordon that have yet been published."

MORALITY: an Essay on some Points thereof. (Addressed to Young Men.) By MAURICE CHARLES HIME, M.A., LL.D., Barrister-at-Law, Head Master of Foyle College, Londonderry.

"It is a remarkable fact that this book is not praised by one sect or sort of people only, but by all sorts—High Church, Low Church, Broad Church, Roman Catholic, Protestant, Method st, Baptist, &c. It is seldom that a book on morals is written which papers of such different shades of opinion combine in speaking favourably of. The book should be in the library of every teacher of youth."—*Irish Ecclesiastical Gazette.*

UNIVERSITY OF LONDON.

NOTICE is HEREBY GIVEN, that on WEDNESDAY, 24TH of APRIL NEXT, the Senate will proceed to ELECT EXAMINERS in the following departments:—

Examinerships.	*Salaries (Each.)*	*Present Examiners.*
ARTS AND SCIENCE.		
Two in *Latin*	£180	Prof. R. Y. Tyrrell, D.Lit., LL.D., M.A. Vacant.
Two in *Greek*	120	Rev. H. A. Holden, LL.D., M.A. Rev. William Wayte, M.A.
Two in *The English Language, Literature, and History*	100	Prof. Edward Arber, F.S.A. Vacant.
Two in *The French Language and Literature*	110	Amédée Roclangon, Esq. Vacant.
Two in *The German Language and Literature*	80	Prof. C. A. Buchheim, Ph.D. Herman Hager, Esq., Ph.D.
Two in *The Hebrew Text of the Old Testament, the Greek Text of the New Testament, the Evidences of the Christian Religion, and Scripture History*	50	George J. Spurrell, Esq., M.A. Rev. C. H. H. Wright, D.D., Ph.D., M.A.
Two in *Mental and Moral Science*	120	Prof. Robert Adamson, LL.D., M.A. Prof. William Knight, LL.D.
Two in *Political Economy*	30	Prof. C. F. Bastable, M.A. Prof. J. S. Nicholson, D.Sc., M.A.
Two in *Mathematics and Natural Philosophy*	200	Prof. M. J. M. Hill, M.A. Joseph Larmor, Esq., D.Sc., M.A.
Two in *Experimental Philosophy*	180	Prof. G. F. FitzGerald, M.A., F.R.S. R. T. Glazebrook, Esq., M.A., F.R.S.
Two in *Chemistry*	240	Prof. W. A. Tilden, D.Sc., F.R.S. Vacant.
Two in *Botany and Vegetable Physiology*	120	Prof. F. Orpen Bower, D.Sc. Prof. H. Marshall Ward, M.A., F.R.S.
Two in *Comparative Anatomy and Zoology*	120	Adam Sedgwick, Esq., M.A., F.R.S. Vacant.
Two in *Geology and Palæontology*	75	Prof. W. Boyd Dawkins, M.A., F.R.S. Vacant.

Examinerships.	*Salaries (Each.)*	*Present Examiners.*
LAWS.		
Two in *Jurisprudence, Roman Law, Principles of Legislation, and International Law*	£100	J. B. Moyle, Esq., M.A., B.C.L. Vacant.
Two in *Equity and Real and Personal Property*	50	Leonard Field, Esq., B.A. E. Horton Smith, Esq., M.A., Q.C.
Two in *Common Law and Law and Principles of Evidence*	50	L. M. Aspland, Esq., LL.D., M.A., Q.C. Lumley Smith, Esq., M.A., Q.C.
Two in *Constitutional History of England*	25	Henry E. Maldon, Esq., M.A. Prof. T. E. Scratton, M.A., LL.B.
MEDICINE.		
Two in *Medicine*	150	William Cayley, Esq., M.D. Prof. F. T. Roberts, M.D., B.Sc.
Two in *Surgery*	150	W. Morrant Baker, Esq. Prof. Christopher Heath.
Two in *Anatomy*	150	Prof. John Carnow, M.D. Prof. Alex. Macalister, M.D., M.A., F.R.S.
Two in *Physiology*	120	J. Newport Langley, Esq. M.A., F.R.S. Prof. E. A. Schäfer, F.R.S.
Two in *Obstetric Medicine*	75	F. H. Champneys, Esq., M.D., M.A. Vacant.
Two in *Materia Medica and Pharmaceutical Chemistry*	100	J. Mitchell Bruce, Esq., M.D., M.A. Frederick Taylor, Esq., M.D.
Two in *Forensic Medicine*	50	Prof. G. V. Poore, M.D., B.S. Thomas Stevenson, Esq., M.D.
MUSIC.		
Two in *Music*	50	William Pole, Esq., Mus.Doc., F.R.S. John Stainer, Esq., Mus.Doc., M.A.

The Examiners above named are re-eligible, and intend to offer themselves for re-election.

Candidates must send in their names to the Registrar, with any attestation of their qualifications they may think desirable, on or before TUESDAY, MARCH 26TH. (It is particularly desired by the Senate that no personal application of any kind be made to its individual Members.)

By order of the Senate,

ARTHUR MILMAN, M.A., Registrar.

LITERATURE.

The Correspondence of John Lothrop Motley. Edited by George William Curtis. In 2 vols. (John Murray.)

MANY of us remember Mr. Motley as a graceful, stately, scholarly figure in London society. But none knew him quite so well as now in the light of this familiar and friendly correspondence. There is not in the two volumes anything so stiff as a dispatch. Much of the matter is diplomacy at play. The three principal contributors — Motley, Bismarck, and Holmes — are all in their most easy manner. There are a few fine sentences in Motley's best historic style. The brightest letters are perhaps those of the Autocrat of the Breakfast-Table, whose pen is most accomplished for such correspondence. There are but few letters in which high interest is sustained throughout, and none that the editor should have rejected. His work is never conspicuous, but it appears to have been thoroughly well done. That Motley's style was naturally fine may be judged from this description of Etna in a letter to his parents written in his twenty-first year:

"The greatest peculiarity in the appearance of Etna, and one which renders him the most striking mountain I have ever seen, is his single and solitary situation. . . . Etna rises all alone from a dead plain: suddenly and singly with one stride he is in heaven, and there he stands and stood to-day, with the sunshine wasting itself on his icy forehead—all alone—the whole sky and the whole earth to himself, and looking like the god and ruling spirit of the island."

Motley's tastes, his studies, his works, his life made him European rather than American. A courtier, a favoured correspondent of *grandes dames* in the Old World, his feelings as citizen and representative of the great Republic of the New World blazed forth under the presidency of Abraham Lincoln and for the cause of the North in the Civil War. But though a most loyal Republican, he was better acquainted with the courts and parliaments of Europe than with the territories of the United States. Who could have written a better description of Thiers?

"He leaned over the Tribune and began to squeak, not to speak; and yet, in spite of his funny voice, every word that he said was distinctly audible, and his style was so fluid, so limpid, and so logical, his manners so assured and self-possessed, that in spite of the disadvantages of his voice, his figure and his great round spectacles, which give him the appearance of a small screech-owl, I thought him one of the most agreeable speakers I had ever heard."

Of the Dutch, for whose history Motley did great things, he says:

"The Dutch have certainly done many great things. They have had to contend with two of the mightiest powers in the world—the ocean and the Spanish tyranny—and they conquered both. Neither the Inquisition nor the Zuyder Zee was able to engulf them; and yet it is very funny to see a people, after having achieved such triumphs, rest themselves so contentedly in their summer houses on their very ill-savoured canals."

It was before the war that Motley said: "I have vastly more respect for the government of England than for our own—the nation I can't help considering governed by higher principles of action, by loftier motives." When the war broke out, all Motley's powers were devoted to make known and to vindicate the cause of his government. He might easily have taken offence and have had his hands full of trouble in London society at that time. His own influence, the charm of his friendship, had probably tended to keep some few straight; and he enjoyed the warm regard of such men as Mill and Bright, who worked upon English public opinion with the same purpose. The Liberal Government of 1861 were but poor friends to the distracted Union. Motley was disappointed and mortified that Liberals should look coldly on the chance of American dismemberment, while his government was struggling with the most gigantic rebellion with which a civilised commonwealth was ever called upon to grapple. He did not ask for more than neutrality; but he could not understand why they were not as much entitled to moral sympathy as Italy ever was. He derived comfort from Mr. Bright, who wrote when the United States Government had given way in regard to Mason and Slidell:

"What has happened will leave a great grievance in the minds of your people, and may bear evil fruit hereafter; for there has been shown them no generosity such as became a friendly nation, and no sympathy with them in their great calamity. I must ask you, however, to understand that all Englishmen are not involved in this charge. Our ruling class, by a natural instinct, hates democratic and republican institutions, and it dreads the example of the United States upon its own permanency here."

"As for John Bright," said Motley, "I hope one day to see a statue raised to him in Washington." Mill was another of his consolers. "If you come well and honourably," he wrote, "through one of the severest trials which a nation has ever undergone, the whole futurity of mankind will assume a brighter aspect." Mill said to Motley, in his simple and straightforward way: "There are few persons whom I have only seen once with whom I so much desire to keep up a communication as with you." Motley had a "great reverence" for Lincoln, whom he thought a man of the most extraordinary conscientiousness. "He seemed to have a window in his breast." Motley quotes from Lincoln's address of March 1865 these noble words: "With malice towards none, with charity to all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in," which, he adds, "should be his epitaph; and who in the long roll of the world's rulers has deserved a nobler one?" Under President Grant Motley also served his country. Grant, says Holmes, was "one of the simplest, stillest, men I ever saw. Of all the considerable personages I have seen, he appears to me to be the least capable of an emotion of vanity."

Through many years, Motley knew many of the leading people in London society. His acquaintance goes back to Brougham, of whom he gives a wonderful description, of which we will quote but one line: "The rugged outlines or headlands of his face are wild and bleak, but not forbidding." He saw little of Disraeli, but believed that "his audacity, which has proved more perennial than brass, was always the solid foundation of his character." He offered the MS. of the *Dutch Republic* to the eminent publisher of these volumes; and, after retaining the work a fortnight, Mr. Murray declined it "civilly but decidedly." He did not fail, however, afterwards to express "in very strong language his self reproaches for his short-sightedness." Motley knew the difference between the society of various capitals:

"The great distinction between Vienna and London company is that here [Vienna] the fine world is composed exclusively of folks of rank and title; *there* every illustration from the world of science, art, letters, politics, and finance, mingle in full proportions with the patricians, and on equal terms."

One of his elder daughter's Austrian partners in a dance once asked her "if Boston was near the river Amazon?" which Motley thought "rather a geographical achievement for Vienna, as, after all, the Amazon is in America." Motley himself said of Bismarck: "Probably no living man knows him more intimately than I do." They had been fellow students and remained fast friends through life Bismarck often wrote to Motley as if he were a typical Yankee with "his feet tilted against a wall." In defence of Bancroft, the United States Minister at Berlin, Bismarck wrote:

"He is better than most of the Europeans who follow his, your, and my profession; even if the smooth liars of the profession should talk about him exactly as my intimate enemies did about me, when they called me the diplomatist in wooden shoes."

In their very friendly intercourse, Motley gathered that

"the military opinion was bent on going to Vienna after Sadowa. Bismarck strongly opposed this idea. He said it was absolutely necessary not to humiliate Austria, to do nothing that would make friendly relations with her in the future impossible. He said many people refused to speak to him. The events have entirely justified Bismarck's course, as all now agree."

Lowell, in a delightful letter, offers five dollars a page for contributions to the *North American*, and urges acceptance in this way:

"Imagine the difference in the tone of the *Review*. If you are a contributor, of course it will always be, 'Our amiable and accomplished minister at the court of Vienna, who unites in himself,' &c., &c.; or else, 'In such a state of affairs it was the misfortune of this country to be represented at Vienna by a Minister as learned in Low Dutch as he was ignorant of high statemanship,' &c., &c. I pull my beaver over my eyes and mutter 'Bewa-r-re!'"

When Motley come to England in 1869, Lowell said he could think of no man so fit

Digitized by Google

to bring back a more kindly understanding between the two countries. "You will neither forget your own nationality nor irritate that of England." Holmes's letters are almost as good as possible. We must quote this admirable description of Emerson:

"Who always charms us with his delicious voice, his fine sense and wit, and the delicate way he steps about the words of his vocabulary; if you have seen a cat picking her footsteps in wet weather, you have seen the picture of Emerson's exquisite intelligence feeling for its phrase or epithet; sometimes I think of an ant-eater singling out his insects as I see him looking about, and, at last, seizing his noun or adjective, the best, the only one, which would serve the need of his thought."

It was to Holmes that Motley wrote a most touching letter on his wife's death. From that last day in 1874 Motley's health declined. He was cheered by the friendship of the late Queen of Holland, to whom "half a dozen languages were like her mother tongue," whose manner "was almost perfection, combining the innate grace and dignity belonging to her station with perfect simplicity, absence of vanity and egotism, and most abundant sympathy." The marriage of his eldest daughter with Sir William Harcourt gave him great satisfaction, and his account of the wedding in Westminster Abbey in a letter to Holmes reads "like a passage in a stately drama." A few months later he died suddenly; and we may adopt as most worthy the words of Dean Stanley with reference to Motley in Westminster Abbey, that he was

"one of the brightest lights of the Western Hemisphere—the high-spirited patriot, the faithful friend of England's best and purest spirits, the brilliant, the indefatigable historian who told, as none before him had told, the history of the rise and struggle of the Dutch Republic, almost a part of his own."

Arthur Arnold.

Chaucer—*The Minor Poems*. Edited by the Rev. Walter W. Skeat. (Oxford: Clarendon Press.)

Perhaps the highest praise that can be given to this edition of Chaucer's *Minor Poems* is that it answers, in every way, to the expectations to which its announcement gave rise. "The inevitable German," to whom Prof. Sweet recently alluded, has for once been forestalled; and, though English students can never be too grateful for the help of foreign scholars like Prof. Ten Brink, it is surely a matter of congratulation that, the first critical edition of the whole of Chaucer's *Minor Poems* is the work of an Englishman and a Londoner. By the ungracious fortune which falls so often to reviewers, a large part of this article will probably be taken up with a discussion of the only two points in which Prof. Skeat's work appears open to exception. But his book is one for which pure gratitude must be, not only the first, but the abiding feeling of every competent reader; and it is a pleasure to have to point out some of its many merits.

As is well-known, it is only within the last quarter of a century that any attempt has been made to fix the canon of Chaucer's Minor Poems on scientific principles. An elucidation of these principles occupies, roughly speaking, the first half of Prof. Skeat's long introduction, and is admirable in its arrangement and clearness. The whole of the external evidence which places the genuineness of most of Chaucer's works beyond question is first given in chronological order; seventy-three poems are then enumerated which have at various times been attributed to Chaucer, and reasons are given for the rejection of upwards of fifty of them. Sometimes these reasons take the form of the production, on the authority of excellent MSS., of the real author; and thus numerous poems which Stowe did not hesitate to father on Chaucer are now restored to Gower, Lydgate, Hoccleve, and Henryson. In other cases the occurrence of impossible dates and references, sometimes a distinct allusion to Chaucer as dead, proves at a glance the incredible carelessness of the sixteenth-century editors. But the main tests are those of rime and language, the presence of Northern dialect words, or of words not in use in England until after Chaucer's death, the dependence of the metre on a spelling never found in Chaucer, or the use of the rime *y*: and *y*, which in Chaucer is no rime at all. By the application of these tests the canon of Chaucer's Minor Poems, as set forth in 1880 by the Chaucer Society, is upheld with two important exceptions: (1) the omission, owing to new evidence attributing it to Hoccleve, of the "Moder of God"; (2) the addition of five poems (among them two now printed for the first time), as to which more hereafter.

After dealing with the Chaucer canon, Prof. Skeat gives a double list of MSS, with the object of showing at a glance the poems contained in each MS. and also the MS. authority for each poem. The more important MSS. are more fully described; and it may be mentioned here that, while making full use of the texts published by the Chaucer Society, Prof. Skeat claims to have based his edition, wherever possible, on an independent collation. The remainder of his introduction is occupied by a brief preface to each of the twenty-three poems in his book, upholding their authenticity and discussing and illustrating their sources, characteristics, and dates.

A quotation of the note which heads the collation to the "A B C" will best illustrate the principles and the scale on which Prof. Skeat set to work to construct his text:

"*The MSS. used to form this text are:* C = MS. Ff. 5.30 in the Camb. Univ. Library; Jo. = MS. G. 21, in St. John's College, Cambridge; Gl. = Glasgow MS. Q. 2 25; L. = Laud 740 in the Bodleian Library; Gg. = MS. Gg. 4.27 in the Camb. Univ. Library; F. = MS. Fairfax 16, in the Bodleian Library. The text closely follows the first of these; and all variations from it are recorded (except sometimes *i* for *y*, and *y* for *i*)."

Nothing fuller or better than this could be wanted, the only thing to be regretted is the absence of any indication in the text itself of cases in which the editor has made omissions or transpositions without MS. authority. Additions are of course inclosed within square brackets; and it would have been convenient if other alterations had been marked by asterisks, so that a reader's attention might at once be drawn to every departure from the MSS. It is needless to say that omissions and additions alike are carefully explained in the collation; but students may be excused for wanting to know when the text has been changed without having to refer every minute to the footnotes.

Prof. Skeat's commentary extends to nearly as many pages as his text, and can hardly be praised too highly. Whether it be in illustrating Chaucer's references to chess and hunting in the "Dethe of Blaunch," his astronomy in the "Compleynt of Mars" and the "Hous of Fame," his bird lore in the "Parlement of Foules," or incidental allusions to geography, music, or aught else, Prof. Skeat appears equally at home. His readers are also given adequate means for acquainting themselves with the poet's indebtedness to his various authorities, such as Guillaume de Machault, Boethius, Alain Delille, &c. Of course, some difficulties are still left for future commentators. Thus, it is not yet given to us to say with certainty to whom Chaucer was, or imagined himself to be, referring to in his allusions to "myn auctor Lollius"; and of the numerous explanations of the name "Eclympasteyre" none can yet be called thoroughly satisfactory. On the other hand, the editor is able to give his own quite convincing explanation of "thou Herenus queen" (Herenus = Herines = Erinnys) in "The Compleynte unto Pitee" and in "The Compleynte of Mars" his interpretation of the difficult phrase, "Fro Venus valance," will be generally accepted. In the emendation "erme" (ermen = to grieve) for the false rime "yerne," in the line—

"Anon, her herte gan to erme"
("Duchesse," l. 80),

he has been independently anticipated by Prof. Ten Brink; but in "The Hous of Fame," l. 1940, fortune has not been so cruel. Here, according to the MSS., the house was made of twigs, such as men make panniers of, "or elles hattes or dossers." As Prof. Skeat justly remarks, "We do not make hats with twigs or osiers," but we do make baskets; and a sentence in Caxton's *Golden Legend*, "And bare on his sholdres vij *hottis* or baskettis fulle of erthe," indicates the true reading in this passage, which is given in this edition for the first time. Again, in l. 17 of "The Former Age," Prof. Skeat has discovered the true meaning of "weld," by which he himself in former days and Dr. Sweet have both been puzzled. "Weld" is now explained as the *Reseda Luteola* of Linnaeus, better known as Dyer's Rocket, and its mention along with madder and wood is natural enough. Other notes to which attention may be drawn are those on "corbettes" ("Hous of Fame," l. 1304); "in the dismalle" ("Duchesse," l. 1206); "sours" ("Hous of Fame," l. 544); and "sweyht" ("Hous of Fame," l. 1783). But the full value of Prof. Skeat's commentary can only be discovered by use.

That this edition of Chaucer's *Minor Poems* is hardly likely to be displaced for many years to come makes an error of judgment which it may contain of really serious importance. It is to be regretted, therefore, that Prof. Skeat should have included two poems in his text, and three in an appendix, none of which have received the general sanction of Chaucer scholars. The last twenty years have witnessed the exclusion

Digitized by Google

from the Chaucer canon of many poems whose authenticity was long undoubted. The justice of this exclusion is absolute, but it has not yet won universal recognition; and if the principles on which it is based are now illegitimately extended to attribute fresh poems to Chaucer upon insufficient evidence, there is a real danger that the principles themselves may be discredited. It is imperative that for a little while the Chaucer canon should be considered closed, and that any fresh poems which successive editors may desire to attribute to him should be as clearly as possible distinguished from those now generally accepted. If this principle be granted, a reviewer's personal opinions for or against the authenticity of any given poem become of very small importance. The present writer is strongly in favour of the genuineness of the curious metrical experiments in seven-line stanzas, in terza rima, and in ten-line stanzas, to which, under the title of "A Compleint to his Lady," Prof. Skeat gives the first place in his Appendix. The style is distinctly Chaucerian, Chaucer is likely to have made experiments in terza rima, and this cannot be said of any other of his contemporaries; lastly, Shirley, by copying the lines at the end of "The Compleint to Pitie," practically asserts Chaucer's authorship. Again, for the triple roundel entitled "Merciles Beaute," printed by Prof. Skeat in his text, a strong claim can be made. It immediately follows several of Chaucer's undoubted poems in the Pepys MS., in which alone it is preserved. It is delightfully pretty, and has a ring about it which is very convincing. The presence, however, of the Chaucerian phrases, "I do no fors" and "I counte him not a bene," on which Prof. Skeat partly bases his case, is very poor evidence. They are exactly the kind of phrases on which an imitator would lay hold; and the possibility that the poems are by an imitator, and not by the poet himself, is by no means to be scouted. A balade "Against Women Unconstant" is inserted by Prof. Skeat in his text, though in the introduction his language (and rightly) is much less decided than when speaking of the "Compleint unto his Lady" which is relegated to the appendix. The poem is found in two MSS. which contain undoubted poems by Chaucer. It also imitates Chaucer's favourite, "Guillaume de Machault." This is the external evidence. The internal is thus summed up by Prof. Skeat:

"The balade is perfect in construction, having but three rimes (-esse, -ace, -ene) and a refrain. The 'mood' of it strongly resembles that of the preceding balade. The lines run with perfect smoothness, and the rimes are all Chaucerian. It is difficult to suppose that Lydgate, or even Hoccleve, who was a better metrician, could have produced so good an imitation of Chaucer's style."

Does Prof. Skeat really mean to assert that every fourteenth-century poem of which as much as this may be said is to be attributed to Chaucer? If so, he is laying down a new and very dangerous canon. This remark applies still more forcibly to the two remaining claimants, now printed for the first time. Both of these are found in Shirley's MS., but without any attribution to Chaucer—a fact alone almost sufficient to condemn them. It is no heresy to say of them that they are rather dull poems, without any of Chaucer's happiness or flow of style; and Prof. Skeat's query as to one of them—"If he did not write it, we may well ask, who did?"—is an unfortunate echo of a question which has been asked as to several quite as good poems once attributed to Chaucer which are now acknowledged not to be his, although no other author has been found for them.

The second point in Prof. Skeat's work to which exception may be taken is the license which he has allowed himself (especially in the octosyllabic poems) of mending Chaucer's metre in disregard of a consensus of MS. authority. As to this point, he remarks himself on the significance of the poet's prayer ("Hous of Fame," 1097-98).

"Yit make hit somewhat agreable
Though som vers fail in a sillable."

And yet the temptation to meddle with verses in which Chaucer's metre is a little more free than usual has too often proved irresistible. If we take the first three hundred lines of the "Hous of Fame" for examination, the following instances of alteration against the authority of every MS. present themselves.

L. 39:

"For ther is phisicien but oon."

Prof. Skeat omits "For."

L. 86:

"That she hadde, this noble wyf."

Compare ll. 23, 70, 79, &c. The editor defends this particular metrical variation in his note on "Hous of Fame," 2119, but here he inserts [ay] after "hadde," as a stopgap.

L. 87:

"For him she loved, alas, alderbest."

Prof. Skeat omits "alas."

L. 101:

"So whan this lady coude here no word."

L. 136:

"'Go bet,' quod Juno, 'to Morpheus.'"

Prof. Skeat substitutes [she] for "this lady" and "Juno."

L. 150:

"Right as hit was woned to do."

The melancholy in this line is splendid. "Woned," of course, is here a monosyllable. Prof. Skeat transposes to

"Right as hit woned was to do."

L. 154:

"Upon his wey and never ne stente."

L. 237:

"For I ne knew never god but oon."

Prof. Skeat in each case omits "ne," but if we remember that "never" in Chaucer is frequently a monosyllable, the lines scan perfectly as they stand.

L. 207:

"Bury my body, for swiche a tyde,"

The extra-syllable before the caesura improves the line. Prof. Skeat omits "for" and, apparently, scans—

"Bury | my bo | dy swiche | a tyde."

which is hardly an improvement on Chaucer.

L. 213:

"And saw noght; Alas! quod she for sorwe."

A similar line, very effective in its context. Prof. Skeat, following Ten Brink, finds it needful to change "Alas" into "A."

L. 264:

"As did the goddesse, quene Aldone."

An excellent verse. Prof. Skeat omits "quene."

Here then, in two hundred and sixty-four lines, are eleven instances in which a defensible reading is altered against a consensus of MSS. Not even Prof. Skeat's authority is sufficient to uphold such innovations. Octosyllabic verse, when written with perfect regularity and smoothness, is extremely monotonous. The MSS. encourage us to think that Chaucer deliberately set himself to introduce metrical variety; and he appears, at least to many readers, to use this variety with the most splendid effect. If this is so, Prof. Skeat's alterations are really a misfortune. A bad or even a tolerable editor may sin and do no harm, but this edition is so admirable that it is likely to hold undisputed sway for for many years. A whole generation of young students may be led to believe that Chaucer had no metrical variety, but scanned with his fingers, like Gower; and it is for this reason that, even amid my deep gratitude to Prof. Skeat for his delightful book, I have here recorded a humble protest.

Alfred W. Pollard.

"Great Writers."—*Life of George Crabbe.* By T. E. Kebbel. (Walter Scott.)

In writing this book Mr. Kebbel had an easier duty than has fallen to some of his compeers in the same series. To summarise in a shilling volume the life and work of Crabbe was much less difficult than to do the same thing, for example, in the case of Carlyle, or Goethe, or Shelley. The task was not only simpler from the more distinctly defined character of the theme, but also because the biographical materials were much less cumbersome. As was to be expected, in regard to its facts Mr. Kebbel's book is largely a *résumé* of the *Life* by the Rev. George Crabbe the younger (1834). At the same time it is an honest and workmanlike *résumé*; and as the author has neglected none of whatever materials of a later date were available, he has managed to preserve within the compass of a hundred pages the main records of the poet's life in detail as full as is likely to be required by most readers of a "popular" series. Whether, indeed, even those readers will be found to be very numerous may be a matter of some doubt. Crabbe, who in his own period was a figure of considerable importance, has been forced by time and tide into a somewhat obscure part of the background of literary history; and it is even possible that in the not distant future he may be classed among our "forgotten poets." Or if this fate be evaded, his memory will probably be perpetuated not so much on account of the absolute merit of his writings, as because of the part he played in that revolutionary poetic movement whose germs were beginning to develop when he published *The Village* in 1783, and whose fruition was already far advanced when his *Tales of the Hall* were given to the world in 1819.

Born in 1754, at Aldeburgh in Suffolk, George Crabbe received a moderate education, and was intended for a surgeon. After several ineffectual attempts to make headway

Digitized by Google

in his profession, he finally abandoned it, and, at the age of twenty-five, started for London, with a capital of £3, and a resolve to give himself to literature. Crabbe appears to have been singularly ingenuous. He had never heard of the fate of Chatterton, and he evidently cherished an unquestioning faith in the system of patronage which had already received its death-blow from the literary Samson whose bulky form was still to be seen daily parading Fleet Street and the Strand. Mr. Kebbel glides too rapidly over that earlier part of Crabbe's London career which his journal to "Mira"—the Sarah Elmy to whom he was long affianced and afterwards married—renders so intensely interesting. Of this journal Mr. Kebbel simply remarks that it is "a record of hopes, fears, trials, and disappointments more melancholy even than Chatterton's." But it might have been as well if he had enlivened his own sober pages with one or two of the many patches of colour to be found therein. What more vivid picture of Grub Street authorship was ever painted, for instance, than that presented to us in the following passage?

"It's the vilest thing in the world to have but one coat. My only one has happened with a mischance, and how to manage it is some difficulty. A confounded stove's modish ornament caught its elbow, and rent it half away. Pinioned to the side it came home, and I ran deploring to my loft. In the dilemma, it occurred to me to turn tailor myself; but how to get materials to work with puzzled me. At last I went running down in a hurry, with three or four sheets of paper in my hand, and begged for a needle, &c., to sew them together. This finished my job, and, but that it is somewhat thicker, the elbow is a good one yet."

After many months of deep poverty and privation, during which he in vain tried to gain a footing with the publishers, and equally in vain supplicated Lords North, Thurlow, and Shelburne, for assistance, the young poet, in the happiest inspiration of his life, bethought himself of Burke, to whom he addressed the urgent and eloquent letter which Mr. Kebbel quotes in part, and which would very well have borne quoting in its entirety. From that moment Crabbe was a made man, and from that moment he almost ceases to be personally interesting. Burke took him under his own roof, persuaded the publishers to accept his poems, encouraged him to enter the Church, and was instrumental in obtaining his first preferment. The remainder of Crabbe's life was spent in the congenial sphere of a country parson. Botanising, writing huge piles of poetry—with many periodical "incremations" thereof—and occasional visits to town, formed his chief recreations. The intimate of Burke, Reynolds, and Johnson, he lived to be the friend of Campbell, Moore, and Scott, and died in 1832, leaving behind him—in spite of the "incremations" above referred to—some six or seven volumes of poems.

Mr. Kebbel has done his work creditably throughout; but his last two chapters, which are written with admirable temper and judgment, are certainly the most important in the book. In them he essays a critical defence of Crabbe's merits as a poet. No trustworthy estimate of these can be arrived at without taking into account his relation to his contemporaries and to the conditions of his time. And the first point of cardinal importance in such an estimate is the fact that Crabbe began his work at a period when the fortunes of English poetry had sunk abnormally low. A generation had passed since the death of Pope, who had wrought to its highest pitch the art of a finikin classicism of theme united to a style of brilliant artificialism; and those who remained as his disciples were "mere mechanic echoes" of the master's faults without his merits. The fact is that Pope had killed for a time the poetry of humanity, and such slight efforts as were made to resuscitate the corpse were futile because inadequate. But now, after the poetry of the gods had long reigned supreme, its high priests were gone, and with their departure its worship became an empty sound. What must take the place of the effete idealism? The general result might have been predicted, for false idealism has but one antidote; but none could have guessed that the antidote was to be administered by the quondam apothecary who was dejectedly tramping the London streets in search of a patron. Yet so it was, and it proved to be Crabbe's mission to infuse that spirit of realism which is the dominant distinction between the poetry of the nineteenth century and that of the eighteenth. Goldsmith and Gray had attempted to substitute for the false heroic a tender pastoral; but their pastoral failed, as the heroic had failed, and from the same cause, namely, that it lacked truth. To preach truth was Crabbe's great work. With Goldsmith and Gray it was a matter of poetic feeling and artistic selection; with Crabbe it was a matter of stern, realistic—one might almost say wholesale—presentment. True, he wrote in Pope's style, because it was the style to which he had accustomed himself in his earliest training, and his success in adapting his new subjects to the old metre was certainly striking; but I think Mr. Kebbel lays too much stress upon Crabbe's successful adherence to the orthodox mode of expression. The battle that was being fought concerned itself much more with the substance than with its form. Mr. Kebbel says:

"Crabbe certainly did succeed in combining the characteristics of the Twickenham school and the Lake school, and in showing that the art of the one and the naturalness of the other were capable of being united. With a power of versification scarcely inferior to Dryden's, he united a depth of feeling which neither Pope nor Dryden ever knew."

I grant the "depth of feeling"; but surely the "power of versification" is ranked too high. In the latter regard Crabbe is a very inefficient disciple of his great prototypes. It is impossible to glance at a page of his writings without detecting faults—trickey turns, awkward conceits, illegal constraints of language—of which Dryden and Pope were never guilty. As a versifier Crabbe was "Pope in worsted stockings," with other differences in addition; and any attempt to connect him too closely with the school he superseded is doomed to failure. In fact, there is plenty of evidence that he was himself careless about style. What he did care for was his theme—a direct, unsparing representation of natural objects and of society in its lowest strata. His aim was to dispel the poetic glamour with which rural scenes and personages had been falsely invested.

"Since vice the world subdued and waters drown'd,
Auburn and Eden can no more be found,"

he satirically exclaims:

"No; cast by Fortune on a frowning coast,
Which neither groves nor happy valleys boast,
Where other cares than those the Muse relates,
And other shepherds dwell with other mates;
By such examples taught, I paint the Cot,
As Truth will paint it and as Bards will not."

To this aim Crabbe was consistent throughout. Instead of sylvan scenery he shows us the hut, the almshouse, and the jail; instead of the antic feats of gods and nymphs, he displays the squalor, the vices, and all the untold misery of the rural poor of his time. The task was one which needed the rough hand of a graphic satirist; and it was a task which, despite the frequent coarseness and exaggeration of its treatment, distinctly places Crabbe by the side of Cowper and Burns in the revolutionary movement, and indicates him as a true forerunner of Wordsworth. In constantly lauding Crabbe to the depreciation of Wordsworth, Jeffrey was as unfair as Byron was perverse in quoting him as the saviour of the Pope school.

In regard to Crabbe's positive merits as a candidate for poetic immortality there may well be some differences of opinion. He impressed his contemporaries—Hazlitt's splenetic attack notwithstanding—as a writer of great force and originality; and it may be noted of the parody in *Rejected Addresses* that it is entirely a caricature of Crabbe's most glaring weaknesses, and in no wise of his stronger traits. In the domain of fundamental passion he is a master; in the analysis of motive and the depicting of pity, despair, pathos, terror, he is entitled to a place with the highest. His stories of "Phœbe Dawson," "Sir Eustace Grey," "The Hall of Justice," "Peter Grimes," "Ruth," "Edward Shore," "The Parting Hour"—not to mention others—deserve to rank as classics. In reading them we feel that we are in the grasp of a genius, though a genius, it may be admitted, of a sombre type. His skies are grand, but they are eternally clouded; or if a rare glint of sunshine be allowed to play for a moment around us, it but serves to heighten the effect of the gloom which is speedily restored. Connected with this is a want of restraint and discrimination. Mr. Kebbel grants that Crabbe is guilty of reprehensible exaggeration; while his "selection" too often impresses one as selection of the unfittest. Entire validity can, however, by no means be allowed to the stock charge of the poet's detractors that his subjects are not such as are proper to poetry. Who, indeed, is to pronounce as to what subjects are in themselves exclusively fit for poetry? Themes taken from the lowest and humblest ranks of life are certainly not inadmissible to poetic treatment as such; they become inadmissible only when innately gross, ugly, or repulsive. Mr. Kebbel, admitting that the line must be drawn somewhere, says that "the instinct of a true poet will tell him where to draw it." Most readers of Crabbe, however, will probably agree that his "instinct" failed him rather too often. But, after all, the real question is not so much one of material as of workmanship, and viewed in this regard, Crabbe more

Digitized by Google

than stands the test. Of all his critics Prof. Wilson, perhaps, spoke the truest word when he said: "The power is almost miraculous with which he has stirred up nature from its very dregs, and shown working in them the common spirit of humanity." I hold with Mr. Kebbel that Crabbe's claims are amply sufficient to qualify him to take rank us a "Great Writer"; and they are claims which appear to me to be essentially based upon the fact that in a degenerate age of poetic feeling and conception he had the boldness and skill to sound the deeps and touch the heights of human emotion, pathos, and passion. Hiram Tattersall.

Chronicle of King Henry VIII. of England. Translated from the Spanish by Martin A. Sharp Hume. (Bell.)

In 1873 the attention of the Academy of History of Madrid was called to the existence of a seventeenth-century MS., entitled "Chronica del Rey Enrico Otavo du Inglaterra." This document, which narrated in seventy-five chapters the course of events in England from 1527 to 1549, was entrusted to the Marquis de Molins for the purpose of examination and report. The result of his investigations was to reveal the existence of no less than eleven copies of the same chronicle, all of which were of an earlier date, and one at least almost contemporary with the author. In several of these other MSS. the history was carried down to a later time, and in three cases it extended into the reign of Queen Mary. That portion, however, which related to the period subsequent to the execution of Somerset was in a different style; and it was accordingly decided to publish only the ninety-two chapters now translated into English by Mr. Hume.

Although the chronicle appears to have excited considerable interest at the time when it was written, we possess no exact information as to the writer, beyond the fact that he was a Spaniard who resided many years in England. The absence of literary polish, and the apparent lack of familiarity with the court, are against his having been either a man of letters or a diplomatist. The probabilities of the case seem to point to either "a resident merchant, trader, or interpreter, or else one of the mercenary soldiers of fortune who flocked to the standard of Henry VIII. for the honour, the pay, and the ransoms." The Marquis de Molins, on the ground of the many curious particulars given about the Spanish military adventurers in England, inclined to the belief that the chronicle was composed by one of their number, and selected a Captain Julian, of whom frequent mention is made, as being the most likely. Mr. Hume has, however, shown reasons for doubting the probability of this conjecture. It does not seem possible that Julian, with whom we are acquainted from other sources, could have written the chronicle. Indeed, though the Marquis rejected the idea that it was the work of a Spanish merchant, there are many traits in the narrative which are more characteristic of the man of peace than of the soldier. The writer appears to have been as familiar with the doings of the Spanish merchants as with those of the mercenaries; for instance, he makes special reference to the merchants who accompanied Chapuys on his visit to Katharine (chap. xxiv.), and to the part they took in the reception of Anne of Cleves, as a recognition of the favour shown by the king to foreign traders (chap. xlii., not lii., as given on page xvii. of the introduction). On several occasions also he notices points of economic interest, such as the changes brought about by the dissolution of the monasteries (p. 27), the rise in prices caused by the turning of vast tracts of land into pasture, and the consequent distress and discontent (p. 169); and in another place he makes a long complaint about the depreciation of the coinage under Somerset (p. 179). It does not, however, seem possible to arrive at any definite conclusion as to the authorship, and we must be content to leave the matter doubtful.

Whoever the writer may have been, he writes throughout like a good Spanish Catholic with a holy hatred for heretics. The simple, unadorned style in which he has noted down what he saw with his own eyes, or heard from his friends, makes it very easy to detect his sympathies and partialities. He states his opinions about all people with a blunt simplicity which leaves no room for questioning his sincerity. Katharine of Arragon is always "the sainted queen," or "blessed lady," and he is no less partial to her daughter. Wolsey was a not very learned person, of very low birth, who deserved his fate. More and Fisher, Gardiner and Bonner, are alike classed as good Christians; and the two latter are especially praised for their resistance to heretics —"God maintain them in their good opinion." Cranmer he describes as "one of the greatest heretics, and greatest enemies, that the Pope had," and depicts him in a rather unfavourable light. Cromwell, to whom he often refers with disparagement as a proud man of mean birth, whom it was natural the lords should dislike, "had better never have been born, for he was the inventor of all the bad sects which they have now." For the Protector and the Council in the reign of Edward he has little but blame; of Paget alone he speaks with respect as a man of wisdom and discretion. "I wish to God there were many of his stamp and knowledge." Henry himself, however, had earned the writer's warm admiration. "Oh, good king! how liberal thou wert to everyone, and particularly to Spaniards." In one place, after lamenting the carelessness and bad management of the Council, he writes:

"Truly, the English lost much on the day that the valiant King Henry VIII. died; and I only hope to God that King Edward will soon be able to govern. . . . There will be no lack of some one to tell him that his father was a very wise man, and a good Christian, notwithstanding his blindness in throwing over his obedience to the Pope; for as regarded the services of the Church, he would never allow them to be altered, although he consented to some of the things being in English.

"Perhaps, even his son may be inspired by the Holy Ghost to return to his obedience to the Church, and to the services as they used to be; but it is notorious that if the late king were alive he would never allow such evildoing, and would take more care of things, for he was liberal, and did not begrudge expenditure, and always gave rewards to his captains and soldiers" (p. 215).

On the whole, the chronicle is interesting rather as giving the impression of a not unobservant contemporary, than as contributing to our store of knowledge; though there are many curious details about the Spaniards in the English service. But its value as a piece of history is seriously impaired by the little regard shown to chronological sequence. From beginning to end there is only one date, and that in the first line; such expressions as "soon," or "a few years after," are used very loosely (*cf.* pp. 181, 193, 196); and, worst of all, the writer makes the extraordinary mistake of transposing the marriages of Anne of Cleves and of Katharine Howard. The explanation would appear to be that the chronicle was first written as far as chapter lxxv. in 1550, and is not a record kept from time to time.

The whole forms a pleasant, chatty record of a foreigner's recollection of England during an important period of our history. Without any pretentions to literary skill, the writer tells his story quaintly, and illustrates it with many naïve observations and anecdotes, of which a single example must suffice It is an extract from his account of the wedding of Katharine Parr:

"The king ordered Anne of Cleves to come to the wedding, and she never showed the slightest annoyance at the king's leaving her or at his marrying this lady. On the contrary she seemed very much pleased, unlike the sainted Queen Katharine, who retired to a castle and died. It is said that this Madam of Cleves exclaimed: 'A fine burden Madam Katharine has taken on herself!' She said this because the king was so stout that such a man has never been seen. Three of the biggest men that could be found could get inside his doublet" (p. 108).

In conclusion, we need only say that the chronicle is likely to interest the general reader as well as the professed student. The book is nicely "got up," and Mr. Hume's translation reads very pleasantly. There is a good introduction, together with some useful notes and an index.

C. L. Kingsford.

Indian Life: Social and Religious. By John Campbell Oman. (Fisher Unwin.)

With the incitements they must have to study and the opportunities for composition, it is somewhat strange that the members of the Education Department in India should write so little concerning the manners and customs, the history and religion of the people among whom they live and work. Nearly all our good books on India are written, not by the men who, being students by profession, might be expected to form a great literary caste in the country, but by over-wrought officials engaged in the civil administration. The volume before us is one of the few exceptions to the literary unproductiveness of the Education Department; and even Mr. Oman is a professor, not of literature or the humanities, but of natural science. It is an unpretending collection of short essays, yet replete with valuable and suggestive information about less known by-paths of Indian sociology. Mr. Oman is a shrewd and conscientious observer, and takes the trouble, moreover, to see what other authorities have said on the subjects of his

Digitized by Google

research. In his descriptions, too, whether it be of a Parsee theatrical performance, an interview with a Brahman soothsayer, a meeting of the Arya Somaj, or some strange religious rite of the older faiths, it is easy to see that we are in the hands of a guide who can tell us much that is worth knowing.

Most of the essays refer to the Punjab; and it may be as well to warn the reader that what is true of the land of the five rivers—a province larger and more populous than Hungary and Belgium put together—does not always apply to India generally. The dominant races of the Punjab are (probably) of Scythic origin. This term, perhaps, may give no very clear clue to their ethnography; but it should serve to indicate one explanation of the vast difference there is between the manly, independent, but stubborn-minded and intellectually obtuse Ját, and the effeminate, unwarlike, but richly gifted Bengali. Not that the Punjabi is always wanting in intelligence. The Khatris, a trading class to which the founder of the Sikh religion belonged, are, according to Sir George Campbell, "one of the most acute, energetic, and remarkable races of India."

Mr. Oman's book opens with some striking chapters on what has been inelegantly termed Oriental occultism; and people who take a common-sense view of the miracles ascribed to *jogis*, *mahatmas*, and *chelas* will find ample evidence in favour of incredulity. Asiatic thought has always displayed an inclination to whatever is mystic and unpractical. The same excursions into the land of the unreal are made to this day as occupied the sages of a prehistorical past; and men like the late Swami Dyanand Saraswati still live to recall the *rishis* of the Sanskrit epics. In regard to the Swami, Mr. Oman corrects Prof. Max Müller on one or two minor points, in which, as he speaks from personal knowledge, he is no doubt to be trusted.

Of the religion founded by Baba Nanak, Mr. Oman has but little to say. He believes, however, that Sikhism, which survived a cruel persecution by the bigot Aurangzeb, nor was shattered by the invasions of the Turkoman Timur, and the Afghan Ahmed Shah Durani, is now fast decaying. As a national faith, Mr. Oman says, its days are numbered. Perhaps I may mention that the so-called Sikh nobleman who attended the recent meeting of the National Congress at Allahabad is only a Sikh by descent, and has long been a member of the Brahmo Somaj. Chapter vii. contains a capital account of the Golden Temple at Amritsar, the holy city of the Sikhs. Many of the worshippers in the temple are not Sikhs at all, but Hindus, mostly women — another instance of the versatility of the Hindu mind. In the sanctuary of the Golden Temple, which is so called from the gilt copper roofing of the dome and cupolas, is kept the Adi Granth, the sacred book of the faith. The chief act of devotion is to circumambulate the corridor surrounding the sanctuary three, five, or seven times, and to lay some small offering before the book. Another interesting chapter is devoted to the curious cult of the scavenger caste in Upper India, who pay reverence to the memory of Zahir Pir or Lal Beg. Further information about Lal Beg will be found in Capt. Temple's *Legends of the Punjab*. The saint's emblem, which may often be seen carried along the roads of a Punjab town in noisy procession, is a tall bamboo gaily decked with scraps of bright coloured cloth and with a huge brush of peacock's feathers at the top. Fans and bunches of cocoa-nuts are slung to the pole, which is commonly taken as a glorified conception of the sweeper's broom. This, Mr. Oman points out, is a mistake. It is really intended to represent a bridegroom arrayed in his wedding garments and riding on horseback, the man who carries it taking the part of the horse. The procession commemorates Zahir Pir's home-coming after his marriage, the cocoa-nuts being the heads of his two half-brothers which he cut off at a single stroke.

There is only one point on which I must seriously differ from Mr. Oman. He talks about the haughty and unsympathetic attitude of British officers (*i.e.*, civilians) and Europeans generally towards the people of the country, of men who shrink from contact with the people and who care little about their welfare or happiness. This is a very old charge and it was disposed of years ago by the head of the department to which Mr. Oman belongs—by Matthew Arnold's brother. That the Indian civilian is often debarred by stress of office work from seeing as much as he ought of the natives is undeniable; but, save for a few exceptions—men who are engaged too exclusively at headquarters—members of the civil service are intimately acquainted with the ways and habits of the people, their modes of thought and everything that concerns their social condition. This, indeed, is a part of their duties. Yet I may add that for nearly all our knowledge of the inner life of India, in its various phases, we are also indebted to civil servants; and such knowledge could never have been acquired by men who were unsympathetic or indifferent.

Stephen Wheeler

NEW NOVELS.

Neighbours on the Green. By Mrs. Oliphant. In 3 vols. (Macmillan.)

Barcaldine. By Vere Clavering. In 3 vols. (Hurst & Blackett.)

The Englishman of the Rue Cain. By H. F. Wood. (Chatto & Windus.)

Bella-Demonia. By Selina Dolaro. (H. J. Drane.)

Body and Soul. By Fred Noël Paton. (Blackwood.)

The Ugly Story of Miss Wetherby. By Richard Pryce. (Walter Scott.)

Sam Saddleworth's Will. By M. Scott Taylor. (Digby & Long.)

Although the new three-volume work of Mrs. Oliphant is but a collection of short stories, it deserves the first place in this list, both because it is greatly superior to the more elaborate novels included in it, and because it is one of the pleasantest books that its author has published for too long a time. Here we have no profound philosophical speculations, no pilgrimages into the unseen, and but little even of the tragedy of life, which makes one feel, after reading certain of Mrs. Oliphant's books, as if one had been spending the day going to and returning from an exceptionally dreary cemetery. All that Mrs. Oliphant does is to introduce us to the members of a little community composed of folks who have neither poverty nor riches, who are always dining at each other's houses or gossipping about each other's affairs, and whose residence, known as the Green, is, it is tolerably safe to say, not a hundred miles from Staines. In the character of fairy godmother or universal confidante of the Green, who is in the secret of the young people's loves and sorrows, who placates the old folks, or, if need be, gets them conveniently out of the way, she unroofs every house in it, including the harmless village inn, opens each room in succession, and even lets us see the skeleton in the closet. Many of the short stories in these volumes are obviously studies for—or rough drafts of—novels that Mrs. Oliphant has abandoned the idea of writing, perhaps even, in some cases, of novels that she has actually written. Thus the tragedy that breaks out, like an unexpected volcanic eruption, in the peaceful life of Sir Thomas and Lady Denzil recalls *Valentine and his Brother*, not to speak of earlier books, of which one has now but a vague recollection. But they are none the worse for that. Occasionally Mrs. Oliphant is obviously the better for being circumscribed in point of space. She might easily have made a full novel out of the domestic misfortunes of "The Scientific Gentleman" or of "The Stockbroker at Dinglewood"; but neither would have been so truly dramatic in plot or so crisp in style as the novelette which here takes its place. Moreover, Mrs. Oliphant's matronly, and here and there almost grandmotherly, humour is seen at its best in "An Elderly Romance," "Lady Isabella," which is another elderly romance, "The Barley-Mow," and one or two other of the stories in this collection. Mrs. Mowbray who, by her skilful tactics, gets rid of the bad people, and marries the good people to each other in "The Barley-Mow" is an admirable example of the well-meaning aristocratic meddler who is not, however, at the same time a mischief-maker. Oddly enough, the most disappointing of the contents of "The Neighbours on the Green" are the first story and the last. The mistake which lies at the bottom of "My Neighbour Nelly" is too trifling, and takes too long a time to unravel. "My Faithful Johnny" also drags towards its close. But no better collection of social sketches, having all the interest and none of the unreality of romance, has been published for many years than *Neighbours on the Green*. It will, moreover, give many more delightful hours than certain more ambitious and important works by its author.

Barcaldine is an ingenious piece of plot-construction, and it is very little else, although the scene shifts with wonderful rapidity from Australia to England. Stephen Callender and Gerald Fairfax find themselves on board the same ship bound for England. Although Gerald is engaged to Stephen's sister, Stephen himself is a scamp, and but for the kindly intervention of death would have become an out-and-out villain. Gerald being himself at death's door, Stephen thinks of personating him, and of putting in an appearance in England as heir to an estate. At

Digitized by Google

this stage the peculiar ingenuity of the author of *Barcaldine* exhibits itself. Gerald does not die, although a shipwreck causes such injuries to his brain that for a time he is little better than an idiot. Stephen, however, is drowned; and, owing to a marvellous series of accidents, that can be made to bear various constructions, Gerald is suspected by an unscrupulous estate-agent of the very crime which Stephen meditated. Not less cleverly managed and incredible is the meeting in England between the lovers that had been separated in Australia. Plot apart, however, there is really nothing in *Barcaldine* which calls for specially favourable notice. The characters, with the single exception of the suspicious agent, have no individuality; and "Vere Clavering's" English is by no means beyond reproach.

Mr. Wood, who scored an undoubted success with *The Passenger from Scotland Yard*, has failed egregiously and exasperatingly in *The Englishman of the Rue Cain*. One feels tempted to skip every second page in it, on account of its containing either odious Gallicisms of style, or club gossip worthy only of the poorest of "society" journals, or digressions on things in general, without Byronic excuse and devoid of Byronic piquancy. On the other hand, had the story been stripped of its various eccentricities and extravagances, it would probably have deserved not a little commendation. M. Renaud, the French detective who figures in it, is a marvellous combination of policeman and gentleman, Mephistopheles and benefactor; while nothing could well surpass the skill with which he traces the murder of Allen Garth—of which a professional beauty is not without reason suspected—to the low-class scoundrels who have actually committed it. Then the mystery of Mrs. Ormond Weir, that *femme incomprise* in the best sense, is revealed with patient industry. One, indeed, gets irritated with Mr. Wood, because he seems to have gone out of his way to spoil a good book.

If *Bella-Demonia* be the first essay of Mdme. Selina Dolaro in fiction, then it must be said that she has, at a bound, reached a first place among the sensational writers of the day. Within the compass of about 270 pages, there could not possibly have been crowded a greater number of crimes, mysteries, and surprises of all kinds. Bella-Demonia is quite as vindictive as Monte Cristo himself; although it is but one man whom she hunts down almost from the first page to the last, and that man her own ruffianly husband. There is absolutely nothing else, however, to recommend this story but its sensationalism. The characters which figure in it are either villains or villain-hunters; and of the former, the worst—who is Arlingford, Bella-Demonia's husband—has not a redeeming virtue except a certain brute courage, and even that makes its appearance only at the end.

Mr. Noël Paton cannot be congratulated on what he describes as his "romance in transcendental pathology." The restoration of Leonard Venercott to life by medical means, which is the central incident in it, savours rather of farce than of romance. What makes *Body and Soul* all the more disappointing is that it begins well. One takes to the Scotch professor and his daughter in the first chapter, although it must be allowed that there is nothing markedly Scotch about them. But the moment Mr. Paton's pathological or pseudo-pathological nonsense begins one loses all interest in his story. Obviously, however, he knows Edinburgh, and especially the life of the legal caste there. Why then should he not seek to write a good domestic Scotch story, instead of trying to ride the worst hobby of the day—even in fiction?

The Ugly Story of Miss Wetherby is clever and harmless, whereas it might have been as clever and as risky as are some passages in *Don Juan* and *Mademoiselle de Maupin*. A smart and essentially Yankee adventurer, Sloane Wetherby by name, aims, by transforming himself into the female attendant of an old lady, at securing that old lady's fortune. He fails, and being not wholly bad, does not greatly regret being found out in playing a character in which he had begun to loathe himself. Yet for a time he succeeds in deceiving the persons he meets, with the help of a number of disguises, but still more by sheer audacity and good luck. He even induces a young man to fall in love with him. This is the whole of *The Ugly Story of Miss Wetherby*, which is as slight as it is harmless.

Sam Saddleworth's Will is a not unpleasant and rather stirring story of an old-fashioned type. Sam Saddleworth comes home from the Antipodes to confound and punish a villain of a relative who has done him much harm early in life. He succeeds in doing this after a remarkable escape from death at the villain's hands; and, in addition, he finds a wife in a worthy scholar's worthy daughter. Although *Sam Saddleworth's Will* is not a notable story in point either of character or of incident, one somehow reads it with gusto; and then one can manage to take a liking for Sam Saddleworth, to fall in love with Mabel Hetherington, and to take the villain Grabbit by the throat—in an hour and a half.

WILLIAM WALLACE.

SOME FOREIGN THEOLOGICAL BOOKS.

Adrian's εἰσαγωγὴ εἰς τὰς θείας γραφάς. Herausgegeben von Friedrich Goessling. (Berlin: Reuther.) Adrian's Introduction to the Holy Scriptures has been hitherto strangely neglected. The latest edition, by David Hoeschel, dates as far back as 1602. It was reprinted in Pearson's *Critici sacri* in 1660, as well as in Migne's *Patrology*. A Latin translation, moreover, made by Bishop Lollin of Belluno in 1630, has come down to us. Dr. Goessling set himself the task of rediscovering the MSS. used by the translator as well as the editor. He was successful only in the second endeavour. But, in the course of his search through the great Italian libraries, he found in the Vatican five fresh MSS., all of the fifteenth century, and one in Florence of the twelfth. From the materials collected with such labour he has furnished a text which will, we believe, form the standard for a long time to come; and which, accompanied by an excellent translation, has made Adrian's work accessible to students of church history. Of Adrian's life and his position among theologians hardly anything is known; but the statement of Cassiodorus, who reckons up the first "introductores scripturae divinae," and places Adrian between Augustine (+430) and Eucherius (+452), leads us to believe that the author of the *Eisagoge* terminated his life about A.D. 440. And the letters addressed by Nilus, a follower of Chrysostom, to Adrian, "the monk, presbyter, and priest," give an indication of the school to which the latter belonged. A Greek-speaking Syrian, he followed, as Dr. Goessling has shown (p. 44 *sq.*), the lines of Theodoret and Theodore of Mopsuestia. His book shows all that clearness and accuracy, that moderation and sobriety of judgment, in questions of biblical hermeneutics which distinguished the Antiochian school. The *Eisagoge* is not an introduction to the study of the Bible, as we now understand that term. It is rather the attempt of a Schoolman at bringing the anthropomorphisms, metaphors, parables, and other forms of speech (p. 119) found in Holy Writ, under certain philosophical rules. But the work, the first of its kind, is, as the editor says, worthy of all respect; and that respect could not have been better shown than by the excellent edition in which he has now presented it.

Wissenschaftlicher und praktischer Commentar über den ersten Petrusbrief. Von Joh. Martin Usteri. (Zürich: Höhr; London: Trübner.) The first, the exegetical, part of this commentary was noticed in the ACADEMY of May 5, 1888. The second volume, now before us, treats of the circumstances amid which the Epistle was written, the relationship in which it stands to the literature of the apostolical age, and the inferences that can be drawn as to its genuineness. Dr. Usteri shows in this volume the same learning, ability, and sound judgment which we noticed in the former. But the very extent of his reading, his manifest desire to do justice to the views held by different schools of theology, to consider carefully every possible argument that may be adduced on one side and the other of each question, have led him into defects of style. Throughout the book there is a want of clearness of arrangement. The course of the discussion does not run straight—it takes a zigzag line; and the reader, while balancing within his mind objections and counter-objections, has sometimes difficulty in finding out in which direction he is moving. This difficulty is increased by the structure of the sentences, which are frequently long and involved. Nor is it to be wondered that the author has, after all his labour, hesitated to draw his last conclusions, and to pronounce a decisive verdict upon the most important point of all. Dr. Usteri argues against the late date which the Tubingen school would assign to the Epistle. It does not, he maintains, show any traces of those legal and juridical proceedings against the Christians which are mentioned in the letters of Trajan and Pliny; but the "manifold trials" by which "the sojourners of the Dispersion in Asia (chap. i. 6, 1) were grieved" arose from local disturbances, caused partly by the manner in which Christians and Jews were confused during the time of the first Jewish war, and partly by the effects of Nero's persecution in Rome (p. 278). For the composition of the Epistle at the early date of 65-70 A.D., he urges the facts (p. 250 *sq.*) that the Christians are addressed as "new born babes"—that is, as converts but recently gathered from among the Gentiles (not from among the Jews); that their use of charismatic gifts appears still in a healthy state, the ministry of their church in an elementary condition, their hope in the return of the Lord still fresh; and that the Epistle, when compared with those books—the Epistle of Polycarp and the Pastor of Hermas—which have first drawn upon it, possesses all the notes of early apostolical doctrine. Whether Babylon—whence the Epistle purports to be written—is to be taken literally, or figuratively for Rome, the author leaves undecided. If the latter, then the Epistle cannot have been written before the Neronian persecution, A.D. 64. From that year Rome became, in the eyes of Christians, the Babylon of the world; and Paul, to whose

Digitized by Google

converts the Epistle is speaking, was no more. We confess we agree with a writer in the *Theologische Literaturzeitung*, that the only conclusion which the author can draw from his arguments is that the Epistle was written by the apostle Peter. But the reasons which he assigns at the close of his work, after a good deal of hesitation, for a kind of ideal authorship by which the mind, the spirit of the great apostle spoke—perhaps after his death—through one or two of his disciples, through Mark or Silas (p. 346), do not appear to us conclusive; and the individuality of the writer, which shows itself in so marked a manner, and on which Dr. Usteri himself has in his first volume laid stress (comp. his comments on i. 8: "Whom having *not* seen *ye* love"; and v. 7, "*I* . . . a fellow-elder, and *a witness* of the sufferings of Christ"), remains on this supposition entirely unexplained.

Augustin's Confessionen. Ein Vortrag von Adolf Harnack. (Giessen: Ricker; London: Williams & Norgate.) Prof. Harnack has a view of his own concerning Augustine's conversion. The son of Monica was not, he says, a prodigal who repented and returned to his home—that is, to the faith in which he had been nurtured; nor a pagan who was struck, after a life of vice and riot, by the truth of the Christian religion. Augustine had, the author maintains, before the great change came upon him, sought diligently after truth and holiness. He found at last in the teaching of the Church what he had longed for—that is, strength to overcome himself. Redeemed from the power of his passions, he resolved to dedicate the rest of his life to the study and contemplation of divine things in the service and under the authority of the Church. He gave up his profession; he renounced sensual pleasures; but he did not alter the course of his studies nor change the sphere of his interests. And when, after his baptism, he retired for a time with his mother and friends to a country house in the neighbourhood of Milan, there to continue his philosophical speculations, he modelled his life on the ideal of Plotinus and Porphyry, not on that of St. Anthony. It was during a later period that theological dogmas gained shape within him; and when he wrote his *Confessions*, twelve years after his conversion, he unconsciously anticipated the thoughts that had since then ripened within his mind, and he represented the gradual change as a sudden rupture between the past and the present. This is Prof. Harnack's view; but readers of the *Confessions* may be inclined to differ from it, and to believe that Augustine had too vivid a recollection, and too profound a knowledge of his own past self, to commit the error here imputed to him. But even if unable to agree with the author on this one point, they will gladly acknowledge the exquisite clearness, grace, and beauty of thought and of style which make the reading of his lecture as great a pleasure almost as the hearing of it must have been. Nothing could be more masterly than the few strokes with which Prof. Harnack describes the influence which Augustine exercised over the middle ages, over the philosophy of Schoolmen and the policy of Popes. To come to modern times, not merely the language of our prayers and hymns, but the diction of men of science and poets, of Lessing and Goethe, is tinged with Augustinian thought. Most interesting is the parallel drawn between the *Confessions* and *Faust*. Augustine was a Faust, only he passed beyond the stage described in the words of the "Chorus Mysticus":

> "Alles Vergängliche
> Ist nur ein Gleichniss;
> Das Unzulängliche,
> Hier wird's Ereigniss;
> Das Unbeschreibliche,
> Hier ist es gethan."

NOTES AND NEWS.

Mr. Stanley Lane-Poole, the biographer of Lord Stratford de Redcliffe, has been entrusted by Sir George Bowen with the editing of his public and semi-official papers, which cover a very wide field of colonial administration.

Mr. D. G. Ritchie, of Jesus College, Oxford, is preparing for publication some hitherto unpublished letters of Mrs. Carlyle, written to a relative of his who was an intimate friend of her girlhood, some of them before her marriage, and some during the Craigenputtock period, a very few belonging to the year after 1834, at which date the letters in Mr. Froude's *Letters and Memories of Jane Welsh Carlyle* begin. The earlier letters throw considerable new light on her mind and character, the growing influence of Carlyle being distinctly perceptible in them. A few letters of Carlyle's never before published are included in the collection. One of these gives an account of the settling in Chelsea, the others relate to his projected History of German Literature, and to Baillie's Letters and other books which he used while preparing for Cromwell. Messrs. Swan Sonnenschein & Co. will be the publishers.

Messrs. Macmillan will publish shortly, collected into a volume, the series of papers on "Supernatural Religion" contributed by Bishop Lightfoot to the *Contemporary Review* between 1874 and 1877; and also an abridged edition of the bishop's classic work on *The Apostolic Fathers*.

Stepniak has undertaken to contribute a volume to Mr. Walter Scott's "Great Writers" series.

Messrs. Sampson Low have in the press *Two Kings of Uganda*: or, Life by the Shores of the Victoria Nyanza; written by Mr. Robert P. Ashe, of the Church Missionary Society. It will be abundantly illustrated.

The third volume of the new edition of *Chamber's Encyclopaedia*, to be published at the end of this week, will cover from Cat to Dig. To indicate the character of the articles, we may mention that most of the geological ones are contributed by Prof. James Geikie; the botanical ones, by Prof. Patrick Geddes; the philosophical ones, by Prof. Seth; and the legal ones, by Mr. Thomas Raleigh. Prof. Rhys has written on the Celts; the Duke of Argyll, on clans; Prof. Legge, on China; Sir Edward Watkin, on the Channel Tunnel; Lord Brassey, on coaling stations; Lord Napier and Ettrick, on crofters; Mr. Goldwin Smith, on Cromwell; Prof. Nicholson, on currency; Mr. E. W. Streeter, on diamonds; Mr. A. J. Ellis, on dialect. The writers of literary biographies include the names of Walter Besant, A. H. Bullen, Prof. J. W. Hales, George Saintsbury, and Theodore Watts.

Dr. James Ward, of Trinity College, Cambridge, is writing for Sonnenschein's "Library of Philosophy" a work on Metaphysics, to be entitled *Epistemology*; or the Science of Knowledge.

Messrs. Ellis & Elvey will issue in a few days an English translation, by Mr. F. M. Nichols, of the famous mediaeval guide-book to mediaeval Rome, entitled *Mirabilia Urbis Romae*, with an illustration from the bronze doors of St. Peter's and a contemporary map of the city. The translator has added a supplement containing illustrative matter and notes.

Early in April Messrs. Chatto & Windus will publish a one-volume novel by Mr. William Sharp, entitled *Children of To-morrow*. Though it deals to some extent with contemporary artistic life, its main motive is the inexorableness of circumstances, and, over and above this, the tragic play of the passions in two fine natures. The title is derived from a passage in Siwäarmill: "We, who live more intensely and suffer more acutely than others, are the Children of To-morrow, for in us the new forces of the future are already astir or even dominant."

The next volume in the series of "Historic Towns" will be *Carlisle*, by Prof. Mandell Creighton.

The next volume of the "Camelot" series, to appear on March 25, will be *The Fall of the House of Usher*, with other Tales and Prose Writings of Edgar Allan Poe, edited by Mr. Ernest Rhys. The approximate dates of first publication of the tales and essays included will be given, and the volume will contain an introduction and biographical appendix.

Messrs. Longmans will publish in a few days a new translation in verse of the second part of *Faust*, by Mr. James Adey Birds; while Messrs. Sampson Low announce another translation of the entire poem, in the original rhyme and metre, by Mr. Alfred H. Huth.

A Danish edition of Max O'Rell's *Jonathan and his Continent* is announced at Copenhagen. Messrs. Cassell & Co. are preparing an illustrated edition of the same work for publication in New York.

Theo. Gift's new volume, entitled *Not for the Night Time*, will be published immediately by Messrs. Roper & Drowley.

A new novel, by M. French Sheldon, entitled *Herbert Severance*, will be published on March 25, by Messrs. Saxon & Co. in London, and by Messrs. Rand, McNally & Co. in Chicago.

The second volume of "Lambert's London Library," entitled *Fraternity*, a novel by Mr. Charles Ogilvie, will be issued next week.

Mr. C. W. Olley, of Belfast, will shortly publish a novel, by Mrs. R. H. Reade, entitled "Puck's Hall."

In the eighth number of Mr. Eyles's *Popular Poets of the Period*, to be published next week by Messrs. Griffith, Farran, & Co., will be given a paper, by Mr. William Cartwright Newsam, on the career of Matthew Arnold. The same number will include also notices and selections from the poems of Miss Christina Rossetti, Malcolm Doherty, the Rev. Frederick Langbridge, and George Francis Armstrong.

On Monday next, March 25, and the two following days, Messrs. Sotheby will sell a selection from the library of the Duke of Buccleuch, including some five or six Caxtons, and other examples of early printing both in England and on the continent. There is also a set of Thomas Hearne's antiquarian publications, on large paper, numbering fifty-six volumes.

The current number of the *Folk-Lore Journal* (Elliot Stock) prints the annual report of the council for 1888, from which we are glad to learn that the society—chiefly through the exertions of the hon. secretary, Mr. J. J. Foster—has increased in numbers during the past year, and hopes now to be able to take in hand the task of examining and sifting the large body of folk-tales already collected. Towards this object, three specimens of the work required are given: (1) a bibliography; (2) a handbook for collectors; and (3) a tabulation of tales. Apart from the quarterly *Journal*, the society hopes to publish in the course of the present year the following books: (1) *Magyar Folk-Tales*, by Messrs. Jones and Kropf; a volume of *Denham Tracts*, edited by Mr. Hardy; and an *Exempla* of Jacques de Vitry, edited by Prof. J. F. Crane. The inaugural address of the new president, Mr.

Digitized by Google

Andrew Lang, will appear in the next number of the *Journal*.

MESSRS. MACMILLAN have issued a new edition of the Complete Works of Lord Tennyson in a single volume, consisting of 807 clearly printed pages in double column, with a portrait, for 7s. 6d. After this, no one can say that the existence of copyright keeps up the price of books. This edition, we may add, differs from that of 1884 by the inclusion of the contents of the *Tiresias* volume, the later dramas—"Becket," "The Cup," "The Falcon," and "The Promise of May"—and also "Locksley Hall Sixty Years After." In fact, it contains everything that was given in the eight-volume edition of last year.

WE have also received from Mr. David Stott the first issue of a series of reprints which he proposes to issue in the old-fashioned 32mo. size. It consists of Florio's Translation of Montaigne, in two volumes, each having a portrait for frontispiece, and with an introduction by Mr. Justin Huntly McCarthy. The typography is excellent, the binding dainty, and the price low; but we cannot recognise the need for an introducer, who talks about "a pigmy putting forth," and writes of his author, "He loved to be a horseback as dearly as ever an English squire, a Texas cowboy, a Mexican *Vacquero*, or an Arab sheik."

M. KAMPOUROGLOU is writing a history of the Athenian people under Turkish domination (*Ἱστορία τῶν Ἀθηναίων—Τουρκοκρατία*). The work is to be published in parts by Papageorgios, of Athens; and the first number, which has just appeared, contains a review of the sources and authorities which are available for this period.

UNIVERSITY JOTTINGS.

PROF. SAYCE, who is still in Upper Egypt, met with a mishap the other day. He was bitten by a snake, but not seriously.

The professorship of English Language and Literature at University College, London, will become vacant at the end of the present session by the resignation of Mr. Henry Morley, who has occupied the chair since 1865. The Quain trustees intend to assign upwards of £500 a year to the promotion of English studies in the college, of which £350 will be set apart as a salary for the professor, in addition to the usual share of class fees.

MR. A. S. NEWALL, of Gateshead, has offered to present to the university of Cambridge a refracting telescope, of 25-inch aperture and 30-feet focal length, together with the dome and instruments connected with it, with the object of promoting the study of stellar physics.

MR. ELLIOT STOCK is about to bring out a facsimile of the unique blackletter A B C Primer of 1538 in the library of Emmanuel College, Cambridge, to which Mr. Shuckburgh, the librarian of the college, will write a bibliographical introduction.

CONVOCATION at Oxford has voted a grant for the extension of the University Galleries in Beaumont-street. It is proposed to build a large block, only one storey high at present, consisting of two long galleries; and also to excavate a new basement room between the old and new galleries, to be covered with a glass roof. The space available for ancient marbles and casts will thus be more than doubled, while the series of casts of Chantrey's sculptures will be removed to the new basement room.

THE university of Cambridge have made a grant of £10 to the fund being raised by the Society for the Preservation of Memorials of the Dead for repairing the monument in the church of Sprowston, Norfolk, to Sir Thomas Adams, founder of the professorship of Arabic.

THE Rev. G. F. Browne, Disney professor of archaeology at Cambridge, has had printed three sheets of engravings to illustrate his second course of lectures on "The Anglian Sculptured Stones of Pre-Norman Type." Many of the sculptures have never been figured before, notably the screens and pillars at Coire, Como, Reichenau, and Milan, which have been supposed to show Hibernian influence. The syllabus of the lectures further contains full information concerning the precise place of the numerous English stones and inscriptions treated of by the professor.

THE Cambridge University Press has published a *Catalogue of the Portsmouth Collection of Books and Papers written by or relating to Sir Isaac Newton*, edited by a syndicate appointed as long ago as 1872. The scientific portion of the collection was presented to the university by the Earl of Portsmouth; the remainder has been returned to him, after copies being taken of everything of interest. Of the mathematical papers the most important are—(1) those on the lunar theory, apparently intended for a new edition of the *Principia;* (2) on the theory of atmospheric refraction, giving some materials for showing Newton's method of forming his table of refractions; (3) a large number relating to his dispute with Leibnitz about the discovery of fluxions or the differential calculus. Concerning the historical and theological MSS. the editors remark that they

"cannot be considered of any great value. A large portion of Newton's later years must have been spent in writing and rewriting his ideas on certain points of theology and chronology. Much is written out as if prepared for the press, much apparently from the mere love of writing. His power of writing a beautiful hand was evidently a snare to him, and his fastidiousness as to the expression of what he wrote comes out very curiously in these papers; thus there are six drafts of the scheme for founding the Royal Society. . . ."

ORIGINAL VERSE.

ALBINIA.

Whither goes the pale maiden, is she gone forth to pray?
'Tis a year since the soul she loved best passed away.
The flash of her eyes that would sparkle o'er tears
Like the light of a gem no more worn, disappears,
And in vain would she struggle her sorrow to hide
For her voice is its music, her smile is its pride.

Sequestered in silence her love she entombs
Yet her heart seems as fresh as the morrow that comes.
Her sorrow o'ertook her when sorrow was new
And its earth-garb of mourning about her she drew;
But she walks in hope's shadow upright like a bride,
Her voice is her music, her smile is her pride.

The sorrow stays with her, its ways are her ways
Though no look to a stranger its presence betrays;
But her voice and her smile have the sadness of old,
In them her blank heart to my heart is retold,
And all seems to pass o'er again at my side,
For her voice is my music, her smile is my pride.

THOS. GORDON HAKE.

OBITUARY.

MR. THOMAS ROWE EDMONDS, who died at 72 Portsdown Road, Maida Vale, on March 6, was for thirty-four years, down to 1866, actuary of the Legal and General Life Assurance Society. His father, the town clerk of Marazion, practised as a solicitor at Penzance, where his son was born in June, 1803. Like many other youths from the West of England, he was sent to St. Pol de Leon in Brittany to learn French and to become acquainted with foreign manners. Afterwards he graduated at Trinity College, Cambridge. His studies were early directed towards the investigation of the principles regulating the duration of life and the means for promoting thrift among those engaged in commercial or professional work. He published in 1828 a volume entitled *Practical Moral and Political Economy*, in which he set out the government, religion, and institutions, "most conducive to individual happiness and national power." He compiled in 1832 a set of life tables; and issued in the same year "An Enquiry into the Principles of Population." Numerous essays on the mortality of this and other countries and the laws of vitality were contributed by him to the *Proceedings* of the Statistical Society, the *Lancet*, and the *Assurance Magazine*. His views on "The Density of Steam" appeared in the *Philosophical Magazine* and the *Artizan*. When the natural impatience of mankind at taxation provoked a general protest against the imposition of the income tax, and a committee of the House of Commons was appointed to enquire into its incidence, Mr. Edmonds gave elaborate evidence before the committee.

MAGAZINES AND REVIEWS.

THE *Library*, the new organ of the Library Association, fully maintains the promise of its first number. In the issue for March, perhaps the most important article is one by Mr. E. Gordon Duff, calling attention to a hitherto unknown English printer of the fifteenth century, whose device contains the initial I. H., and whom Mr. Duff sees reason for identifying with I. Huvin, of Rouen. His date is known only from a single sheet of a Sarum Horae, recently acquired by the Bodleian, which luckily contains the colophon, showing that it was printed for Wynkyn de Worde, at the sign of St. Thomas, in 1497. Among the other contents are a paper on "Early Glasgow Printing," by Prof. Thomas Ferguson; and an account, by Chancellor Christie, of the Bignon family, who were librarians of the Bibliothèque du Roi for a continuous period of 140 years.

IN his article in the *Antiquary* on "The Stewart Exhibition" Mr. W. E. Millikin has avoided the nonsense in which too many have indulged themselves in writing about the old royal family. If he tells us nothing absolutely new, all that he gives is carefully considered. He thinks it necessary to refer to the idle controversy as to the correct spelling of the name. There is surely no right or wrong in the matter. Mary lived long in France and naturally used the French mode of spelling. Those who were not so fortunate followed other modes as fancy dictated: "A' Stuarts are nae sib to the king" is a well-known proverb. The name may have originated in many ways; but so uncertain was spelling in those times that it by no means follows that even all who were of kindred with the royal house used the same arrangement of letters. We have ourselves examined many of the papers relating to the wars between 1640 and 1660 now preserved in the Register Office in Edinburgh, and have found nearly every form of spelling represented there. Mr. Plumtree's first paper of a series on Giordano Bruno is excellent. Mr. Rendle has given us a useful account of the "Early Hospitals in Southwark." The *Monasticon* ought to contain full accounts of all the institutions of this sort which existed before the great crash in the reign of Henry VIII.; but very few obtained adequate treatment therein. Mr. A. C. Bickley tells us something—it is but very little—of the Great

Digitized by Google

Seals of England. It would be a service if a good illustrated catalogue of them in all their varieties were prepared. A piece of formalism that has lasted nine hundred years should not perish, if perish it must, without a memorial.

The *Theologisch Tijdschrift* for March opens with the second part of a study on the task of philosophy by the late Dr. Rauwenhoff, and closes with a deeply felt obituary notice of the author by Dr. Kuenen. The independence of the Linden school of theology is well known; and Dr. Rauwenhoff, by the width of his sympathies, not less than by the extent of his researches (church historical as well as philosophic), was one of it its most interesting members. Pre-eminently a modern thinker and a modern Churchman, his death at the early age of sixty will be much felt. The first volume of his last work on the Philosophy of Religion was reviewed lately by Pfleiderer, together with Dr. Martineau's kindred work, with characteristic geniality. In the same number Dr. Caland endeavours to show that the six Iranian creation-periods are found not only in the late book called the Bundehesh, but in a very old part of the Avesta itself (the so-called Yasht). The bearing of this on the origin of Genesis i.-ii. 4 (*a*) is evident. Among the books noticed are Chavanne's *La Religion dans la Bible* (reviewed lately in the Academy), by Dr. Oort, who does not allow his sympathy with the critical "Richtung" of the author to blind him to his somewhat narrow view of Bible religion; and a book of theological confessions of a very modern type, much read just now in Germany, called *Im Kampf um die Weltanschauung.*

CORRESPONDENCE.

"GUILLAUME DE GUILEVILLE."

Cambridge: March 11, 1889.

The spelling of the name of the author of *Les trois pèlerinages* is not a question of the first importance; but as Prof. Skeat has been told that he is inaccurate in spelling it with one "l," and that the proper spelling is with two, it may be worth while to state what the evidence in favour of the two forms is.

The point is supposed to be decided by the authority of M. Paulin Paris, who states in his *Manuscrits François* (iii. 240) that the Abbé Goujet was right in maintaining, against the *Mercure de France*, that the author's name was "G. de Deguilleville," because all the letters of this name were to be found in two acrostics which occur in two parts of the poem. Now, in the first place, what the Abbé Goujet (*Bibl. Franç.*, xv., Additions, p. xii.) correctly maintained as against the *Mercure de France* was that the author's name was Guillaume de Deg., and not Guillaume de G., and the spelling with one "l" or with two was no part of his contention. That this was the case is evident from what M. Paulin Paris says in the very next sentence: "On trouve encore en France et en Belgique des noms propres assez analogues à celui là; comme *Degnevilly, Equevauvillers*, &c." In the second place, M. Paulin Paris is not to be literally understood as implying that the French form of the name is given in the acrostics. So far as I am aware, it is always in Latin. In fact, the acrostics represent the name in four different ways: (1) Guillermus de Deguilevilla; (2) Guillermus de Deguillevilla; (3) Guillermus de Guillevilla; (4) Guillermus de Guilevilla. If we may trust the authority of the Catalogue des Manuscrits du Fonds Français, 1868, tom. i. Ancien Fonds, form 1 is supported by four MSS. of the first recension (Nos. 824, 1139, 1647, 1648) and three (Nos. 825, 829, 1138) of the second; and if to these we add the British Museum Add. MS. 22,937, which is of the second recension, there are eight MSS., four of each recension, in favour of the spelling with one "l." Form 2 is only found in two MSS., one of the first (No. 376) and one of the second (No. 377) recension. Form 3 is only found in one MS. (No. 823), and form 4 only in one (No. 828); and both these are of the first recension. Another form, "Guillermus de Desguilleville" occurs in the colophon to No. 827, a MS. of the first recension; and the name appears as "Deguilleville" in No. 1645, and as "Deguillerville" in No. 1649, as we may infer from the fact that these are given in the catalogue in inverted commas. So far, therefore, as the evidence of the MSS. is concerned, the authority of the acrostics is greatly in favour of the form "Guillermus de Deguilevilla"; and with this the printed editions agree. There is, therefore, something to be said in favour of the spelling with one "l."

All this is given substantially in the Preface (p. v.) to my edition of the *Pilgrimage of the Lyf of the Manhode* printed for the Roxburghe Club in 1869; but I have only just found the notes which I made at the time. From these I am able to correct a slight error in the form in which the name occurs in the acrostic in MS. No. 823. It should be "Guillermus de Guillevilla," and not "Guillermus de Guilevilla."

M. Paul Meyer kindly enables me to add that in MS. No. 377 the acrostic in the *Pèlerinage de l'âme* agrees with the form in No. 376, and the acrostic in the *Pèlerinage de Jésus Christ* with the form in No. 823—that is, it gives both "Guillermus de Deguillevilla" and "Guillermus de Guillevilla." The authority of this MS., therefore, does not count for much.

W. Aldis Wright.

A PALAEOGRAPHICAL PUZZLE.

Oxford: March 10, 1889.

Prof. A. Napier has lately drawn my attention to the two enigmatic letters—viz., *x* and a crossed *b*—which are to be found four times in the corner and in the middle of the leaves in the MSS. Barlow of the Bodleian Library, which is of the tenth century; more frequently in the earlier Caedmon MS. of the same library; and four times in the Vercelli MS. (once *x* alone), which is of the eleventh century (see Prof. Stoddard's article in the *Anglia*, pp. 159 and 163). Walther, in his *Lexicon Diplomaticum*, col. 433, no. 11, mentions the letters *x'l* occurring in MSS. of the fourteenth century, which stand, according to him, for "Christe eleison." *X* for Christus is, of course, found frequently in MS. of all centuries.

Without any pretension on my part to knowledge of western palaeography, I venture to propose the solution "Christus benedictus *or* benedicat" for the letters *x b*. M. Henri Omont, of the Bibliothèque Nationale, who is a great authority on western palaeography, writes to me the following:

"Je n'ai jamais remarqué les lettres dont vous me parlez dans des MSS. Latins; il semble bien qu'on puisse l'interpréter *Xr* benedictus, comme une invocation du copiste, analogue à celle qu'on voit en tête d'un MS. ou des cahiers d'un MS., un peu à toutes les époques du moyen âge."

A. Neubauer.

A MANUSCRIPT IN TRINITY COLLEGE LIBRARY, DUBLIN, OF THE TIME OF QUEEN ELIZABETH.

Dublin: Feb. 24, 1889.

There is a MS. volume of music, with some verses (I believe unpublished), in the Trinity College Library, Dublin, which is worthy of a notice, and I cannot learn that it has been anywhere described. It is entered in the catalogue as

"Dallis Tho: of Cambridge 1583, His Musical Lessons set for the Lute
11. More Musical Lessons by other Hands } D 3.30."

The volume is an oblong quarto, containing about 120 pages of musical notation of that sort which is known as "lute tablature." Three quarters of the work is chiefly by one hand, with perhaps a few additions by "other hands" at the close of that portion. Some blank pages then occur, and the remainder appears to be somewhat more recent.

On an early page is written the following inscription from which the catalogue title is derived. It is in caligraphy attributable to the close of the sixteenth century:

"Incepi Nonis Augusti praeceptore M^o Thoma Dallis Cantaburgii, 1583."

This has been interpreted in the library catalogue as signifying that the music was written by one Thomas Dallis, musical teacher in Cambridge in the year 1583. The writing is somewhat ambiguous, and M^o looked to me very like M^r (for "Magistro").

The body of the work begins with a few elementary lessons to the lutenist. Subsequently we find a number of simple tunes,

Digitized by Google

chiefly dance music of the period. The following names are appended to these:

Le passe Meze de pavana
The passa Meze gailiard
Rogero The Division of Rogero
The division of the frenche gaylarde by Jhonson
The quean's almayne
banda la Schotis gaylard
Fortune is now my fo
Scotche gaylarde
all a greene willow Mr. T Dallis
O what it is to love
T Dallis fansye
In none pavan strogeris basso
passamezo d'Angleterre
The earle of Oxforde gailiard
A pavan of Breunshers [?] makinge
finis parsons in none set forthe by [?]
passamezo bellisino Di Gorzanis
Psalmus Anglicus 128
Saltorello Englesa
passa mezo sopra il soprani di Gorzanis
pavane de la battaile
passamezo antico per Gorzanem [?]
Giacomo Gorzanis

These are each affixed at the end of an air, and are mostly, apparently, in the early handwriting, and belong to the first part. At the close of this part appears the first of the short poems ("In Youthful Years"), which I shall presently copy. At the end of these pretty, quaint lines, "Mr. Parsons" is written. The name has already occurred, and it probably refers to the music; for these lines are placed with their tablature notation.

There is also here a devotional verse; and then occurs the first verse of the other poem, or ballad, perhaps in a later hand, and also accompanied by its tune.

Later on, the remaining three stanzas of "Fortune is Fickle" are written in a hand that is still later, perhaps by a century; but here I speak with no certainty. The writing is not unlike some that I have seen of the seventeenth century, but the ink looks fresher, and the poem itself has not the true ring about it. But I will return to this again.

There is here also a Latin verse of four lines of no merit, and in a different hand.

The end of the book is entirely musical notation of the same sort as the rest, or nearly so; but the airs or compositions, of whatever nature, are unnamed. Some of them are psalm tunes. This part of the volume, however, did not interest me. It contains no writing, and has no descriptive entry whatever.

These are the verses; the first one has a pleasing simplicity about it:

"In youthfull yeares when first
My young desires beganne,
To pricke me forth to serue in court
A sclender tal young man.

"My father's blessings then
I asked upon my knee,
Who blessing me with trembling hands
these words gan say to me:

"'My son, God guide thy way
and shield thee from mischance,
And grant thy just deserts in court
thy poor estate to advance.

"'Yet when thou art become
one of the courtly trayne,
Think on this proverb old,' quoth he,
'that fayre words make fools fayne.'"
[finis
Mr. Parsons]*

These are in a more recent hand; they might have been written a hundred years ago:

"Fortune is fickle, and wonderful tickle:
Hir powre is mickle in each degree,
And with hir scepter she makes him better,
And this man greater of gowld and fee.

"And with hir thunder of worldly wonder
Shee binds menne under adversitye:
Shee rocks hir cradle, which is unstable,
And sytts in hir saddle of dygnitye.

"Shee frownes, shee flatters, shee gatters, she scatters,
Shee rules al matters as wynde waveringe,
Shee laughs, she lowres, shee shines, she showres,
Now this straigest yours sans stay quaveringe.

"As zele [eele?] most slipper, no houlde tho you hipper [*sic*]
At neede aye you kepe hir, proofe hath yt so tried
Hir mirth is madness, hir joy is sadnes,
Hir sorrowe is gladness, this wisemen have spied."

I submitted the last production to Mr. A. H. Bullen, to see if he had met with it. He suspects that the verses are not Elizabethan, and thinks they have a "spurious look." They are not of much value, but they seem to me rather provincial and uncouth in their oddness, than modern. The last stanza has a familiar ring about it, but I cannot recall what it reminds me of. The diction is somewhat obsolete, as is the orthography, and an expert in the latter could probably pin the lines into some tight corner. The words "tickle" and "mickle" are used by Shakspere. The word "straigest" is probably the same as "strage" given by Halliwell as "To stray, said of cattle." I have met this form in Browne's *Shepheard's Pipe*.

"See how he blindfold, *strags* along the mead."

The line it occurs in here is a villainous one. "Hipper," in the last stanza, is unknown to me.

With regard to the authorship of the music, I thought at first there was reason to conclude that Thomas Dallis is one and the same as Thomas Tallis, the "father of English cathedral music." The name at once suggested this to me, and further corroboration arose in one or two ways. The great Tallis did write "Lute Tablature"; for in Grove's *Dictionary of Music and Musicians*, mention is made of an MS. of Lute Tablature by Tallis in the Oxford Music School Library. Again, Tallis died in 1585, at about seventy years of age; so the dates seemed suitable.

Mr. Hemsley (well-known in musical circles) kindly looked at the MS. for me from his point of view, and directed me in finding information about Tallis. He was inclined to think the two names the same, and pointed out that Tallis did write music to secular words, instancing "Fond youth" in Grove. He decided that the notation was the same as that which is known as "Lute Tablature," "peculiar to the fifteenth and sixteenth centuries—a system often found convenient for lute players."

Mr. Luard, the Registrar at Cambridge University, to whom I wrote, informs me that there is "no such name among our graduates as Dallis. Thomas Tallys was B.A. of Trinity Hall in 1583." He thinks this might have been a son of *the* Tallis.

The verses above quoted are of interest; but the list of tunes, written out when Shakspere was twenty years of age, and recalling his plays as they so often do, is still more attractive. The verses may have been elsewhere published. I have no reason to think they are. Dallis may not be Tallis, but someone hitherto unheard of. But I feel grateful to him for this compilation; and I long to hear how many of these old tunes—very simple, no doubt, they are—are known to those skilled in early music. The music of "Fortune my foe" is given in Chappell, and the words in Ebsworth's *Bagford Ballads*. The first line there is "Fortune, my foe, why dost thou frown on me?" There appears to have been some variant, however, for "Fortune is now my fo (foe)," as given above, is also met with in Beaumont and Fletcher's "Wit without Money." "Fortune, my foe" is very commonly mentioned, and was a popular tune to sing ballads of murders to. It was also, according to Charles Kingsley, a favourite tune of Queen Elizabeth, and is said to have been played on board men of war going to meet the Spanish Armada. This ballad is, however, fully discussed by Mr. Ebsworth, than whom there is no higher authority. It is mentioned in "Merry Wives," Jonson's "Case is altered," "Faire Em," "Lingua," "Maid's Metamorphosis," "Return from Parnassus," and several of Beaumont and Fletcher's plays.

"All a Green Willow" is familiar to everyone from Shakspere's "Othello," and the tune is found in many collections.

"Rogero" is mentioned by several early writers as Nash, and also Heywood in "A Woman killed with Kindness." In *A Handful of Pleasant Delights*, by Clement Robinson (1584), there is "A faithfull vow to two Constant Lovers to the *new Rogero*," showing it to be an old tune then. In Gascoyne's School of Abuse (1579) it is also mentioned.

"O what it is to love" may be the same as "O what a thing is love," Chappell.

"Pavans," "galliards," "almains," and "passamezos" may all be found described more or less correctly in Nares's dictionary, as well as in Chappell's or Hawkins's musical works. All these were dances, and (excepting the almain) are spoken of by Shakspere. The almain is not often met with; but in the old play of "Tancred and Gismunda" (Hazlitt's *Dodsley*, vii. 26) an instance may be found which is quoted by Nares—"The haubois sounded a lofty *almain*." In Peele's "Arraignment of Paris" (ii. 1) occurs "Enter nine knights in armour, treading a warlike *almain*" as a stage direction. In Chapman's "Alphonsus, Emperor of Germany" (iii. 1):

"We Germans have no changes in our dances
An *almain* and an upspring that is all,
So dance the princes, burghers, and the boors.
Br. So danced our ancestors for a thousand years.
Ed. It is a sign the Dutch are not new-fangled."

Nares concludes it to be a kind of solemn music. There was a musical work by John Dowland, a little later than the MS. under description, which was entitled "Lachrymae, or seaven tears figured in seaven passionate Pavans with divers other Pavans, Galliards and Almands, set forth for the lute, viol, or violons in five parts."

The pavan was a grave Spanish dance. The name was probably derived from *pavo* (peacock), because ladies danced it with long trains, or on account of the strutting action. Ben Jonson has "Your Spanish pavin is the best dance" ("Alchemist," iv. 2). It is often mentioned; and in Shakspere's "Twelfth Night" occurs in the passage:

"Then he's a rogue, and a passy-measures *pauyn*, I hate a drunken rogue";

which is undoubtedly a misprint for "pavin," "pavan," or "pavian."

"Passy-measures." Here is the passa mezza which occurs in Middleton's "More Dissemblers besides Women," as "passa-measures galliard" in connexion with another dance. It appears to have been a technical term representing rather a particular portion of, or move-

* The words I have bracketted apply, I think, to the air.

Digitized by Google

ment in, either the pavan or galliard than a complete dance. Thus in "Lingua"—"Prythee sit still, you must dance nothing but the passing-measures" is levelled at one who is meant to be snubbed thereby and not supposed competent for the genuine revels—"You may go in for slow dances." The term is derived by Hawkins from *passer*, walk, and *mezzo*, the middle and dignified, a slow dance. But others more recently have derived it from *Passo e mezzo*, a step and a half, and describe it as intermediate between the galliard and pavin.

The galliard was a lively, swift, and wandering dance. Chaucer uses the word in the sense of gay, lively. Its description in "The Orchestra," by Sir John Davis, is well known, and it is continually spoken of by writers of James I. and Charles I. It was called also "cinquepace" on account of the "number of the music's feet." This dance appears to have got a bad name, and was, of course, hateful to the Puritans. Anything which formed a portion of the masques and anti-masques of James and Charles was fully entitled to an ill-reputation among the Puritans, and, I might add, among the citizens.

I must not omit to mention that I have to thank Mr. W. J. O'Donnovan for calling my attention to this manuscript. He lit upon it while engaged in genealogical researches, and was good enough to send the first stanza of "Fortune is fickle" for my inspection. And I have also to thank Mr. French of the Library for his courteous assistance in deciphering the earlier handwriting.

H. C. Hart.

P.S.—Since writing the above I have found proof positive that Dallis was a totally distinct person from Tallis. In Francis Mere's *Wits Treasury* (1598) there is given a list of "excellent musitions" of England as compared with those of ancient Greece. This list has, among others, the names of "Maister Tallis" and "Doctor Dallis." Independently, also, Mr. Hemsley tells me that a closer inspection of the music shows that it could not have been written by Tallis. Further, I find that in Chappell's *Popular Music*, at the tune "Rogero," this very MS. is referred to by name.

H. C. H.

THE HARVEST MOON.

London: March 12, 1889.

May I point out that Mr. William Canton, in his appreciative review of Mr. Alfred Austin's *Love's Widowhood*, has, in critical fault-finding, unwittingly perpetrated an error in one instance. His comment on the verse,

"Thrice thus it [the moon] came, *nor later nor more soon*,"

is that it is permissible as a striking poetic licence, but is in itself obviously inaccurate.

But accurate the statement is, for the moon in question, as the context shows, is the Harvest Moon; and in our latitude the Harvest Moon, or the moon that is full ("did round itself with light") nearest the autumnal equinox, rises for three days nearly at sunset, *and at the same hour*, instead of, as usual, fifty-two minutes later each day than on the preceding one.

William Sharp.

"MASTERS OF THE WORLD."

London: March 9, 1889.

On a matter of taste I should never venture to question the decision of a critic, but on a matter of fact I may, perhaps, be permitted to do so. Your critic charges me with the use of Latin words where English words would have served the purpose, and asks me why I have not said, "He passed his manus over his heated frons"? My answer is, that *manus* and *frons* are exactly expressed by "hand" and "forehead," while the word *pulvinar*, to which your critic objects (expressing, as it does, a highly complex idea), has no English equivalent. The *pulvinar* was the couch on which the images of the gods reposed at the games. When Domitian proclaimed, "vocatam eam in pulvinar suum," he blasphemously ranked himself with the gods. "With the like arrogance," continues Suetonius, "he began letters thus, 'Our lord and god thus commands' (Dominus et Deus noster)." I know of no word, nor even admissible periphrasis, which could convey the sense of *pulvinar*. If your critic can suggest a possible English equivalent, I will gratefully use it in any future edition of my book.

Mary A. M. Marks.

APPOINTMENTS FOR NEXT WEEK.

Monday, March 18, 4 p.m. Asiatic: "Notes on the Early History of Northern India," II., by Mr. J. F. Hewitt.
5 p.m. London Institution: "Our Early British Ancestors," by Prof. Boyd Dawkins.
8 p.m. Society of Arts: Cantor Lecture. "The Decoration and Illustration of Books," III., by Mr. Walter Crane.
8 p.m. Victoria Institute: "The Dawn of Metallurgy among Primitive Races," by the Rev. J. M. Mello.
8.30 p.m. Society for Psychical Research: "Some recent Hypnotic Experiments in Italy," by Mr. H. Babington Smith; "Apparitions occurring shortly after Death," by Mr. F. W. H. Myers.

Tuesday, March 19, 3 p.m. Royal Institution: "Before and after Darwin—Evolution," IX., by Prof. G. J. Romanes.
7.45 p.m. Statistical: "The Alleged Depopulation of the Rural Districts," by Dr. W. Ogle.
8 p.m. Society of Arts: "The Art of the Jeweller." by Mr. Carlo Giuliano.
8 p.m. Civil Engineers: Discussion, "Indian Railways—the Broad and the Narrow-Guage Systems contrasted," by Mr. F. J. Waring.
8.30 p.m. Zoological: "The Generic Position of the Physas of Australia," by Mr. A. H. Cooke; "Some Lizards in the Zoological Museum of Halle," by Mr. G. A. Boulenger; "The Occasional Persistence of the Left Posterior Cardinal Vein in the Frog, with Remarks on the Homologies of the Veins in the Dipnoi." by Prof. W. N. Parker.

Wednesday, March 20, 8 p.m. Society of Arts: "Objects and Methods of the Society of Arts' Motor Trials," by Prof. A. B. W. Kennedy.
8 p.m. Geological: "The Rocks of the Atlantic Coast of Canada," by Sir J. W. Dawson; "The Occurrence of Colloid Silica in the Lower Chalk of Berkshire and Wiltshire," by Messrs. A. J. Jukes-Browne and W. Hill; "The Pelvis of *Ornithopsis*," by Prof. H. G. Seeley; "The Elvans and Volcanic Rocks of Dartmoor," by Mr. R. N. Worth.
8 p.m. Folklore: "Death's Messenger and its Variants." by the Rev. Dr. R. Morris; "The Folklore of Middlesex," by Mr. J. P. Elmslie.
8 p.m. Literature: "The Destruction and Preservation of Books," by Mr. W. T. Rogers.

Thursday, March 21, 3 p.m. Royal Institution: "Houses and their Decoration, from the Classical to the Mediæval Period," I., by Prof. J. H. Middleton.
6 p.m. London Institution: "The Phonograph," by Col. Gouraud.
8 p.m. Linnean: "Botanical Collections from Christmas Island," by Mr. W. B. Hemsley; "The Sexual Forms of Catasetum, with Special Reference to the Researches of Darwin and others," by Mr. R. Allen Rolfe; "New Cape Plants," by Prof. P. MacOwan.
8 p.m. Chemical: "The Molecular Weights of Metals," by Mr. W. Ramsay; "Some Compounds of Tribenzyl Phosphine Oxide," by Mr. N. Collie.
8 p.m. Electrical Engineers.
8.30 p.m. Antiquaries.
8.30 p.m. Historical: "Babylonian History and Chronology," by Mr. G. Bertin.

Friday, March 22, 7.30 p.m. Civil Engineers: Students' Meeting, 'The Cyclical Velocity Fluctuations of Steam and other Engines," by Mr. H. B. Ransom.
9 p.m. Royal Institution: "The Science of Animal Locomotion in its Relation to Design in Art," illustrated by the Zoopraxiscope, by Mr. Eadweard Muybridge.

Saturday, March 23, 3 p.m. Royal Institution: "Experimental Optics—Polarisation, Wave Theory," V., by Lord Rayleigh.
3 p.m. Physical: "The Use of Lissajou's Figures in the Maintenance of Uniform Rotation," and "The Direct Determination of the Vibration Period of a Reed or Tuning-Fork by means of a Morse Receiver," by Prof. J. V. Jones; "The Clark Cell as a Source of Standard Currents," by Prof. R. Threlfall and Mr. A. Pollock; and "The Measurement of High Specific Resistances," by Prof. R. Threlfall.
3.45 p.m. Botanic: General Meeting.

SCIENCE.

The History of Ancient Civilisation. A Handbook based upon M. Gustave Ducoudray's "Histoire Sommaire de la Civilisation." Edited by Rev. J. Verschoyle. (Chapman & Hall.)

The schoolboys of the present day—or, rather, that small percentage of them who are really desirous of improvement—must feel that they have fallen on happy times. Knowledge, which used to be gradually and painfully gathered, mixed with much error and misconception, partly from stray hints dropped by teachers "in a friendly way," as Mr. Silas Wegg "dropped into poetry," and partly from inferences, often unsound, drawn by themselves, is now put before them in compendious and systematic handbooks, elegantly and attractively written and excellently illustrated.

Mr. Verschoyle's work possesses all these attractive qualities and many more. It preserves all the grace and liveliness of style which characterises M. Ducoudray's Summary, but is completely purged from those errors which in the book on which it is based mar a really fine effort of generalisation. One could not praise too highly the breadth of view, the lightness of touch, and the fine appreciation of the spirit of various epochs, which the "Histoire Sommaire" displays; yet one would repent of having recommended it to a learner when one's eye had fallen on a paragraph such as this, under the heading, "La Religion des Grecs":

"Au-dessous venaient les divinités de la terre: *Plutus*, dieu des richesses; *Bacchus*, le dieu du vin; *Proserpine*, fille de Cérès, le blé; *Palès*, déesse des pâturages; *Flore*, déesse des fleurs; *Pomone*, des fruits; *Pan*, chef des Satyres au masque grimaçant."

To point out that Mr. Verschoyle does not enumerate Pales, Flora, and Pomona among Greek goddesses; and does not describe the Greek gods, demigods, and heroes by the names of their (supposed) Latin analogues, would be an impertinence to one who is himself an excellent scholar, and who, in the writing of this handbook, has consulted all the soundest authorities: for Egypt—Wilkinson, Rawlinson, Birch, and Kenrick; for Babylon and Assyria—Layard, Rawlinson, Oppert; for Greece—Grote, Curtius, Jebb; for Rome—Mommsen and Merivale; and for the art of the very ancient world—Georges Perrot and Charles Chipiez.

Again, the brilliant work of M. Ducoudray often deals in such strictly abridged fashion with a subject that it would have been far better not to touch it at all. Is not this account of Catullus far worse than nothing?—

"La mollesse et le raffinement des mœurs au temps de César disposèrent les Romains à se plaire au poésies tendres et fugitives de *Catulle*, fin, gracieux, ingénieux et sensible jusqu'à la délicatesse. Catulle, par l'atticisme de son langage, par la tendresse de ses élégies, annonce déjà le siècle d'Auguste où on pourrait le placer."

Does not this almost suggest the suspicion that M. Ducoudray had never read a line of the strong, rough, red hot poetry of Catullus? On the other hand, the corresponding paragraph in Mr. Verschoyle's book is a model of

Digitized by Google

sound, while necessarily very compendious, information:

'Catullus, the most original as well as one of the greatest of the Latin poets, stands almost alone in more than one particular. He was a great metrist, as may be seen in his hendecasyllables, the earliest in Latin literature, and in the galliambics of his 'Attis.' He, first of Romans, understands and expresses the love of man for woman. In this Propertius comes far behind him; and even in conceiving and pourtraying the passion of woman for man, the Ariadne of Catullus preceded the Dido of Virgil. The 'Epithalamium' of Callius is probably his best work, always excepting his charming lyrics to Lesbia. The Attis' is a wonderful poem; the lines beginning *Patria O mea creatrix, patria O mea genetrix*, give the key-note to Lord Tennyson's Oenone.'"

One could hardly over-estimate the increased intelligence with which a boy would read Herodotus after studying chapters ii. and iii. of this handbook; chapter iv. would form the best introduction to Bible history; and the whole work affords an admirable frame-work for future acquisitions.

Dr. James Gow has recently brought out an excellent *Companion to School Classics*, which, I am glad to hear, has already reached a second edition. This book would be useful to fill in Mr. Verschoyle's frame-work. Equipped with both works, the candidate could fearlessly face even the most depraved specimen of the class now so much inveighed against—the examiners who are ruining education. It will, moreover, be a valuable aid to teachers who wish to do their work really well, and to all who desire to group and systematise their knowledge.

It would be a mistake, indeed, to describe the book as addressed only to the ministrants and the victims in "the sacrifice of education to examination." Though the range is so wide, the attempt to amuse, as well as to instruct, has by no means been abandoned. Hence the work may be recommended to the general reader, by whom I understand that kind of person who has an ambition to extend the limits of his reading—if it is made easy to him—with a view to making a better figure in society.

The second portion of the work—"The History of Modern Civilisation"—is in the press, and will shortly be published.

R. Y. TYRRELL.

CURRENT SCIENTIFIC LITERATURE.

Our Rarer Birds: being Studies in Ornithology and Oology. By Charles Dixon. (Bentley.) There is much which is commendable in this volume, for it is the work of a man who has sympathetically studied his subject, and who has followed to their native haunts the birds of which he writes. But some evil fortune seems to dog the author's steps. His very title is misleading. Out of some 376 species of birds generally recognised as British, not counting stragglers, Mr. Dixon treats of upwards of 110. The nightingale, nuthatch, wryneck, heron, woodcock, common gull, wild duck, cormorant—why, more than half the birds he calls "rarer" are common enough in their accustomed habitats. The frontispiece is an uncoloured lithograph from the coloured one published in the *Ibis* in January, 1885. Its source is ignored, and a new publisher's name is added to the presumed original, as well as an altered title; and Mr. Sclater is thanked for allowing its reproduction, even in this garbled form, as if he had given his permission in his capacity of secretary to the Zoological Society, when of course he only did so as editor of the organ of the British Ornithologists' Union. Indeed, we should have liked to hear more about the subject of this plate of the "St. Kilda wren." Mr. Dixon only tells us what we heard five years ago. We never learn from him that ornithologists are now satisfied that the species which he "discovered" is no species at all. The book is embellished with a number of original woodcuts by Mr. Charles Whymper, many of which are very good; but the artist, or his engraver, misses the character of the nuthatch's bill, and his crossbill appears, to say the least of it, in a very uncomfortable position. Mr. Dixon seems to regard falconry as a lost art, although hawks are often flown at this day within the metropolitan area by a well-known enthusiast, and the columns of the *Field* bear witness to the fact that in many parts of the country hawking is still a fashionable hobby. The author is not much more happy in his remarks about the red-legged partridge. Nor do goatsuckers generally lay "white eggs" in this country (p. 365). In a chapter on migration an acknowledgment to Prof. Palmén would not have been out of place; and a perusal of his well-known treatise would have tended to the elucidation of the subject, while some notice of the work of the British Association committee would at least have been an act of grace. When we come to the chapter entitled "The Philosophy of Birds' Nests and Eggs," we are inclined to lose patience. So long as Mr. Dixon merely relies upon the writings of Darwin and Wallace he writes many a pleasant paragraph; but when he raises his so-called "laws of isolation" to the level of the philosophy of his forerunners we feel prompted to warn the public from his heresies, so obvious are they to the initiated. Still this is an agreeable book, which many a lover of birds in their wild state will read with much interest. While Mr. Dixon is content to express facts which have come under his own personal notice, he is generally trustworthy; and he has a picturesque way of putting his observations into words.

A Monograph of the British Uredineae and Ustilagineae. By Charles B. Plowright. (Kegan Paul, Trench & Co.) This monograph is the fruit of much research, both morphological and systematic, extending over a number of years. It bears strong evidence on nearly every page that the work has been done in the most painstaking way; and, so far as the details are concerned, the only criticism to be made is that in the introductory portion they are given occasionally at quite unnecessary length. This is partly owing to the fact that the author has chosen to bring together in one monograph two groups which are at present held to have much less connexion than was formerly supposed to be the case. Mr. Plowright has followed in many respects the example of de Bary so judiciously that he might have gone farther with advantage, and kept apart the groups of Uredineae and Ustilagineae which de Bary has taught us to recognise as separated from each other by the great group of Ascomycetes. A detailed morphological account of the Uredineae is followed by a similar account of the Ustilagineae, and then the systematic descriptions of the Uredineae by those of the Ustilagineae. This plan is farther calculated to prolong the idea of close relationship between the groups. Mr. Plowright shows, as was to be expected, a very intimate personal acquaintance with the objects he describes; and it is, therefore, the more to be regretted that he handles so loosely the important question as to the morphological value of the so-called spermatia. He attaches, in our opinion at all events, too little weight to the view that these are male organs, persisting in a series of organisms which have lost by retrogression the corresponding female organs of reproduction (at least assiduous research has failed to find them; and he is too much impressed by the phenomenon of their sprouting in suitable media, as pollen-grains germinate in sugar solutions. However, the real value of the book is in the systematic portion, for which there can be nothing but praise. It has been done in the most careful and well-judged fashion; and its author deserves, and will, doubtless, obtain from botanists in this country, most hearty thanks for it. With Stevenson's *Hymenomycetes* and Phillips's *Discomycetes*, and the present volume by Mr. Plowright, the students of our native fungi are now very nearly independent of Cooke's faulty *Handbook of British Fungi*.

OBITUARY.

GENERAL NASSAU LEES.

ALL Anglo-Indians will hear with regret of the death of Major-Gen. W. Nassau Lees, for many years past the proprietor of the *Times of India*, which took place in London on Saturday last, March 9, in the sixty-fifth year of his age. His services to Oriental learning deserve special commendation here. It was during his principalship that the Madrasa, or Mohammedan college, at Calcutta was affiliated to the university, and its methods of teaching underwent a radical reform. Besides textbooks in Arabic and Persian, he himself edited the great commentary on the Koran of Zamakshari; and from his press issued a long series of Arabic and Persian works. He also held at one time the office of Persian translator to the Government of India. Gen. Lees had received the hon. degree of LL.D. at Dublin; and he had been elected corresponding member of the Oriental Society of Berlin and the Academy of Sciences of Göttingen.

SCIENCE NOTES.

MESSRS. MACMILLAN announce a work on *The Bacteria in Asiatic Cholera*, by Dr. E. Klein, who, it will be remembered, was sent to India by the government some three years ago to investigate the reported discovery of the cholera germs.

MESSRS. JOHN BARTHOLOMEW & Co. have this month removed into new premises, called the Edinburgh Geographical Institute, which they announce to be "fitted with all the latest appliances calculated to aid in perfecting the various processes of engraving, lithographing, and printing."

MR. R. D. OLDHAM, the Deputy-Superintendent of the Geological Survey of India, has prepared—and the Survey has published—a most useful Bibliography of Indian Geology. The work supplies full references to a great mass of literature relating to British India and the adjoining countries up to the end of 1887.

PHILOLOGY NOTES.

M. CLERMONT-GANNEAU has been elected a member of the Académie des Inscriptions, by 31 votes out of 36, in place of the late Comte Paul Riant.

PROF. JAMES DARMESTETER has reprinted from the *Journal Asiatique* his paper upon "The Inscriptions on the Tomb of Baber at Cabul." These inscriptions, it appears, have never before been published in full, though their existence is well known. The present copies were made by a regimental *munshi*

Digitized by Google

during the British occupation in 1879. The inscriptions commemorate the emperor Baber himself, who died in 1530; his son Mirza Hindal, and a daughter of Mirza Hindal; a son of Baber's successor, Humayun; and a daughter of the emperor Alamgir II., married to a Durani prince, who died in 1788. Some of the monuments show that they were erected by the emperors Jehangir and Shah Jehan.

Correction.—In Prof. Bühler's letter in the ACADEMY of last week, on "Dr. Burgess's New Impressions of the Rock-Edicts of Asóka" (line 13 from beginning), *for* "inch" *read* "centimètre."

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPERE SOCIETY.—(*Saturday, February 23.*)

W. C. H. CROSS, Esq., president, in the chair.—Mr. L. M. Griffiths, in some "General Observations on 'A Yorkshire Tragedy,'" after quoting Stow's record of the murder (Chronicle, ed. 1631, pp. 870-1), drew attention to the kind of literature the event called forth, as shown by the entries in the Stationers' Registers on June 12, July 3, and August 24, 1605. The entry of the play itself on May 2, 1608, and the editions of 1608 and 1619 were mentioned; and attention was directed to the opinions of Collier (*English Dramatic Poetry*, ed. 1831, vol. iii., pp. 50-1), Schlegel (*Dramatic Literature*, ed. Bohn, p. 445), Ward (*English Dramatic Literature*, vol. i., p. 462), Dowden (*Shakspere Primer*, p. 158), Halliwell-Phillipps (*Outlines of the Life of Shakspere*, 6th ed., vol. i., pp. 206-7), and Symonds (*Shakspere's Predecessors*, pp. 421-3, 434-40).—Miss E. Maud Williams in "Notes on 'A Yorkshire Tragedy'" dealt with the external evidence connecting the play with the name of Shakspere; and then pointed out that probably the child, mentioned in the drama as having escaped being murdered through being at nurse, was "Henrie Calverley," whose marriage with a daughter of Sir Walter Pye, on July 28, 1628, is recorded in the parish register of Much Dewchurch, in the county of Hereford.—Mr. John Taylor read a paper on "The Diabolism of 'A Yorkshire Tragedy.'" That a demoniac deed, like the subject of this play, should be attributed to diabolic possession need excite no surprise if we connect it with the prevalent belief at the time in the active energy of Satan among mankind. The British Solomon (James VI. of Scotland) published his *Demonologie* at Edinburgh in 1597, and it was reprinted in London in 1617. Its purpose was to sustain the belief that the devil's personal communication with those ready to admit his advances was as vital a doctrine as justification by faith—the Protestant pillar of salvation. The Witch Act became law in 1604; and between 1603 and 1680 the number of the victims of this superstition far exceeded that of the sufferers under the Holy Office in an equal space of time. Some 70,000 were burned or drowned, after, perhaps, excruciating torture to exact confession of their crime, on accusations of which none of them could have been guilty. Even Lord Bacon and Sir Thomas Browne argued for the reality of witchcraft as a form of diabolical agency in human affairs; and John Wesley, in later days, declared that to give up witchcraft was to give up the Bible. The convenient practice of charging upon Satan the effects of men's violent passions and purposes is, in the instance before us, inartistically managed, and seems an afterthought, or is brought in as a stage necessity to account for a moral revulsion really induced by terror of the law, from which the criminal finds it now too late to escape. There is a Shakesperian ring about some of the passages in the drama; but its character as a whole shows that, if Shakspere was the writer, it was hurriedly prepared for the stage.—Mr. L. M. Griffiths presented a report upon "The Rare Words and Phrases in 'A Yorkshire Tragedy.'" The following are not used by Shakspere:—Cap-case; ninny-hammer (a simpleton); stand in wax (for extensive securities given for money); knighting (drinking upon the knees); promoter (an informer); underputter; white boy (a term of special affection).—Dr. L. Proescholdt, of Homburg, Mr. Albert R. Frey, of New York, and Dr. H. H. Furness, of Philadelphia, have accepted invitations to become corresponding members of the Society.

ANTHROPOLOGICAL INSTITUTE.—(*Tuesday, February 26*)

DR. J. BEDDOE, president, in the chair.—Mr. Francis Galton exhibited a new instrument for testing the delicacy of perception of differences of tint, also an instrument for telling reaction time. Both instruments will be exhibited in the Paris Exhibition. Major C. R. Conder read a paper on "The Early Races of Western Asia." The students of Aryan and Semitic antiquity have found themselves confronted for the last forty years in Western Asia, in Greece, and Italy, by languages and racial types neither Aryan nor Semitic, and showing races whose civilisation is earlier. In three cases these languages are found to be Turanian (in the more limited meaning of the word), viz., Akkadian, Medic, and Etruscan. As regards these languages, the study of Akkadian, as it existed about 3000 B.C., shows a grammar nearest to that of Turkic languages and even of the Manchu Tartars, and a vocabulary which has been in great measure recovered, though in part still doubtful, and which, while comparable with Finnic and Ugrian languages, is yet nearest to the Turkic. The language of the Medes known from the inscriptions of Darius, about 500 B.C., has a similar but more advanced grammar, and a vocabulary held by Oppert and others to be nearest the Turkic. The Etruscan, of which the numerals were shown by Dr. Isaac Taylor in 1874 to be Turanian, is also found to compare in grammar and vocabulary with the Akkadian. The question now raised is whether this early population of Asia Minor and Syria, of which traces are recoverable from various sources, did not belong to the same stock. In Asia Minor, Lenormant believed a Turanian stock to have existed very early; and in Syria this was the belief of the late Dr. Birch, and has been urged by Capt. Conder from 1883 onwards. (1) As regards Syria, the names of towns and persons are recoverable from Egyptian monuments and papyri in 1600 and 1340 B.C. In the south these are mainly Semitic. In the north the country of the Phoenicians and Kheta gives us 200 town names and 20 royal names which are neither Semitic nor Aryan. Comparing these words with Akkadian, and with the living Turkic and Ugrian languages, the translation is suitable. Among the personal words, *Tar*, *Sar*, *Lul*, *Nazi*, *Essebu*, and *Tarkun* are the most distinctive; and among geographical terms *Tumi*, "building," *Su*, "river," *Tep*, "hill, and others are distinctive of the Turkic dialects. From these words it is fairly safe to conclude that a Turanian population inhabited Syria in the earliest historic times, akin to the Turks and Turkomans still found in the same region. In Northern Syria also certain hieroglyphic inscriptions of a very archaic kind are found which, by general consent of archaeologists, have been attributed to the same race; and, by the same general consent, the hieratic character derived from these hieroglyphs is recognisable in the later syllabary generally known as Cypriote or Asianic. This connexion was first discovered by Prof. Sayce. The author has proposed to treat these syllabaries as representing Turkic words, and by this means to recover the sounds of the original hieroglyphs of Northern Syria. He finds that by this method it is possible to read the short bilingual known as the "Boss of Tarkondemos." The words *Ma* and *Ku* for "country" and "king," which he thus recovered in 1887, though questioned by Prof. Sayce as not being Akkadian, are admitted by other authorities to belong to that language, and are widely-spread Turanian words. The evidence of physiognomy, dress, and religious customs among the Kheta, or Hittites, points to the same conclusion. Their type of face is recognised to be Tartaric or Mongolian, and their adoration of the sun, moon, mountains, clouds, rivers, and the sea is similar to the beliefs of other Turanian peoples, as is their practice of exogamy mentioned in the Bible. The Kara Khitai, or "black Khitans," of Eastern Turkestan—an important people in Central Asia as early as the time of the geographer Ptolemy—possessed a name identical with that of the Kheta. Their language is similar in many words to Akkadian, their religious beliefs and warlike customs resemble those of the Kheta. The pigtails found to be worn by the latter are also of Tartar origin in China. (2) The early "barbarian" population of Asia Minor is stated by the ancients to have been akin to the Etruscan race. In various parts of Asia Minor hieroglyphs like those of the Hittite are found; and cylinders used as amulets, not unlike the Akkadian cylinders, occur in this region, with similar heiroglyphic emblems. The syllabary above mentioned as Asianic also exists in these regions, and in the island of Lemnos a text recently discovered proves to be written in a language and character closely similar to the Etruscan. A few words of the Lydian and Carian languages have also come down to us; and among these the author claims to have recognised Turkic words such, for instance, as the Carian *Taba* for a "rock," and the Lydian *Lailas*, "tyrant." The ancient nomenclature of Asia Minor seems to indicate the same connexion, as do also the Carian personal names. The river Sangarius may be compared with the river Sangari in Manchuria. The only alternative to the supposition that a Turkic population once spread over Mesopotamia, Syria, and Asia Minor, is the supposition that these tribes, or some of them, belonged to the Leghic group in the Caucasus, to which Lenormant proposed to refer the ancient Vannic population. But the study of this group of languages, though not long since proposed, has not led to any satisfactory result, or enabled any student to interpret the sounds of the various languages of Syria and Asia Minor above noticed, or those of the Syrian hieroglyphs, in the manner in which they can be interpreted through the use of the Tartar or Ugrian languages.

PHILOLOGICAL SOCIETY.—(*Friday, March 1*)
